* The London Assays in this Table were made by Robert Bingley, Esq. F.R.S., the King's Assay Master of the Mint, and those at Paris by Pierre Frédéric Bonneville, Essayer du Commerce, as published in his elaborate work on the coins of all nations.

Specimens of all the foreign coins brought to London for commercial purposes have been supplied for this Table from the Bullion-office, Bank of England, by order of the Bank Directors, and have been selected by John Humble, Esq., the chief clerk of that office, who also examined the Tables in their progress. It may likewise be added, that the Mint Reports of these commercial coins are chiefly from average assays; and that all the computations have been carefully verified by different calculators. — (Note by Dr. Kelly, to second edition of the *Cambist*, published in 1821.)

for four Prussian dollars. There were, however, no florins in existence exactly of this value; but as the nearest approach to it was a valuation called the 24 guldenfuss, or florin-foot, these Zollverein florins were nominally reckoned to be in this rate, though the difference amounts to more than 2 per cent.

"The term 24 guldenfuss implies that the mark weight of fine silver is rated at 24 gulden or florins. It was formed by giving to the coins minted or valued in 20 guldenfuss an increased value of one-fifth, as rating the 20 kreutzer piece at 24 kreutzers. At 60*d.* per ounce standard, the value of this mark of fine silver is worth 40*s.* $7\frac{1}{2}$*d.* sterling, from which the value of the different German monetary integers is readily obtained; as reckoning $27\frac{2}{3}$ marks banco or 34 marks current of Hamburg, 14 dollars of Prussia, $21\frac{1}{3}$ florins of South Germany, 20 florins of Austria, and also 60 lire Austriache of Lombardy, to be of this amount.

"In order, therefore, to prevent the loss or inconvenience which would attend their adhering to this mode of valuation, a money convention was entered into on the 25th of August, 1837, among the states forming the union, by which it was agreed upon that a new basis of valuation should be adopted for their coins, under the term of Süddeutscher Währung, or South German valuation, at the rate of $24\frac{1}{2}$ gulden or florins from the mark's weight of fine silver.

"Bavaria, Wirtemberg, Baden, and Saxony have since issued their coins at this rate, and the other states of the confederation are doing or preparing to do the same. Among them Frankfort, in 1840, began the mintage of coins of this value; and by a regulation of the Chamber of Commerce of this free city, all the rates of exchange, as well as the values of bullion and foreign coins, were ordered to be expressed in this Süddeutscher Währung from the beginning of this present year (1843). One of these new and very exactly-minted florins was assayed by Messrs. Johnson and Cock, of Hatton Garden, who reported it to be, full weight, 6 dwts. $19\frac{1}{2}$ grains, worse 6 dwts., gold under 2 grains; from which the value, at 60*d.* per ounce standard, is very exactly $19\frac{1}{2}$*d.* sterling, making the par of exchange with London $120\frac{1}{2}$ florins in S. D. W. for 10*l.* sterling.

"I have been thus particular in these explanations, partly because several persons imagine that the late-alteration in the rate of exchange with Frankfort was made in compliance with the wishes, or to suit the convenience, of one or more of our leading houses in exchange negotiations, but more particularly because it is maintained by many that the valuation of this rate is not merely nominally, but really, in 24 guldenfuss. This is a point of no small importance to the commercial world, for had it been so, the par of exchange with London would have been only 118 florins for 10*l.* sterling, and the difference between this and the present price of sight bills on Frankfort would have exceeded $2\frac{1}{2}$ per cent.; a variation which every practical cambist well knows could not exist, except under very extraordinary circumstances, and with nearly corresponding differences in the other rates of exchange: neither of which causes is now in operation."—(*Letter of William Tate, Esq., cambist to the Times.*)

	N. B. It was ordered by a ukase, dated the 1st of July, 1839, that this coin should be the standard of value in Russia. It is divided into 100 copecks; and the other silver coins are of the value of 75, 50, 25, and 10 copecks each. This same ukase enacts, that 1 silver rouble shall henceforth be equal to 3½ old paper roubles.

The sterling value of the foreign coins, in the foregoing tables, has been computed from the assays as follows: — Let it be required to assign the value, in sterling, of a French double Louis d'or coined since 1786, the assay master's report being as follows: — "Weight, 9 dwts. 20 grs.; assay W. 1$\frac{1}{2}$ grs.," that is, 0 car. 1$\frac{1}{2}$ grs. worse than the English standard. We proceed as under: —

From 22 car. 0 gr. the fineness of English standard gold,
Take 0 car. 1$\frac{1}{2}$ gr. } There remains 21 car. 2$\frac{1}{2}$ gr.

Then, as 22 car.: 21 car. 2$\frac{1}{2}$ grs. :: 9 dwts. 20 grs.: 9 dwts. 16 grs., the standard gold contained in the Louis d'or; and hence, as 1 oz.: 3*l.* 17*s.* 10$\frac{1}{2}$*d.* :: 9 dwts. 16 grs.: 1*l.* 17*s.* 7$\frac{1}{2}$*d.*, the value of the Louis in sterling money, and so for any of the other coins.

Ancient Coins. — We subjoin, for the convenience of such of our readers as may at any time have occasion to consult works in which reference is made to ancient coins, the following tables of those that were principally current among the Jews, Greeks, and Romans. They were calculated by Dr. Arbuthnot (*Tables of Ancient Coins, Weights, &c.* 4to ed. Lond. 1754), and do not differ materially from the tables of Paucton, whose *Métrologie* (4to. Paris, 1780) is the most complete and elaborate work that has ever been published with respect to ancient monies, weights, and measures. At the same time we confess we should not be disposed to place much reliance on these tables, and we have elsewhere stated our reasons for holding this opinion. — (*Encyc. Britannica*, art. *Money*.)

* The American dollars, and inferior silver pieces of late coinage, vary in fineness from W. 4 dwts. to W. 9$\frac{1}{2}$ dwts.

Of the foregoing Grecian coins, the drachma and didrachma were of silver; the rest, for the most part, of brass.

The drachma is here, with the generality of authors, supposed equal to the denarius: though there is reason to believe that the drachma was somewhat the weightier.

	Value in Sterling. £	s.	d.
The Grecian gold coin was the stater aureus, weighing 2 Attic drachms, or half of the stater argenteus; and exchanging usually for 25 Attic drachmas of silver	0	16	$1\frac{2}{4}$
But according to our proportion of gold to silver it was worth	1	0	9
There were likewise the stater Cyzicenus, exchanging for 28 Attic drachmas, or	0	18	1
The stater Philippicus, and stater Alexandrinus, were of the same value.			
Stater Daricus, according to Josephus, worth 50 Attic drachmas, or	1	12	$3\frac{1}{2}$
Stater Crœsius, of the same value.			

VALUE AND PROPORTION OF THE ROMAN COINS.

					Sterling. s.	d.	grs.
Teruncius					0	0	$0\frac{775}{1000}$
2	Sembella				0	0	$1\frac{55}{100}$
4	2	Libella As			0	0	$3\frac{1}{10}$
10	5	$2\frac{1}{2}$	Sestertius		0	1	$3\frac{3}{4}$
20	10	5	2	Quinarius Victoriatus	0	3	$3\frac{1}{5}$
40	20	10	4	2 Denarius	0	7	3

	£	s.	d.
The Roman gold coin, or aureus, weighed generally double the denarius; its value, according to the proportion of gold to silver, mentioned by Pliny, was	1	4	$3\frac{3}{4}$
According to the proportion that now obtains amongst us	1	0	9
According to the decuple proportion mentioned by Livy and Julius Pollux	0	12	11
According to the proportion mentioned by Tacitus, by which the aureus exchanged for 25 denarii, its value	0	16	$1\frac{2}{4}$

COIR, a species of yarn manufactured out of the husk of cocoa nuts. The husks being steeped in water, the dry dusty substance mixed with the fibres is separated. These are afterwards spun into yarn, and manufactured into cordage, that is deemed by some superior to that made of hemp. The goodness of coir depends on the fineness of the filaments, and on their being of a bright yellow colour. About 3,000,000 lbs. weight are annually exported from Ceylon, principally to Calcutta, and other ports in the East Indies. It is also prepared in the Maldive Islands, and many other places; and is very extensively used throughout the East. — (*Bertolacci's Ceylon; Bell's Commerce of Bengal, &c.*)

COLOCYNTHIS, COLOQUINTIDA, OR BITTER CUCUMBER (Ger. *Koloquinten*; Du. *Bitter-appelen*; Fr. *Coloquintes*; It. *Coloquintida*; Sp. *Coloquintidas*; Arab. and Pers. *Hunzil*), the produce of an annual plant (*Cucumis colocynthis* Lin.) growing in Turkey, Nubia, India, and other places, much resembling the cucumber in herbage. When ripe, the fruit is peeled and dried in a stove; and in this state is brought to England. It is inodorous, but has an extremely nauseous taste. It is an exceedingly powerful drastic cathartic. When it is larger than a St. Michael's orange, and has black acute pointed ends, it is not good. — (*Ainslie's Materia Indica.*)

COLONIES. — COLONY TRADE. — *Colonies* are establishments founded on foreign countries by individuals who either voluntarily emigrate from, or are forcibly sent abroad by, their mother country. The *colony trade* is the trade carried on between colonies and their parent states.

I. ESTABLISHMENT OF COLONIES.
II. INFLUENCE OF THE MONOPOLY OF THE COLONY TRADE.
III. MAGNITUDE, POPULATION, TRADE, &c. OF BRITISH COLONIES. — DISPOSAL OF LAND IN THE COLONIES, &c.
IV. REGULATIONS UNDER WHICH THE COLONY TRADE IS CONDUCTED.
V. FOREIGN COLONIES.

I. ESTABLISHMENT OF COLONIES.

(1.) *Greek Colonies.* — Various motives have, in different countries and ages, led to the formation of colonies.* The Greek colonies of antiquity seem to have been chiefly

* Seneca has given, in a few words, a very clear and accurate statement of the different motives that induced the ancients to found colonies. "*Nec omnibus eadem causa relinquendi quærendique patriam fuit. Alios excidia urbium suarum, hostilibus armis elapsos, in aliena, spoliatos suis, expulerunt: Alios domestica seditio submovit: Alios nimia superfluentis populi frequentia, ad exonerandas vires, emisit: Alios pestilentia, aut frequens terrarum hiatus, aut aliqua intoleranda infelicis soli ejecerunt: Quosdam fertilis oræ, et in majus laudatæ, fama corrupit: Alios alia causa excivit domibus suis.*" — (Consol. ad Helviam, c. 6.)

founded by citizens whom the violence and fury of contending factions forced to leave their native land; but they were sometimes formed for the purpose of relieving the mother country of a redundant population, and sometimes also for the purpose of extending the sphere of commercial transactions, or of providing for their security. The relations between the mother country and the colony depended, in a great measure, on the motives which led to the establishment of the latter. When a colony was founded by fugitives forcibly expelled from their ancient homes; or when it was founded, as was frequently the case, by bodies of voluntary emigrants, who received no assistance from, and were in no respect controlled by, the parent state, it was from the first independent; and even in those rarer cases in which the emigration was conducted under the superintendence of the parent city, and when the colony was protected by her power and influence, the dependence was, mostly, far from being absolute and complete. The great bulk of the Greek colonies were really independent states; and though they commonly regarded the land of their forefathers with filial respect, though they yielded to its citizens the place of distinction at public games and religious solemnities, and were expected to assist them in time of war, they did so as allies only, on fair and equal terms, and never as subjects. Owing to the freedom of their institutions, and their superiority in the arts of civilised life to the native inhabitants of the countries among whom they were generally placed, these colonies rose, in a comparatively short period, to a high pitch of opulence and refinement; and many among them, as Miletus and Ephesus in Asia Minor, Syracuse and Agrigentum in Sicily, and Tarentum and Locri in Italy, not only equalled, but greatly surpassed, their mother cities in wealth and power.

(2.) *Roman Colonies.* — The Roman colonies were, for the most part, founded by and under the authority of government; being intended to serve both as outlets for poor and discontented citizens, and as military stations, or garrisons, to secure the subjection of the conquered provinces over which they were scattered. The most intimate political union was always maintained between them and the mother city. Their internal government was modelled on that of Rome; and, while their superior officers were mostly sent from the capital, they were made to contribute their full quota of troops and taxes, to assist in carrying on the contests in which the Republic was almost constantly engaged.

(3.) *Spanish Colonies.* — The early colonies of most modern nations were founded by private adventurers, influenced either by the hope of gain, or by a desire to escape from religious persecution, without any wish to relieve the mother country of a surplus population, or to bridle subjugated provinces. On their first institution, therefore, the modern colonies approached, though with some essential variations, more nearly to the Grecian than the Roman model — but the period of their freedom was of very limited duration. They were very soon subjected to laws and regulations framed in the metropolis, and calculated, as was to be supposed, rather to promote its interests than those of the colony. At a somewhat later period the foundation of colonial establishments was eagerly patronised by most European governments, in the view of extending commerce, and of enriching the mother country, by securing to her the exclusive possession of the market of distant countries; and where, from the thinness of the aboriginal population, or their inferiority in the arts of civilised life, the colonists were enabled to amass fortunes with comparative rapidity.

The Spaniards who first resorted to America after its discovery, had no intention of settling in the country, or of colonising it. The idea that gold and silver alone constituted wealth was then universally prevalent; and the bold and enterprising companions and followers of Columbus, instead of engaging in industrious undertakings, which they neither understood nor relished, sought only to enrich themselves by plundering the feeble and defenceless natives of the gold and silver in their possession, and of the abundance of which the most exaggerated accounts were immediately spread throughout Europe. When new adventurers arrived on an unknown coast, their single inquiry was, whether it abounded in gold. If it did, they remained, for some time at least, in the country; if not, they immediately set sail for some other quarter. *Auri rabida sitis a cultura Hispanos divertit,* is the expressive statement of a contemporary writer (Petrus Martyrus, in the *Novus Orbis* of Grynæus, p. 511.). The slow progress of the Spanish colonies, after their first discovery, must principally be ascribed to this cause. The gold and silver accumulated by the natives were very soon exhausted; and the skill and energy of the successive swarms of adventurers, who continued to pour into the country, were principally directed to the unproductive and generally ruinous trade of mining. The few large fortunes that were made in this way, like the large prizes in a lottery, inflamed the cupidity of the multitude, and gave an appearance of credibility to the fabulous accounts of the excessive productiveness of the mines. After the gambling spirit which had exclusively actuated the early adventurers had begun to subside, the colonists gradually betook themselves to agricultural and commercial pursuits: and the vast variety of valuable productions with which Mexico and the other Spanish colonies

abound, the extreme richness of the soil, and their advantageous situation, would, had they been only tolerably well governed, have occasioned their rapid increase in wealth and civilisation. But a blind and intolerant despotism paralysed their energies, and fettered and retarded their progress. All the abuses and defects of the government of Old Spain were transferred to, and multiplied in, the colonies. The whole property of those vast regions was considered as vested in the crown of Spain; and every law or regulation, whether of a local or general nature, affecting their government, emanated from the council of the Indies, in which it was supposed the king was always present. We cannot stop to describe the sort of regulations to which the colonists were subjected with any degree of minuteness; but we may notice a few of them, to furnish the means of judging of their general spirit and probable effect. It was, for example, made a *capital* offence to carry on any intercourse with foreigners; and the inhabitants of the different colonies were even forbidden any intercourse with each other, unless under the strictest and most vexatious regulations. There were several articles, such as flax, hemp, and wine, which they were not permitted to cultivate; at the same time that the crown reserved to itself the monopoly of salt, tobacco, gunpowder, and some other less important articles. The alcavala, and other oppressive imposts, which had proved destructive of industry in Old Spain, were rigorously levied as well on the exports as on the imports of the colonies. No situation of power or emolument could be filled except by a native of Old Spain. The Catholic religion was established, to the exclusion of every other; and bishops, tithes, and the inquisition, followed in its train: while, in order still better to consolidate and strengthen the foundations of this monstrous despotism, the government endeavoured to make the colonists insensible of their degradation, by proscribing every species of instruction, and watchfully opposing the introduction and progress of all useful knowledge!

Under such circumstances, we cannot be surprised that the Continental colonists, among whom the monopoly system was maintained in its greatest purity, should have languished for above two centuries in a state of sluggish inactivity. Though surrounded by all the means of producing wealth, they were not generally wealthy. Oppression rendered them indolent; and went far to deprive them not only of the power, but also of the wish, to emerge from poverty. The progress of the colonists who occupied the West India islands was not quite so slow. It is certain, however, that down to the middle of last century, Spain reaped no greater advantage from the possession of Cuba, Hispaniola, and Porto Rico, than England or France from the smallest of its dependencies. In proof of this we may mention, that the noble island of Cuba, which could without difficulty supply all Europe with sugar, did not, in 1750, produce a sufficient quantity even for the consumption of Old Spain. But the combined influence of an arbitrary and intolerant government, and of a degrading superstition, could not balance the means of improvement, which the fertility of the soil, and the command thence arising over most of the necessaries and many of the conveniences of life, gave to the colonists. Owing also to the total incapacity of Old Spain to furnish her transatlantic provinces with a sufficient supply of the articles she had forced them to import from Europe, and the consequent extension of the contraband trade carried on with them by the other European nations, she had been compelled gradually to relax the severity of her commercial monopoly. A new impulse was thus given to the spirit of industry. The colonists began to be more sensible of the natural advantages of their situation, and less inclined to submit to the blind and bigoted policy of the Spanish court. In 1781, a rebellion broke out in Peru, in consequence of an attempt made by the government to establish a new monopoly in that province, which threatened to end in the total dissolution of the connection between Spain and South America, and was not quelled without great difficulty and much bloodshed. But the spirit of liberty, when once excited, could not be suppressed. It continued to gain ground progressively, until the commencement of the late contest between France and Spain interrupted the communication with the mother country, and gave the colonists an opportunity of proclaiming that independence which, after a lengthened and bloody struggle, they happily succeeded in achieving.

(4.) *British Colonies.* — The English, who, like all the other nations of Europe, had been impressed with mingled feelings of admiration and envy by the extent and importance of the acquisitions made by the Spaniards in the New World, speedily entered with enthusiasm and ardour into the career of discovery. Owing, however, to the bull which Ferdinand and Isabella had obtained from the Pope, conveying to them the ample donation of all the countries inhabited by infidels that the Spaniards had discovered, or might discover, the English, to avoid encroaching on the dominions of their rivals, directed their efforts further to the north. Several attempts to found colonies on the coast of America were made in the reign of Elizabeth by Sir Humphrey Gilbert, Sir Richard Grenville, Sir Walter Raleigh, and others. But in consequence of their ignorance of the country, the deficiency of their supplies of provisions,

the loss of time in fruitless searches after gold, and the various difficulties incident to the first settlement of a colony, none of these attempts proved successful: and it was not until 1607, that a small body of adventurers founded the first permanent establishment of the English in America, at James Town in Virginia. Letters patent were granted in 1609, by King James, to the principal persons resident in London, by whom the expense attending the formation of the colony was to be defrayed, incorporating them into a company, and establishing a council in England for the direction of their proceedings, the members of which were to be chosen by, and removeable at the pleasure of, the majority of the partners of the company; permitting whatever was necessary for the support and sustenance of the colony for the first 7 years to be exported free of duty; declaring that the colonists and their descendants were to be secured in all the rights and privileges of Englishmen, the same as if they had remained at home, or been born in England; and reserving only, as the stipulated price of these concessions, and in imitation of the policy of the Spaniards, *one fifth* part of the gold and silver ore to be found in the colonies, which was to be paid to his Majesty and his successors in all time to come. In virtue of these powers, the company issued, in 1621, a charter or ordinance, which gave a legal and permanent form to the constitution of the colony. By this charter the supreme legislative authority was lodged, partly in the governor, who held the place of the sovereign, partly in a council of state, named by the company, and partly in a general council, or assembly composed of the representatives of the people, in which were vested powers and privileges similar to those of the House of Commons. It was not long, however, before the king and the company quarrelled. The latter were in consequence divested of all their rights, partly by open violence, and partly under colour of law, without compensation, after having expended upwards of 150,000*l.* in founding the colony; and a governor and council of state appointed by the king succeeded to the powers of those appointed by the committee. — (*Robertson's History of America*, book ix. *passim*; *Jefferson's Notes on Virginia*, p. 179.)

The founders of the colony in Virginia had been actuated solely by the hopes of gain: but the colonies that were soon after established in New England, were chiefly planted by men who fled from religious and political persecution. The form of government in the New England colonies, though at first modified a good deal by the peculiar religious opinions entertained by the colonists, was in its leading principles essentially free. For a considerable period, the colonists elected their own governors, coined money, and exercised most of the rights of sovereignty; while the English, wholly engrossed with the contest between freedom and prerogative at home, had no leisure to attend to their proceedings. Subsequently to the Restoration, however, the governments of most of the New England states were established nearly on the same footing as that of Virginia; which, indeed, became the favourite model, not only for the constitution of the colonies established on the Continent, with the exception of the proprietary governments of Pennsylvania and Maryland, but also for those that were established in the West India islands. But under every vicissitude of government and fortune, the New England colonists were distinguished by the same ardent and enthusiastic love of liberty that had first induced them to quit their native land. Every thing relating to the internal regulation and administration of the different colonies was determined, in the colonial assemblies, by representatives freely chosen by the settlers. The personal liberty of the citizens was well secured and vigilantly protected. And, if we except the restraints on their commerce, the monopoly of which was jealously guarded by the mother country, the inhabitants of Virginia, Pennsylvania, and New England enjoyed nearly the same degree of freedom, when colonists of England, that they now enjoy as citizens of the powerful republic of North America. Their progress in wealth and population was in consequence quite unprecedented in the history of the world. The white population of the colonies had increased in 1776, at the commencement of the revolutionary war, to above 2,000,000, and the value of the exports from Great Britain to them amounted to about 1,300,000*l.* a year!

It is not difficult to discover the causes of the unexampled prosperity and rapid growth of our North American colonies, and generally of all colonies placed under similar circumstances. The North American colonists carried with them a knowledge of the arts and sciences practised by a civilised and polished people. They had been trained from their infancy to habits of industry and subordination. They were practically acquainted with the best and wisest form of civil polity that had been established in Europe; and they were placed in a situation that enabled them, without difficulty, to remedy its defects, and to try every institution by the test of utility. But the thinness of the aboriginal population, and the consequent facility of obtaining inexhaustible supplies of fertile and unoccupied land, must certainly be placed at the head of all the causes which have promoted the rapid increase of wealth and population in the United States, and in all the other colonies both of North and South America. On the first foundation of a colony, and for long after, each colonist gets an ample supply of land of

the *best quality;* and having no rent, and scarcely any taxes, to pay, his industry necessarily becomes exceedingly productive, and he has every means, and every motive, to amass capital. In consequence, he is eager to collect labourers from all quarters, and is both willing and able to reward them with high wages. But these high wages afford the means of accumulation, and, joined to the plenty and cheapness of the land, speedily change the more industrious labourers into proprietors, and enable them, in their turn, to become the employers of fresh labourers; so that every class participates in the general improvement, and capital and population advance with a rapidity hardly conceivable in old settled and fully peopled countries.

It has been frequently said, that the establishment of our American and West India colonies was a device of the supporters of the exclusive or mercantile system — that they founded them in the view of raising up a vast agricultural population, whose commerce should be confined entirely to an exchange of their raw products for our manufactured goods. There is, however, no truth in these assertions. On the contrary, the charters granted to the founders of the settlement in Virginia distinctly *empower the colonists to carry on a direct intercourse with foreign states.* Nor were they slow to avail themselves of this permission; for they had, so early as 1620, established tobacco warehouses in Middleburg and Flushing — (*Robertson's America*, book ix. p. 104.); and the subsequent proceedings of the British government, depriving them of this freedom of commerce, were the chief cause of those disputes which broke out, in 1676, in an open rebellion of ominous and threatening import. — (*Robertson's America*, p. 147.) It was not until the colonists had surmounted the difficulties and hardships incident to their first establishment, and had begun to increase rapidly in wealth, that their commerce became an object of importance, and that regulations were framed in the view of restricting its freedom, and of rendering it peculiarly advantageous to the mother country. The act of 1650, passed by the republican parliament, laid the first foundations of the monopoly system, by confining the import and export trade of the colonies exclusively to British or colony built ships. But the famous Navigation Act of 1660 (12 Charles 2. c. 18.) went much further. It enacted, that certain specified articles, the produce of the colonies, and since well known in commerce by the name of *enumerated* articles, should not be exported directly from the colonies to any foreign country; but that they should first be sent to Britain, and there unladen (the words of the act are, *laid upon the shore*), before they could be forwarded to their final destination. Sugar, molasses, ginger, fustic, tobacco, cotton, and indigo, were originally enumerated; and the list was subsequently enlarged by the addition of coffee, hides and skins, iron, corn, lumber, &c. In 1739, the monopoly system was so far relaxed, that sugars were permitted to be carried directly from the British plantations to any port or place southward of Cape Finisterre; but the conditions under which this indulgence was granted, continued so strict and numerous down to 1803, when they were a good deal simplified, as to render it in a great degree nugatory — (*Edwards's West Indies*, vol. ii. p. 452. ed. 1819.); and with this exception, the oppressive and vexatious restrictions on their direct exportation to foreign countries were maintained on most of the other *enumerated* commodities of any importance, down to a late period.

But besides compelling the colonists to *sell* their produce exclusively in the English markets, it was next thought advisable to oblige them to *buy* such foreign articles as they might stand in need of entirely from the merchants and manufacturers of England. For this purpose it was enacted, in 1663, that "no commodity of the growth, production, or manufacture of Europe, shall be imported into the British plantations, but such as are laden and put on board in England, Wales, or Berwick-upon-Tweed, and in English-built shipping, whereof the master and three fourths of the crew are English." The preamble to this statute, which effectually excluded the colonists from every market for European produce, except that of England, assigns the motive for this restriction to be, "the maintaining a greater correspondence and kindness between the subjects at home and those in the plantations; keeping the colonies in a firmer dependence on the mother country; making them yet more beneficial to it, in the further employment and increase of English shipping, and the vent of English manufactures and commodities; rendering the navigation to and from them more safe and cheap; and making this kingdom a staple, not only of the commodities of the plantations, but also of the commodities of other countries and places for their supply; it being the usage of other nations to keep their plantation trade exclusively to themselves."

It was also a leading principle in the system of colonial policy, adopted as well by England as by the other European nations, to discourage all attempts to manufacture such articles in the colonies as could be provided for them by the mother country. The history of our colonial system is full of efforts of this sort; and so essential was this principle deemed to the idea of a colony, that Lord Chatham did not hesitate to declare, in his place in parliament, that "the British colonists of North America had *no* RIGHT *to manufacture even a nail for a horseshoe!*" — (*Edwards's West Indies*, vol. ii. p. 566.) And

when such were the enactments made by the legislature, and such the avowed sentiments of a great parliamentary leader and a friend to the colonies, we need not be surprised at a declaration of the late Lord Sheffield, who did no more, indeed, than express the opinion of almost all the merchants and politicians of his time, when he affirmed that "THE ONLY *use of American colonies or West India islands is* THE MONOPOLY *of their consumption, and the carriage of their produce!*"

II. INFLUENCE OF THE MONOPOLY OF THE COLONY TRADE.

(1.) It is not necessary to enter into any lengthened disquisitions with respect to this part of our subject. The rules by which we are to form our judgment upon it, are unfolded in the article COMMERCE. Here it is sufficient to observe, in the first place, that, though it could be shown that restrictions on the colony trade were really advantageous to the mother country, that is not enough to prove that they should be adopted. In dealing with a colony, we are not dealing with a foreign country, but with an integral part of our own empire. And hence, in order to show that restrictions on the colony trade are advantageous, it must not merely be shown that they are beneficial to the mother country, but it must further be shown that they are beneficial, or, at all events, not injurious, to the colony. The advantage of one part of the empire is not to be purchased by the depression of some other part. The duty of government is to promote the prosperity and to maintain the equal rights and privileges of all; not to enrich one class, or one province, at the expense of others.

This principle is decisive of the whole question. Owing to the identity of language, manners, and religion, the merchants of the mother country must always have very great advantages in the colony markets; and if the commodities which they have to sell be about as suitable for them, and as low priced, as those of others, none else will be imported into them; but if they be not, it would plainly be to the injury of the colony to compel her to buy from the mother country what she might procure cheaper from others. It will immediately be seen that such forced sale could be of no real advantage to the mother country; but whether that were so or not, its mischievous influence upon the colony is manifest. Were Jamaica, for example, obliged to import any article from England which cost her 100,000*l.* a year more than she could procure a similar article for elsewhere, she would manifestly lose this amount; and though it were true that every shilling of this sum found its way as *extra profit* into the pockets of the merchants or manufacturers of England, that would be no sufficient justification of the policy of such a system. The protection due by a government to its subjects does not depend on the varying degrees of latitude and longitude under which they happen to live. It would not be more glaringly unjust to lay peculiar burdens on the Lothians for the sake of Middlesex, than it is to lay them on Jamaica for the sake of England.

In point of fact, however, the monopoly of the colony trade is of no real use, but the reverse, to the mother country. If, as has been already observed, she can supply her colonists with goods as cheaply as they can be supplied by others, she will have no competitors in their markets; and if she cannot do this, the monopoly is really hostile to her interests. Each country has some natural or acquired capabilities that enable her to carry on certain branches of industry more advantageously than any one else. But the fact of a country being liable to be undersold in the markets of her colonies, shows conclusively, that instead of having any superiority, she labours under a disadvantage, as compared with others, in the production of the peculiar articles in demand in them. And hence, in providing a forced market in the colonies for articles that we should not otherwise be able to dispose of, we really engage a portion of the capital and labour of the country in a less advantageous channel than that into which it would naturally have flowed. We impress upon it an artificial direction; and withdraw it from those secure and really beneficial businesses in which it would have been employed, to engage it in businesses the existence of which depends only on the continuance of oppressive regulations, and in which we are surpassed by foreigners.

Even were it conceded that the possession of an outlet in the colonies for goods that could not otherwise be disposed of, was an advantage, it is one that can exist in theory only. Practically it can never be realised. The interests of the colonists, and the dexterity and devices of the smuggler, are too much for Custom-house regulations. Cheap goods never fail of making their way through every obstacle. All the tyrannical laws and *guarda costas* of Old Spain did not hinder her colonies from being glutted with prohibited commodities. And we may be assured that the moment a competitor appears in the field capable of supplying the Canadians and people of Jamaica with cottons, woollens, hardware, &c. cheaper than we can supply them, that moment will they cease to be our customers. All the revenue officers, and all the ships of England, supposing them to be employed for that purpose, would be unable to avert this result.

The consequences of the American war should have led to sounder opinions than those that are still current as to the value of the monopoly of the colony trade. Has

the independence of the United States been in any respect injurious to us? So far from this, it is certain that it has redounded materially to our advantage. We have been relieved from the expense and trouble of governing extensive countries at a great distance from our shores, at the same time that we have continued to reap all the advantage that we previously reaped from our intercourse with them. It is visionary to imagine that we could have succeeded either in preventing them from establishing manufactories at home, or from importing products from abroad, had any one been able to undersell us. Our command of the American market depends, at this moment, on the very same principle—the comparative cheapness of our goods—on which it depended when we had a governor in every state. So long as we preserve this advantage, we preserve the only means by which the monopoly of any distant market can be maintained, and the only means by which such monopoly is rendered of the least advantage.

Being integral parts of the empire, the trade with the colonies should, as far as circumstances will permit, be conducted on the footing of a coasting trade. The state of the revenue requires that moderate duties should be laid on sugar, coffee, and rum, when imported into Great Britain or Ireland; but the duties on cotton, cocoa, and most other colonial products, might be repealed without injury to the revenue, and with advantage to all parties. Unfortunately, however, the system we pursued down to a late period was in most respects the reverse of what it should have been. By excluding the colonists from the cheapest markets for their food and lumber, we artificially raised the cost of their produce; and then, to protect them from the consequences of such short-sighted policy, we gave them a monopoly of the British market! It is thus that one unjust and vicious regulation is sure to give birth to others; and that those who depart from sound principle have nothing left but to endeavour to bolster up one absurdity by another. It is time, surely, that an end were put to every vestige of so ruinous a system. It is as much for the interest as it is the *duty* of England, to remove all restrictions from the colonists, not essential for the sake of revenue: for this is the only means by which she can provide for their real prosperity, by turning their industry into those departments for the prosecution of which they are naturally fitted, and rid herself of those monopolies that form the heaviest clog upon her industry.

We could not, however anxious, exclude manufactured articles, and such foreign goods as are valuable without being very bulky, from our West India islands, provided they were offered cheaper by others. But such is not the case with lumber, provisions, &c. They are too bulky to be easily smuggled; and may be, and indeed were, very much raised in price by restrictions on their importation. For many years, all direct intercourse between our West India colonies and the United States was interdicted; and, in consequence, the planters were compelled either to supply themselves with lumber, staves, &c. by a distant voyage from Canada, or, which was by far the most common practice, from the United States, through the circuitous and expensive channel of St. Thomas and other neutral islands! In papers laid by the West India merchants and planters before the House of Commons (No. 120. Session 1831), they estimated the increased expense they thus incurred on lumber, staves, flour, shingles, fish, &c. at 15 per cent. of the entire value of these articles, or at 187,576*l.* a year. And it will be observed, that no part of this sum went into the pockets of any British merchant. It went wholly to indemnify the Americans and others for being obliged to bring their products round about by St. Thomas, instead of direct from the States.

This system grew out of the American war; but it is due to Mr. Pitt to state that it received no countenance from him. On the contrary, he introduced a bill, in 1785, for reviving the beneficial intercourse that existed previously to the war, between the United States and the West India islands. But being opposed by a powerful party in parliament, and by the ship owners and Canada merchants, he was obliged reluctantly to withdraw the bill. The following remarks of Mr. Bryan Edwards on this subject, written in 1794, are too interesting to be omitted.

"This," says he, "is not a business of selfishness or faction; nor (like many of those questions which are daily moved in parliament merely to agitate and perplex government) can it be dismissed by a vote. It will come forward again and again, and haunt administration in a thousand hideous shapes, until a more liberal policy shall take place; for no folly can possibly exceed the notion that any measures pursued by Great Britain will prevent the American states from having, some time or other, a commercial intercourse with our West Indian territories on their own terms. With a chain of coast of 20° of latitude, possessing the finest harbours for the purpose in the world, all lying so near the sugar colonies and the track to Europe, with a country abounding in every thing the islands have occasion for, and which they can obtain no where else; all these circumstances necessarily and naturally lead to a commercial intercourse between our islands and the United States. It is true we may ruin our sugar colonies, and ourselves also, in the attempt to prevent it; but it is an experiment which God and nature have marked out as impossible to succeed. The present restraining system is forbidding men

to help each other; men who, by their necessities, their climate, and their productions, are standing in perpetual need of mutual assistance, and able to supply it."—(*Hist. West Indies*, Preface to 2d ed.)

We have also thought fit to interdict the West Indians from the refining, or, as it is technically termed, the *claying* of sugars. This is one of the few manufactures that might be advantageously set up in the islands. The process adds considerably to the value of sugar; and it might be carried on in the buildings, and by the hands, that are required to boil the cane, or to prepare the raw or muscovado sugar. Instead, however, of being allowed to refine their sugars on the spot, and where it might be done for a third part of the expense that is required in England, the planters have been prohibited from engaging in this branch of industry; and have been obliged to export all their sugars, either raw or crushed, to England. Nothing can exceed the oppressiveness of such a regulation; and what is most singular, it has not been enforced, like most regulations of the sort, in order to bolster up any of the leading interests of the country, but merely to give a factitious employment to a very small class,—that of the sugar refiners, whose natural residence is in the West Indies. The planters and merchants estimated (in 1830) the loss caused by this preposterous regulation at 75,550*l.* a year; and we regret to say that it is still enforced.

The distillation of spirits from sugar has only been occasionally allowed; but provided the duties were so adjusted as to give no advantage to the planters over the growers of barley, or to the latter over the former, we think the distillers should be, at all times, allowed to distil indiscriminately from sugar, molasses, or grain. It is the business of government to take care that the duties be so arranged as to give no unfair advantage to one party over another; but, having done this, it should do nothing more. To prohibit distillation from sugar, that a forced market may be opened for grain; or distillation from grain, that a forced market may be opened for sugar; are interferences with the freedom of industry, for which no good reason has been, nor, we believe, can be assigned.

(2.) *Relaxation of the Monopoly.* — But though a good deal remains to be done, it is not to be denied that a very material progress has been made towards the adoption of a sound system of colonial policy since 1822, when measures for the relaxation of the monopoly were introduced by Mr. Robinson (now Lord Ripon). These measures were farther followed up by Mr. Huskisson in 1825, by the act 6 Geo. 4. cap. 114.; and since his time by the 3 & 4 Will. 4. cap. 59. and more recently by the 5 & 6 Vict. cap. 49., which came into operation in the West Indies on the 5th of April last (1843). These acts have repealed several of the prohibitions that formerly existed against the importation of certain articles into the West Indian colonies and the Mauritius, and they have also either repealed or very materially reduced the duties that were previously laid on others. For example, the barrel of American or other foreign flour, that down to the present year paid a duty of 5*s.*, may now be imported on paying a duty of 2*s.* Most other duties on articles of food have been reduced in the same proportion; and rice, wood, and lumber, articles of great importance in the colonies, which formerly paid high duties, may now be imported duty free. — (See *post.*) We believe, indeed, that it would be sound policy to carry still farther this liberal system, by entirely repealing the duties on flour, salt meat, and all other articles of provision. Jamaica and our other West Indian colonies, may be viewed as immense sugar, rum, and coffee manufactories, which, though situated at a distance from England, belong to Englishmen, and are carried on by English capital. But to promote the prosperity of any manufacture, without injury to others, there are no means, at once so obvious and effectual, as to give those engaged in it the means of carrying it on with the least outlay, and to keep the duties on its produce as low as possible. And, how much soever we may fail in the last of these necessary conditions, we have now but little to reproach ourselves with in regard to the former. It were better certainly that the duties on necessaries imported into the colonies should be wholly repealed; but if they are to be retained, those imposed by the late act are as moderate as can well be desired.

Formerly, though American and other foreign flour could not be imported from a foreign country into the West India islands without paying a duty of 5*s.* a barrel, it might be imported free of duty into Canada and our other possessions on the continent of N. America, and be thence exported in British ships to the islands free of duty. In consequence of this regulation a large proportion of the flour, lumber, and other articles required for the supply of the islands, instead of being shipped direct for them from New Orleans, Baltimore, and other American ports, was sent in the first instance to Canada, whence it was conveyed in British ships to its final destination. So that the influence of the duty was not so much to raise a revenue, or to open a market for the flour, provisions, and lumber of Canada, as to make the flour and other necessaries supplied to the colonists by the United States be carried, at a heavy expense, a roundabout voyage of some 2,000 miles and transhipped, that employment might be found for a few

thousand tons of British and colonial shipping! But this preposterous system is happily at an end. American flour is now charged with a duty of 3*s.* a barrel in Canada; and, independently of this, the duties on foreign articles directly imported into the colonies are too low to give any encouragement to their indirect conveyance.

It is, however, not a little singular, that while the imperial legislature has thus endeavoured, by repealing and lowering the duties on most articles of foreign produce, to provide for the future prosperity of the colonies, the legislature of Jamaica should have passed an act imposing heavy duties on the same articles. Luckily, however, this most impolitic act expires on the 31st of December 1843 and government has most properly directed the governor to refuse his assent should it be attempted to renew it, or to propose any similar measure.—(*Parl. Paper* No. 292. Sess. 1843.)

Hitherto, however, concession has been all on the one side; and while we have all but emancipated the trade of the colonies, and allowed them to resort to all the markets of the world, we confine our demand for colonial produce exclusively to their markets. So long, indeed, as the colonists were compelled to take all that they wanted from us, it was but fair that we should be compelled to take the sugar and other articles with which they could supply us exclusively from them. But having liberated them from this obligation, and permitted them to resort to whatever markets they think most advantageous, where is the justice or policy of continuing to confine the people of the U. Kingdom to their markets? This, of all possible cases, is that in which reciprocity would seem to be most desirable. If it be right, as no doubt it is, that the planters of Jamaica should, if they deem it most for their interest, be allowed to draw supplies of flour, provisions, and manufactured goods from New Orleans or Baltimore, on what pretence is the British manufacturer or merchant to be prevented from importing sugar from Rio, the Havannah, or Batavia?

Having done so much to abolish prohibitions on one side, we are bound to do as much for their abolition on the other. Having deprived the merchants and manufacturers of the U. Kingdom of the monopoly of the colony market, we cannot, without violating every principle of consistency and justice, refuse to deprive the colonists of the monopoly of the British markets. Indeed the ablest and most zealous defenders of the colony system have admitted that one part of it could not be supported independently of the rest, that it is of a piece, and must either stand or fall together. "The British dominions," says Lord Sheffield, "*are as much entitled to the markets of the British West Indies, as the latter are entitled to those of the former, and whenever that monopoly is given up it* WILL BE THE HIGHEST ABSURDITY NOT TO OPEN ALL THE BRITISH PORTS TO FOREIGN RAW SUGARS."—(*Observations on the Commerce of the American States*, p. 288.) Inasmuch, indeed, as the well-being and prosperity of the people of the U. Kingdom is of incomparably more importance than that of the West Indian colonists, every argument that has been or that may be brought forward to show the impolicy of the restraints on the trade of the latter, applies with tenfold force to those laid on the trade of the former.

Influence of the Monopoly on the Sugar, Timber, &c. imported into the U. Kingdom. — It appears from the official returns given in the Parl. Paper No. 226. Sess. 1843, that during the three years ending with 1842, 3,840,309½ cwts. sugar were annually retained for home consumption in the U. Kingdom; and it farther appears, from the same return, that while the average price of British muscovado sugar during that period was 41*s.* 10½*d.* a cwt., the average price of Brazil sugar was only 20*s.* 2*d.* a cwt. Hence it follows that if the present prohibitory duty of 63*s.* a cwt. on foreign sugar had been reduced to the same level (24*s.*) as that on British colonial sugar, we might have purchased the same supply of sugar for 20*s.* 2*d.* a cwt. that cost us 41*s.* 10½*d.*, which, on the average quantity consumed during the last three years, would have been a total saving in this single article of no less than 4,168,335*l.* a year! But it may, perhaps, be said, that, had our ports been open to the free importation of Brazil and other foreign sugars, the price of the latter would have been raised; and so, probably, it would; though, considering the vast extent and productiveness of the field from which sugar may now be brought, we doubt whether this effect would be very sensible. But supposing that the opening of our ports had raised the price of foreign sugar from 20*s.* 2*d.* to 25*s.* a cwt., still the saving would have amounted to 3,240,260*l.* 6*s.* a year!—(See art. SUGAR.)

This is bad enough, certainly: but this is not all. Not only do we force the people of the U. Kingdom to pay the planters of the West India islands and the Mauritius twice the price for their sugar for which they could supply themselves with equally good foreign sugar, but, in order to force a trade with Canada, we admit its inferior timber at a duty of 1*s.* a load, while we impose a duty of 25*s.* a load on the superior timber brought from the Baltic and other foreign countries.—(See art. TIMBER.) It is needless to dwell on the glaring impolicy of such *felo de se* regulations. In Great Britain sugar is no longer a luxury but a necessary; and the largest supply of the best and cheapest timber is of the last importance to a manufacturing nation possessed of a great mercantile and warlike navy. And yet we load these indispensable articles with

oppressive duties, not for the sake of revenue, but merely that we may consume the produce of Jamaica and Canada rather than of Brazil or Prussia. It is surely impossible that we should continue to subject ourselves to such burdens for such an object. If sugar cannot be as cheaply produced in Jamaica and our other islands as in Brazil and Cuba, its culture must be a public loss, and should be abandoned for the culture of other articles more suitable to their peculiar capacities. It might, no doubt, be wrong at once to reduce the duty on foreign sugar to the same level as that on the sugar brought from our colonies. But the duties on the former should be progressively, and not very slowly, lowered, till they are reduced to the same level as those on the latter. The monopoly against the colonies having been abandoned, it is not to be endured that the monopoly against the mother country should be indefinitely prolonged.

The expense of the colonies is, also, a very heavy item in the national expenditure — far more so than is generally supposed. Not only are we subjected to oppressive discriminating duties on foreign articles, that similar articles from the colonies may enjoy the monopoly of our markets, but we have to defray a very large sum on account of their military and naval expenditure. There are no means by which to estimate the precise amount of this expense; but it is, notwithstanding, abundantly certain, that Canada and the islands in the West Indies cost us annually, in military and naval outlays, upwards of a *million and a half in time of peace, exclusive of the revenue collected in them.* And if to this heavy expense be added the vast additional sums their defence costs during war, the debtor side of a fairly drawn up colonial budget would attain to a very formidable magnitude; and one which we apprehend could not possibly be balanced.

With the exception of the outlet which they afford to emigrants (which, however, is not so great as that afforded by the U. States), we have yet to learn what are the advantages we derive from our colonies in N. America. They do not, we are bold to say, furnish a single article which we might not import at a less cost from elsewhere; and if we said that their occupation costs us directly and indirectly (through the unjust preference given to their products in our markets) the sum of 3,500,000*l.* a year, over and above every countervailing advantage, we are pretty confident we should be considerably within the mark. Some, if not all, of our West India colonies are in the same, or nearly the same predicament. And on the whole, it is all but certain that we should be considerable gainers by providing, under judicious regulations, for the independence of our transatlantic dominions.

In entertaining this opinion we are not singular. "If," said Lord Sheffield, "we have not purchased our experience sufficiently dear, let us derive a lesson of wisdom from the misfortunes of other nations, who, like us, pursued the phantom of foreign conquest and distant colonisation; and who, in the end, found themselves less populous, opulent, and powerful. By the war of 1739, which may be truly called an American contest, we incurred a debt of upwards of 31,000,000*l.*; by the war of 1755 we incurred a further debt of 71,500,000*l.*; and by the war of the revolt we have added to both these debts nearly 100,000,000*l.* more! And thus we have expended a far larger sum in defending and retaining our colonies, than the value of all the merchandise we have ever sent them. So egregious has our impolicy been, in rearing colonists for the sake of their custom!" — (*On the Commerce of the American States*, p. 240.)

We hope it will not be supposed, from any thing now stated, that we consider the foundation of colonial establishments as, generally speaking, inexpedient. We entertain no such opinion. We do not object to the establishment of colonies, provided they be placed in advantageous situations, but we do object to the trammels that have been laid on their industry, the interference exercised by the mother countries in their domestic concerns, and the attempts to govern and coerce them after they have attained to maturity. Every individual should have full liberty to leave his native country; and occasions very frequently occur, when governments may advantageously interfere to settle emigrants in foreign countries, and when the soundest policy dictates the propriety of their supporting and protecting them until they are in a situation to support and protect themselves. There can be no question that Europe has been prodigiously benefited by the colonisation of America. The colonists carried the arts, the sciences, the language, and the religion of the most civilised communities of the Old World to regions of vast extent and great natural fertility, occupied only by a few miserable savages. The empire of civilisation has in consequence been immeasurably extended: and while the experience afforded by the rise and progress of communities placed under such novel circumstances, has served to elucidate and establish many most important and fundamental principles in government and legislation, Europe has been enriched by the vast variety of new products America has afforded to stimulate the inventive powers of genius, and to reward the patient hand of industry.

But whatever may have been the advantages hitherto derived from the colonisation of America, they are trifling compared to what they would have been, had the European

powers left the colonists at liberty to avail themselves of all the advantages of their situation, and avoided encumbering themselves with the government of extensive territories 3,000 miles distant. Fortunately, however, a new æra has begun — *Novus sæclorum nascitur ordo!* The monopoly of the trade of America is destroyed, and her independence achieved. From Canada to Cape Horn, every port is ready to receive adventurers from Europe; and a boundless field has, in consequence, been opened for the reception of our surplus population, and for the advantageous employment of European arts, capital, and skill. The few remains of the old colonial system which still exist, cannot be of long duration. Their mischievous operation is no longer doubtful, and they will disappear according as the knowledge of sound commercial principles is more generally diffused.

The colonisation of Australia will also contribute in no ordinary degree to extend the blessings of civilisation; and there can be no doubt that this newly discovered quarter of the globe, the native inhabitants of which were still fewer in number and more barbarous than those of America, is destined, at no very remote period, to be the seat of flourishing communities: and while they preserve the language and literature, it is to be hoped that they may also pursue the mild, liberal, and tolerant policy, of the illustrious people from whom it should ever be their proudest boast to have descended.

(3.) *Slavery.* — Since the publication of the first edition of this work, a vast change has been effected in the condition of society in our West India colonies and the Mauritius, by the abolition of slavery, under the provisions of the act 3 & 4 Will. 4. cap. 73. (See art. SLAVES AND SLAVE TRADE.)

In the second edition of this work, published soon after the act for the abolition of slavery had been passed, and before its provisions had been carried into effect, we ventured to speculate as follows on its probable results: —

"Nothing but vague conjectures can, of course, be indulged in as to the future working of this measure in the colonies. We believe, however, that those who have contended that it will not be productive of any falling off in the industry of the blacks will be found to have taken a very erroneous view of the matter. Field labour in the West Indies has hitherto been always associated with slavery and degradation, and been enforced by the lash. The fair inference, consequently, is, that when the fetters are struck off the slave, and he is left to follow his own inclinations, he will be desirous of escaping from what he cannot fail to consider an ignominious occupation. Necessity, no doubt, will prevent him from becoming altogether indolent; but the effect will in this, as in other instances, be proportioned to its cause: and necessity in the West Indies is very different from necessity in Europe. Most articles that are here deemed indispensable, would there be positive incumbrances; and those essential to subsistence may be procured with less, certainly, than half the labour hitherto exacted from the slaves. At some future period, perhaps, when the recollection of their degradation has begun to fade, and a taste for conveniences and gratifications has been introduced amongst them, they may become more industrious; but this is a distant and a very uncertain prospect. We therefore look, at first, for a very considerable decline in the industry of the slaves, and a proportional falling off in the exports from the islands."

It will be seen, from the returns given in a subsequent part of this article, that these anticipations have been more than realised, and that there has been a most extraordinary falling off in the imports from the colonies. We confess, also, that we are a good deal more sceptical than formerly in our anticipations of their future increase. Industry, when carried on by free labourers, is prosecuted only as a means by which they may acquire an adequate supply of necessaries and conveniences. And it is all but contradictory and absurd to suppose that a population with few wants, occupying a soil of great natural fertility, lying under a burning sun which unfits for exertion, should voluntarily engage in severe, and, to them, useless labour. We believe, indeed, that it will be found wholly impossible, except under peculiar circumstances, to carry on the culture of sugar on its present plan, in tropical countries, by the agency of *really* free labourers. Hayti, formerly the most important and productive of all the sugar colonies, does not now produce a single cwt. of sugar. Mexico is, also, fast relapsing into the most deplorable barbarism (see *Geog. Dict.*, art. *Mexico*); and experience seems to show that some sort of modified slavery, or, which is the same thing, of compulsory labour, is indispensable to the successful prosecution of industry in tropical countries. It is to this that the extraordinary increase of produce in Java is to be ascribed; and, how much soever we may cry out against the slavery of the U. States, there cannot, we apprehend, be a doubt that its existence, how objectionable soever in many respects, is necessary to the advantageous cultivation of the Southern states. It is the same in Cuba and Brazil. Were their slaves emancipated, may it not be fairly presumed that they would gradually, and not very slowly, sink into the state of Mexico and Hayti? and that instead of an extensive culture of sugar and other articles for foreign demand, the bulk of the population would be satisfied if they supplied themselves with those

necessary for their subsistence? We need not, therefore, wonder that the projects for slave emancipation should make but little progress among the Americans, Brazilians, and Cubans. Whether the West India colonies cease to produce sugar and cotton is a matter of excessively little importance to the people of Britain; but it is a matter of the very last importance to the white people of the Southern states of America, of Brazil, and of Cuba; and they will be much to blame if they do not exercise extreme caution in legislating upon this most delicate matter. Perhaps the better policy will be for them gradually to relax the rigours of servitude, and to endeavour to improve the character and condition of the slaves, so as to fit them the better for emancipation, which may, probably, in the end be forced upon them: but they should carefully eschew all rash or precipitate measures.

III. Magnitude, Population, Trade, etc. of the British Colonies.

Notwithstanding the loss of the U. States, the colonies of Great Britain, exclusive of India, exceed in number, extent, and value, those of every other country. Previously, indeed, to the breaking out of the late contests, the colonial dominions of Spain far exceeded in extent and importance those of any other power. But Cuba, Porto Rico, and the Philippine Islands are now all that remain to her. These, indeed, are very valuable possessions, though inferior to those of England.

(1.) *North American Colonies.* — In N. America we possess the provinces of Lower and Upper, or of East and West Canada, Nova Scotia, New Brunswick, Prince Edward's Island, and their dependencies. The situation and boundaries of these provinces will be more easily learned from the inspection of the accompanying map, than they could be from any description. The shores of Nova Scotia and New Brunswick are washed by the Atlantic Ocean; and the noble river St. Lawrence, by its communication with the great American lakes, gives to Canada all the benefits of a most extensive inland navigation, and forms a natural outlet for her surplus produce, as well as for the surplus produce of that part of the U. States which is washed by the lakes. There is every variety in the soil and climate of these regions. In Lower Canada, the winter is very severe. The surface of the country is covered with snow for nearly half the year. From the beginning of December to the middle of April, the St. Lawrence is frozen over, and affords a smooth and convenient passage for the sledges by which it is then covered. But though severe, the climate is far from being unhealthy or disagreeable. The weather is generally clear and bracing; and the labour of artisans, at their out-door employments, is rarely suspended for many days in succession. On the breaking up of the ice in the latter end of April, or the beginning of May, the powers of vegetation almost immediately resume their activity, and bring on the fine season with a rapidity that is astonishing to a stranger. The highest temperature in Lower Canada varies from 96° to 102° of Fahrenheit; but the purity of the atmosphere abates the oppressive heat that is felt in most countries where the mercury ranges so high; and the weather is, on the whole, decidedly pleasant.

That part of the province of Upper or West Canada, which stretches from Lake Simcoe and the rivers Trent and Severn, westward to Lake Huron and the St. Clair River, and southward to Lake Erie, and part of Lake Ontario, has a soil of extraordinary fertility, capable of producing luxuriant crops of wheat, and every sort of grain. "The climate," says Mr. Bouchette, late surveyor-general of Lower Canada, "is so particularly salubrious, that epidemic diseases, either among men or cattle, are almost entirely unknown. Its influence on the fertility of the soil is more generally perceptible than it is in Lower Canada, and is supposed to be congenial to vegetation in a much superior degree. The winters are shorter, and not always marked with such rigour as in the latter. The duration of frost is always accompanied with a fine clear sky and a dry atmosphere. The spring opens, and the resumption of agricultural labours takes place, from 6 weeks to 2 months earlier than in the neighbourhood of Quebec. The summer heats rarely prevail to excess, and the autumns are usually very friendly to the harvests, and favourable for securing all the late crops." — (*Bouchette's Topographical Description of Canada*, p. 595.) The ground on the shores of Lake Ontario and Lake Erie, as far west as the junction of the Thames with the St. Clair Lake, is laid out in townships, and partly settled. But the population is still very thin. To the north of the river Thames, along the banks of the St. Clair, and the shores of Lake Huron, round to the River Severn, and thence to the river that joins Lake Nippissing and Lake Huron, is a boundless extent of country that is almost entirely unoccupied. The interior of this space has hitherto been but imperfectly explored; but the banks of the St. Clair and the shores of Lake Huron afford the finest situations for settlements. The soil is in many places of the greatest fertility, the river and lake teem with fish, and every variety of the best timber is found in the greatest profusion.

The winters in the provinces of Nova Scotia, Prince Edward's Island, and New Brunswick are more severe than in Upper Canada, and they are a good deal infested

with fogs and mists. But their proximity to England, and their favourable situation for the fishing business, give them considerable advantages.

In addition to the above, we possess the Hudson's Bay territory, a tract of vast extent, but situated in an inhospitable climate, and worth very little except as hunting grounds. We also possess the large islands of Newfoundland and Cape Breton, the latter being a dependency of Nova Scotia; but their soil is barren, and the climate severe and foggy; so that they are valuable principally as fishing stations.

The following table exhibits the population, area, and surveyed and unsurveyed lands in the different N. American colonies in 1842:—

Colony.	Population (and date of census.)	Area.	Surveyed or granted.	Unsurveyed or ungranted.	Available for Settlement.
		Acres.	Acres.	Acres.	Acres.
Eastern (Lower) Canada - -	(1842) 700,000 ?	132,000,000	2,734,735 sd.	118,980,000 uns.	5 to 6,000,000
Western (Upper) Canada - -	(1842) 600,000 ?	64,000,000	1,326,343 sd.	3,180,000 uns.	3,754,000
New Brunswick - -	(1840) 156,162	16,500,000	No Return.	13,817,573 ung.	11,000,000
Prince Edward's Island - -	(1842) 47,000 ?	1,360,000	No Return.	6,000 ung.	No Return.
Newfoundland - - -	(1836) 75,094	23,000,000	23,000 sd.	No Return.	No Return.
Nova Scotia - - -	(1838) 142,543	8,000,000	5,750,000 gr.	2,225,000 ung.	280,000

Total emigration of the 18 years - 504,944							

Of these, the great majority have been destined for Upper Canada. — (For the total emigration from the U. Kingdom, see PASSENGERS.)

Information for Emigrants to British North America. — In January 1840 a board of "Colonial Land and Emigration Commissioners" was appointed. It consists of three commissioners, whose proceedings are guided by instructions from the secretary of state for the colonies, and their practical duties may be divided under three heads:—

The sale of colonial lands.

Superintendence of emigration.

Diffusion of information in respect of the colonies.

1. The functions of the commissioners under the first head do not extend to the North American colonies. The crown having placed the revenue derived from the sale of their waste lands at the disposal of the local legislatures, these lands are, of course, disposed of by the authorities on the spot.

2. The board endeavours, in as far as possible, to protect poor emigrants from imposition, and from the effects of improvident arrangements on their parts, and takes care that the provisions of the Passengers Act, 5 & 6 Vict. c. 107., are duly carried out and enforced.

3. The board publishes from time to time such authentic information as they may receive on matters connected with the settlement of waste lands in the colonies, the prices of the principal articles of colonial produce, the wages of labour, and such other matters as may appear to be useful to persons who propose to settle in the colonies. They likewise answer all applications from individuals, and afford them, so far as may be in their power, such information as may be adapted to their particular cases.*

No pecuniary assistance is afforded by government to parties desirous of proceeding to the N. American colonies; and emigrants after their arrival no longer receive grants of land, that being now wholly disposed of in the way stated below.

But though government makes no gifts at the public expense to emigrants to N. America, it maintains agents at the principal colonial ports, whose business is to protect emigrants from imposition upon their first landing, to acquaint them with the demand for labour in different districts, to point out the most advantageous routes, and to furnish them with useful advice upon the objects which they have had in view in emigrating, without making any charge for the same. Persons newly arrived should not omit to consult these agents, and should avoid detention in the ports, where they are exposed to all kinds of imposition, and pretences for keeping them at taverns till any money they may possess has been expended.

Passage. — Emigrants intending to settle in Canada will find it in all respects more advantageous to proceed by Quebec.

The cost of a steerage passage to Quebec, including provisions during the voyage, varies from 5*l.* to 6*l.*; and without provisions, beyond the legal allowance, from 3*l.* to 3*l.* 15*s.*, according to the port from which the party sails.

The usual length of the voyage is about 46 days.

The prices to New Brunswick are about the same as to Quebec; those to Halifax in Nova Scotia are rather higher.

The cost of a cabin passage to the above-mentioned colonies depends upon the accommodation required, and the port at which the emigrant embarks. It varies from 12*l.* to 20*l.*, being cheaper from Irish than English ports.

Half these prices are generally charged for children between 1 and 14 years of age; and for children under 1 no charge is made.

The best months for leaving England are March and April; the later emigrants do not find employment so abundant, and have less time in the colony before the commencement of winter.

For information respecting the cost of passage and probable opportunities of sailing, application should be made to the government emigration agents at the various ports at which they are stationed; but no party need apply who does not intend to pay his own passage. The following are the ports at which agents are established:—London, Liverpool, Leith, Greenock, Belfast, Londonderry, Sligo, Limerick, and Cork.

The following notification was put forth in 1843 by Messrs. Carter and Bonus, eminent shipping agents:—

"Ships will be despatched from London to Quebec and Montreal at short intervals during the ensuing season, by which steerage passengers may be conveyed at the following *reduced* rates:—

	To Quebec.	To Montreal.
For each person 14 years of age and upwards - - -	5*l.* 7*s.* 6*d.*	5*l.* 15*s.* 0*d.*
For each child of 1 and under 14 years of age - - -	2 13 9	2 17 6

Infants under 1 year old free of charge.

In these rates are included provisions on an ample *and much improved* scale, as below; medicines, medical comforts, sleeping-berths, cooking-hearth and fuel, mess-bowls, plates, and hook-pots, and emigrant tax in Canada.

The passengers must provide themselves with bedding, small casks or metal bottles for containing water, knives and forks, and spoons.

Luggage will be taken free of charge in the proportion of ten cubic feet for each adult, and five cubic feet for each child between 1 and 14 years old; and any further quantity will be subject to a charge of 6*d.* per cubic foot for freight.

Half passage money is required to be paid when berths are engaged, and the remainder at or before embarkation; and parties who engage passage for themselves or others, who shall fail to embark on the day appointed, will be required to forfeit and pay half the passage money, whether their places shall be filled by others or not.

A properly qualified surgeon will be appointed to each ship carrying passengers equal to 100 adults or upwards.

Ships will be sent to any good and safe out-ports at which sufficient numbers of emigrants may be collected.

These ships will be despatched on fixed days, with STRICT PUNCTUALITY.

* The office of the commissioners is at No. 9, Park Street, Westminster.—Secretary, Stephen Walcott, Esq.

Scale of Allowance of Provisions for each Person, Male and Female, above 14 Years of Age.

Days.	Preserved Meat.	Pork.	Beef.	Rice.	2nd Cabin Bread.	Potatoes.	Flour.	Split Peas.	Suet.	Sugar.	Tea.	Cheese.	Oatmeal.	Vinegar.	Water.
	lb.	lb.	lb.	lb.	lb.	lb.	lb.	pt.	oz.	oz.	oz.	lb.	pt.	pt.	qts.
Sunday	½	-	-	-	½	1	½	-	1	1	½				3
Monday	-	½	1	-	½	1	½	¼	1	1	½				3
Tuesday	-	-	-	¼	½	1	½	-	1	1	½				3
Wednesday	½	-	-	-	½	1	½	-	1	1	½				3
Thursday	-	½	-	-	½	1	½	¼	1	1	½	½ Weekly.	1 Weekly.	½ Weekly.	3
Friday	-	-	-	1	½	1	½	-	1	2	½				3
Saturday	-	-	½	-	½	1	½	-	1	1	½				3
	1	1	1	1	3½	7	3	½	6	8	1¾	½	1	½	21

For each child, male and female, from 1 to 14 years of age, one half the above allowances.

When the potatoes are expended, ½ lb. of rice to be issued daily in lieu of 1 lb. of potatoes.

In case of the occasional substitution of any of the following articles —

½ lb. raisins, or ½ lb. currants, is considered equal to - - - - - 1 lb. beef or pork.
¼ suet - - - - - 1 do. do.
1¼ fish - - - - - 1 do. do.
1 flour - - - - - 1 bread.
1 rice, or 1 pint oatmeal - - - 1 bread or flour.
5 potatoes - - - - - 1 do. do.

N. B. Passengers have the option of agreeing upon the above terms, or of being supplied by the ship with those provisions only *which are required by the Passengers Act*, viz. for each adult, 7 pounds of bread, biscuit, flour, oatmeal, or rice per week, of which at least one half must be bread or biscuit, and potatoes may be employed for the remainder, in the proportion of 5 pounds of potatoes to 1 pound of the other articles enumerated. Half allowance for each child between 1 and 14 years old. The charge in this case, including water as above, medicines, medical comforts, sleeping-berths, cooking-hearth, fuel, and emigrant tax, is 3*l.* 15*s.* to Quebec, and 4*l.* 2*s.* 6*d.* to Montreal, for each adult, and half price for children between 1 and 14 years of age. Such passengers are allowed to take any reasonable quantity of provisions for their own use in addition to the breadstuffs above stated, but no person will be permitted on any account to bring intoxicating liquors on board."

The conveyance of passengers to foreign parts is regulated by the 5 & 6 Vic. cap. 107., of which the following are the principal regulations respecting voyages to North America.

No vessel proceeding to any place out of Europe, not being within the Mediterranean Sea, to carry more than 3 persons (master and crew included) to every 5 tons' burden; nor, whatever be the tonnage, more than 1 passenger to every 10 clear superficial feet of the space appropriated for the use of the passengers, under a penalty not exceeding 5*l.* for every passenger in excess. The lower deck must be not less than 1¼ inch in thickness, and laid and secured in a certain manner. The height between decks is to be 6 feet at least. There must not be more than 2 tiers of berths; the bottom of the lower tier to be 6 inches above the deck. The berths not to be less than after the rate of 6 feet in length and 18 inches in width for each passenger, and to be securely constructed. At least 3 quarts of water per diem to be issued to each passenger, and a supply of provisions not less often than twice a week, at the rate of 7 lbs. of breadstuffs per week; half at least to be bread or biscuit, the other half may be potatoes, of which 5 lbs. are to be reckoned as equal to 1 lb. of breadstuffs. The water to be taken in tanks or sweet casks, none exceeding 500 gallons in capacity.

The length of the voyage to N. America to be computed at 10 weeks. 2 children under 14 to be reckoned equal to 1 passenger. Children under 1 not to count. Provisions and water to be inspected and surveyed by the government emigration agents, or, in their absence, by the officers of customs Seaworthiness of vessels to be ascertained by those officers, who may order a survey if necessary. Sufficient boats to be taken. Two copies of the act to be kept on board, to be produced to the passengers on demand. A proper supply of medicines, &c., with directions for their use, to be provided for the voyage. The sale of spirits prohibited under a penalty not exceeding 100*l.* Lists of passengers to be delivered by the master to proper officers previous to clearance, and counterparts to be deposited with officers of customs or consuls at final port of discharge. Same regulations in respect to additional passengers taken on board after clearance.

Parties contracting to find passages to North America to give written receipts in a prescribed form for money received, under a penalty not exceeding 10*l.*, and forfeiture of licence if a passage broker. No person, except owner or master of the ship, to act as a passage broker or dealer, unless licensed by magistrates at the petty or quarter sessions, under a penalty of 10*l.* for each offence. Brokers liable to a penalty of 10*l.* and forfeiture of licence if they receive passage money as agents for others without written authority from their principals, or if they fraudulently induce persons to engage passages. In case the contract for a passage is not performed on the shippers' part, the aggrieved parties, unless maintained at the contractors' expense, and provided within a reasonable time with a passage to the same place, may recover by summary process, before 2 justices of the peace, any passage money they may have paid, with a sum not exceeding 10*l.* as compensation. Passengers to be victualled during detention of ships; but if detention (except caused by wind or weather) exceed two clear working days, to receive instead 1*s.* per diem, unless suitably lodged and maintained with their own consent by the contractor. Passengers not to be landed against their consent at any place but the one contracted for, and to be maintained on board for 48 hours after arrival, unless the ship, in the prosecution of her voyage, quits the port sooner. The master is to afford every facility to the proper officers for inspecting the ship, communicating with the passengers, and ascertaining that the act has been duly observed. The owners and charterers, or, in their absence, some approved person on their behalf, and the master of vessels carrying more than 50 passengers, must, before clearance, give bond, without stamp, to the Crown, for the due performance of the act. Passengers suing under the act for monies made recoverable due to their use not to be deemed on that account incompetent witnesses. The act extends to foreign as well as British ships; but not to vessels carrying fewer than 30 passengers, nor to cabin passengers. It reserves to passengers their right to proceed at law for any breach of contract; and imposes a penalty not exceeding 50*l.* for the breach of any of its provisions, except in the 5 cases where specific penalties are affixed.

The enforcement of this law rests with the government emigration agents, and the officers of H. M. customs. Persons, therefore, having complaints to make of its infraction, should apply to these officers, who alone can enforce the various *penalties*.

Besides the sea voyage from England, persons proceeding to Canada should be provided with the means of paying for the journey which they may have to make after their arrival at Quebec. The cost of this journey must, of course, depend upon the situation of the place where the individual may find employment, or where he may have previously formed a wish to settle; but to all it will probably be useful to have the following hints and report of the prices of conveyance during the season of 1841, on the route from Quebec to Toronto, the capital of Upper Canada.

	Currency. £	s.	d.
On the arrival of the emigrant vessel at Quebec, the emigrant, if he intend to proceed to Upper Canada, should on no account leave the vessel, except it be to go with the long-boat direct with his luggage to the steamer for Montreal; and not unfrequently the steamer comes alongside the emigrant ship, and thus facilitates the re-embarkation of the emigrant. The captain of the ship can easily arrange this with the steamer. Very little difficulty is experienced by the emigrant at Quebec; a few hours suffice to provide his family with the necessaries of life, if his supplies are run out. The steamboat goes up the river to Montreal, in about 24 hours, a distance of 180 miles. The charge for deck passengers is 7*s.* 6*d.*, and no charge is made for luggage - - - -	0	7	6
The fare is reduced, when there is any competition, to 5*s.* and less. Next year (1842) it may be reduced much more, as new steamers are preparing for this route. The emigrant, before going on board the steamer, should boil as much pork or beef as will serve him for a day or two, which he can do before leaving the ship; in a few minutes he can procure fresh bread; and if he has a large tin tea-pot, with a few tins, he can with ease get hot water in the steamer to make some tea, to refresh the members of his family on the way up. On his arrival at Montreal, he should, with as little delay as possible, get his luggage transported to the barges of the forwarding company. He will find many carters in readiness for this purpose, and must take care not to be imposed upon by them; 1*s.* 6*d.* should be sufficient to take all his things to the	0	1	6

	Currency. £	s.	d.
station of the barges. Here the fare is, from Montreal to Bytown, per adult, 8*s.* Allowance for luggage, 1 cwt. or 1¼ cwt. free; and for any quantity over and above this, 2*s.* per cwt. The barges arrive at Bytown about 72 hours after leaving Montreal. The same barges continue through to Kingston. The fare from Bytown to Kingston is, per adult, 10*s.*; same allowance of luggage as above, and 2*s.* 6*d.* for each cwt. extra; and 1*s.* per day for meals from Quebec to Bytown, say 8 days - - - -	0	10	0
When the emigrant gets on board the barge at Montreal, his luggage need not be moved until he reaches Kingston. He will find utensils for cooking, and the female part of his family will find shelter in the cabin of the barge. In case of foul weather, he can get his family on board of the steamer at Lachine, 7 miles from Montreal,) where the barges are taken in tow to Carillon, about 40 miles from Lachine. The barges there take 7 or 8 hours in getting through the locks, and getting up to Grenville. On the way, the emigrant can buy a few potatoes from the farmers on the canal. The prices of provisions do not vary from Montreal to Kingston; potatoes 1*s.* 6*d.* and 2*s.* per bushel; pork 5*d.* to 7*d.* per lb; butter 8*d.* to 10*d.*; flour 5 dollars to 6 dollars per barrel; tea 3*s.* to 4*s.* per lb.; sugar 6*d.* per lb.; eggs 8*d.* to 10*d.* per dozen; butcher's meat 3½*d.* to 5*d.* per lb., according to the quality. All these articles are easily procured on the way. From Grenville to Bytown is about 65 miles, and the barges are towed by a steamer, and reach in about 15 or 16 hours. On their arrival at Bytown the	0	8	0

barges have again to pass through locks, which causes a detention of some hours. The passage from Bytown to Kingston is rather tedious; but as it affords to the emigrant various opportunities of seeing the country, and many of engaging as a farm servant, he should not look upon it as altogether lost time.

A great error is committed by the emigrant in asking exorbitant wages on his arrival; he should content himself at first with 3s. or 4s., and take the first employment that offers. Many emigrants on arrival at Quebec and Montreal have not the means to carry them forward; but they find no difficulty in getting work about the coves at Quebec, and are very soon enabled to lay up sufficient to carry them up the country. They should on no account remain in Quebec or Montreal during winter, as they will assuredly have much privation and hardship to contend with. However high the wages may be in the busy season, the winter presents to them a barren field.

	Currency. £	s.	d.

At Kingston there are steamers for Toronto, distant 170 miles, and for Hamilton, at the head of Lake Ontario, distant from Kingston 210 miles. The time occupied at Toronto is 24 hours; the deck fare is usually 7s. 6d. Last season it was only 5s. for each adult, exclusive of provisions. Two children under 14 years of age are charged as one passenger. The distance from Quebec to Toronto is 606 miles; time occupied in performing it last season about 10 days; and the total expense for each adult, including provisions, is, including 2 days' provisions from Kingston to Toronto - - - - - - -

	£2	4	

It must be observed, that the prices of conveyance are necessarily fluctuating, and that the foregoing account is only presented as sufficiently accurate for purposes of information in this country, leaving it to the government agent at Quebec to supply emigrants with more exact particulars, according to the circumstances of the time at which they may arrive. According to some statements, the journey from Quebec to Toronto may be accomplished for less than 40s; but a good deal depends on the season of the year, and other accidental circumstances.

islands, occasioned an extraordinary extension of cultivation. So powerful in this respect was its influence, that Jamaica, which, at an average of the 6 years preceding 1799, had produced only 83,000 hogsheads, exported, in 1801 and 1802, upwards of 286,000 hogsheads, or 143,000 a year!

The same rise of price, which had operated so powerfully in Jamaica, occasioned a similar though less rapid extension of cultivation in our other islands, and in Cuba, Porto Rico, and the foreign colonies generally. The vacuum caused by the cessation of the supplies from St. Domingo being thus more than filled up, a reaction commenced. The price of sugar rapidly declined; and, notwithstanding a forced market was for a while opened to it, by substituting it for malt in the distillery, prices did not attain to their former elevation. On the opening of the Continental ports, in 1813 and 1814, they, indeed, rose, for a short time, to an extravagant height; but they very soon fell, involving in ruin many of the speculators upon an advance. Prices, however, continued at a pretty high level down to 1818; but they sustained a material fall in the course of the following year, and were comparatively low from that period down to 1835, when the extraordinary falling off in the supplies of sugar consequent to the measures connected with the emancipation of the slaves, again occasioned a considerable rise of price. But, as already seen, this high price is entirely factitious, being wholly caused by our excluding foreign sugar from our market. Were the sugar of Brazil, Cuba, and Java admitted on paying the same duty as British colonial sugar, there can be no doubt that the price of the latter would be diminished a half or more. And from the extraordinary facility with which sugar may be raised in the countries referred to and elsewhere, we have no idea, provided they adopt no rash or ill-advised measures in relation to slaves, that the price of sugar in their markets would be at all likely to sustain any material increase, even though the demand for it were doubled or more. The imports of sugar from our West India colonies, which amounted to 4,103,800 cwts. in 1831, had sunk, in 1841, to 2,151,217 cwts.!

The devastation of St. Domingo gave the same powerful stimulus to the growth of coffee in the other West Indian colonies, that it did to the growth of sugar; and owing to the extraordinary increase in the demand for coffee in this and other European countries, the supply went on increasing till it was checked by the influence of the measures relating to slavery. In 1752, for example, only 60,000 lbs. of coffee were exported from Jamaica; in 1775 the export amounted to 440,000 lbs.; in 1797 it had increased to 7,931,621 lbs.; and in 1832, when it had attained its maximum, the exports to England only amounted to 19,405,933 lbs. Such, however, and so rapid has been their subsequent decline, that in 1841 the exports to England had fallen off to 7,618,890 lbs.! (See opposite.)

We have already seen, that when Jamaica was taken from the Spaniards, it only contained 1,500 white inhabitants. In 1673, the population amounted to 7,768 whites and 9,504 slaves. It would have been well for the island had the races continued to preserve this relation to each other; but, unfortunately, the black population has increased more than *five* times as rapidly as the white; the latter having only increased from 7,768 to about 30,000, while the former has increased from 9,504 to about 310,000, exclusive of persons of colour.

The real value of the exports to Jamaica amounts to about 1,500,000*l.* a year, being more than half the amount of the exports to the West Indian colonies. It should, however, be observed, that a considerable portion of the articles sent to Jamaica, and some of the other colonies, are only sent there as to an *entrepôt*, being subsequently exported to the Spanish main. During the ascendancy of the Spanish dominion in Mexico and South America, this trade, which was then contraband, was carried on to a very great extent. It is now much fallen off; but the central situation of Jamaica will always secure to her a considerable share of this sort of transit trade.

Barbadoes was the earliest of our possessions in the West Indies. It is the most easterly of the Caribbee islands; Bridge Town, the capital, being in long. 59° 41′ W. Barbadoes is by far the best cultivated of all the West India islands. It contains about 105,000 acres, having a population of about 13,000 whites, 6,600 people of colour, and 83,000 blacks. Of late years it has exported from 250,000 to 470,000 cwts. of sugar. Barbadoes had attained the acme of its prosperity in the latter part of the seventeenth century, when the white population is said to have amounted to about 50,000, though this is probably an exaggeration. But it is only as compared with itself that it can be considered as having fallen off; for, compared with the other West India islands, its superiority is manifest. It raises nearly as much food as is adequate for its supply.

The islands next in importance are St. Vincent, Grenada, Trinidad, Antigua, &c. It is unnecessary to enter into any special details with respect to them; their population and trade being exhibited in the annexed Tables.

During the late war, we took from the Dutch the settlements of Demerara, Berbice, and Essequibo, in Guiana, which were definitively ceded to us in 1814. The soil of

Account of the Quantities of Sugar, Molasses, Rum, and Coffee, imported into the United Kingdom from the West Indies and British Guiana, during each of the 10 Years ending with 1841.—(*Parl. Paper* No. 293. Sess. 1842).

these settlements is naturally very rich; and they have, in this respect, a decided advantage over most of the West India islands. Their advance, since they came into our possession, was for a while very great; but recently their progress has been checked, and their exports have declined most materially. This, however, is entirely a consequence of the want of labour; for, in other respects, these colonies have every facility of production. Various schemes have been suggested for supplying this want; but none of them, unless they involve the principle of compulsory service, will, we apprehend, be successful. The rum of Demerara enjoys a high reputation. The best samples of Berbice coffee are very superior, and it is extensively cultivated both in that colony and in Demerara. In 1832, the exports amounted, from both colonies, to 3,492,288 lbs., whereas in 1841 they only amounted to 2,109,569 lbs. Considerable quantities of cotton were formerly exported from Guiana; but the Americans having superior facilities for its production, its culture has nearly ceased. Cocoa, annotto, &c. are produced, but not abundantly.

Exclusive of the above, we possess the settlement of Balize on the Bay of Honduras. This is of importance, as affording a means of obtaining abundant supplies of mahogany; but it is of more importance as an *entrepôt* for the supply of Guatemala and central America with English manufactured goods.

The exports from this country to our West India colonies consist of coarse cottons, linens, checks, hats, and other articles of negro clothing; hardware and earthenware; staves, hoops, coal, lime, paint, lead; Irish provisions, herrings, and other salt fish; along with furniture, wine, beer, medicines, and, indeed, almost every article which a great manufacturing country can supply to one, situated in a tropical climate, which has very few mechanics, and hardly any manufactures. Since the opening of the ports on the Spanish main to ships from England, the exports to the West Indies have decreased both in quantity and value; this decrease being, however, more than balanced by the shipments to Mexico, Columbia, &c. The declared or real value of the exports amounted, as appears from the following account, in 1841, to 2,504,004*l.*; but this was fully 1,000,000*l.* below their usual value.

Account of the Declared Value of the Exports of British and Irish Produce to the West India Colonies in each Year from 1814 to 1841, both inclusive.

Money.—What used to be called West India currency was an imaginary money, and had a different value in different colonies. The value it bore, as compared with sterling money, was supposed to represent the corresponding value of the coins in circulation in the different islands at the time the proportion was fixed: these coins being for the most part mutilated, and otherwise worn and defaced, currency was in all cases less valuable than sterling. The following are the old values of 100*l.* sterling, and of a dollar, in the currencies of the different islands:—

	Sterl.		Curr.	Dol.		Curr.
Jamaica	100*l.*	=	140*l.*	1	=	6*s.* 8*d.*
Barbadoes	100*l.*	=	135*l.*	1	=	6*s.* 3*d.*
Windward Islands (except Barbadoes)	100*l.*	=	175*l.*	1	=	8*s.* 3*d.*
Leeward Islands	100*l.*	=	200*l.*	1	=	9*s.* 0*d.*

But latterly these currencies have been in a great measure superseded by the introduction of sterling money, current at the same rates as in England, and of the Spanish dollar.

By an order in council of the 23d of March 1825, British silver money was made legal tender throughout all British colonial possessions, at the same nominal value as in England; and bills for the same are given on the Treasury of London, of 100*l.* each bill for 103*l.* such silver money. By this order, also, the value of the Spanish dollar was fixed at 4*s.* 4*d.* British silver money throughout all the colonies where it is current; but this value was farther reduced on the 21st of September, 1838, to 4*s.* 2*d.* The value of the doubloon was then, also, fixed at 64*s.*

(3.) *Australian Colonies.*—This group of colonies, though founded in a very distant part of the world, and at a comparatively recent epoch, promises, at no very remote period, to equal or surpass the others in magnitude and importance. The countries in which they are situated, including the great Australian continent, formerly called New Holland, with Van Diemen's Land or Tasmania, New Zealand, &c., are of vast extent, and differ in many respects from each other. Hitherto, also, by far the larger portion of the continent is wholly unexplored; and even the islands are but very imperfectly known. Enough, however, has transpired to show that this great division of the globe differs in some most important respects from most or all countries with which we were previously acquainted; and that it is, in fact, full of anomalies. The interior of the continent has not been sufficiently explored to enable any distinct opinion to be formed as to the height of the mountain chains; but it appears to be pretty well established, that it has no great rivers, or, at least, none that reach the sea. Indeed it seems, speaking generally, to be a law in this new world, that rivers are largest near their source; and that they gradually diminish as they proceed, and most commonly dwindle into insignificance, or lose themselves in marshes, before they reach the ocean!

In consequence, perhaps, of this singular constitution of its river system, it is found that in Australia the best land is not at the mouths, but towards the sources, of the rivers. There are, no doubt, exceptions to this rule; but it appears to hold in by far the greater number of instances. Generally, also, the extent of fine land appears to be comparatively limited; and, in so far as the continental portion of the country has been explored, it appears to be much better adapted for pasturage than for tillage.

The northern portion of Australia, including, perhaps, about a third part of the entire continent, lies between the tropics; the other portion of the continent, with the adjacent islands of Van Diemen's Land and New Zealand being in the south temperate zone. The climate of the different parts of the continent must, therefore, it is obvious, differ very widely. We, however, know but little of the climate of inter-tropical Australia, except that it is within the range of the Indian monsoon; that the temperature along the coast is rapidly raised by a wind from the south, which has been supposed to afford a strong presumption of the existence of sandy deserts in the interior; and that the air is so very moist that during the season of the dry monsoon iron articles are with the utmost difficulty preserved from rusting.

It is commonly said that the climate of extra-tropical Australia, and especially of New South Wales, assimilates closely to that of Southern Italy. But this statement must be taken with considerable limitation; for, 1st, the atmosphere is very decidedly denser; 2nd, the extremes of temperature are greater; 3rd, the average heat is rather less; and 4th, the temperature appears to decline more rapidly by increase of elevation. The grand defect in the climate of extra-tropical Australia, which would otherwise be excellent, appears to consist in the periodical recurrence of wet and dry seasons. Sometimes hardly a single drop of rain falls for an entire year or more; and though, happily, dews are in such seasons peculiarly abundant, they form no adequate substitute for rain. During long continued droughts crops of all kinds are destroyed; and herbage, except in a few favoured spots, suffers severely.

Hence, as already stated, all the eastern parts of extra-tropical Australia, and perhaps, also, the southern, would seem to be much better fitted for pasturage than for husbandry. The droughts are exceedingly injurious to the latter, and they would necessarily involve any large population that depended principally on the indigenous products of the soil in extreme privations. Certainly, however, no country seems to be better fitted for grazing, or rather for the growth of sheep and wool. A dry climate is especially suitable to the latter; and though the pastures be far from luxuriant, their boundless extent compensates for every other deficiency. Sheep are not native to the country, a small flock of 29 head having been introduced for the first time by the original English settlers in 1788. For a while, however, their value was not appreciated; but the importance of sheep-farming, and its suitableness to the country, having been demonstrated by John M'Arthur, Esq. (to whom the colony is under the greatest obligations), it has since increased with unprecedented rapidity. In proof of this, it is only necessary to mention that while the export of wool from New South Wales amounted, in 1822, to only 152,880 lbs., it had increased, in 1825, to 411,600 lbs., in 1830 to 899,750 lbs., and in 1840 to the enormous amount of 7,668,960 lbs.—(See SYDNEY.)

Van Diemen's Land being less subject to droughts than New South Wales, husbandry is carried on in it to a greater extent, and with more advantage; but there also sheep-farming is the principal and most advantageous employment.—(See VAN DIEMEN'S LAND.)

New Zealand, which has only been very recently resorted to by regular colonists, will, no doubt, from its situation, be better fitted for agriculture than either Australia or Van Diemen's Land. The ground in it is, however, very difficult to clear; the natives are also much more formidable, and it is not nearly so suitable for sheep-farming.

In 1842 the imports of wool into the U. Kingdom from the Australian colonies were —

New South Wales	8,725,973 lbs.	Swan River	51,617 lbs.
Van Diemen's Land	3,491,685	South Australia	690,396

Making a grand total of 12,959,671 lbs.

The first of the Australian colonies, that in New South Wales, founded so late as 1788, and that in Van Diemen's Land, founded in 1808, were originally intended to serve as penal settlements; and great numbers of convicts have since been carried to them. Latterly, however, these colonies, notwithstanding their distance, have been a favourite resort of free settlers, consisting partly of voluntary emigrants, and partly of emigrants carried out at the public expense. The settlement at Swan River, on the western coast of Australia, founded in 1829, and that on the south coast of Australia, founded in 1834, have been wholly formed of free settlers. New Zealand was not constituted a colony till 1840; but various establishments, chiefly consisting of adventurers from New South Wales and Van Diemen's Land, had previously been formed on different parts of its coasts.

Population. — The European population of the Australian colonies is believed to have been in 1842 nearly as follows: —

New South Wales, including Port Philip	155,222
Van Diemen's Land	48,963
South Australia	15,029
Western Australia	3,274
New Zealand	12,664
Total	235,152

Passage. — The cost of a passage to the Australian colonies, including provisions, is for the

Cabin, from 60*l.* to 100*l.*
Intermediate, from 35*l.* to 40*l.*
Steerage, about 20*l.*

The average length of the voyage is about four months; and at whatever season of the year it may be made, the passengers have to pass through both very hot and very cold weather, and should, therefore, be prepared accordingly with suitable clothing.

The prices of cabin and intermediate passages to New Zealand are about the same as to the Australian colonies; a steerage passage, however, is rather higher, the passage being somewhat longer.

Emigration. — We subjoin a return of the number of individuals that have emigrated from the United Kingdom to the Australian colonies, from 1825 down to 1842, both inclusive.

Years.	Emigrants.	Years.	Emigrants.
1825	485	1834	2,800
1826	903	1835	1,866
1827	715	1836	3,124
1828	1,056	1837	5,054
1829	2,016	1838	14,021
1830	1,242	1839	15,786
1831	1,561	1840	15,850
1832	3,733	1841	32,625
1833	4,093	1842	8,554

Making a grand total of 115,458.

(4.) *Disposal of Land in the Colonies.*—The question as to the best method of disposing of the unoccupied lands in colonies planted in unsettled countries is one of considerable nicety and difficulty. Land in old settled and fully occupied countries being, for the most part, very valuable, and its possession bringing along with it great consideration and influence, and frequently, also, great wealth, colonists are very apt, wherever they have the opportunity, to appropriate a much larger extent of land than they have the means of cultivating, or of turning to any useful account. Not only, however, are settlers disposed to act in this way, but speculators, who have no thought of emigrating, and

persons having influence with government, endeavour to obtain large tracts of land, in the view of holding them till, in consequence of the increase of population in the vicinity, they acquire a considerable value. It has been usual, also, to reserve large tracts for ecclesiastical and other public purposes. And these extensive tracts of unoccupied and reserved lands being interposed between the settled parts of a colony, render it in all cases more difficult, and sometimes all but impossible, to form roads and other means of communication; so that the settlers are thus frequently cut off from a market for their produce; and are less able to combine for municipal or such like purposes, and for the establishment of schools and churches, and the undertaking of such public works as require co-operation.

The improvident manner in which large tracts of land have been granted in Canada, and the great extent of the clergy and other reserves in that colony, have materially retarded its prosperity; and the same circumstances have had a similar operation in our other North American possessions, in Western Australia, and elsewhere. But there are various ways in which an abuse of this sort might be prevented. One of the most obvious of these is to impose such a moderate price on the land as might, without crippling the means of the settlers, hinder them from seeking unduly to extend their possessions; and making all the land held by individuals, whether occupied or not, contribute according to its extent to the construction of roads and other public works. Perhaps, however, the better plan would be to apportion the land according to the available capital of the settlers, it being stipulated that no individual should secure above a certain number of acres; and that it should revert back to the public unless certain improvements were effected upon it within a specified time after the grant was made.

But, not satisfied with attempting to prevent abuses like those noticed above, we are now told that all the difficulties incident to colonisation have originated in the too great dispersion of the colonists, and that to obviate them, and to insure to all new colonies the acme of prosperity, we have merely to compel the colonists to keep close together by exacting a high price for the surrounding waste or unoccupied land — in other words, by making the colony as like an old settled country as possible! And this precious project has been trumpeted forth as a great discovery. It is obvious, however, that if, on the one hand, the price set on waste land were inconsiderable, it would not (without a limitation of quantity) prevent the purchase of large tracts of land on speculation, and the entailing on the colony all the disadvantages that have resulted from the making of injudicious grants; and if, on the other hand, the price demanded for the land were pretty high, it would go far to oppose an insuperable obstacle to the progress of the colony, at least if it were to be founded by voluntary emigrants. Rich men do not leave their native country to expose themselves to the inconveniences and hardships attending the establishment of new settlements in the wilderness. This, if it be done at all, must be done in time to come, as in time past, by individuals in straitened circumstances, and anxious to improve their fortunes. But to exact a high or considerable price for land from such persons would, by sweeping away the whole, or a considerable portion of their capital, deprive them of the means of clearing and cultivating the land, and proportionally retard their progress and that of the colony. The plan of letting lands by fine is admitted by every one who knows any thing of agriculture to be one of the worst that can be devised: and this colonisation project is bottomed on the same principle, and will, no doubt, be as pernicious.

It is said that, in consequence of the exacting of a price for the land, and the concentration of the colonists, their employments, being more combined and divided, will be prosecuted with a great deal more success than at present. All this, however, proceeds on the false and exploded assumption that the colonists are not, like other individuals, the best judges of what is for their own advantage. Dr. Smith says truly, that it is the highest impertinence for kings and ministers to attempt to direct private people *how* they should employ their capitals. But it is, if possible, a still greater impertinence, to attempt to direct them *where* they shall employ them. A regard to their own interest will draw people sufficiently together. And to enact regulations in the view of concentrating them still more, is in every respect as contradictory and absurd as it would be to set about increasing the public wealth by regulating the sort of employments to be carried on, and the countries with which, and the commodities in which, to deal.

Latterly the English government has adopted the plan of disposing of all ungranted colonial lands by sale; and though we incline to think, as already stated, that the preferable plan would be to distribute them according to the capital or means of the settlers, still, if the price at which land is sold be reasonable, and the quantity that may be held by individuals be limited, we do not know that the plan is open to any very good objection. But the price charged for land in most of our colonies, and especially in Australia, where the minimum is 20*s.* an acre, appears to be a great deal too high. At the same time, however, we must bear in mind the distinction between founding a

colony, with a view principally to the interests of the colonists; and founding it not only with a view to their interests, but in an especial degree for the relief of the mother country. For it is not to be denied that the plan of exacting a pretty high price for colonial lands, and applying that price to defray the cost of carrying out emigrants, may (how injurious soever to voluntary emigrants) be made to assist in relieving the mother country of those who might otherwise have had to be supported at the public expense. Inasmuch, too, as an extraordinary quantity of labour is thus supplied to the colony, the injury done to the capitalists by making land artificially dear, is partially, or it may be wholly, compensated by its making labour artificially cheap. The immense emigration to the Australian colonies since 1837 has been principally a consequence of the principle now stated, a very large proportion of the emigrants having been carried out at the public expense.

It would obviously, however, be the extreme of folly for any one intending to emigrate, who has a little, but not a great deal of capital, to think of establishing himself in a colony where a high price is set upon land. At all events, such person must not expect in such a colony to become a landowner, or to be independent, but must make up his mind to be a hired labourer; whereas, if he emigrate to a colony where land is sold at a low price, or given away on condition of certain improvements being effected upon it within a given time, he may at once acquire an estate, and exchange the condition of hired servant for that of landowner.

Seeing that the Americans sell the best lands in the valley of the Mississippi at less than a dollar an acre, it is not easy to discover the principle on which we proceed in exacting 6*s.* 7*d.* an acre for the worst land in Upper Canada. If this regulation were meant to divert the current of voluntary emigration from Canada to the U. States, nothing could be found to say against it; but otherwise it seems alike contradictory and absurd. Notwithstanding the facilities of getting out to Quebec in timber ships, the direct emigration to the U. States generally exceeds that to British N. America, the emigrants to the former being also of a superior description, and having a greater command of capital. And there can be no doubt that the U. States are in no inconsiderable degree indebted for this influx of comparatively valuable immigrants to the fact of their public lands being sold at a less price than ours. "It is population alone which imparts value to land, and a more effectual method could not be devised for preventing an influx of inhabitants into Upper Canada, and drawing away many of those already settled, than government adhering to the present prices of land."—(See Shireff's valuable *Agricultural Tour through N. America*, p. 365.)

Regulations for the Disposal of Lands in British North America.

Canada.—By an act of the local legislature, passed in September, 1841, the waste lands of the Crown are to be sold at a price to be fixed from time to time by the governor in council. The prices fixed for the present are as follows:—For Upper Canada, 8*s.* currency (about 6*s.* 7*d.* sterling) per acre; for Lower Canada, in the county of Ottawa, and South of the river St. Lawrence, west of the Chaudiere road, 6*s.* currency (about 4*s.* 11*d.* sterling); and elsewhere in that division of the province, 4*s.* currency (about 3*s.* 3½*d.* sterling) per acre.

These prices do not apply to lands resumed by government for nonperformance of the conditions of settlement on which they were granted under a former system now abolished, nor to lands called Indian reserves, and clergy reserves; which three classes are, as well as town and village lots, subject to special valuation.

The size of the lots of country lands is usually 200 acres; but they are sold as frequently by half as whole lots.

The following are the conditions of sale at present in force, as published by the local government in its official gazette:—

1. The lots are to be taken at the contents in acres marked in the public documents, without guarantee as to the actual quantity contained in them.

2. No payment of purchase money will be received by instalments, but *the whole purchase money, either in money or land scrip*, must be paid at the time of sale.*

3. On the payment of the purchase money, the purchaser will receive a receipt which will entitle him to enter on the land which he has purchased, and arrangements will be made for issuing to him the patent without delay.

The receipt thus given not only authorises the purchaser to take immediate possession, but enables him, under the provisions of the Land Act, to maintain legal proceedings against any wrongful possessor or trespasser, as effectually as if the patent deed had issued on the day the receipt is dated.

For the convenience of the public generally, district agents are appointed under the Provincial Land Act in each municipal district, with full power to sell to the first applicant any of the advertised lands which by the return open to public inspection may be vacant within his district.

New Brunswick.—The mode of sale in this province is by auction. The upset price is generally about 2*s.* 8*d.* sterling (3*s.* currency), but varies according to situation, &c. The average price actually fetched by ordinary country lands has been from 4*s.* 6*d.* to 9*s.* sterling (5*s.* to 10*s.* currency) per acre, according to situation, &c. Fifty acres is the smallest quantity usually sold.

Nova Scotia.—The public lands are here also sold by auction, at an upset price, which is at present 2*s.* 6*d.* sterling (about 3*s.* currency) per acre. The smallest quantity of country land usually sold is 100 acres.

Prince Edward's Island.—In this colony the Crown has at its disposal only about 8,400 acres. Sale by auction prevails, and the average price realised for ordinary country lands has been from 10*s.* to 14*s.* currency per acre.

Newfoundland.—There exists no official return of the surveyed and accessible land at the disposal of the Crown in this colony. The area as been estimated at about 2,300,000 acres, of which about 23,000 have been appropriated. In 1841 the number of acres sold was 311, at an average price of 2*s.* per acre. Although the agriculture of the province is progressively increasing, *there are yet comparatively few persons exclusively employed in it*, the population being nearly all engaged in the fisheries.

The Canada Company having acquired an extensive tract of land in Upper Canada, dispose of it as follows:—

The Canada Company, desirous of affording every facility to parties wishing to settle in the Huron district in Canada West, and who may not have the means of paying the usual sum down in cash, will grant leases of their lands for twelve years, at small annual rents, commencing one year from the date of the lease, at the expiration of which lease and the punctual payment of the yearly rents, the settler will receive a deed for the freehold of the land he occupies without further charge. The rents are so proportioned that an industrious man may pay them, and maintain his family from the produce of the land.

Under these leases no money is required to be paid down.

The rents payable annually for a lot of 100 acres are as follow, and they are required to be punctually discharged.

Goderich. Any further information may be obtained at the Company's House, 13. St. Helen's Place, London.

London, 2 February, 1843.

Regulations for the Disposal of Land in the Australian Colonies and New Zealand, issued in 1842.

1. All lands are disposed of by sale only, and must be once at least exposed to public auction.

2. The lowest upset price is not less than 1*l.* per acre; but government may raise the same by proclamation, but cannot again reduce it.

3. The lands are distinguished into three different classes; viz. town lots, suburban lots, and country lots.

4. Upon town and suburban lots, as well as upon a proportion not exceeding one tenth of the whole of the country lots, offered for sale at any auction, the governor has the power of naming a higher than the general or lowest upset price; the country lots on which such power is exercised to be designated "special country lots."

5. Town and suburban lots will in no case be disposed of except by public auction, but country lots which have already been put up to public auction and not sold, may be disposed of by private contract at the upset price.

6. No lands will be sold by private contract except for ready money. When sold by public auction, one tenth at least of the whole purchase money must be paid down, and the remainder within one calendar month, else the deposit is forfeited.

7. Lands are put up for sale in lots not exceeding one square mile, or 640 acres, in extent.

8. As an exception to the general regulations, and subject to certain restrictions laid down in the Australian Land Act, the governor has it in his discretion to dispose, by private contract, at a price not less than the lowest upset price for the district, of blocks comprising 20,000 acres or more.

9. Persons may make payments for colonial lands in this country, for which payment or deposit they will receive an order for credit to the same amount in any purchase of land they may effect in the colony, and will have the privilege of naming a proportionate number of emigrants for a free passage, as explained below. The deposits must be made in one or more sums of 100*l.* each at the bank of England, to the account of the agent general for crown colonies, and the depositor must state at the time the colony in which the land is to be selected, and give notice to the agent and to the land and colonial commissioners, of the deposit. Upon receiving the agent's certificate that the money has been duly paid in, the colonial land and emigration commissioners will furnish the depositor with a certificate, stating the amount he has paid, and entitling him to obtain credit for that sum in any purchase which he may effect in the colony, subject to all rules and regulations then in force.

10. For every sum of 100*l.* deposited as above, the depositor will be entitled, for six months from the date of payment, to name a number of properly qualified emigrants, equal to four adults, for a free passage. Two children between 1 and 14 are to be reckoned as equal to one adult. The emigrants are required to be chosen from the class of mechanics and handicraftsmen, agricultural labourers, or domestic servants, and must be going out with the intention to work for wages. They are to be subject to the approval of the commissioners, and must, in all respects, fall within their general regulations on the selection of labourers. The purchaser and his family cannot receive a free passage under this privilege.

Summary of Modes of Sale, and Prices of Land, in the different Colonies.

Colony.	Mode of Sale.	Price per Acre.
North American Colonies:		
Canada (West)	Fixed price	8*s.* Currency.
Canada (East)	Ditto	6*s.* and 4*s.* do. according to situation.
New Brunswick	Auction	3*s.* currency upset price.
Nova Scotia	Ditto	3*s.* 1*d.* ditto.
Prince Edward's Island	Ditto	10*s.* to 20*s.* ditto.
Australian Colonies:		
Sydney Port Phillip Van Diemen's Land Western Australia South Australia New Zealand	By Auction. Country lands not sold at the public sales may afterwards be bought at the upset price as a fixed price	Lowest upset price 1*l.* sterling.
Falklands	Auction. Ditto Ditto	Lowest upset price 8*s.*
Cape of Good Hope	Ditto	No fixed upset price. Average price realised about 2*s.* per acre.
Ceylon	Ditto	5*s.* sterling.

IV. Regulations under which Colony Trade is conducted.

These are embodied in the act 3 & 4 Will. 4. c. 59., and 5 & 6 Victoria c. 49., the last having come into operation in 1843.

Importation and Exportation of Goods confined to free Ports. — No goods shall be imported into, nor shall any goods, except the produce of the fisheries in British ships, be exported from, any of the British possessions in America by sea, from or to any place other than the U. Kingdom, or some other of such possessions, except into or from the several ports in such possessions, called "Free Ports," enumerated or described in the table following; (that is to say,)

Table of free Ports. — Kingston, Savannah Le Mar, Montego Bay, Santa Lucia, Antonio, Saint Ann, Falmouth, Maria, Morant Bay, Annotto Bay, Black River, Rio Bueno, Port Morant, Jamaica; Saint George, Grenada; Roseau, Dominica; Saint John's, Antigua; San Josef, Trinidad: Scarborough, Tobago; Road Harbour, Tortola; Nassau, New Providence; Pitt's Town, Crooked Island; Kingston, Saint Vincent; Port Saint George and Port Hamilton, Bermuda; any port where there is a Custom-house, Bahamas; Bridgetown, Barbadoes; Saint John's, Saint Andrew's, New Brunswick; Halifax, Pictou, Nova Scotia; Quebec, Canada; Saint John's, Newfoundland; George Town, Demerara; New Amsterdam, Berbice; Castries, Saint Lucia; Basseterre, Saint Kitt's; Charles Town, Nevis; Plymouth, Montserrat; Sydney, Cape Breton; Charlotte Town, Prince Edward's Island; Anguilla, Anguilla; and if any goods shall be imported into any port or place in any of the said possessions contrary hereto, such goods shall be forfeited. — (3 & 4 *Will.* 4. c. 59. § 2.)

His Majesty may appoint other Ports to be free Ports. — Provided always, that if his Majesty deem it expedient to extend the provisions of this act to any port or ports not enumerated in the said table, it shall be lawful for his Majesty, by order in council, to do so; and from the day mentioned in such order in council, all the privileges and advantages of this act, and all the provisions, penalties, and forfeitures therein contained, shall extend, and be deemed and construed to extend, to any such port or ports, as fully as if the same had been inserted and enumerated in the above table: provided also, that nothing hereinbefore contained shall extend to prohibit the importation or exportation of goods into or from any ports or places in Newfoundland or Labrador in British ships. — § 3.

His Majesty may appoint Ports for limited Purposes. — And whereas there are in the said possessions many places situated in rivers and in bays at which it may be necessary to establish ports for particular and limited purposes only; be it therefore enacted, that it shall be lawful for his Majesty, in any order in council made for the appointment of any free port, to limit and confine such appointments respectively to any and such purposes only as shall be expressed in such order. — § 4.

Privileges granted to Foreign Ships limited to the Ships of those Countries granting the like Privileges to British Ships, &c. — And whereas by the law of navigation foreign ships are permitted to import into any of the British possessions abroad, from the countries to which they belong, goods the produce of those countries, and to export goods from such possessions to be carried to any foreign country whatever; be it therefore enacted, that the privileges thereby granted to foreign ships shall be limited to the ships of those countries which, having colonial possessions, shall grant the like privileges of trading with those possessions to British ships, or which, not having colonial possessions, shall place the commerce and navigation of this country, and of its possessions abroad, upon the footing of the most favoured nation, unless his Majesty by order in council shall in any case deem it expedient to grant the whole or any of such privileges to the ships of any foreign country, although these conditions be not in all respects fulfilled by such foreign country; provided, that no foreign country shall be deemed to have fulfilled the before-mentioned conditions, or to be entitled to these privileges, unless his Majesty shall, by his order or orders, have declared that such foreign country hath so fulfilled the said conditions, and is entitled to the said privileges: provided also, that every order in council in force at the time of the commencement of this act, whereby declaration is made of the countries entitled in whole or in part to the privileges of the law of navigation, shall continue in force as effectually as if the same had been made under the authority of this act. — § 5.

This Act not to affect certain Acts. — Nothing contained in this act, or any other act passed in the present session of parliament, shall extend to repeal or in any way alter or affect an act (4 *Geo.* 4. c. 77.) intituled "An Act to authorize his Majesty, under certain Circumstances, to regulate the Duties and Drawbacks on Goods imported or exported in foreign Vessels, and to exempt certain foreign Vessels from Pilotage," nor to repeal or in any way alter or affect an act (5 *Geo.* 4. c. 50.) to amend the last-mentioned act; and that all trade and intercourse between the British possessions and all foreign countries shall be subject to the powers granted to his Majesty by those acts. — § 6.

Goods prohibited or restricted to be imported into Colonies. — The several sorts of goods enumerated or described in the table following, denominated "A Table of Prohibitions and Restrictions," are hereby prohibited to be imported or brought, either by sea or by inland carriage or navigation, into the British possessions in America, or shall be so imported or brought only under the restrictions mentioned in such table, according as the several sorts of such goods are set forth therein; (that is to say,)

A Table of Prohibitions and Restrictions.

Gunpowder, ammunitions, arms, or utensils of war, prohibited to be imported, except from the United Kingdom, or from some other British possession.

Coffee, sugar, not being refined, in bond in the United Kingdom; molasses, rum, being the produce or manufacture of any British possession within the limits of the East India Company's charter, except and subject as hereinafter is provided, or being of foreign produce or manufacture, prohibited to be imported into any of the British possessions on the continent of South America or in the West Indies (the Bahama and Bermuda Islands not included), or into the Mauritius, except to be warehoused for exportation only, and may also be prohibited to be imported into the Bahama or Bermuda Islands by her Majesty's order in council.

Base or counterfeit coin.

Books, such as are prohibited to be imported into the United Kingdom, prohibited to be imported.

And if any goods shall be imported or brought into any of the British possessions in America contrary to any of the prohibitions or restrictions mentioned in such table in respect of such goods, the same shall be forfeited; and if the ship or vessel in which such goods shall be imported be of less burden than 70 tons, such ship or vessel shall also be forfeited. — (5 & 6 *Victoria*, c. 49. § 4.)

Coffee, Sugar, and Rum may be imported into British Possessions. — It shall be lawful to import into any British possession in the West Indies and S. America, and into the Mauritius, any coffee the produce of any British possession within the limits of the East India Company's charter, and also any sugar the produce of any British possession within the limits of the East India Company's charter into which the importation of sugar the produce of any foreign country or of any British possession into which foreign sugar may be legally imported has been prohibited, and also any rum the produce of any British possession within the limits of the East India Company's charter into which the importation of rum the produce of any foreign country or of any British possession into which foreign sugar or rum may be legally imported has been prohibited. But no such coffee, sugar, or rum shall be entered in any British possession in the West Indies or S. America, or the Mauritius, as being the produce of any British possession within the limits of the East India Company's charter from which the same may be legally imported under last proviso, unless the master of the ship importing the same shall have delivered to the collector or principal officer of the customs at the port of importation, a certificate of origin as hereinafter mentioned, under the hand and seal of the proper officer at the place where the same shall have been taken on board; and such master shall also make and subscribe a declaration before the proper officer of the customs that such certificate was received by him at the place where such coffee, sugar, or rum was taken on board, and that the coffee, sugar, or rum so imported is the same as is

mentioned therein; and such certificate of origin shall, as regards coffee, certify that a declaration in writing had been made and signed before the officer giving such certificate, the contents of which he believed to be true, by the shipper of such coffee, that the same was really and *bonâ fide* the produce of some British possession; and such certificate of origin shall, as respects sugar, state the name of the district in which such sugar was produced, the quantity and quality thereof, the number and denomination of the packages containing the same, and the name of the ship in which they were laden and the master thereof, to the officer giving the same, by the shipper of such sugar, and shall likewise certify that there had been produced a certificate under the hand and seal of the collector or assistant collector of the land or customs revenue of the district within which such sugar was produced, that such sugar was the produce of the district, and that the importation into such district of foreign sugar, or sugar the growth of any British possession into which foreign sugar can be legally imported, is prohibited; and such certificate of origin shall, as respects rum, state the name of the district in which such rum was produced, the quantity and strength thereof, the number and denomination of the packages containing the same, the name of the ship in which they were laden and of the master thereof, and shall also testify that there had been produced to the party giving such certificates, by the shipper of such rum, a certificate under the hand and seal of the collector or assistant collector of the land or customs revenue of the district within which such rum was produced, that the same was the production of such district.—(5 & 6 *Victoria*, c. 49. § 5.)

Duties on Importation. — There shall be raised, levied, collected, the several duties of customs set forth in the subjoined table of duties, upon goods, wares, and merchandise, not being the growth, production, or manufacture of the U. Kingdom, or of any British possession in America, or of the Mauritius, or of any British possession within the limits of the East India Company's charter, or the produce of any British fishery, imported or brought into any British possession in America or the Mauritius by sea or inland carriage or navigation.

Table of Dutics.

Articles not enumerated, except such as are comprised or referred to in the subjoined Table of Exemptions	4 per centum ad valorem.			

And if any of the goods hereinbefore proposed to be charged with duty, except sugar and tea, shall be imported through the U. Kingdom (having been warehoused therein, and being exported from the warehouse), or the duties thereon, if there paid, having been drawn back	Such goods shall only be charged with three-fourths of the duties hereinbefore proposed.

Table of Exemptions.

Coin, bullion, and diamonds.
Horses, mules, asses, neat cattle, and all other live stock.
Hay and straw.
Tallow and raw hides.
Salt.
Rice.
Corn and grain, unground.
Biscuit or bread.
Meal or flour, except wheat flour.
Fresh meat.
Fresh fish.
Fruit and vegetables, fresh.
Carriages of travellers.
Wood and lumber.
Cotton wool.
Hemp, flax, and tow.
Drugs.
Gums and resins.
Tortoise-shell.
Manures of all kinds.
Herrings, taken and cured by the inhabitants of the Isle of Man, and imported from thence.
Provisions and stores of every description, imported or supplied for the use of her Majesty's land and sea forces.
All goods imported from the U. Kingdom after having there paid the duties of consumption, and imported from thence without drawback. — § 7.

Exemptions from Duty.—The articles enumerated or mentioned in the above table of exemptions, shall be imported without payment of any duty under this act, and also such of the following articles, namely,

Salted or cured meat,	Oakum,
Flour,	Pitch,
Butter,	Tar,
Cheese,	Turpentine,
Molasses,	Leather and leather ware,
Cork-wood,	Fishermen's clothing and hosiery,
Cordage,	Fishing craft, utensils, instruments, and bait,

as shall be imported for the use of the British fisheries in America, into any place at or from whence any such fishery is carried on, subject to such regulations as the commissioners of customs, or the principal officer of customs at such place, shall make for the purpose of ascertaining that such articles are *bonâ fide* intended to be applied to the use of such fisheries, or that such provisions and stores as aforesaid are *bonâ fide* imported or supplied for the use of her Majesty's land and sea forces. —§ 8.

Import Duty on Sugar refined in Bond. — There shall be raised, levied, and collected, a duty of 10*l.* for every 100*l.* of the value upon sugar refined in bond in the U. Kingdom, not being of the growth of any British possession in America, or of the Mauritius, or of any British possession within the East India Company's charter, imported or brought into any British possession in America, or into the Mauritius, by sea or by inland carriage or navigation. —§ 9.

Duties imposed by this Act to be increased in certain Cases.— If in any British possession in America or the Mauritius any duty be chargeable by any colonial law upon any articles, the growth, produce, or manufacture of the U. Kingdom, or of the British possessions in America, or the British possessions within the East India Company's charter, or the produce of the British fisheries, beyond the duty (if any) chargeable by such colonial law upon similar foreign articles, the imperial duty hereby imposed upon such foreign articles shall be increased by such excess or amount (as the case may be) of the duties so chargeable by such colonial law upon similar British articles; and if in any British possession in America or the Mauritius any duty be chargeable by any colonial law upon tea imported direct from China, or imported from the U. Kingdom or any British possession, beyond the duty (if any) chargeable by such colonial law upon tea not so imported, the imperial duty hereby imposed upon tea not so imported shall be increased by such excess or amount (as the case may be) of the duties so chargeable by such colonial law upon tea imported direct from China, or imported from the U. Kingdom or from any of the British possessions. — § 10.

Power to Her Majesty by Order in Council to exempt certain Articles from Duty.—It shall and may be

lawful for her Majesty, with the advice of her privy council, by an order or orders in council to be issued from time to time, to direct that any article chargeable under this act as an unenumerated article with a duty of four per centum ad valorem, shall be added to the previous list of exemptions, and be free from such duty, from and after the time mentioned in such order; and any such order may at any time be suspended or revoked by her Majesty, with advice of her privy council, by any order in council. — § 11.

Currency, Weights, and Measures. — All sums of money granted or payable as duties, penalties, or forfeitures, in the British possessions in America or the Mauritius, shall be deemed and are hereby declared to be sterling money of Great Britain, and shall be collected, recovered, and paid to the amount of the value which such nominal sums bear in Great Britain; and such monies may be received and taken in sterling money of Great Britain, or in foreign coins at such rates as shall be equivalent to sterling money of Great Britain, and shall have been fixed by any proclamation issued by her Majesty; and all duties shall be paid and received in every part of the British possessions in America and in the Mauritius according to the imperial weights and measures now by law established; and in all cases where such duties are imposed according to any specific quantity or any specific value, the same shall be deemed to apply in the same proportion to any greater or less quantity or value; and all such duties shall be under the management of the commissioners of the customs. — § 13.

Net produce of Duties how to be applied. — The net produce of the duties so received under this act shall be paid by the collector of the customs into the hands of the treasurer or receiver general of the colony, or other proper officer authorised to receive the same in the colony in which the same are levied, to be applied to such uses as shall be directed by the local legislatures of such colonies; and the produce of such duties so received in colonies which have no local legislature shall be applied in such manner as shall be directed by the commissioners of her Majesty's treasury. — § 14.

Goods from the Channel Islands. — Goods the produce or manufacture of the islands of Guernsey, Jersey, Alderney, or Sark, when imported from such islands into the British possessions in America or the Mauritius, shall be admitted to entry upon payment of the same duties as are payable upon like goods the produce or manufacture of the U. Kingdom or of any of said possessions, upon production to the principal officer of customs at the port of importation of the proofs now required by law that such goods are the production or manufacture of the islands aforesaid. — § 15.

All British Vessels shall be subject to equal Duties, except coasting Vessels. — Whereas in some of his Majesty's possessions abroad, certain duties of tonnage are, by acts of the local legislatures of such possessions, levied upon British vessels, to which duties the like vessels built within such possessions, or owned by persons resident there, are not subject; be it further enacted, that there shall be levied and paid at the several British possessions abroad, upon all vessels built in any such possessions, or owned by any person or persons there resident, other than coasting or drogueing vessels employed in coasting or drogueing, all such and the like duties of tonnage and shipping dues as are or shall be payable in any such possessions upon the like British vessels built in other parts of his Majesty's dominions, or owned by persons not resident in such possessions. — (3 & 4 *Will.* 4. c. 59. § 14.)

Drawback on Rum, &c. — There shall be allowed upon the exportation from Newfoundland to Canada of rum or other spirits, the produce of the British possessions in S. America or the West Indies, a drawback of the full duties of customs paid upon the importation thereof from any of the said places into Newfoundland, provided proof on oath be made to the satisfaction of the collector and comptroller of the customs at the port whence such rum or other spirits is exported, that the full duties on the importation of such rum or other spirits at the said port had been paid, and that a certificate be produced under the hands and seals of the collector and comptroller of the customs at Quebec, that such rum or other spirits had been duly landed in Canada: provided that no drawback shall be allowed upon any such rum or other spirits unless the same shall be shipped within 1 year from the day of importation of the same, nor unless such drawback shall be duly claimed within 1 year from the day of such shipment. — § 15.

Ship and Cargo to be reported on Arrival. — The master of every ship arriving in any of the British possessions in America, or the islands of Guernsey, Jersey, Alderney, or Sark, whether laden or in ballast, shall come directly, and before bulk be broken, to the Custom-house for the port or district where he arrives, and there make a report in writing to the collector or comptroller, or other proper officer, of the arrival and voyage of such ship, stating her name, country, and tonnage, and if British the port of registry, the name and country of the master, the country of the owners, the number of the crew, and how many are of the country of such ship, and whether she be laden or in ballast, and if laden, the marks, numbers, and contents of every package and parcel of goods on board, and where the same was laden, and where and to whom consigned, and where any and what goods, if any, had been unladen during the voyage, as far as any of such particulars can be known to him; and the master shall further answer all such questions concerning the ship, and the cargo, and the crew, and the voyage, as shall be demanded of him by such officer; and if any goods be unladen from any ship before such report be made, or if the master fail to make such report, or make an untrue report, or do not truly answer the questions demanded of him, he shall forfeit the sum of 100*l.*; and if any goods be not reported, they shall be forfeited. — § 16.

Entry outwards of Ship for Cargo. — The master of every ship bound from any British possession in America, or the islands of Guernsey, Jersey, Alderney, or Sark, shall, before any goods be laden therein, deliver to the collector or comptroller, or other proper officer, an entry outwards under his hand of the destination of such ship, stating her name, country, and tonnage, and if British the port of registry, the name and country of the master, the country of the owners, the number of the crew, and how many are of the country of such ship; and if any goods be laden on board any ship before such entry be made, the master of such ship shall forfeit the sum of 50*l.*; and before such ship depart, the master shall bring and deliver to the collector or comptroller, or other officer, a content in writing under his hand of the goods laden, and the names of the respective shippers and consignees of the goods, with the marks and numbers of the packages or parcels of the same, and shall make and subscribe a declaration to the truth of such content as far as any of such particulars can be known to him; and the master of every ship bound from any British possession in America, or from the islands of Guernsey, Jersey, Alderney, or Sark, whether in ballast or laden, shall before departure come before the collector or comptroller, or other proper officer, and answer upon oath all such questions concerning the ship, and the cargo, if any, and the crew and the voyage, as shall be demanded of him by such officer; and thereupon the collector and comptroller, or other proper officer, if such ship be laden, shall make out and give to the master a certificate of the clearance of such ship for her intended voyage, containing an account of the total quantities of the several sorts of goods laden therein, or a certificate of her clearance in ballast, as the case may be; and if the ship depart without such clearance, or if the master deliver a false content, or shall not truly answer the questions demanded of him, he shall forfeit the sum of 100*l.* — § 17.

N. B. The act 5 & 6 Victoria, c. 47. § 57. extends to all goods entered for exportation in every British possession abroad, except the presidencies of Bengal, Madras, and Bombay.

Goods not stated in Certificate to be Produce of British Possessions to be deemed of Foreign Production. — No goods shall be stated in such certificate of clearance to be the produce of British possessions in America, unless such goods have been expressly stated so to be in the entry outwards of the same; and all goods not expressly stated in such certificate of clearance to be the produce of the British possessions in America shall, at the place of importation in any other such possessions, or in the U. Kingdom, be deemed to be of foreign production. — § 18.

Newfoundland Fishing Certificates in lieu of Clearance. — Whenever any ship shall be cleared out from Newfoundland, or any other part of his Majesty's dominions, for the fisheries on the banks or coasts

of Newfoundland or Labrador or their dependencies, without having on board any article of traffic, (except only the provisions, nets, tackle, and other things usually employed in and about the said fishery,) the master of such ship shall be entitled to demand from the collector or other principal officer of the customs at such port a certificate under his hand that such ship hath been specially cleared out for the Newfoundland fishery; and such certificate shall be in force for the fishing season for the year in which the same may be granted, and no longer; and upon the first arrival in any port in Newfoundland, &c. of any ship having on board such certificate, a report thereof shall be made by the master of such ship to the principal officer of the customs; and all ships having such certificate so reported, and being actually engaged in the said fishery, or in carrying coastwise to be landed or put on board any other ships engaged in the said fishery any fish, oil, salt, provisions, or other necessaries for the use and purposes thereof, shall be exempt from all obligation to make an entry at or obtain any clearance from any Custom-house at Newfoundland upon arrival at or departure from any of the ports or harbours of the said colony, &c. during the fishing season, for which such certificate may be granted; and previously to obtaining a clearance at the end of such season for any other voyage at any of such ports, the master of such ship shall deliver up the before-mentioned certificate to the officer of the customs: provided always, that in case any such ship shall have on board, during the time the same may be engaged in the said fishery, any goods or merchandises whatsoever other than fish, seals, oil made of fish or seals, salt, provisions, and other things, being the produce of or usually employed in the said fishery, such ship shall forfeit the said fishing certificate, and shall thenceforth be subject and liable to the same rules, regulations, &c. as ships in general are subject or liable to. — § 19.

Entry of Goods to be laden or unladen. — No goods shall be laden, or water-borne to be laden, on board any ship, or unladen from any ship, in any of the British possessions in America, or the island of Guernsey, Jersey, Alderney, or Sark, until due entry be made of such goods, and warrant granted for the lading or unlading of the same; and no goods shall be so laden or water-borne, or so unladen, except at some place at which an officer of the customs is appointed to attend the lading and unlading of goods, or at some place for which a sufferance shall be granted by the collector and comptroller; and no goods shall be so laden or unladen except in the presence or with the permission in writing of the proper officer: provided always, that it shall be lawful for the commissioners of customs to make and appoint such other regulations for the carrying coastwise, or for the removing of any goods for shipment, as shall appear expedient; and that all goods laden, water-borne, or unladen contrary to the regulations of this act, or contrary to any regulations so made, be forfeited. — § 20.

Particulars of Entry of Goods inwards and outwards. — The person entering any such goods shall deliver to the collector or comptroller, or other proper officer, a bill of the entry thereof, fairly written in words at length, containing the name of the exporter or importer, and of the ship, and of the master and of the place to or from which bound, and of the place within the port where the goods are to be laden or unladen, and the particulars of the quality and quantity of the goods, and the packages containing the same, and the marks and numbers on the packages, and setting forth whether such goods be the produce of the British possessions in America or not; and such person shall at the same time pay down all duties due upon the goods; and the collector and comptroller, or other proper officer, shall thereupon grant their warrant for the lading or unlading of such goods. — § 21.

Entry inwards by Bill of Sight. — If the importer of any goods make and subscribe a declaration before the collector or comptroller, or other proper officer, that he cannot, for want of full information, make perfect entry thereof, it shall be lawful for the collector and comptroller to receive an entry by bill of sight for the packages or parcels of such goods by the best description which can be given, and to grant a warrant thereupon, in order that the same may be landed and secured to the satisfaction of the officer of the customs, and at the expense of the importer, and may be seen and examined by such importer in the presence of the proper officers; and within 3 days after the goods shall have been so landed, the importer shall make a perfect entry thereof, and pay down all duties due thereon; and in default of such entry such goods shall be taken to the Queen's warehouse, and if the importer shall not, within 1 month after such landing, make perfect entry of such goods and pay the duties due thereon, together with charges of removal and warehouse rent, such goods shall be sold for the payment thereof, and the overplus, if any, shall be paid to the proprietor of the goods. — § 22.

Goods subject to ad Valorem Duty. — In all cases where the duties imposed by this act upon the importation of articles into her Majesty's possessions in America are charged, not according to the weight, tale, gauge, or measure, but according to the value thereof, such value shall be ascertained by the declaration of the importer of such articles, or his known agent, in manner and form following; (that is to say,)

'I *A. B.* do hereby declare, that the articles mentioned in the entry, and contained in the packages '[*here specifying the several packages, and describing the several marks and numbers, as the case may* '*be*] are of the value of . Witness my hand the day of *A. B.*

'The above declaration, signed the day of in the presence of *C. D.* collector [*or* '*other principal officer*].

Which declaration shall be written on the bill of entry of such articles, and shall be subscribed by the importer thereof, or his known agent, in the presence of the collector or other principal officer of the customs at the port of importation: provided, that if upon view and examination of such articles by the proper officer of the customs it shall appear to him that the said articles are not valued according to the true price or value thereof, and according to the true intent and meaning of this act, in such case the importer or his known agent shall be required to declare on oath before the collector or comptroller what is the invoice price of such articles, and that he verily believes such invoice price is the current value of the articles at the place from whence the said articles were imported; and such invoice price, with the addition of 10*l. per centum* thereon, shall be deemed to be the value of the articles in lieu of the value so declared by the importer or his known agent, and upon which the duties imposed by this act shall be charged and paid: provided also, that if it shall appear to the collector and comptroller, or other proper officer, that such articles have been invoiced below the real and true value thereof, at the place from whence the same were imported, or if the invoice price is not known, the articles shall in such case be examined by two competent persons, to be nominated and appointed by the governor or commander-in-chief of the colony, plantation, or island into which the said articles are imported, and such persons shall declare on oath before the collector or comptroller, or other proper officer, what is the true and real value of such articles in such colony, plantation, or island; and the value so declared on the oaths of such persons shall be deemed to be the true and real value of such articles, and upon which the duties imposed by this act shall be charged and paid. — § 23.

If Importer refuse to pay such Duty, the Goods may be sold. — If the importer of such articles shall refuse to pay the duties hereby imposed thereon, it shall be lawful for the collector or other chief officer of the customs where such articles shall be imported, to take and secure the same, with the casks or other package thereof, and to cause the same to be publicly sold within the space of 20 days at the most after such refusal made, and at such time and place as such officer shall, by 4 or more days' public notice, appoint for that purpose: which articles shall be sold to the best bidder; and the money arising from the sale thereof shall be applied in the first place in payment of the said duties, together with the charges that shall have been occasioned by the said sale, and the overplus, if any, shall be paid to such importer or proprietor, or any other person authorised to receive the same. — § 24.

If Goods be not entered in 20 Days, the Officer may land and secure them. — Every importer of any goods shall, within 20 days after the arrival of the importing ship, make due entry inwards of such goods, and land the same; and in default of such entry and landing it shall be lawful for the officers of the

customs to convey such goods to the king's warehouse; and if the duties due upon such goods be not paid within 3 months after such 20 days shall have expired, together with all charges of removal and warehouse rent, the same shall be sold, and the produce thereof applied first to the payment of freight and charges, next of duties, and the overplus, if any, shall be paid to the proprietor of the goods. — § 25.

Goods imported from U Kingdom or British Possessions must appear in Cocket, &c. — No goods shall be imported into any British possession as being imported from the U. Kingdom, or from any other British possession (if any advantage attach to such distinction), unless such goods appear upon the cockets or other proper documents for the same to have been duly cleared outwards at the port of exportation in the U. Kingdom, or in such other British possession, nor unless the ground upon which such advantage be claimed be stated in such cocket or document. — § 26.

Goods imported from, to be deemed of the growth of, U. Kingdom. — No goods shall, upon importation into any of the British possessions in America, be deemed to be of the growth, production, or manufacture of the U. Kingdom, or of any British possession in America, unless imported from the U. Kingdom, or from some British possession in America. — § 27.

Entry not to be valid, if goods be not properly described in it. — No entry, nor any warrant for the landing of any goods, or for the taking of any goods out of any warehouse, shall be deemed valid, unless the particulars of the goods and packages in such entry correspond with the particulars of the goods and packages in the report of the ship, or in the certificate or other document, where any is required, by which the importation or entry of such goods is authorised, nor unless the goods shall have been properly described in such entry by the denominations and with the characters and circumstances according to which such goods are charged with duty or may be imported; and any goods taken or delivered out of any ship or out of any warehouse by virtue of any entry or warrant not corresponding or agreeing in all such respects, or not properly describing the same, shall be deemed to be goods landed or taken without due entry thereof, and shall be forfeited. — § 28.

Certificate of Production for Sugar, Coffee, Cocoa, or Spirits. — Before any sugar, coffee, cocoa, or spirits shall be shipped for exportation in any British possession in America or in the island of Mauritius, as being the produce of such possession or of such island, the proprietor of the estate on which such goods were produced, or his known agent, shall make and sign an affidavit in writing before the collector or comptroller at the port of exportation, or before a justice of the peace, or other officer duly authorised to administer such oath, declaring that such goods are the produce of such estate; and such affidavit shall set forth the name of the estate, and the description and quantity of the goods, and the packages containing the same, with the marks and numbers thereon, and the name of the person to whose charge at the place of shipment they are to be sent; and if any justice or other officer shall subscribe his name to any writing purporting to be such affidavit, unless the person making it shall actually appear before him and be sworn to the truth of the same, such justice of the peace or officer shall forfeit and pay for any such offence the sum of 50*l.*; and the person entering and shipping such goods shall deliver such affidavit to the collector or comptroller, or other proper officer, and shall make and subscribe a declaration before him that the goods which are to be shipped by virtue of such entry are those mentioned in such affidavit; and the master of the ship in which such goods shall be laden shall, before clearance, make and subscribe a declaration before the collector or comptroller that the goods shipped by virtue of such entry are the same as are mentioned and intended in such affidavit, to the best of his knowledge and belief; and thereupon the collector and comptroller, or other proper officer, shall sign and give to the master a certificate of production, stating that proof has been made, in manner required by law, that such goods (describing the same) are the produce of such British possession or of such island, and setting forth in such certificate the name of the exporter and of the exporting ship, and of the master thereof, and the destination of the goods; and if any sugar, coffee, cocoa, or spirits be imported into any British possession in America, as being the produce of some other such possession or of such island, without such certificate of production, the same shall be forfeited. — § 29.

Certificate of Production on Re-exportation from another Colony. — Before any sugar, coffee, cocoa, or spirits shall be shipped for exportation in any British possession in America, as being the produce of some other such possession, the person exporting the same shall in the entry outwards state the place of the production, and refer to the entry inwards and landing of such goods, and shall make and subscribe a declaration before the collector or comptroller to the identity of the same; and thereupon, if such goods shall have been duly imported with a certificate of production within 12 months prior to the shipping for exportation, the collector and comptroller shall sign and give to the master a certificate of production, referring to the certificate of production under which such goods had been so imported, and containing the like particulars with the date of such importation. — § 30.

Goods brought over Land, or by Inland Navigation. — It shall be lawful to bring or import by land or by inland navigation into any of the British possessions in America from any adjoining foreign country any goods which might be lawfully imported by sea into such possession from such country, and so to bring or import such goods in the vessels, boats, or carriages of such country, as well as in British vessels, boats, or carriages. — § 31.

What Vessels shall be deemed British on the Lakes in America. — No vesse. or boat shall be admitted to be a British vessel or boat on any of the inland waters or lakes in America, except such as have been built within the British dominions, and shall be wholly owned by British subjects, and shall not have been repaired at any foreign place to a greater extent than in the proportion of 10*s.* for every ton of such vessel or boat at any one time: provided always, that nothing herein-before contained shall extend to prevent the employment of any vessel or boat as a British vessel or boat on such inland waters or lakes, which shall have wholly belonged to British subjects before the 5th day of July, 1825, and which shall not have been since that day repaired as aforesaid in any foreign place. — § 32.

Goods must be brought to a Place where there is a Custom-house. — It shall not be lawful so to bring or import any goods except into some port or place of entry at which a Custom-house now is or hereafter may be lawfully established: provided also, that it shall be lawful for the governor, lieutenant-governor, or person administering the government of any of the said possessions respectively, by and with the advice of the executive council thereof, from time to time to diminish or increase, by proclamation, the number of ports or places of entry. — § 33.

Duties to be collected in same Manner as on Goods imported by Sea. — The duties imposed by this act shall be ascertained, levied, and recovered upon all goods so brought or imported in the same manner, and by the same means, rules, regulations, penalties, &c. as the duties on the like goods imported by sea; and if any goods shall be brought or imported contrary hereto, or if any goods so brought or imported shall be removed from the station or place appointed for the examination of such goods before all duties payable thereon shall have been paid or satisfied, such goods shall be forfeited, together with the vessel, boat, or carriage, and the horses or other cattle, in or by which such goods shall have been so imported or brought, or so removed. — § 34.

Duties in Canada on American Boats, as in America on British Boats. — The same tonnage duties shall be paid upon all vessels or boats of the U. States of America importing any goods into Canada as are or may be payable in the U. States of America on British vessels or boats entering the harbours whence such goods have been imported. — § 35.

CONDITIONS WITH RESPECT TO WAREHOUSING IN THE COLONIES.

Ports herein mentioned to be free warehousing Ports. — The several ports herein-after mentioned, (that to say,) Bridgetown in Barbadoes, Quebec in Canada, Sydney in Cape Breton, Roseau in Dominica,

St. George in Grenada, Kingston and Montego Bay in Jamaica, Charlestown in Nevis, Saint John's and Saint Andrew's in New Brunswick, Saint John's in Newfoundland, Nassau in New Providence, Halifax and Pictou in Nova Scotia, Basseterre in Saint Kitt's, Kingston in Saint Vincent, Road Harbour in Tortola, San Joseph in Trinidad, shall be *free warehousing ports* for all the purposes of this act; and Kingston and Montreal in the Canadas, and Liverpool and Yarmouth in Nova Scotia, shall be *warehousing ports* for the warehousing of goods brought by land or by inland navigation, or imported in British ships; and it shall be lawful for the several collectors and comptrollers of the said ports respectively, by notice in writing under their hands, to appoint from time to time such warehouses at such ports as shall be approved of by them for the free warehousing and securing of goods, and also in such notice to declare what sorts of goods may be so warehoused, and also by like notice to revoke or alter any such appointment or declaration: provided always, that every such notice shall be transmitted to the governor of the place, and shall be published in such manner as he shall direct. — § 36.

Goods may be warehoused without Payment of Duty. — It shall be lawful for the importer of any such goods into the said ports to warehouse them in the warehouses so appointed, without payment of any duty on the first entry thereof, subject nevertheless to the rules, regulations, &c. herein-after contained. — § 37.

Regulation as to warehousing of Goods on Arrival in Canada. — Upon the arrival of any goods at any frontier port in the Canadas, such goods may be entered with the proper officer of the customs at such port to be warehoused at some warehousing port in the Canadas, and may be delivered by such officer to be passed on to such warehousing port, under bond, to the satisfaction of such officer, for the due arrival and warehousing of such goods at such port. — § 38.

Stowage of Goods in Warehouse. — All goods so warehoused shall be stowed in such parts or divisions of the warehouse and in such manner as the collector and comptroller shall direct; and the warehouse shall be locked and secured in such manner, and shall be opened and visited only at such times, and in the presence of such officers, and under such rules and regulations, as the collector and comptroller shall direct; and all such goods shall, after being landed upon importation, be carried to the warehouse, or shall, after being taken out of the warehouse for exportation, be carried to be shipped, under such rules and regulations as the collector and comptroller shall direct. — § 39.

Bond upon Entry of Goods to be warehoused. — Upon the entry of any goods to be warehoused, the importer of such goods, instead of paying down the duties due thereon, shall give bond with two sufficient sureties, to be approved of by the collector or comptroller, in treble the duties payable on such goods, with condition for the safe depositing of such goods in the warehouse mentioned in such entry, and for the payment of all duties due upon such goods, or for the exportation thereof, according to the first account taken of such goods upon the landing of the same; and with further condition, that no part thereof shall be taken out of such warehouse until cleared from thence upon due entry and payment of duty, or upon due entry for exportation; and with further condition, that the whole of such goods shall be so cleared from such warehouse, and the duties, upon any deficiency of the quantity according to such first account, shall be paid, within 2 years from the date of the first entry thereof; and if after such bond shall have been given, the goods or any part thereof shall be sold or disposed of, so that the original bonder shall be no longer interested in or have any control over the same, it shall be lawful for the collector and comptroller to admit fresh security to be given by the bond of the new proprietor or other person having control over such goods, with his sufficient sureties, and to cancel the bond given by the original bonder of such goods, or to exonerate him to the extent of the fresh security so given. — § 40.

Goods not duly warehoused, &c. to be forfeited. — If any goods which have been entered to be warehoused shall not be duly carried and deposited in the warehouse, or shall afterwards be taken out of it without due entry and clearance, or having been entered and cleared for exportation shall not be duly carried and shipped, or shall afterwards be relanded, except with permission of the customs, such goods shall be forfeited. — § 41.

Account of Goods to be taken on landing. — Upon the entry and landing of any goods to be warehoused, the proper officer shall take a particular account of the same, and shall mark the contents on each package, and shall enter the same in a book to be kept for that purpose; and no goods which have been so warehoused shall be taken or delivered from the warehouse except upon due entry, and under care of the proper officers for exportation, or upon due entry and payment of duty for home use; and whenever the whole of the goods warehoused under any entry shall be cleared from the warehouse, or whenever further time shall be granted for any such goods to remain warehoused, an account shall be made out of the quantity upon which the duties have been paid, and of the quantity exported, and of the quantity (to be then ascertained) of the goods still remaining in the warehouse, as the case may be, deducting from the whole the quantity contained in any whole packages (if any) which may have been abandoned for the duties; and if upon such account there shall in either case appear to be any deficiency of the original quantity, the duty payable upon the amount of such deficiency shall then be paid. — § 42.

Samples may be taken. — It shall be lawful for the collector and comptroller, under such regulations as they shall see fit, to permit moderate samples to be taken of any goods so warehoused, without entry, and without payment of duty, except as the same shall eventually become payable, as on a deficiency of the original quantity. — § 43.

Goods may be sorted and repacked. — It shall be lawful for the collector and comptroller, under such regulations as they shall see fit, to permit the proprietor or other person having control over any warehoused goods to sort, separate, and pack and repack any such goods, and to make such lawful alterations therein, or arrangements and assortments thereof, as may be necessary for the preservation of such goods, or in order to the sale, shipment, or legal disposal of the same; and also to permit any parts of such goods so separated to be destroyed, but without prejudice to the claim for duty upon the whole original quantity of such goods: provided always, that it shall be lawful for any person to abandon any whole packages to the officers of the customs for the duties, without being liable to any duty upon the same. — § 44.

Goods warehoused may be delivered for Removal without payment of Duty. — Goods warehoused at any warehousing port in any of the British possessions in America, being first duly entered, may be delivered, under the authority of the proper officer of the customs, without payment of duty, except for any deficiency thereof, for the purpose of removal to another warehousing port in the same possession, under bond, to the satisfaction of such officer, for the due arrival and rewarehousing of such goods at such other port. — § 45.

All Goods to be cleared within 2 Years, or sold. — All goods which have been so warehoused or rewarehoused shall be duly cleared, either for exportation or for home consumption, within 2 years from the day of first entry for warehousing: and if any such goods be not so cleared, it shall be lawful for the collector and comptroller to cause the same to be sold, and the produce shall be applied, first to the payment of the duties, next of warehouse rent and other charges, and the overplus (if any) shall be paid to the proprietor: provided always, that it shall be lawful for the collector and comptroller to grant further time for any such goods to remain warehoused, if they shall see fit. — § 46.

Bond on Entry for Exportation. — Upon the entry outwards of any goods to be exported from the warehouse, the person entering the same shall give security by bond in treble the duties of importation on such goods, with two sufficient sureties, to be approved by the collector or comptroller, that the same shall be landed at the place for which they be entered outwards, or be otherwise accounted for. — § 47.

Power to appoint other Ports. — It shall be lawful for his Majesty, by order in council, from time to time to appoint any port in his Majesty's possessions in America to be a free warehousing port for all or any of the purposes of this act; and every such port so appointed by his Majesty shall be, for all the purposes expressed in such order, a free warehousing port under this act, as if appointed by the same. — § 48.

Goods from Mauritius liable to same Duties and Regulations as West India Goods. — § 49. — (See PORT LOUIS.)

Cape of Good Hope within Limits of the Company's Charter. — In all trade with the British possessions in America, the Cape of Good Hope, and the territories and dependencies thereof, shall be deemed to be within the limits of the East India Company's charter. — § 50.

DUTCH PROPRIETORS, &c.

Dutch Proprietors in Demerara, Essequibo, and Berbice, may supply their Estates from Holland. — It shall be lawful for any of the subjects of the King of the Netherlands, being Dutch proprietors in the colonies of Demerara, Essequibo, and Berbice, to import in Dutch ships from the Netherlands into the said colonies all the usual articles of supply for their estates therein, and also wine imported for the purposes of medicine only, and which shall be liable to a duty of 10*s.* per ton, and no more; and in case seizure be made of any articles so imported, upon the ground that they are not such supplies, or are for the purpose of trade, the proof to the contrary shall lie on the Dutch proprietor importing the same, and not on the seizing officer: provided always, that if sufficient security by bond be given in court to abide the decison of the commissioners of customs upon such seizure, the goods so seized shall be admitted to entry and released. — § 51.

Dutch Proprietors may not export to United Kingdom. — It shall not be lawful for such Dutch proprietors to export the produce of their estates to the United Kingdom, or to any of his Majesty's sugar colonies in America, except under the conditions herein-after provided. — § 52.

What Persons shall be deemed Dutch Proprietors. — All subjects of his Majesty the King of the Netherlands resident in his said Majesty's European dominions, who were at the date of the convention between his Majesty George III. and the King of the Netherlands, dated the 12th day of August, 1815, proprietors of estates in the said colonies, and all subjects of his said Majesty who may hereafter become possessed of estates then belonging to Dutch proprietors therein, and all such proprietors as being then resident in the said colonies, and being natives of his said Majesty's dominions in the Netherlands, may have declared, within 3 months after the publication of the aforesaid convention in the said colonies, that they wish to continue to be considered as such, and all subjects of his said Majesty the King of the Netherlands who may be the holders of mortgages of estates in the said colonies made prior to the date of the convention, and who may under their mortgage deeds have the right of exporting from the said colonies to the Netherlands the produce of such estates, shall be deemed Dutch proprietors under the provisions of this act: provided, that where both Dutch and British subjects have mortgages upon the same property in the said colonies, the produce to be consigned to the different mortgagees shall be in proportion to the debts respectively due to them. — § 53.

Persons not wishing to be considered Dutch proprietors to sign a Declaration to that Effect. — Whereas it is expedient to permit any of such persons, at their option, to relinquish such character of Dutch proprietor; be it therefore enacted, that if any such person shall make and sign a declaration in writing, attested by two credible witnesses, setting forth that he is desirous and has elected not to be deemed to be a Dutch proprietor within the meaning of the said act in respect of any such estate or mortgage to be mentioned and named in such declaration, and shall cause such declaration to be delivered to the commissioners of his Majesty's customs, such person shall thenceforth be no longer deemed a Dutch proprietor within the meaning of the said act in respect of the estate or mortgage so mentioned in such declaration as aforesaid, and such declaration shall have effect in respect of any goods the produce of any such estate of which such person so far as relates to those goods was a Dutch proprietor, although such goods may have been exported from the colony before the delivering of such declaration as aforesaid. — § 54.

Colonial Laws repugnant to any Act of Parliament to be null and void. — All laws, by-laws, usages, or customs at this time or which hereafter shall be in practice, or pretended to be in practice, in any of the British possessions in America, in anywise repugnant to this act, or to any other act of parliament so far as such act relates to the said possessions, shall be null and void to all intents and purposes. — § 56.

Exemption from Duties to extend only to Duties by Act of Parliament. — Provided always, that no exemption from duty in any of the British possessions abroad, contained in any act of parliament, extends to any duty not imposed by act of parliament, unless and so far only as any duty not so imposed is expressly mentioned in such exemption. — § 57.

Officers may board Ships hovering on the Coasts. — It shall be lawful for the officers of customs to go on board any ship in any British possession in America, and to rummage and search all parts of such ship for prohibited and uncustomed goods, and also to go on board any ship hovering within 1 league of the coasts thereof, and in either case freely to stay on board such ship so long as she shall remain in such port or within such distance; and if any such ship be bound elsewhere, and shall continue so hovering for the space of 24 hours after the master shall have been required to depart, it shall be lawful for the officer of the customs to bring such ship into port, and to examine her cargo, and to examine the master upon oath touching the cargo and voyage: and if there be any goods on board prohibited to be imported, such ship and cargo shall be forfeited; and if the master shall not truly answer the questions demanded of him, he shall forfeit 100*l.* — § 58.

Forfeiture of Vessels, Carriages, &c. removing Goods liable to Forfeiture. — All vessels, boats, carriages, and cattle made use of in the removal of any goods liable to forfeiture under this act shall be forfeited, and every person who shall assist or be otherwise concerned in the unshipping, landing, or removal, harbouring, &c. of such goods, or into whose possession the same shall knowingly come, shall forfeit the treble value thereof, or the penalty of 100*l.*, at the election of the officers of the customs. — § 59.

Goods, Vessels, &c. liable to Forfeiture may be seized by Officers. — All goods, ships, vessels, boats, carriages, and cattle, liable to forfeiture under this act, may be seized and secured by any officer of the customs or navy, or by any person employed for that purpose with the concurrence of the commissioners of his Majesty's customs; and every person who shall in any way hinder or obstruct such officers or persons employed as aforesaid, or any person aiding him, shall for every such offence forfeit the sum of 200*l.* — § 60.

Writ of Assistance to search for and seize Goods liable to Forfeiture. — Under authority of a writ of assistance granted by the supreme court of justice or court of vice admiralty having jurisdiction in the place, it shall be lawful for any officer of the customs, taking with him a peace officer, to enter any building or other place in the daytime, and to search for, seize, and secure any goods liable to forfeiture under this act, and, in case of necessity, to break open any doors and any chests or other packages for that purpose; and such writ of assistance, when issued, shall be deemed to be in force during the whole of the reign in which the same shall have been granted, and for 12 months from the conclusion of such reign. — § 61.

Obstruction of Officers by Force. — If any person shall, by force or violent assault, molest, hinder, or obstruct any officer of the customs or navy, or other person employed as aforesaid, or any person acting in his aid, such person upon conviction shall be adjudged a felon, and punished at the discretion of the court. — § 62.

Goods seized to be secured at the next Custom-house, and sold by Auction. — All things seized as liable to forfeiture under this act, or under any act made for the prevention of smuggling, or relating to the customs, or to trade or navigation, shall be delivered to the collector and comptroller of the customs next to the place where the same were seized; and after condemnation they shall cause the same to be sold by public auction to the best bidder: provided always, that it shall be lawful for the commissioners of the customs to direct in what manner the produce of such sale shall be applied, or, in lieu of such sale, to direct what things shall be destroyed or be reserved for the public service. — § 63.

The next 17 clauses relate to the mode of proceeding in actions as to seizures before the courts, the application and recovery of penalties, &c. It seems unnecessary to insert these in this place.

The King may regulate the Trade of certain Colonies. — It shall be lawful for his Majesty, by any order or orders in council to be issued from time to time, to give such directions and make such regulations touching the trade and commerce to and from any British possessions on or near the continent of Europe, or within the Mediterranean Sea, or in Africa, or within the limits of the East India Company's charter (excepting the possessions of the said Company), as to his Majesty in council shall appear expedient; and if any goods shall be imported or exported in any manner contrary to any such order, the same shall be forfeited, together with the ship importing or exporting the same. — § 81.

East India Company may carry Goods from India to Colonies. — It shall be lawful for the East India Company, during the continuance of their exclusive privileges of trade, to export from any place within the limits of their charter any goods for the purpose of being carried to some of his Majesty's possessions in America, and so to carry and to import the same into any of such possessions, and also to carry return cargoes from such possessions to any place within the limits of their charter, or to the U. Kingdom; and it shall be lawful for any of his Majesty's subjects, with the licence or under the authority of the said Company, to lade in and export from any of the dominions of the Emperor of China any goods, and to lade in and export from any place within the limits of the said Company's charter any tea, for the purpose of being carried to some of his Majesty's possessions in America, and also so to carry and to import the same into any of such possessions. — § 82.

Certificate of Production of East India Sugar. — It shall be lawful for any shipper of sugar the produce of some British possession within the limits of the East India Company's charter, to be exported from such possession, to go before the collector, comptroller, &c. of the customs at such place, or, if there be none such, to go before the principal officer of such place, or the judge or commercial resident, and make an affidavit that such sugar was really and *bonâ fide* the produce of such British possession, to the best of his knowledge and belief; and such officer, &c. is to grant a certificate thereof, setting forth the name of the ship in which the sugar is to be exported, and her destination.—§ 83.

Ships built prior to the 1st of January, 1816, deemed British Ships within certain Limits.—All ships built within the limits of the East India Company's charter prior to the 1st day of January, 1816, and which were then and have continued since to be solely the property of his Majesty's subjects, shall be deemed to be British ships for all the purposes of trade within the said limits, including the Cape of Good Hope. — § 84.

Certificate of Production of Cape Wine.— It shall be lawful for the shipper of wine the produce of the Cape of Good Hope, or of its dependencies, which is to be exported from thence, to go before the chief officer of the customs, and make an affidavit that such wine was really and *bonâ fide* the produce of the Cape or its dependencies; and such officer is required to administer such affidavit, and to grant a certificate thereof stating the name of the ship in which the wine is exported, and her destination.— § 85.

Certificate of Production of Goods in Guernsey, &c.—It shall be lawful for any person who is about to export from Guernsey, Jersey, Alderney, or Sark, to the U. Kingdom, or any British possession in America, any goods the growth or produce of any of those islands, or any goods manufactured from materials the growth or produce thereof, or of the U. Kingdom, to go before a magistrate of the island from which the goods are to be exported, and sign a declaration that such goods are of such growth, produce, or manufacture, and such magistrate shall administer and sign such declaration; and thereupon the governor, lieutenant-governor, &c. of the island shall, upon the delivery to him of such declaration, grant a certificate under his hand of the proof contained in such declaration, stating the ship by, and the port in the U. Kingdom, or in such possession, to which the goods are to be exported; and such certificate shall be produced at such ports, in proof that the goods mentioned therein are of the growth, produce, &c. of such islands.— § 86.

The next section relates to the importation of tea into Guernsey, &c. during the exclusive trading privileges enjoyed by the East India Company.

Guernsey, &c. Tonnage of Ships and Size of Packages for Spirits.—No brandy, geneva, or other spirits (except rum of the British plantations) shall be imported into or exported from the islands of Jersey, Guernsey, Alderney, or Sark, or removed from any one to any other of the said islands, or coastwise from any one part to any other part of either of the said islands, or be shipped to be so removed or carried, or be waterborne for the purpose of being so shipped in any ship, vessel, or boat of less burden than 100 tons (except when imported from the U. Kingdom in ships of the burden of 70 tons at least), nor in any cask or package of less size or content than 40 gallons (except when in bottles, and carried in a square-rigged ship), nor any tobacco or snuff in any ship, vessel, or boat of less burden than 100 tons (except when imported from the U. Kingdom in ships of the burden of 70 tons at least), nor in any cask or package containing less than 450 lbs. weight (save and except any such spirits or loose tobacco as shall be for the use of the seamen belonging to and on board any such ship, vessel, or boat, not exceeding 2 gallons of the former, and 5 lbs. weight of the latter, for each seaman, and also except such manufactured tobacco or snuff as shall have been duly exported as merchandise from Great Britain or Ireland), on pain of forfeiture of all such foreign brandy, geneva, or other spirits, tobacco or snuff respectively, together with the casks or packages containing the same. and also of every such ship, vessel, or boat, together with all her guns, furniture, &c. — § 88.

Not to extend to Vessels of 10 Tons supplying Island of Sark, having Licence so to do. — Nothing herein contained shall extend, or be construed to extend, to any boat not exceeding the burden of 10 tons, for having on board at any one time any foreign spirits of the quantity of 10 gallons or under, in casks or packages of less size or content than 40 gallons, or any tobacco, snuff, or tea, not exceeding 50 lbs. weight of each, for the supply of the said island of Sark, such boat having a licence from the officer of customs at either of the islands of Guernsey or Jersey, for the purpose of being employed in carrying commodities for the supply of the said island of Sark; provided that every such boat having on board at any one time any greater quantity of spirits than 10 gallons, or any greater quantity of tobacco or snuff than 50 lbs. weight of each of the said articles, unless such greater quantity of spirits, tobacco, or snuff shall be in casks or packages of the size, content, or weight herein-before required, or having on board at any one time any greater quantity of tea than 50 lbs. weight, shall be forfeited.— § 89.

Penalty on Persons found on board Vessels liable to Forfeiture within 1 League of Guernsey, &c.—Every person found or discovered to have been on board any vessel or boat liable to forfeiture, for being found within 1 league of the islands of Guernsey, Jersey, Alderney, or Sark, having on board or in any manner attached or affixed thereto, or conveying or having conveyed, in any manner, such goods or other things as subject such vessel or boat to forfeiture, or who shall be found or discovered to have been on board any vessel or boat from which any part of the cargo shall have been thrown overboard during chace, or staved or destroyed, shall forfeit the sum of 100*l*. — § 90.

British Coals not to be re-exported from British Possessions without Duty.—It shall not be lawful to re-export from any of his Majesty's possessions abroad to any foreign place any coals the produce of the U. Kingdom, except upon payment of the duty to which such coals would be liable upon exportation from the U. Kingdom to such foreign place; and no such coals shall be shipped at any of such possessions, to be exported to any British place, until the exporter or the master of the exporting vessel shall have given bond, with one sufficient surety, in double the value of the coals, that such coals shall not be landed at any foreign place.—§ 91.

Penalty for using Documents counterfeited or falsified.— If any person shall, in any of his Majesty's possessions abroad, counterfeit or falsify, or wilfully use when counterfeited or falsified, any entry, warrant, cocket, &c. for the unlading, lading, entering, reporting, or clearing any ship or vessel, or for

the landing, shipping, or removing of any goods, stores, baggage, or article whatever, or shall by any false statement procure any writing or document to be made for any such purposes, or shall falsely make any oath or affirmation required by any act for regulating the trade of the British possessions abroad, or shall forge or counterfeit a certificate of the said oath or affirmation, or shall knowingly publish such certificate, he shall for every such offence forfeit the sum of 200*l.* — § 92.

Connection of the Planter and Home Merchant. Mode of transacting Business in England. — The mode of transacting West India business is as follows: — A sugar planter forms a connection with a mercantile house in London, Bristol, Liverpool, or Glasgow; stipulates for an advance of money on their part; grants them a mortgage on his estate; and binds himself to send them annually his crop, allowing them the full rate of mercantile commissions. These commissions are $2\frac{1}{2}$ per cent. on the amount of sugar sold, and of plantation stores sent out; along with $\frac{1}{2}$ per cent. on all insurances effected. During the war, when prices were high, the amount of those commissions was large; but, like other high charges, the result has, in nine cases in ten, been to the injury of those who received them; they led the merchants to undertake too much, and to make too large advances to the planters, for the sake of obtaining their business. At that time it was usual to allow a permanent loan at the rate of 3,000*l.* for the assured consignment of 100 hogsheads of sugar; but that *ratio* was very often exceeded by the planter, the 3,000*l.* becoming 4,000*l.*, 5,000*l.*, 6,000*l.*, and, in very many cases, still more, in consequence of unforeseen wants and too sanguine calculations on his part.

Persons resident in the West Indies are almost always bare of capital, and for obvious reasons. A climate of such extreme heat, and a state of society possessing so few attractions to persons of education, offer no inducement to men of substance in Europe to go thither. Those who do go, must trust to their personal exertion and the support of others; and when, after a continued residence in the West Indies, they have made some progress in acquiring a competency, and have become accustomed to the climate, they hardly ever consider themselves as settled there for life; their wish and hope is, to carry their acquisitions so far as to be enabled to pass the remainder of their days comfortably at home. The readiest means, in the view of the planter, of accomplishing this, is the extension of his undertakings; which he can do only by borrowing money. Hence a continued demand on his mercantile correspondents at home for fresh advances: the consuming effect of heavy commissions, and of the interest on borrowed money, is, or rather was, overlooked in his ardent speculations. But when prices unfortunately fall, he finds himself 10,000*l.* or 20,000*l.* in debt, with a reduced income. The merchants at home become equally embarrassed, because the case of one is the case of three fourths of their correspondents; and the capital of the merchants, large as it may be, is absorbed and placed beyond their control. The mortgages they hold are of value only in an ultimate sense: to foreclose them, and to take possession of the estates, is, in general, a very hazardous course.

Such has been for a number of years the state of our West India trade. Perhaps it is impossible to point out any means of effectual relief: our planters must not build expectations on such doubtful, or rather improbable, events as the stoppage of distillation from malt, or an insurrection or emancipation of the negroes in rival countries, such as Cuba or Brazil. Of a bounty on exportation it is idle to speak: so that their only rational and substantial ground of hope seems to be in a further reduction of the duties on sugar, coffee, and rum; and a farther reduction of the duties on imports, with the abolition of the remaining restrictions on their trade.

The sale of West India articles takes place through the medium of produce brokers, who in London reside chiefly in Mincing Lane and Tower Street. Samples of sugar and rum are on show in their respective sale rooms during four days of the week, viz. Tuesday, Wednesday, Thursday, and Friday, from 11 to 1 o'clock; during which time the sugar refiners, wholesale grocers, and other dealers in produce, call in, observe the state of the market, and buy what they require. The term of credit is short; only 1 month for coffee and rum, and 2 months for sugar. Coffee is generally sold by public auction, sugar and rum by private contract. The broker's commission is usually $\frac{1}{2}$ per cent. on the amount; but in the case of coffee, as they guarantee the buyers, their charge amounts to 1 per cent. The brokers have no correspondence or connection with the planters; they are employed by the merchants; and their sales, though for large amounts, being very simple, a brokerage house of consequence generally does the business of a number of merchants. Neither merchant nor broker see, or are in the least under the necessity of seeing, the bulky packages containing the different articles of produce of which they effect the sales: all is done by sample; the packages remaining in the bonded warehouse from the time of landing till they are sold; after which they pass to the premises of the refiner, wholesale grocer, or whoever may be the purchaser.

The allowances made to the buyer in respect of weight, consist, first of the tare, which

is the exact weight of the cask; and, in the second place, of a fixed allowance of 5 lbs. per cask in the case of coffee, called trett, and of 2 lbs. per cask on sugar, under the name of draft. —(See *Account Sales* of both, in p. 146.)

The shipping of stores from England to the plantations is also a very simple transaction. West India merchants in London, Liverpool, or Bristol, receive from the planters, in the autumn of each year, a list of the articles required for the respective estates: these lists they divide, arrange, and distribute among different wholesale dealers in the course of September and October, with instructions to get them ready to ship in a few weeks. November and December are the chief months for the despatch of outward-bound West Indiamen, as the plantation stores ought, by rights, to arrive about the end of December, or in the course of January. That is a season of activity, and generally of health, in the West Indies; the comparatively cool months of November and December having cleared the air, and the produce of the fields having become ripe and ready to carry. Crop time lasts from January to the end of July, after which the heavy rains put a stop to field work in the islands. Demerara, being so near the line, experiences less difference in the seasons, and it is customary there to continue making sugar all the year round.

The arrivals of West Indiamen in England with homeward cargoes begin in April and continue till October; after which, with the exception of occasional vessels from Demerara and Berbice, they cease till the succeeding April. This corresponds with the time of carrying and loading the crops: for it would be quite unadvisable, on the score of health, as well as of the interruptions to work from the heavy rains, to attempt loading vessels in the sugar islands during the autumnal months.

The unloading of West Indiamen in London usually takes place at the West India docks; and did so uniformly from the autumn of 1802, when the docks were first opened, till August, 1823, when the dock monopoly expired. The delays in discharging occasionally complained of during the war, arose from two causes; from the vessels arriving in fleets (in consequence of sailing with convoy), and from the imperfections inseparable from a new establishment. The latter have been long remedied; and as to the former, though at particular seasons, and after a change of wind, the vessels still come close on each other, the crowding in the docks is by no means to be compared to that arising from the arrival of a convoy. Cargoes are discharged very speedily, the time seldom exceeding 3 days. The dock dues have also been materially reduced since the peace: and the whole exhibits a striking example of the advantage attendant on transacting a mass of business on one spot; an advantage which can be enjoyed only in great sea-ports, such as London, Liverpool, or Amsterdam. —(See Docks.)

The rates of freight during the war were, on sugar from 7*s.* to 8*s.* per cwt., and on coffee from 10*s.* to 11*s.*; whereas they now amount, the former to 4*s.* and 4*s.* 6*d.*, and the latter to 6*s.* The ship owners complain that these freights leave them very little profit; but in consequence of the speeed with which vessels may now be unloaded and cleared at London, it is probable that the practice of making *two* voyages in the season will become general.

Selection of Sites for Colonial Establishments. — Nothing can be more unwise than the plan, if so we may call it, hitherto followed in the selection of places at which to found colonies. The captain of a ship, without any knowledge whatever of the nature of soils or the capacities of a country in an agricultural point of view, falls in after a long cruise with a river or bay, abounding with fish and fresh water, and surrounded with land that *looks* fertile and is covered with herbage. He forthwith reports all these circumstances, duly embellished, to the Admiralty, strongly recommending the situation as an admirable one at which to found a colony; and, in nine cases out of ten, *this* is all the information that is required in taking a step of such infinite importance! No wonder, therefore, that many fine schemes of colonisation should have ended only in loss and disappointment; and that situations which the colonists were taught to look upon as a species of paradise, have proved to be any thing but what they were represented. Botany Bay, though described by Captain Cook as one of the finest places in the world, had to be abandoned by the colonists that were sent out to it; as the country round it, instead of being favourable for cultivation, is a mere sandy swamp. Is it possible to suppose, had the proper inquiries been entered into, that any attempt would have been made to establish a colony in so pestilential a climate as that of Sierra Leone? The colony on Swan River may be adduced as another instance of misplaced or premature confidence in the reports of those who were really without the means of forming a correct estimate of the various circumstances necessary to be attended to in forming a colony.

We, therefore, hope than an end may be put to this system, —a system which is in no common degree injurious to the public interests, and is highly criminal towards those who embark as colonists. The founding of a colony should be looked upon in its true point of view — as a great national enterprise. It is not an adventure to be intrusted to presumptuous ignorance; but should be maturely weighed, and every circumstance

connected with it carefully investigated. Above all, the situation in which it is proposed to found the colony should be minutely surveyed; and its climate, soil, and capacities of production deliberately inquired into by competent persons employed for the purpose. Were this done, government and the public would have the best attainable grounds upon which to proceed; and neither party would have much reason to fear those disappointments, which have hitherto so often followed the exaggerated representations of those to whom the important and difficult task of selecting situations for colonies has been delegated.

V. Foreign Colonies.

1. *Spanish Colonies.* — Spain, whose colonial possessions extended a few years ago from the frontiers of the U. States to the Straits of Magellan, is not, at present, possessed of a foot of ground in the whole American continent. Still, however, her colonial possessions are of great value and importance. In the West Indies, she is mistress of Cuba and Porto Rico; — the former by far the largest and finest of the West India islands; and the latter also a very valuable possession. In the East, Spain is mistress of the Philippine Islands, which, were they in the hands of an enterprising people, would speedily become of very great commercial importance. — (See the articles Havannah, Manilla, Porto Rico.)

2. *Dutch Colonies.* — Java is the principal Dutch colonial possession, and it is one of which it is not easy to exaggerate the value and importance. — (See Batavia.) In the East the Dutch also possess the Moluccas, Bencoolen on the coast of Sumatra, Macassar, and the eastern coast of Celebes, Banda, &c. They have several forts on the Gold Coast in Africa; and in the West Indies, they possess the islands of Curaçao and St. Eustatius, Saba, and part of St. Martin; and on the continent of South America, they are masters of Dutch Surinam. Curaçao and St. Eustatius are naturally barren, but they have been both highly improved. From its being very conveniently situated for maintaining a contraband traffic with the Caraccas and other districts in South America, Curaçao was formerly a place of great trade, particularly during war. But since the independence of South America, Curaçao has ceased in a great measure to be an *entrepôt;* the goods destined for the continent being now, for the most part, forwarded direct to the places of their destination.

That district of Surinam ceded to the British in 1814, comprising the settlements of Demerara, Berbice, and Essequibo (see *ante*, p. 332.), formed the most valuable portion of Surinam, or Dutch Guiana. The district which still belongs to the Dutch lies to the south of Berbice. It contains about 38,000 square miles, and a population of about 65,000. It is daily becoming of more value and importance. The exports of sugar may amount to about 25,000,000 lbs., and those of coffee to about 4,000,000 lbs.

3. *French Colonies.* — Previously to the negro insurrection that broke out in 1792, St. Domingo was by far the most valuable colony in the West Indies. But this disastrous event, having first devastated the island, terminated in the establishment of the independent black republic of Hayti. — (See Port au Prince.) Having also sold Louisiana to the Americans, and ceded the Mauritius to the English, without making any new acquisitions, the colonial dominions of France are, at this moment, of very limited extent. They consist of Gaudeloupe and Martinique, and the small islands of Marie-Galante and Deseada, in the West Indies; Cayenne, in South America; Senegal and Goree, in Africa; the Isle de Bourbon, in the Eastern Ocean; St. Marie, in Madagascar; and Pondicherry and Chandernagor, with a very small surrounding territory, in the East Indies. The annexed tabular statements show the population, trade, &c. of the French colonies.

4. *Danish Colonies.* — In the West Indies, these consist of the islands of St. Croix, St. Thomas, and St. John. St. Croix contains about 100 square miles, and has about 32,000 inhabitants, of whom 27,000 are slaves. The soil is fertile, and it is well cultivated. The principal productions are sugar, rum, and coffee. St. Thomas has long been, and still continues to be, one of the principal emporiums in the West Indies. It owes this distinction partly to its convenient situation, partly to its spacious and safe harbour at St. Thomas, on the S. side of the island, and partly and principally to the moderation of the import duties, which vary from 1 to 1¼ per cent. St. Thomas has, in consequence, become as it were a depôt for the supply of the neighbouring islands; goods being sent to it to be warehoused till opportunity offers for conveying them to their final destination. The great articles of importation are manufactured goods, principally from England, but partly, also, from other countries of Europe, with provisions, lumber, &c. from the United States. We subjoin an

Account of the Import Trade of St. Thomas in 1840.

In India, the Danes possess Tranquebar, near Madras; and Serampoor, near Calcutta. The former contains about 20,000 inhabitants, and has greatly improved since the peace, both in commerce and population. Serampoor is a neat but not very considerable place. It serves as an asylum for the debtors of Calcutta, and is the capital station of the missionaries. The Danes have a few forts on the coast of Guinea.

5. *Swedish Colonies.* — The Swedes possess one colony — the small island of St. Bartholomew, in the West Indies. It is only about 25 square miles in extent, but is very fertile. It has no springs, nor fresh water of any sort, except such as is supplied by the rain. Population between 8,000 and 9,000.

COLUMBO, the modern capital of Ceylon, on the south-west coast of the island; lat. 6° 56′ 6″ N., lon. 79° 49′ 48″ E. It is defended by a very strong fort, nearly surrounded by the sea, in which is a light-house 97 feet high. Population of the town and fort, in 1831, 31,549. The houses, generally only one story high, are of stone, clay, and lime; and the town has more of a European appearance than any other in India. The inhabitants are principally Cingalese. The temperature is remarkable for its equality; and though very humid, the climate may, on the whole, be esteemed salubrious and temperate. There is no harbour at Columbo for large vessels, but only an open roadstead. A projecting rock, on which two batteries are erected, affords shelter to a small semicircular bay on the north side of the fort, having a wooden quay to facilitate the loading and unloading of boats. The depth of water is not sufficient to allow sloops or large dhonies to come alongside the quay; those exceeding 100 tons burden lying at about a cable's length from it. A bar of sand, on some parts of which the water is not more than 7 feet deep, extends from the projecting rock across this bay. The channel where it may be crossed by the larger class of ships is liable to shift; and it is only in the fine weather of the safe season that they venture within the bar. The outer road affords secure anchorage for half the year, from she beginning of October to the end of March, during the prevalence of the N. E. monsoon, when the wind blows off the land: during the other, or S. W. monsoon, when the wind blows from the sea on shore, the road is very far from safe; and the ships that

frequent it are sometimes obliged to slip their cables and stand out to sea. — (*Milburn's Orient. Comm.; Hamilton's Gazetteer, &c.*)

As respects its harbour, Columbo is, therefore, very inferior to Trincomalee, the harbour of which is accessible at all times, and is one of the best in India: but the country in the vicinity of Columbo is more fertile; and it has the command of an internal navigation, stretching in a lateral direction along the coast, from Putlam, to the north of the city, to Caltura on the south, a distance of about 100 miles, partly obtained by rivers, and partly by canals. Many flat-bottomed boats are employed in this navigation, the families dependent on which reside mostly on board. Nearly all the foreign trade of Ceylon is carried on from Columbo; and it has also a large proportion of the coasting traffic.

Moneys. — The rix dollar = 1*s.* 6*d.*; but accounts are kept in pounds, shillings, and pence, as in England.

The Bank of Ceylon, established in 1840, has its head office in London, its principal office in the island being in Columbo. It transacts all sorts of banking business, remitting money to and from the island, granting cash credits on the Scotch system, discounting bills, &c.

Weights, Measures, &c. — The weights are divided into ounces, pounds, &c., and are the same as in Great Britain. The candy or bahar = 500 lbs. avoirdupois, or 461 lbs. Dutch Troy weight. The principal dry measures are *seers* or *parrahs*. The former is a perfect cylinder, of the depth and diameter under-mentioned: —

	Depth.	Diameter.
Seer - - -	4·35 inches.	4·35 inches.

The parrah is a perfect cube, its internal dimensions being every way 11·57 inches.

The liquid measure consists of gallons, and their multiples and sub-multiples. 150 gallons = 1 leaguer or legger.

The bale of cinnamon consists of 92½ lbs. very nearly.

The great articles of export from Ceylon are coffee, cocoa nut oil, areca nuts, cinnamon, chanks, coir, tobacco, pearls, &c. The island is peculiarly suitable for the culture of coffee, the growth of which has rapidly increased since the reduction, in 1835, of the duty on coffee from Ceylon to the same level as that on coffee from the West Indies, the imports into the U. Kingdom from Ceylon in the former year having been only 1,870,143 lbs., whereas in 1841 they amounted to 7,098,543 lbs., and the supply appears to be susceptible of an indefinite increase.—(*Porter's Progress of the Nation*, iii. 357.) The exports of cocoa nut oil, coir, and tobacco might, also, be greatly increased; and it will be seen, in the art. CINNAMON, how the growth of that important staple has been restricted by the enormous duty laid on its exportation.

Sailing Directions and Remarks on the Port of Columbo, by James Steuart, Esq., Master Attendant.

The land about Columbo is low near the sea, with some hills to the eastward at a distance in the country. The high mountain having on it a sharp cone, called Adam's Peak, bears from Columbo E. 7° S., distant 12½ leagues; its height above the level of the sea is estimated at about 7,000 feet, according to a rough trigonometrical measurement by Colonel Willerman. When the atmosphere is clear, it may be seen 30 leagues. During the prevalence of the N. E. monsoon, Adam's Peak is generally visible in the morning, and frequently the whole of the day; but it is rarely seen in the S. W. monsoon, dense vapours generally prevailing over the island at this season.

Ships approaching Columbo in the night have a brilliant light to direct them, which is exhibited every night from a light-house in the fort; the height of the light above the level of the sea is 97 feet, and may be seen in clear weather as far as the light appears above the horizon.

A steep bank of coral, about ½ a mile broad, with 15 fathoms water on it, lies 7 miles W. from Columbo, extending northward towards Negombo (where its surface is sand), and a few miles to the southward of Columbo; outside the bank the water deepens at once to 23 fathoms, and in 2 miles to 28 fathoms, greenish sand, which is not far from the edge of soundings. Within the bank there are 25 fathoms gradually shoaling towards the shore.

A bed of sunken rocks, called the Drunken Sailor, lies S. W. by W. ½ W. from Columbo Light-house, distant 1,000 yards. The length of the ledge may be estimated at 100 yards, and the breadth 20 yards; on its N. end a small spot, about the size of the hull of a 20 ton boat, is said to have only 3 feet water on it at low water; but during several recent visits, when some of the coral from its surface was brought up, there did not appear to be less than 7 feet 6 inches water on the shallowest part: on the other parts of the ledge there is 4, 5, and 6 fathoms. The sea breaks on the shallow part of these rocks almost constantly during the S. W. monsoon, but this is very seldom the case during the N. E. monsoon.

The Drunken Sailor should not be approached under 9 fathoms during the night, as there are 8 fathoms very near to it, and in its stream to the southward.

The passage within the Drunken Sailor is clear, and some ships have sailed through; but no advantage can be gained by approaching the shore so very near at this point.

The Drunken Sailor lies so near the land, and so far to the southward of the anchorage in Colombo road, as scarcely to form any impediment to ships bound to or from Columbo.

The currents off Columbo are subject to considerable variation; but they are never so strong as to cause inconvenience to ships which may have to communicate with the shore in either monsoon without coming to anchor.

Columbo road affords good anchorage, free from foul ground; and is frequented at all seasons of the year.

The best anchorage during the prevalence of S. W. winds from April to October, is in from 7 to 8 fathoms, with the light-house bearing S. by E. ¼ E., Dutch church E. by S. In the N. E. monsoon from November to April, it is more convenient to anchor in 6½ fathoms, with the light-house bearing S. or S. ½ E., and the Dutch church E. S. E.

Ships requiring pilots to conduct them to the anchorage should make the usual signal; the charge for pilotage is 15*s.*

The bar is a bank of sand with 7 feet water on its shallowest part, the northern extremity being about 400 yards N. W. of the Custom-house Point; small vessels that draw less than 10 feet water, ride within the bar protected from the S. W. wind and sea.

When the sea is high, it breaks with great force on the bar, and renders the passage from the shipping in the outer road dangerous for small boats: the native boats generally pass out and in to the southward of the bar, close to the breakers on the rocky point of the Custom-house; but as the passage is narrow, it should not be attempted by strangers: when the sea breaks on the bar, it is better to proceed round to the northward of the bar, which may be easily distinguished by the breakers.

What is strictly understood by a gale of wind, is a rare occurrence at Columbo: this may be owing to the vicinity of the equator. The strong gales which blow on the Malabar coast are felt in small squalls, and a high sea, but there is scarcely wind to endanger vessels properly found in ground tackling; it is true, ships have sometimes required the aid of a second anchor, but in most cases the cause has been attributable to some defect in the first anchor or cable, a light anchor, an anchor breaking, a short chain, or the chain coming unshackled: an instance occurred in Columbo road, of two ships receiving cargo during the S. W. monsoon, whose chain cables came unshackled twice; twice did it occur to each ship.

Pipe or puncheon	0 0 3
Hogshead	0 0 2
Barrel	0 0 1½
Cask or keg of smaller size	0 0 1
Case containing one dozen of liquor	0 0 0½
Crate, cask, or case of hardware, earthenware, or ironmongery	0 0 4
Bale of cloth, Indian	0 0 4
Half ditto ditto	0 0 2
Quarter ditto ditto	0 0 1
Bale, case, or box, not exceeding half a ton measurement	0 0 4
Ditto, exceeding half a ton	0 0 8
Bag rice, sugar, or coffee	0 0 1
Small package not otherwise enumerated	0 0 1
Ton of heavy goods ditto	0 1 0

N. B. — A week's rent chargeable for all fractions of a week.

Port Dues. — 4*d.* per ton of the registered tonnage of any ship or vessel anchoring in any port of the island, excepting chartered transports, and vessels belonging to this government.

Vessels employed between one port and another of the island are allowed to compound for port dues for 12 months at 1*s.* per ton.

No coasting vessel is liable to pay port dues within 30 days from the date of the last payment thereof.

Pilotage. — Rates of Pilotage payable by all Square-Rigged Vessels, Sloops, or Schooners, at the Ports of Colombo, Trincomalee, and Galle.

	Back Bay. £ s. d.	Inner Harbour. £ s. d.
Colombo		0 15 0
Trincomalee —		
Vessels of 600 tons and upwards	2 0 0	4 0 0
400 tons and under 600	1 10 0	3 0 0
200 tons and under 400	1 1 0	2 2 0
100 tons and under 200	0 10 6	1 1 0
under 100	0 6 0	0 15 0
Galle —		
Vessels of 600 tons and upwards		3 0 0
400 tons and under 600		2 5 0
200 tons and under 400		1 10 0
100 tons and under 200		1 2 6
under 100		0 15 0

The above rates of pilotage are charged to all vessels going into the Inner Harbour of Trincomalee and the harbour of Galle, whether they make a signal for a pilot or not. In Colombo and the Back Bay at Trincomalee, the charge is only made if the vessel make the signal, and a pilot actually repair on board.

General Rates of Agency Commission and Godown Rent, agreed upon by the Chamber of Commerce of Ceylon, on the 29th April, 15th May, and 12th June, 1839, and recommended for general adoption, viz. —

	Per cent
1. On all sales, purchases, and shipments	5
With the following exceptions, viz —	
On all purchases of government cinnamon, on the purchase money, and duty included	2½
On returns made with the proceeds of goods on which commission has been previously charged, if in coffee or cocoa-nut oil	5
in every description of produce	2½
On diamonds, pearls, precious stones, and jewellery	2½
On treasure and bullion	1
On all property withdrawn, shipped, or delivered to order	2½
2. On guaranteeing sales, bills, bonds, contracts, or other engagements	2½
3. On ships' disbursements	5
4. On advertising for freight and passengers, on the amount of freight or passage money, whether the same pass through the agent's hands or not	5
5. On effecting insurance, or writing orders for insurance	½
6. On settling losses, partial and general, and returns of premium	1
7. On procuring money on respondentia	2½
8. On attending the delivery of contract goods, or receiving and delivering private commissions of wines, cattle, and merchandise	2½
9. On the total sum of the debit or credit side of an account at the option of the agent, excepting items on which a commission of 5 per cent. is chargeable	1
10. On effecting remittances, or on purchasing, selling, or negotiating bills of exchange	1
11. On subscriptions to government loans, selling, transferring, or exchanging public securities	1
12. On delivering up public securities, or lodging them in any of the public offices	½
13. On the sale of lottery tickets from the other settlements	5
14. On the purchase of lottery tickets, and amount of prizes	1
15. On letters of credit granted	2½
16. On the management of estates as executors, administrators, or attornies	5
17. On debts, when a process at law or arbitration is necessary	2½
And if recovered by such means	5
18. On bills of exchange, notes, &c. dishonoured	1
19. On overdue debts collected for absentees	5

Rates of Godown Rent per Month.

	£ s. d.
Coffee, rice, sugar, pepper, and saltpetre — bag	0 0 3
Cinnamon — bale	0 1 0
Piece goods — bale or case	0 1 0
Cotton, screwed — bale	0 0 6
Ditto, raw	0 1 0
Coir, rope, or junk — cwt.	0 0 1
Wine, spirits, beer, oil, &c. — leaguer or pipe	0 2 0
Wine in 6 dozen chests	0 0 6
Rough goods, such as earthenware, in crates, per 50 cubic ft.	0 2 0

All other articles in proportion to the above.

COMMERCE.

Extent, Population, Revenue, &c. of Ceylon.—The area of Ceylon is estimated at 24,448 sq. miles. Its population, according to a census taken in 1831, amounted to 950,000, of whom about 6,600 were whites. And if this statement may be depended upon, it would seem that the population has increased very rapidly in the interim, for it is said to have amounted in 1842 to 1,337,032, of whom 7,500 were whites. It appears, from a statement in the *Ceylon Almanac* (p. 205.), that during the 5 years ending with 1842, the colonial expenditure exceeded the colonial income about 20,000*l.* a year. In fact the whole income of the island, including land rent, customs, cinnamon duty, and everything else, amounted in 1841 to only 341,937*l.* But looking at the extent of the island, its fertility, its favourable situation for commerce, and the advantage it enjoys in the possession of cinnamon, can any one doubt that its trade and revenue should be far greater than they really are? The rapid extension of the culture of coffee will, no doubt, contribute in no ordinary degree to introduce a better state of things; but we incline to think that nothing would do so much to increase the wealth and importance of the island, as the reduction of the export duty on cinnamon to 3*d.* or 4*d.* per lb. (See CINNAMON.)

COLUMBO ROOT (Du. *Columbo wortel*; Fr. *Racine de Colombo*; Ger. *Columbo-wurzel*; It. *Radice di Columbo*; Port. *Raiz de Columba*; Sp. *Raiz de Columbo*; Mosamb. *Kalumb*), the root of the plant of that name. It is a staple export of the Portuguese from Mosambique. It is not cultivated, but grows naturally in great abundance. It is imported in circular pieces, from ½ an inch to 3 inches in diameter, generally from ¼ to ¾ of an inch thick; the bark is wrinkled and thick, of a brownish colour without, and a brightish yellow within; the pith is spongy, yellowish, and slightly striped: when fresh, its smell is rather aromatic; it is disagreeably bitter, and slightly pungent to the taste, somewhat resembling mustard that has been too long kept. Choose the largest pieces, fresh, and of a good colour, as free from worms as possible, rejecting that which is small and broken. The freight is calculated at 16 cwt. to a ton. —(*Milburn's Orient. Com.*)

COMMERCE, from *commutatio mercium*, is simply, as its name imports, the exchange of commodities for commodities.

I. ORIGIN OF COMMERCE. — MERCANTILE CLASSES.
II. HOME TRADE.
III. FOREIGN TRADE.
VI. RESTRICTIONS ON COMMERCE.

I. ORIGIN OF COMMERCE. — MERCANTILE CLASSES.

(1.) *The Origin of Commerce* is coeval with the first dawn of civilisation. The moment that individuals ceased to supply themselves directly with the various articles and accommodations they made use of, that moment must a commercial intercourse have begun to grow up amongst them. For it is only by exchanging that portion of the produce raised by ourselves that exceeds our own consumption, for portions of the surplus produce raised by others, that the division of employments can be introduced, or that different individuals can apply themselves in preference to different pursuits.

Not only, however, does commerce enable the inhabitants of the same village or parish to combine their separate efforts to accomplish some common object, but it also enables those of different provinces and kingdoms to apply themselves in an especial manner to those callings, for the successful prosecution of which the district or country which they occupy gives them some peculiar advantage. This *territorial division of labour* has contributed more, perhaps, than anything else to increase the wealth and accelerate the civilisation of mankind. Were it not for it, we should be destitute of a vast number of the necessaries, comforts, and enjoyments which we now possess; while the price of the few that would remain would, in most instances, be very greatly increased. But whatever advantages may be derived — and it is hardly possible to exaggerate either their magnitude or importance — from availing ourselves of the peculiar capacities of production enjoyed by others, are wholly to be ascribed to commerce as their real source and origin.

We do not mean to say any thing in this article with respect to the practical details connected with the different departments of commerce. These will be found under the various titles to which they refer. Our object, at present, is merely to show the nature and influence of commerce in general, and of the restrictions that have sometimes been imposed upon it. We shall begin by endeavouring, first of all, to give some account of the nature of the services performed by the individuals by whom commercial undertakings are usually carried on. In the second place, we shall consider the influence of the *home* trade, or of the intercourse subsisting amongst individuals of the same country. In the third place, we shall consider the influence of *foreign* trade, or of that intercourse which subsists amongst individuals belonging to different countries. After these topics have been discussed, we shall offer a few remarks on what has been termed the restrictive system; or on the principles involved in the regulations enacted at different times, in this and other countries, for the government and direction of commerce.

(2.) *Mercantile Classes.* — While the exchange of different products is carried on by the producers themselves, they must unavoidably lose a great deal of time, and experience many inconveniences. Were there no merchants, a farmer wishing to sell his

crop would be obliged, in the first place, to seek for customers, and to dispose of his corn as nearly as possible in such quantities as might suit the demands of the various individuals inclined to buy it; and after getting its price, he would next be obliged to send to 10 or 20 different and, perhaps, remote places, for the commodities he wanted to get in its stead. So that, besides being exposed to a world of trouble and inconvenience, his attention would be continually diverted from the labours of his farm. Under such a state of things, the work of production, in every different employment, would be meeting with perpetual interruptions, and many branches of industry that are successfully carried on in a commercial country would not be undertaken.

The establishment of a distinct mercantile class effectually obviates these inconveniences. When a set of dealers erect warehouses and shops for the purchase and sale of all descriptions of commodities, every producer, relieved from the necessity of seeking customers, and knowing beforehand where he may at all times be supplied with such products as he requires, devotes his whole time and energies to his proper business. The intervention of merchants gives a continuous and uninterrupted motion to the plough and the loom. Were the class of traders annihilated, all the springs of industry would be paralysed. The numberless difficulties that would then occur in effecting exchanges would lead each particular family to endeavour to produce all the articles they had occasion for: society would thus be thrown back into primæval barbarism and ignorance; the divisions of labour would be relinquished; and the desire to rise in the world and improve our condition would decline, according as it became more difficult to gratify it. What sort of agricultural management could be expected from farmers who had to manufacture their own wool, and make their own shoes? And what sort of manufacturers would those be, who were every now and then obliged to leave the shuttle for the plough, or the needle for the anvil? A society, without that distinction of employments and professions resulting from the division of labour, that is, *without commerce*, would be totally destitute of arts or sciences of any sort. It is by the assistance each individual renders to and receives from his neighbours, by every one applying himself in preference to some peculiar task, and combining, though probably without intending it, his efforts with those of others, that civilised man becomes equal to the most gigantic efforts, and appears endowed with almost omnipotent power

The mercantile class has generally been divided into two subordinate classes — the wholesale dealers, and the retail dealers. The former purchase the various products of art and industry in the places where they are produced, or are least valuable, and carry them to those where they are more valuable, or where they are more in demand; and the latter, having purchased the commodities of the wholesale dealers, or the producers, collect them in shops, and sell them in such quantities and at such times as may best suit the public demand. These classes of dealers are alike useful; and the separation that has been effected between their employments is one of the most advantageous divisions of labour. The operations of the wholesale merchant are analagous to those of the miner. Neither the one nor the other makes any change on the bodies which he carries from place to place. All the difference between them consists in this, — that the miner carries them from below ground to the surface of the earth, while the merchant carries them from one point to another on its surface. Hence it follows that the value given to commodities by the operations of the wholesale merchant may frequently exceed that given to them by the producers. The labour or expense required to dig a quantity of coal from the mine, does not exceed what is required for its conveyance from Newcastle to London; and it is a far more difficult and costly affair to fetch a piece of timber from Canada to England, than to cut down the tree. In this respect there is no difference between commerce and agriculture and manufactures. The latter give utility to matter, by bestowing on it such a shape as may best fit it for ministering to our wants and comforts; and the former gives additional utility to the products of the agriculturist and manufacturer, by bringing them from where they are of comparatively little use, or are in excess, to where they are of comparatively great use, or are deficient.

If the wholesale merchant were himself to retail the goods he has brought from different places, he would require a proportional increase of capital; and it would be impossible for him to give that exclusive attention to any department of his business, which is indispensable to its being carried on in the best manner. It is for the interest of each dealer, as of each workman, to confine himself to some one business. By this means each trade is better understood, better cultivated, and carried on in the cheapest possible manner, But whether carried on by a separate class of individuals or not, it is obvious that the retailing of commodities is indispensable. It is not enough that a cargo of tea should be imported from China, or a cargo of sugar from Jamaica. Most individuals have some demand for these articles; but there is not, perhaps, a single private person, even in London, requiring so large a supply for his own consumption. It is clear, therefore, that they must be *retailed*; that is, they must be sold in such quanti-

ties and at such times as may be most suitable for all classes of consumers. And since it is admitted, on all hands, that this necessary business will be best conducted by a class of traders distinct from the wholesale dealers, it is impossible to doubt that their employment is equally conducive as that of the others to the public interest, or that it tends equally to augment national wealth and comfort.

II. Home Trade.

The observations already made serve to show the influence of the home trade in allowing individuals to confine their attention to some one employment, and to prosecute it without interruption. But it is not in this respect only that the establishment of the home trade is advantageous. It is so in a still greater degree, by its allowing the inhabitants of the different districts of the empire to turn their labour into those channels in which it will be most productive. The different soils, different minerals, and different climates of different districts, fit them for being appropriated, in preference, to certain species of industry. A district, like Lancashire, where coal is abundant, which has an easy access to the ocean, and a considerable command of internal navigation, is the natural seat of manufactures. Wheat and other species of grain are the natural products of rich arable soils; and cattle, after being reared in mountainous districts, are most advantageously fattened in meadows and low grounds. Hence it follows, that the inhabitants of different districts, by confining themselves to those branches of industry for the successful prosecution of which they have some peculiar capability, and exchanging their surplus produce for that of others, will obtain an incomparably larger supply of all sorts of useful and desirable products, than they could do, were they to apply themselves indiscriminately to every different business. The territorial division of labour is, if possible, even more advantageous than its division among individuals. A person may be what is commonly called *Jack of all trades*; and though it is next to certain that he will not be well acquainted with any one of them, he may nevertheless make some sort of rude efforts in them all. But it is not possible to apply the same soils or the same minerals to every different purpose. Hence it is, that the inhabitants of the richest and most extensive country, provided it were divided into small districts without any intercourse with each other, or with foreigners, could not, how well soever labour might be divided among themselves, be otherwise than poor and miserable. Some of them might have a superabundance of corn, at the same time that they were wholly destitute of wine, coal, and iron: while others might have the largest supplies of the latter articles, with but very little grain. But in commercial countries no such anomalies can exist. Opulence and comfort are there universally diffused. The labours of the mercantile classes enable the inhabitants of each district to apply themselves principally to those employments that are naturally best suited to them. This superadding of the division of labour among different provinces to its division among different individuals, renders the productive powers of industry immeasurably greater; and augments the mass of necessaries, conveniences, and enjoyments, in a degree that could not previously have been conceived possible, and which cannot be exceeded except by the introduction of foreign commerce.

"With the benefit of commerce," says an eloquent and philosophical writer, "or a ready exchange of commodities, every individual is enabled to avail himself, to the utmost, of the peculiar advantage of his place; to work on the peculiar materials with which nature has furnished him; to humour his genius or disposition, and betake himself to the task in which he is peculiarly qualified to succeed. The inhabitant of the mountain may betake himself to the culture of his woods and the manufacture of his timber; the owner of pasture lands may betake himself to the care of his herds; the owner of the clay-pit to the manufacture of his pottery; and the husbandman to the culture of his fields, or the rearing of his cattle. And any one commodity, however it may form but a small part in the accommodations of human life, may, under the facility of commerce, find a market in which it may be exchanged for what will procure any other part, or the whole: so that the owner of the clay-pit, or the industrious potter, without producing any one article immediately fit to supply his own necessities, may obtain possession of all that he wants. And commerce, in which it appears that commodities are merely exchanged, and nothing produced, is, nevertheless, in its effects, very productive, because it ministers a facility and an encouragement to every artist in multiplying the productions of his own art; thus adding greatly to the mass of wealth in the world, in being the occasion that much is produced." — (*Ferguson's Principles of Moral Science*, vol. ii. p. 424.)

The roads and canals that intersect a country, and open an easy communication between its remotest extremities, render the greatest service to internal commerce, and also to agriculture and manufactures. A diminution of the expense of carriage has, in fact, the same effect as a diminution of the direct cost of production. If the coals brought into a city sell at 20*s.* a ton, of which the carriage amounts to a half, or 10*s.*, it is plain

that in the event of an improved communication, such as a more level or direct road, a railway, or a canal, being opened for the conveyance of the coals, and that they can, by its means, be imported for half the previous expense, their price will immediately fall to 15*s.* a ton; just as it would have done, had the expense of extracting them from the mine been reduced a half.

Every one acquainted with the merest elements of political science is aware that employments are more and more subdivided, that more powerful machinery is introduced, and the productive powers of labour increased, according as larger masses of the population congregate together. In a great town like London, Glasgow, or Manchester, the same number of hands will perform much more work than in a small village, where each individual has to perform several operations, and where the scale of employment is not sufficiently large to admit of the introduction of extensive and complicated machinery. But the great towns with which England is studded could not exist without our improved means of communication. These, however, enable their inhabitants to supply themselves with the bulky products of the soil and of the mines almost as cheaply as if they lived in country villages; securing to them all the advantages of concentration, with but few of its inconveniences. Roads and canals are thus productive of a double benefit; for while. by affording comparatively cheap raw materials to the manufacturers, they give them the means of perfecting the divisions of labour, and of supplying proportionally cheap manufactured goods; the latter are conveyed by their means, and at an extremely small expense, to the remotest parts of the country. The direct advantages which they confer on agriculture are not less important. Without them it would not be possible to carry to a distance sufficient supplies of lime, marl, shells, and other bulky and heavy articles necessary to give luxuriance to the crops of rich soils, and to render those that are poor productive. Good roads and canals, therefore, by furnishing the agriculturists with cheap and abundant supplies of manure, reduce, at one and the same time, the *cost of producing* the necessaries of life, and the cost of bringing them to market.

In other respects, the advantages resulting from improved communications are probably even more striking. They give the same common interest to every different part of the most widely extended empire; and put down, or rather prevent, any attempt at monopoly on the part of the dealers of particular districts, by bringing them into competition with those of all the others. Nothing in a state enjoying great facilities of communication is separate and unconnected. All is mutual, reciprocal, and dependent. Every man naturally gets into the precise situation that he is best fitted to fill; and each, cooperating with every one else, contributes to the utmost of his power to extend the limits of production and civilisation. — (See Roads.)

Such being the nature and vast extent of the advantages derived from the home trade, it is obviously the duty of the legislature to give it every proper encouragement and protection. It will be found, however, on a little consideration, that this duty is rather negative than positive — that it consists less in the framing of regulations, than in the removal of obstacles. The error of governments in matters of trade has not been that they have done too little, but that they have attempted too much. It will be afterwards shown that the encouragement which has been afforded to the producers of certain species of articles in preference to others, has uniformly been productive of disadvantage. In the mean time it is sufficient to observe, that the encouragement which a prudent and enlightened government bestows on industry, will equally extend to all its branches; and will be especially directed to the removal of every thing that may in any respect fetter the freedom of commerce, and the power of individuals to engage in different employments. All regulations, whatever be their object, that operate either to prevent the circulation of commodities from one part of the empire to another, or the free circulation of labour, necessarily tend to check the division of employments and the spirit of competition and emulation, and must, in consequence, lessen the amount of produce. The same principle that prompts to open roads, to construct bridges and canals, should lead every people to erase from the statute book every regulation which either prevents or fetters the operations of the merchant, and the free disposal of capital and labour. Whether the freedom of internal commerce and industry be interrupted by impassable mountains and swamps, or by oppressive tolls or restrictive regulations, the effect is equally pernicious.

The common law and the ancient statute law of England are decidedly hostile to monopolies, or to the granting of powers to any particular class of individuals to furnish the market with commodities. Lord Coke distinctly states, "that all monopolies concerning trade and traffic are against the liberty and freedom granted by the great charter, and divers other acts of parliament which are good commentaries upon that charter." — (2 *Inst.* 63.) And he affirms, in another place, that, "*Commercium jure gentium commune esse debet, et non in monopolium et privatum paulorum quæstum convertendum. Iniquum est aliis permittere, aliis inhibere mercaturam.*"

But, notwithstanding this concurrence of the common and statute law of the country in favour of the freedom of industry, during the arbitrary reigns of the princes of the house of Tudor, the notion that the crown was by its prerogative entitled to dispense with any law to the contrary, and to establish monopolies, became fashionable among the court lawyers, and was acted upon to a very great extent. Few things, indeed, occasioned so much dissatisfaction in the reign of Elizabeth as the multiplication of monopolies; and notwithstanding the opposition made by the crown, and the court party in parliament, the grievance became at length so intolerable as to give rise to the famous statute of 1624 (21 James 1. c. 3.), by which all monopolies, grants, letters patent, and licences, for the sole buying, selling, and making of goods and manufactures, not given by an act of the legislature, are declared to be "*altogether contrary to the laws of this realm, void, and of none effect.*" This statute has been productive of the greatest advantage; and has, perhaps, contributed more than any other to the development of industry, and the accumulation of wealth. With the exception of the monopoly of printing Bibles, and the restraints imposed by the charters of bodies legally incorporated, the freedom of internal industry has ever since been vigilantly protected; full scope has been given to the principle of competition; the whole kingdom has been subjected to the same equal law; no obstacles have been thrown in the way of the freest transfer of commodities from one country or place to another; the home trade has been perfectly unfettered; and though the public have not been supplied with commodities at so low a price as they might have obtained them for, had there been no restrictions on foreign commerce, they have obtained them at the lowest price that would suffice to pay the *home producers* the cost of producing and bringing them to market. It is to this freedom that the comparatively flourishing state of industry in Great Britain is mainly to be ascribed.

III. Foreign Trade.

What the home trade is to the different provinces of the same country, foreign trade is to all the countries of the world. Particular countries produce only particular commodities, and, were it not for foreign commerce, would be entirely destitute of all but such are indigenous to their own soil. It is difficult for those who have not reflected on the subject, to imagine what a vast deduction would be made, not only from the comforts, but even from the necessaries, of every commercial people, were its intercourse with strangers put an end to. It is not, perhaps, too much to say that in Great Britain we owe to our intercourse with others a full half or more of all that we enjoy. We are not only indebted to it for the cotton and silk manufactures, and for supplies of wine, tea, coffee, sugar, the precious metals, &c.; but we are also indebted to it for most of the fruits and vegetables that we now cultivate. At the same time, too, that foreign commerce supplies us with an immense variety of most important articles, of which we must otherwise have been wholly ignorant, it enables us to employ our industry in the mode in which it is sure to be most productive, and reduces the price of almost every article. We do not misemploy our labour in raising sugar from the beet-root, in cultivating tobacco, or in forcing vines; but we employ ourselves in those departments of manufacturing industry in which our command of coal, of capital, and of improved machinery give us an advantage; and obtain the articles produced more cheaply by foreigners, in exchange for the surplus produce of those branches in which we have a superiority over them. A commercial nation like England avails herself of all the peculiar facilities of production given by Providence to different countries. To produce claret here is perhaps impossible; and at all events it could not be accomplished, unless at more than 100 times the expense required for its production in France. We do not, however, deny ourselves the gratification derivable from its use; and to obtain it, we have only to send to France, or to some country indebted to France, some articles in the production of which we have an advantage, and we get claret in exchange at the price which it takes to raise it under the most favourable circumstances. One country has peculiar capacities for raising corn, but is at the same time destitute of wine, silk, and tea; another, again, has peculiar facilities for raising the latter, but is destitute of the former; and it is impossible to point out a single country which is abundantly supplied with any considerable variety of commodities of domestic growth. *Non omnis fert omnia tellus.* Providence, by giving to each particular nation something which the others want, has evidently intended that they should be mutually dependent upon one another. And it is not difficult to see that, *cæteris paribus*, those must be the richest and most abundantly supplied with every sort of useful and desirable accommodation, who cultivate the arts of peace with the greatest success, and deal with all the world on fair and liberal principles.

"The commerce of one country with another is, in fact," to use the words of an able and profound writer, "merely an extension of that division of labour by which so many benefits are conferred upon the human race. As the same country is rendered the richer by the trade of one province with another; as its labour becomes thus infinitely

more divided and more productive than it could otherwise have been; and as the mutual supply to each other of all the accommodations which one province has, and another wants, multiplies the accommodations of the whole, and the country becomes thus in a wonderful degree more opulent and happy; the same beautiful train of consequences is observable in the world at large, — that great empire of which the different kingdoms and tribes of men may be regarded as the provinces. In this magnificent empire, too, one province is favourable to the production of one species of accommodation, and another province to another: by their mutual intercourse they are enabled to sort and distribute their labour as most peculiarly suits the genius of each particular spot. The labour of the human race thus becomes much more productive, and every species of accommodation is afforded in much greater abundance. The same number of labourers, whose efforts might have been expended in producing a very insignificant quantity of home-made luxuries, may thus, in Great Britain, produce a quantity of articles for exportation, accommodated to the wants of other places, and peculiarly suited to the genius of Britain to furnish, which will purchase for her an accumulation of the luxuries of every quarter of the globe. There is not a greater proportion of her population employed in administering to her luxuries, in consequence of her commerce; there is probably a good deal less; but their labour is infinitely more productive: the portion of commodities which the people of Great Britain acquire by means of the same labour, is vastly greater." — (*Mill's Commerce defended*, p. 38.)

What has been already stated is sufficient to expose the utter fallacy of the opinion that has sometimes been maintained, that whatever one nation may gain by her foreign commerce, must be lost by some one else. It is singular, indeed, how such a notion should ever have originated. Commerce *is not directly productive*, nor is the good derived from it to be estimated by its immediate effects. What commercial nations give is uniformly the fair equivalent of what they get. In their dealings they do not prey upon each other, but are benefited alike. The advantage of commerce consists in its enabling labour to be divided, and giving each people the power of supplying themselves with the various articles for which they have a demand, at the lowest price required for their production in those countries and places where they are raised with the greatest facility. We import wine from Portugal, and cotton from America, sending in exchange cloth and other species of manufactured goods. By this means we obtain two very important articles, which it would be all but impossible to produce at home, and which we could not, certainly, produce, except at an infinitely greater cost. But our gain is no loss to the foreigners. They derive precisely the same sort of advantage from the transaction that we do. We have very superior facilities for manufacturing, and they get from us cloth, hardware, and other important articles, at the price at which they can be produced in this country, and consequently for far less than their direct production would have cost them. The benefits resulting from an intercourse of this sort are plainly mutual and reciprocal. Commerce gives no advantage to any one people over any other people; but it increases the wealth and enjoyments of *all* in a degree that could not previously have been conceived possible.

But the influence of foreign commerce in multiplying and cheapening conveniences and enjoyments, vast as it most certainly is, is perhaps inferior to its indirect influence — that is, to its influence on industry, by adding immeasurably to the mass of desirable articles, by inspiring new tastes, and stimulating enterprise and invention by bringing each people into competition with foreigners, and making them acquainted with their arts and institutions.

The apathy and languor that exist in a rude state of society have been universally remarked. But these uniformly give place to activity and enterprise, according as man is rendered familiar with new objects, and is inspired with a desire to obtain them. An individual might, with comparatively little exertion, furnish himself with an abundant supply of the commodities essential to his subsistence; and if he had no desire to obtain others, or if that desire, however strong, could not be gratified, it would be folly to suppose that he should be laborious, inventive, or enterprising. But, when once excited, the wants and desires of man become altogether illimitable; and to excite them, no more is necessary than to bring new products and new modes of enjoyment within his reach. Now, the sure way to do this is to give every facility to the most extensive intercourse with foreigners. The markets of a commercial nation being filled with the various commodities of every country and every climate, the motives and gratifications which stimulate and reward the efforts of the industrious are proportionally augmented. The husbandman and manufacturer exert themselves to increase their supplies of raw and manufactured produce, that they may exchange the surplus for the products imported from abroad. And the merchant, finding a ready demand for such products, is prompted to import a greater variety, to find out cheaper markets, and thus constantly to afford new incentives to the vanity and ambition, and consequently to the enterprise and industry, of his customers. The whole powers of the mind and the body are thus

called into action; and the passion for foreign commodities — a passion which has sometimes been ignorantly censured — becomes one of the most efficient causes of wealth and civilisation.

Not only, however, does foreign commerce excite industry, distribute the gifts of nature, and enable them to be turned to the best account, but it also distributes the gifts of science and of art, and gives to each particular country the means of profiting by the inventions and discoveries of others as much as by those of her own citizens. The ingenious machine invented by Mr. Whitney, of the United States, for separating cotton wool from the pod, by reducing the cost of the raw material of one of our principal manufactures, has been quite as advantageous to us as to his own countrymen. And the discoveries and inventions of Watt, Arkwright, and Wedgwood, by reducing the cost of the articles we send abroad, have been as advantageous to our foreign customers as to ourselves. Commerce has caused the blessings of civilisation to be universally diffused, and the treasures of knowledge and science to be conveyed to the remotest corners. Its humanising influence is, in this respect, most important; while, by making each country depend for the means of supplying a considerable portion of its wants on the assistance of others, it has done more than any thing else to remove a host of the most baleful prejudices, and to make mankind regard each other as friends and brothers, and not as enemies. The dread, once so prevalent, of the progress of other nations in wealth and civilisation, is now universally admitted to be as absurd as it is illiberal. While every people ought always to be prepared to resist and avenge any attack upon their independence or their honour, it is not to be doubted that their real prosperity will be best secured by their endeavouring to live at peace. "A commercial war, whether crowned with victory or branded with defeat, can never prevent another nation from becoming more industrious than you are; and if they are more industrious they will sell cheaper; and consequently your customers will forsake your shop and go to theirs. This will happen, though you covered the ocean with fleets, and the land with armies. The soldier may lay waste; the privateer, whether successful or unsuccessful, will make poor; but it is the eternal law of Providence that '*the hand of the diligent can alone make rich.*'" — (*Tucker's Four Tracts*, p. 41. 3d ed.)

Mr. Hume has beautifully illustrated the powerful and salutary influence of that spirit of industry and enterprise resulting from the eager prosecution of commerce and the arts. "Men," says he, "are then kept in perpetual occupation, and enjoy, as their reward, the occupation itself, as well as those pleasures which are the fruits of their labour. The mind acquires new vigour; enlarges its powers and faculties; and, by an assiduity in honest industry, both satisfies its natural appetites, and prevents the growth of unnatural ones, which commonly spring up when nourished with ease and idleness. Banish those arts from society, you deprive men both of action and of pleasure; and, leaving nothing but indolence in their place, you even destroy the relish of indolence, which never is agreeable but when it succeeds to labour, and recruits the spirits, exhausted by too much application and fatigue.

"Another advantage of industry and of refinements in the mechanical arts is, that they commonly produce some refinements in the liberal; nor can the one be carried to perfection, without being accompanied in some degree with the other. The same age which produces great philosophers and politicians, renowned generals and poets, usually abounds with skilful weavers and ship-carpenters. We cannot reasonably expect that a piece of woollen cloth will be wrought to perfection in a nation which is ignorant of astronomy, or where ethics are neglected. The spirit of the age affects all the arts; and the minds of men, being once roused from their lethargy, and put into a fermentation, turn themselves on all sides, and carry improvements into every art and science. Profound ignorance is totally banished; and men enjoy the privilege of rational creatures, to think as well as to act, to cultivate the pleasures of the mind as well as those of the body.

"The more these refined arts advance, the more sociable do men become; nor is it possible that, when enriched with science, and possessed of a fund of conversation, they should be contented to remain in solitude, or live with their fellow citizens in that distant manner which is peculiar to ignorant and barbarous nations. They flock into cities; love to receive and communicate knowledge; to show their wit or their breeding; their taste in conversation or living, in clothes or furniture. Curiosity allures the wise, vanity the foolish, and pleasure both. Particular clubs and societies are every where formed; both sexes meet in an easy and sociable manner; and the tempers of men, as well as their behaviour, refine apace. So that beside the improvements they receive from knowledge and the liberal arts, it is impossible but they must feel an increase of humanity from the very habit of conversing together, and contributing to each other's pleasure and entertainment. Thus *industry*, *knowledge*, and *humanity* are linked together by an indissoluble chain; and are found, from experience as well as reason, to be peculiar to the

more polished, and what are commonly denominated the more luxurious ages."—(*Essay of Refinement in the Arts.*)

Most commercial treatises, and most books on political economy, contain lengthened statements as to the comparative advantages derived from the home and foreign trade. But these statements are almost always bottomed on the most erroneous principles. The quantity and value of the commodities which the inhabitants of an extensive country exchange with each other, is far greater than the quantity and value of those they exchange with foreigners: but this is not, as is commonly supposed, enough to show that the home trade is proportionally more advantageous. Commerce, it must be borne in mind, is not a direct but an indirect source of wealth. The mere exchange of commodities adds nothing to the riches of society. The influence of commerce on wealth consists in its allowing employments to be separated and prosecuted without interruption. It gives the means of pushing the divisions of labour to the furthest extent; and supplies mankind with an infinitely greater quantity of necessaries and accommodations of all sorts, than could have been produced, had individuals and nations been forced to depend upon their own comparatively feeble efforts for the supply of their wants. And hence, in estimating the comparative advantageousness of the home and foreign trades, the real questions to be decided are, which of them contributes most to the division of labour? and which of them gives the greatest stimulus to invention and industry? These questions do not, perhaps, admit of any very satisfactory answer. The truth is, that both home trade and foreign trade are most prolific sources of wealth. Without the former, no division of labour could be established, and man would for ever remain in a barbarous state. Hence, perhaps, we may say that it is the most indispensable; but the length to which it could carry any particular country in the career of civilisation, would be limited indeed. Had Great Britain been cut off from all intercourse with strangers, there is no reason for thinking that we should have been at this day advanced beyond the point to which our ancestors had attained during the Heptarchy! It is to the products and the arts derived from others, and to the emulation inspired by their competition and example, that we are mainly indebted for the extraordinary progress we have already made, as well as for that we are yet destined to make.

Dr. Smith, though he has satisfactorily demonstrated the impolicy of all restrictions on the freedom of commerce, has, notwithstanding, endeavoured to show that it is more for the public advantage that capital should be employed in the home trade than in foreign trade, on the ground that the capitals employed in the former are more frequently returned, and that they set a greater quantity of labour in motion than those employed in the latter. But we have elsewhere endeavoured to show that the rate of profit which different businesses yield is the only test of their respective advantageousness. —(*Principles of Political Economy*, 3d ed. pp. 165—181.) Now, it is quite evident that capital will not be employed in foreign trade, unless it yield as much profit as could be made by employing it at home. No merchant sends a ship to China, if it be in his power to realise a larger profit by sending her to Dublin or Newcastle; nor would any one build a ship, unless he expected that the capital so laid out would be as productive as if it were employed in agriculture or manufactures. The more or less rapid return of capital is a matter of very little importance. If the average rate of profit be 10 per cent., an individual who turns over his capital 10 times a year, will make *one* per cent. of profit each time; whereas if he turns it only once a year, he will get the whole 10 per cent. at once. Competition reduces the rate of nett profit to about the same level in all businesses; and we may be quite certain that those who employ themselves in the departments in which capital is most rapidly returned, do not, at an average, gain more than those who employ themselves in the departments in which the returns are most distant. No one is a foreign merchant because he would rather deal with foreigners than with his own countrymen, but because he believes he will be able to employ his capital more advantageously in foreign trade than in any other business: and while he does this, he is following that employment which is most beneficial for the public as well as for himself.

IV. Restrictions on Commerce.

The statements already made, by explaining the nature and principles of commercial transactions, are sufficient to evince the inexpediency of subjecting them to any species of restraint. It is obvious, indeed, that restrictions are founded on false principles. When individuals are left to pursue their own interest in their own way, they naturally resort to those branches of industry which they reckon most advantageous for themselves; and, as we have just seen, these are the very branches in which it is most for the public interest that they should be employed. Unless, therefore, it could be shown that a government can judge better as to what sort of transactions are profitable or otherwise than private individuals, its regulations cannot be of the smallest use, and may be exceedingly injurious. But any such pretension on the part of government would be

universally scouted. It is undeniably certain that a regard to our own interest is, if not an unerring guide to direct us in such matters, at least incomparably better than any other. If the trade with a particular country or in a particular commodity be a losing one, or merely a less profitable one than others, it is quite as unnecessary to pass an act to prevent it from being carried on, as it would be to interfere to prevent individuals from selling their labour or their commodities below the market price. It appears, therefore, that all regulations affecting the freedom of commerce, or of any branch of industry, are either useless or pernicious. They are useless, when they are intended to protect the interest of individuals by preventing them from engaging in disadvantageous businesses; and pernicious, when they prevent them from engaging in those that are advantageous. The self-interest of the parties concerned is the only safe principle to go by in such matters. When the acts of the legislature are in unison with it, there is nothing to object to in them, save only that they might as well not exist; but whenever they are inconsistent with it, — that is, whenever they tend to divert capital and industry into channels into which individuals, if left to their own discretion, would not have carried them, — they are decidedly injurious.

No one denies that it is possible to confer, by means of a restrictive regulation, an advantage on a greater or less number of individuals. This, however, is no proof that it is advantageous in a public point of view; and it is by its influence in this respect that we are to decide concerning it. If the exclusion of an article imported from abroad, in order to encourage its manufacture at home, raise its price in the home market, that circumstance will, for a while at least, be advantageous to those engaged in its production. But is it not clear that all that is thus gained by them is *lost by those who purchase the article?* To suppose, indeed, that the exclusion of commodities that are comparatively cheap, to make room for those that are comparatively dear, can be a means of enriching a country, is equivalent to supposing that a people's wealth might be increased by destroying their most powerful machines, and throwing their best soils out of cultivation.

But it is contended, that though this might be the case in the instance of commodities produced at home, it is materially different when the commodity excluded came to us from abroad. It is said, that in this case the exclusion of foreign produce increases the demand for that produced at home, and consequently contributes to increase the demand for labour; so that the rise of price it occasions is, in this way, more than balanced by the other advantages which it brings along with it. But the fact is, that though the demand for one species of produce may be increased by a prohibition of importation, the demand for some other species is sure to be at the same time equally diminished. There is no jugglery in commerce. Whether it be carried on between individuals of the same country, or of different countries, it is in all cases bottomed on a fair principle of reciprocity. Those who will not buy need not expect to sell, and conversely. It is impossible to export without making a corresponding importation. We get nothing from the foreigner gratuitously: and hence, when we prevent the importation of produce from abroad, we prevent, by the very same act, the exportation of an equal amount of British produce. All that the exclusion of foreign commodities ever effects, is the substitution of one sort of demand for another. It has been said, that "when we drink beer and porter we consume the produce of English industry, whereas when we drink port or claret we consume the produce of the industry of the Portuguese and French, to the obvious advantage of the latter, and the prejudice of our countrymen!" But, how paradoxical soever the assertion may at first sight appear, there is not at bottom any real distinction between the two cases. What is it that induces foreigners to supply us with port and claret? The answer is obvious: — We either send directly to Portugal and France an *equivalent in British produce*, or we send such equivalent, in the first place to South America for bullion, and then send that bullion to the Continent to pay for the wine. And hence it is as clear as the sun at noon-day, that the Englishman who drinks only French wine, who eats only bread made of Polish wheat, and who wears only Saxon cloth, gives, by occasioning the exportation of a corresponding amount of British cotton, hardware, leather, or other produce, the same encouragement to the industry of his countrymen, that he would give were he to consume nothing not immediately produced at home. A quantity of port wine and a quantity of Birmingham goods are respectively of the same value; so that whether we directly consume the hardware, or, having exchanged it for the wine, consume the latter, must plainly, in so far as the employment of British labour is concerned, be altogether indifferent.

It is absolutely nugatory, therefore, to attempt to encourage industry at home by restraining importation from abroad. We might as well try to promote it by interdicting the exchange of shoes for hats. We only resort to foreign markets, that we may supply ourselves with articles that cannot be produced at home, or that require more labour to produce them here than is required to produce the equivalent exported to pay for them. It is, if any thing can be, an obvious contradiction and absurdity to attempt

to promote wealth or industry by prohibiting an intercourse of this sort. Such prohibition, even when least injurious, is sure to force capital and labour into less productive channels; and cannot fail to diminish the foreign demand for one species of produce, quite as much as it extends the home demand for another.

It is but seldom, however, that a restriction on importation from abroad does no more than substitute one sort of employment for another. Its usual effect is both to alter the distribution of capital and to increase the price of commodities. A country rarely imports any commodity from abroad that may be as cheaply produced at home. In the vast majority of instances, the articles bought of the foreigner could not be directly produced at home, without a much greater outlay of capital. Suppose that we import 1,000,000*l.* worth of any commodity, that its importation is prohibited, and that the same quantity of produce cannot be raised in this country for less than 1,200,000*l.* or 1,500,000*l.*: in a case of this sort, — and this is actually the case in 99 out of every 100 instances in which prohibitions are enacted, — the prohibition has the same effect on the consumers of the commodity, as if, supposing it not to have existed, they had been burdened with a peculiar tax of 200,000*l.* or 500,000*l.* a year. But, had such been the case, what the consumers lost would have gone into the coffers of the treasury, and would have afforded the means of repealing an equal amount of other taxes; whereas, under the prohibitory system, the high price, being occasioned by an increased difficulty of production, is of no advantage to any one. So that, instead of gaining any thing by such a measure, the public incurs a dead loss of 200,000*l.* or 500,000*l.* a year.

We have said that a prohibition of importation may be productive of immediate advantage to the home producers of the prohibited article. It is essential, however, to remark that this advantage cannot continue for any considerable time, and that it *must* be followed by a period of distress. Were the importation of foreign silks put an end to, that circumstance, by narrowing the supply of silk goods, and raising their prices, would, no doubt, be, in the first instance, advantageous to the manufacturers, by elevating their profits above the common level. But the consequence would be, that those already engaged in the trade would immediately set about extending their concerns; at the same time that not a few of those engaged in other employments would enter a business which presented such a favourable prospect: nor would this transference of capital to the silk manufacture be stopped, till such an increased supply of silks had been brought to market as to occasion a glut. This reasoning is not founded upon hypothesis, but upon the widest experience. When a business is carried on under the protection of a restriction on importation, it is limited by the extent of the home market, and is incapable of further extension. It is, in consequence, particularly subject to that fluctuation which is the bane of industry. If, owing to a change of fashion, or any other cause, the demand be increased, then, as no supplies can be brought from abroad, prices suddenly rise, and the manufacture is rapidly extended, until a reaction takes place, and prices sink below their usual level: and if the demand decline, then, as there is no outlet abroad for the superfluous goods, their price is ruinously depressed, and the producers are involved in inextricable difficulties. The businesses deepest entrenched behind ramparts of prohibitions and restrictions, such as the silk trade previously to 1825, the West India trade, and agriculture since 1815, have undergone the most extraordinary vicissitudes; and have been at once more hazardous and less profitable than the businesses carried on under a system of fair and free competition.

A prohibition against buying in the cheapest markets is really, also, a prohibition against selling in the dearest markets. There is no test of high or low price, except the quantity of other produce for which an article exchanges. Suppose that, by sending a certain quantity of cottons or hardware to Brazil, we might get in exchange 150 hhds. of sugar, and that the same quantity, if sent to Jamaica, would only fetch 100 hhds; is it not obvious, that by preventing the importation of the former, we force our goods to be sold for *two thirds* of the price they would otherwise have brought? To suppose that a system productive of such results can be a means of increasing wealth, is to suppose what is evidently absurd. It is certainly true that a restrictive regulation, which has been long acted upon, and under which a large amount of capital is employed, should not be rashly or capriciously repealed. Every change in the public economy of a great nation ought to be gone about cautiously and gradually. Adequate time should be given to those who carry on businesses that have been protected, either to withdraw from them altogether, or to prepare to withstand the fair competition of foreigners. But this is *all* that such persons can justly claim. To persevere in an erroneous and oppressive system, merely because its abandonment might be productive of inconvenience to individuals, would be a proceeding inconsistent with every object for which society is formed, and subversive of all improvement.

It may, perhaps, be supposed that in the event of commodities being imported from abroad, after the abolition of a protecting regulation, that were previously produced

at home, the workmen and those engaged in their production would be thrown upon the parish. Such, however, is not the case. We may, by giving freedom to commerce, change the *species* of labour in demand, but it is not possible that we should thereby change its *quantity*. If, in consequence of the abolition of restrictions, our imports were increased 4,000,000*l.* or 5,000,000*l.*, our exports, it is certain, must be augmented to the same extent: so that whatever diminution of the demand for labour might be experienced in certain departments would be balanced by a corresponding increase in others.

The pressure of taxation has often been alleged as an excuse for restrictions on commerce; but it is not more valid than the rest. Taxation may be heavy, and even oppressive; but so long as it is impartially and fairly assessed, it equally effects *all* branches of industry carried on at home, and consequently affords no ground whatever for the enactment of regulations intended to protect any particular business. And to propose to protect *all* branches of industry from foreign competition, is, in effect, to propose to put a total stop to commerce; for if nothing is to be imported, nothing can be exported. The imposition of moderate duties on foreign commodities, for the sake of revenue, is quite another thing. Several of these commodities are among the very best subjects of taxation; and when the duties on them are confined within proper bounds, — that is, when they are not so high as to exert any injurious influence over trade, or to occasion smuggling and fraud, — they cannot fairly be objected to.

It is sometimes contended, by those who assert, on general grounds, that restrictions are inexpedient, that it would be unwise, on the part of any country, to abolish them until she had obtained a security that those imposed by her neighbours would also be abolished. But the reasons that have been alleged in favour of this statement are not entitled to the least weight. It is our business to buy in the cheapest and sell in the dearest markets, without being, in any degree, influenced by the conduct of others. If they consent to repeal the restrictions they have laid on commerce, so much the better. But whatever others may do, the line of policy *we* ought to follow is clear and well defined. To refuse, for example, to buy claret, brandy, &c. from the French, because they lay restrictions on the importation of British hardware, cottons, &c., is not to retaliate upon them, but upon ourselves. The fact that we *do* import French wine and brandy shows that we do export to France, or to some other country to which France is indebted, an equivalent, in some sort, of British produce. The fear of being glutted with foreign products, unless we secure beforehand a certain outlet for our own, is the most unfounded that can be imagined. The foreigner who will take nothing of ours, can send us nothing of his. Though our ports were open to the merchants of all the countries of the world, the exports of British produce must always be equal to the imports of foreign produce; and none but those who receive our commodities, either at first or second hand, could continue to send any thing to us.

"Les étrangers ne peuvent demander ni désirer rien mieux, que la liberté de vous acheter et de vous vendre chez vous et dans vos colonies. Il faut la leur accorder, non par foiblesse et par impuissance, mais parcequ'elle est juste en elle-même, et qu'elle vous est utile. Ils ont tort sans doute de la refuser chez eux: mais cette faute d'ignorance, dont, sans le savoir, ils sont punis les premiers, n'est pas un raison qui doive vous porter à vous nuire à vous-même en suivant cet exemple, et à vous exposer aux suites et aux dépenses d'une guerre pour avoir la vaine satisfaction d'user des représailles, dont l'effet ne peut manquer de retomber sur vous, et de rendre votre commerce plus désavantageux." — (*Le Trosne de l' Ordre Social*, p. 416.)

There are some, however, who contend, that though restrictions on importation from abroad be unfavourable to opulence, and the advancement of individuals and nations in arts and civilisation, they may, notwithstanding, be vindicated on other grounds, as contributing essentially to independence and security. The short and decisive answer to this is to be found in the reciprocity of commerce. It does not enrich one individual or nation at the expense of others, but confers its favours equally on all. We are under no obligations to the Portuguese, the Russians, or any other people with whom we carry on trade. It is not *our* advantage, but *their own*, that they have in view in dealing with us. We give them the full value of all that we import; and they would suffer quite as much inconvenience as we should do were this intercourse put an end to. The independence at which those aspire who would promote it by laying restrictions on commerce, is the independence of the solitary and unsocial savage; it is not an independence productive of strength, but of weakness. "The most flourishing states, at the moment of their highest elevation, when they were closely connected with every part of the civilised world by the golden chains of successful commercial enterprise, were, according to this doctrine, in the most perfect state of absolute dependence. It was not till all these connections were dissolved, and they had sunk in the scale of nations, that their true independence commenced! Such statements carry with them their own refutation. There is a natural dependence of nations upon each other, as there is a natural dependence of

individuals upon each other. Heaven has so ordered it. Some soils, some climates, some situations, are productive exclusively of some peculiar fruits, which cannot elsewhere be profitably produced. Let nations follow this as their guide. In a rich and rising community, the opulent capitalists may be as dependent upon the poor labourers, as the poor labourers upon the opulent capitalists. So it is with nations. The mutual dependence of individuals upon each other knits and binds society together, and leads to the most rapid advancement in wealth, in intelligence, and in every kind of improvement. It is the same, but on a far larger scale, with the mutual dependence of nations. To this alone do we owe all the mighty efforts of commerce: and what lights, what generous feelings, and multiplied means of human happiness, has it not every where spread!" — (*North American Review*, No. 57.)

The principles of commercial freedom, and the injurious influence of restrictive regulations, were set in a very striking point of view by Dr. Smith, in his great work; and they have been since repeatedly explained and elucidated. Perhaps, however, the true doctrines upon this subject have nowhere been better stated than in the petition presented by the merchants of London to the House of Commons on the 8th of May, 1820. This document is one of the most gratifying proofs of the progress of liberal and enlarged views. It was subscribed by all the principal merchants of the metropolis, who did not scruple to express their conviction, that the repeal of every *protective regulation* would be for the public advantage. Such an address, confirming, as it did, the conclusions of science, by the approval of the best informed and most extensive merchants of the world, had a powerful influence over the legislature. During the last 20 years several most important reforms have been made in our commercial system; so that, besides being the first to promulgate the true theory of commerce, we are now entitled to the praise of being the first to carry it into effect. No doubt our trade is still fettered by many vexatious restraints; but these will gradually disappear, according as experience serves to disclose the benefits resulting from the changes already made, and the pernicious operation of the restrictions that are still allowed to continue.

The petition now referred to is too important to be omitted in a work of this sort. It is as follows: —

"To the Honourable the Commons, &c. The Petition of the Merchants of the City of London,

"Sheweth,

"That foreign commerce is eminently conducive to the wealth and prosperity of a country, by enabling it to import the commodities for the production of which the soil, climate, capital, and industry of other countries are best calculated, and to export, in payment, those articles for which its own situation is better adapted.

"That freedom from restraint is calculated to give the utmost extension to foreign trade, and the best direction to the capital and industry of the country.

"That the maxim of buying in the cheapest market, and selling in the dearest, which regulates every merchant in his individual dealings, is strictly applicable, as the best rule for the trade of the whole nation.

"That a policy founded on these principles would render the commerce of the world an interchange of mutual advantages, and diffuse an increase of wealth and enjoyments among the inhabitants of each state.

"That, unfortunately, a policy the very reverse of this has been and is more or less adopted and acted upon by the government of this and every other country; each trying to exclude the productions of other countries, with the specious and well-meant design of encouraging its own productions: thus inflicting on the bulk of its subjects, who are consumers, the necessity of submitting to privations in the quantity or quality of commodities; and thus rendering what ought to be the source of mutual benefit and of harmony among states, a constantly recurring occasion of jealousy and hostility.

"That the prevailing prejudices in favour of the protective or restrictive system may be traced to the erroneous supposition that every importation of foreign commodities occasions a diminution or discouragement of our own productions to the same extent: whereas it may be clearly shown, that although the particular description of production which could not stand against unrestrained foreign competition would be discouraged, yet, as no importation could be continued for any length of time without a corresponding exportation, direct or indirect, there would be an encouragement, for the purpose of that exportation, of some other production to which our situation might be better suited; thus affording at least an equal, and probably a greater, and certainly a more beneficial, employment to our own capital and labour.

"That of the numerous protective and prohibitory duties of our commercial code, it may be proved that, while all operate as a very heavy tax on the community at large, very few are of any ultimate benefit to the classes in whose favour they were originally instituted, and none to the extent of the loss occasioned by them to other classes.

"That among the other evils of the restrictive or protective system, not the least is, that the artificial protection of one branch of industry or source of production against foreign competition, is set up as a ground of claim by other branches for similar protection; so that if the reasoning upon which these restrictive or prohibitory regulations are founded were followed out consistently, it would not stop short of excluding us from all foreign commerce whatsoever. And the same train of argument, which, with corresponding prohibitions and protective duties, should exclude us from foreign trade, might be brought forward to justify the re-enactment of restrictions upon the interchange of productions (unconnected with public revenue) among the kingdoms composing the union, or among the counties of the same kingdom.

"That an investigation of the effects of the restrictive system at this time is peculiarly called for, as it may, in the opinion of your petitioners, lead to a strong presumption, that the distress, which now so generally prevails, is considerably aggravated by that system; and that some relief may be obtained by the earliest practicable removal of such of the restraints as may be shown to be most injurious to the capital and industry of the community, and to be attended with no compensating benefit to the public revenue.

"That a declaration against the anti-commercial principles of our restrictive system is of the more importance at the present juncture; inasmuch as, in several instances of recent occurrence, the merchants and manufacturers of foreign countries have assailed their respective governments with applications for further protective or prohibitory duties and regulations, urging the example and authority of this country, against which they are almost exclusively directed, as a sanction for the policy of such

measures. And certainly, if the reasoning upon which our restrictions have been defended is worth any thing, it will apply in behalf of the regulations of foreign states against us. They insist upon our superiority in capital and machinery, as we do upon their comparative exemption from taxation, and with equal foundation.

"That nothing would tend more to counteract the commercial hostility of foreign states, than the adoption of a more enlightened and more conciliatory policy on the part of this country.

"That although, as a matter of mere diplomacy, it may sometimes answer to hold the removal of particular prohibitions, or high duties, as depending upon corresponding concessions by other states in our favour, it does not follow that we should maintain our restrictions in cases where the desired concessions on their part cannot be obtained. Our restrictions would not be the less prejudicial to our own capital and industry, because other governments persisted in preserving impolitic regulations.

"That, upon the whole, the most liberal would prove to be the most politic course on such occasions.

"That independent of the direct benefit to be derived by this country, on every occasion of such concession or relaxation, a great incidental object would be gained, by the recognition of a sound principle or standard, to which all subsequent arrangements might be referred; and by the salutary influence which a promulgation of such just views, by the legislature and by the nation at large, could not fail to have on the policy of other states.

"That in thus declaring, as your petitioners do, their conviction of *the impolicy and injustice of the restrictive system*, and in desiring every practicable relaxation of it, they have in view only such parts of it as are not connected, or are only subordinately so, with the public revenue. As long as the necessity for the present amount of revenue subsists, your petitioners cannot expect so important a branch of it as the customs to be given up, nor to be materially diminished, unless some substitute less objectionable be suggested. But it is *against every restrictive regulation of trade, not essential to the revenue, against all duties merely protective from foreign competition, and against the excess of such duties as are partly for the purpose of revenue, and partly for that of protection*, that the prayer of the present petition is respectfully submitted to the wisdom of parliament.

"May it therefore," &c.

For examples of the practical working and injurious operation of restrictions, see the articles BORDEAUX, CADIZ, CAGLIARI, COLONY TRADE, CORN LAWS AND CORN TRADE, NAPLES, TIMBER, &c., in this Dictionary; the articles on the American Tariff and the French Commercial System in Nos. 96. and 99. of the *Edinburgh Review*; the *petition* and *Memoire a l'Appui*, addressed, in 1828, by the landowners and merchants of the Gironde to the Chamber of Deputies. &c. &c.

For an account of the doctrines with respect to the *balance of trade*, and the importation and exportation of the precious metals, see the articles BALANCE OF TRADE, and EXCHANGE.

For an account of the articles exported from and imported into Great Britain, see IMPORTS AND EXPORTS.

COMPANIES. In commerce or the arts, a company is a number of persons associated for the purpose of carrying on some commercial or industrious undertaking. When there are only a few individuals associated, it is most commonly called a *copartnery*; the term company being usually applied to large associations, like the East India Company, the Bank of England, &c., who conduct their operations by means of agents acting under the orders of a Board of directors.

Companies have generally been divided into two great classes — exclusive or joint stock companies, and open and regulated companies.

1. *Exclusive or Joint Stock Companies.* — By an institution of this sort is meant a company having a certain amount of capital, divided into a greater or smaller number of transferable shares, managed for the common advantage of the shareholders by a body of directors chosen by and responsible to them. After the stock of a company of this sort has been subscribed, no one can enter it without previously purchasing one or more shares belonging to some of the existing members. The partners do nothing individually; all their resolutions are taken in common, and are carried into effect by the directors and those whom they employ.

According to the common law of England, all the partners in a joint stock company are jointly and individually liable, to the whole extent of their fortunes, for the debts of the company. They may make arrangements amongst themselves, limiting their obligations with respect to each other; but unless established by an authority competent to set aside the general rule, they are all indefinitely responsible to the public. Parliament sometimes limits the responsibility of the shareholders in joint stock companies established by statute, to the amount of the shares they respectively hold. Charters of incorporation granted by the Crown were also, until lately, supposed necessarily to have this effect; but by the act 6 Geo. 4. c. 96. the Crown is empowered to grant charters of incorporation by which the members of corporate bodies may be made *individually liable, to such extent, and subject to such regulations and restrictions*, as may be deemed expedient. Hence charters are now frequently granted for the purpose merely of enabling companies to sue and be sued in courts of law, under the names of some of their office-bearers, without in any respect limiting the responsibility of the shareholders to the public. This limitation cannot be implied in a charter any more than in an act of parliament, and will be held not to exist unless it be distinctly set forth.

"In a private copartnery, no partner, without the consent of the company, can transfer his share to another person, or introduce a new member into the company. Each member, however, may, upon proper warning, withdraw from the copartnery, and demand payment from them of his share of the common stock. In a joint stock com-

pany, on the contrary, no member can demand payment of his share from the company; but each member may, without their consent, transfer his share to another person, and thereby introduce a new member. The value of a share in a joint stock is always the price which it will bring in the market; and this may be either greater or less, in any proportion, than the sum which its owner stands credited for in the stock of the company." —(*Wealth of Nations*, p. 333.)

2. *Utility of Joint Stock Companies.* — Whenever the capital required to carry on any undertaking exceeds what may be furnished by an individual, it is indispensable, in order to the prosecution of the undertaking, that an association should be formed. In all those cases, too, in which the chances of success are doubtful, or where a lengthened period must necessarily elapse before an undertaking can be completed, an individual, though ready enough to contribute a small sum in connection with others, would, generally speaking, be very little inclined, even if he had the means, to encounter the whole responsibility of such enterprises. Hence the necessity and advantage of companies or associations. It is to them that we are indebted for those canals and railways by which every part of the country is intersected, for the formation of so many noble docks and warehouses, for the institution of our principal banks and insurance offices, and for many other establishments of great public utility carried on by the combined capital and energies of large bodies and individuals.

3 *Branches of Industry, for the Prosecution of which Joint Stock Companies may be advantageously established.* — In order to ensure a rational prospect of success to a company, the undertaking should admit of being carried on according to a regular systematic plan. The reason of this is sufficiently obvious. The business of a great association must be conducted by factors or agents; and unless it be of such a nature as to admit of their duties being clearly pointed out and defined, the association would cease to have any effectual control over them, and would be, in a great measure, at their mercy. An individual who manages his own affairs reaps all the advantage derivable from superior skill, industry, and economy; but the agents, and even directors of joint stock companies labour, in most cases, entirely or principally for the advantage of others; and cannot therefore, however conscientious, have the same powerful motives to act with energy prudence, and economy. "Like," says Dr. Smith, "the stewards of a rich man, they are apt to consider attention to small matters as not for their masters' honour, and very easily give themselves a dispensation from having it. Negligence and profusion, therefore, must always prevail more or less in the management of the affairs of such a company." It also not unfrequently happens that they suffer from the bad faith, as well as the carelessness and extravagance of their servants; the latter having in many instances endeavoured to advance their own interests at the expense of their employers. Hence the different success of companies whose business may be conducted according to a nearly uniform system, — such as dock, canal, and insurance companies, railroad companies, &c., — and those whose business does not admit of being reduced to any regular plan, and where much must always be left to the sagacity and enterprise of those employed. All purely commercial companies, trading upon a joint stock, belong to the latter class. Not one of them has ever been able to withstand the competition of private adventurers; they cannot subject the agents they employ to buy and sell commodities in distant countries to any effectual responsibility; and from this circumstance, and the abuses that usually insinuate themselves into every department of their management, no such company has ever succeeded, unless when it has obtained some exclusive privilege, or been protected from competition.

The circumstances now mentioned would seem to oppose the most formidable obstacles to the success of the companies established in this country for the prosecution of mining in America. This business does not admit of being reduced to a regular routine system. Much must always depend on the skill and probity of the agents employed at the mines; and it must plainly be very difficult, if not quite impossible, for directors resident in London to exercise any effectual *surveillance* over the proceedings of those who are at so great a distance. Hence it is not at all likely that these establishments will ever be so productive to the undertakers, as if they had been managed by the parties themselves.

The Abbé Morellet has given, in a tract published in 1769 (*Examen de la Réponse de M. N.*, pp. 35—38.), a list of 55 joint stock companies, for the prosecution of various branches of foreign trade, established in different parts of Europe since 1600, every one of which had failed, though most of them had exclusive privileges. Most of those that have been established since the publication of the Abbé Morellet's tract have had a similar fate.

But notwithstanding both principle and experience concur in showing how very ill fitted a large association is for the purpose of prosecuting commercial undertakings, there are cases in which they cannot be prosecuted except by associations of this sort, and when it may be expedient to grant them certain peculiar privileges. When, owing either to the disinclination or inability of government to afford protection to those engaged in any

particular department of trade, they are obliged to provide for their own defence and security, it is obviously necessary that they should have the power to exclude such individuals as may refuse to submit to the measures or to bear their due share of the expense, required for the common protection of all. The Russian Company, the East India Company, the Levant or Turkey Company, and most of the other great trading companies which have existed in this country, seem principally to have grown out of a real or supposed necessity of this sort. It was not believed that any safe or advantageous intercourse could be carried on with barbarous countries without the aid of ships of war, factories, interpreters, &c. And as government was not always able or willing to afford this assistance, the traders were formed into companies or associations, and vested with such peculiar privileges as appeared to be necessary for enabling them to prosecute the trade without any extrinsic support. "When," says Dr. Smith, "a company of merchants undertake, at their own risk and expense, to establish a new trade with some remote and barbarous nation, it may not be unreasonable to incorporate them into a joint stock company, and to grant them, in case of success, a monopoly of the trade for a certain number of years. It is the easiest and most natural way in which the state can recompense them for hazarding a dangerous and expensive experiment, of which the public is afterwards to reap the benefit. A temporary monopoly of this kind may be vindicated upon the same principles upon which a like monopoly of a new machine is granted to its inventor, and that of a new book to its author. But upon the expiration of the term, the monopoly ought certainly to determine; the forts and garrisons, if it was found necessary to establish any, to be taken into the hands of government, their value to be paid to the company, and the trade to be laid open to all the subjects of the state." — (*Wealth of Nations*, p. 339.)

It may be doubted, however, whether it be really necessary, even in such a case as that now mentioned, to establish *a joint stock company* with peculiar privileges, and whether the same thing might not be more advantageously effected by the establishment of an open or regulated company.

4. *Open or Regulated Companies.* — The affairs of such companies or associations are managed by directors appointed by the members. They do not, however, possess a common or joint stock. Each individual pays a fine upon entering into the company, and most commonly an annual contribution: a duty applicable to the business of the company is also sometimes charged upon the goods imported and exported from and to the countries with which they trade. The sums so collected are applied by the directors to fit out ambassadors, consuls, and such public functionaries as may be required to facilitate commercial dealings, or to build factories, maintain cruisers, &c. The members of such companies trade upon their own stock, and at their own risk. So that when the fine, or the sum payable on admission into a regulated company, is moderate, it is impossible for its members to form any combination that would have the effect of raising their profits above the common level; and there is the same keen and close competition amongst them that there is amongst other classes of traders. A regulated company is, in fact, a device for making those engaged in a particular branch of trade bear the public or political expenses incident to it, at the same time that it leaves them to conduct their own business with their own capital, and in their own way.

Should, therefore, government at any time refuse, or be unable to afford, that protection to those engaged in any branch of trade which is necessary to enable them to carry it on, their formation into a regulated company would seem to be the most judicious measure that could be adopted; inasmuch as it would obtain for them that protection which is indispensable, without encroaching on the freedom of individual enterprise.

The African, the Levant, and some other branches of trade, were for a long time conducted by open or regulated companies. These, however, have been recently abolished: the African Company, by the act 1 & 2 Geo. 4. c. 28.; and the Levant Company, by the act 6 Geo. 4. c. 33. The Russia Company still exists. — (See RUSSIA COMPANY.)

In so far as relates to protection, it may perhaps be thought, for the reasons given by Dr. Smith, that a joint stock company is better calculated to afford it than a regulated company. The directors of the latter having, Dr. Smith alleges, no particular interest in the prosperity of the general trade of the company, for behoof of which, ships of war, factories, or forts have to be maintained, are apt to neglect them, and to apply their whole energies to the care of their own private concerns. But the interest of the directors of a joint stock company are, he contends, in a great measure identified with those of the association. They have no private capital employed in the trade; their profits must depend upon the prudent and profitable management of the common stock; and it may, therefore, it is argued, be fairly presumed that they will be more disposed to attend carefully to all the means by which the prosperity of the association may be best secured. On the other hand, however, it is seldom that the directors of joint stock companies stop at the proper point; having almost invariably attempted to extend their commercial dealings by force, and to become not only merchants but sovereigns. Nor is this any thing but

what might have been expected, seeing that the consideration and extensive patronage accruing from such measures to the directors is generally of far more importance to them than a moderate increase of the dividends on their stock. Whenever they have been able, they have seldom scrupled to employ arms to advance their projects; and instead of contenting themselves with shops and factories, have constructed fortifications, embodied armies, and engaged in war. But such has not been the case with regulated companies. The businesses under their control have uniformly been conducted in a comparatively frugal and parsimonious manner; their establishments have been, for the most part, confined to factories; and they have rarely, if ever, allowed themselves to be seduced by schemes of conquest and dominion.

And hence, considering them as *commercial machines*, it does not really seem that there can be any doubt as to the superiority of a regulated over a joint stock company. The latter has the defect, for which nothing almost can compensate, of *entirely excluding individual enterprise and competition*. When such a company enjoys any peculiar privilege, it naturally, in pursuing its own interest, endeavours to profit by it, how injurious soever it may be to the public. If it have a monopoly of the trade with any particular country, or of any particular commodity, it rarely fails, by understocking the home and foreign markets, to sell the goods which it imports and exports at an artificially enhanced price. It is not its object to employ a comparatively large capital, but to make a large profit on a comparatively small capital. The conduct of the Dutch East India Company, in burning spices, that their price might not be lowered by larger importations, is an example of the mode in which such associations uniformly and, indeed, almost necessarily act. All individuals are desirous of obtaining the highest possible price for what they have to sell: and if they are protected by a monopoly, or an exclusive privilege, from the risk of being undersold by others, they never hesitate about raising the price of their products to the highest elevation that the competition of the buyers will allow them; and thus frequently realise the most exorbitant profits.

And yet, notwithstanding these advantages, such is the negligence, profusion, and peculation, inseparable from the management of great commercial companies, that even those that have had the monopoly of the most advantageous branches of commerce have rarely been able to keep out of debt. It will be shown in the article East India Company, that that association has lost by its trade; and that, had it not been for the aid derived from the revenues of India, it must long since have ceased to exist. To buy in one market; to sell with profit in another; to watch over the perpetually occurring variations in the prices, and in the supply and demand of commodities; to suit with dexterity and judgment the quantity and quality of goods to the wants of each market; and to conduct each operation in the best and cheapest manner; requires a degree of unremitting vigilance and attention, which it would be visionary to expect from the directors or servants of a great joint stock association. Hence it has happened, over and over again, that branches of commerce which proved ruinous to companies, have become exceedingly profitable when carried on by individuals.

5. Constitution of Companies. — When application is made to parliament for an act to incorporate a number of individuals into a joint stock company for the prosecution of any useful undertaking, care should be taken not to concede to them any privileges that may be rendered injurious to the public. If a company be formed for the construction of a dock, a road, or a canal, it may be necessary, in order to stimulate individuals to engage in the undertaking, to give them some peculiar privileges for a certain number of years. But if other persons were to be permanently hindered from constructing new docks, or opening new lines of communication, a lasting injury might be done to the public. It may be highly expedient to incorporate a company for the purpose of bringing water into a city; but supposing there were no springs in the vicinity, other than those to which this company has acquired a right, they might, unless restrained by the act incorporating them, raise the price of water to an exorbitant height; and make large profits for themselves at the expense and to the injury of the public. In all cases of this sort; and in the case, indeed, of all joint stock companies established for the formation of canals, railroads, &c.; it would be sound policy to limit the rates charged for their services, or on account of the water, ships, goods, &c. conveyed by their means, and also to limit the dividends, or to fix a *maximum* beyond which they should not be augmented: enacting, that if the rates charged by the company produce more than sufficient to pay the maximum rate of dividend, and to defray the wear and tear of the aqueduct, canal, &c., they shall be allowed to reduce them till they only yield this much; and, in the event of their declining to do so, that the whole surplus above paying the dividend shall be applied to purchase up the stock of the association, so that ultimately the charges on account of dividends may be entirely abolished. Had this principle been acted upon when canals first began to be formed in England, the carriage of goods conveyed by some of the most important lines of communication would now have cost almost nothing; and this desirable result might have been accomplished in the way now suggested, with-

out, we believe, diminishing in any degree the number of those undertakings. Probably, however, the better way, in such cases, would be for the legislature to reserve to itself, where it institutes such companies, power periodically to revise these rates of charges. There are few who, at the time they engage in such enterprises, suppose that they will yield more than 10 or 12 per cent.; and vast numbers will always be disposed to engage in them, if there be any reasonable prospect of their yielding this much. Now, when such is the case, is it not the duty of government to provide, in the event of the undertaking becoming in an *unexpected* and *unusual degree profitable*, that the public should derive some advantage from it? This is not a case in which competition can reduce profits to the common level. The best, perhaps the only practicable, line for a canal or railroad between any two places will be appropriated by those who are first in the field; who thus, in fact, obtain a natural monopoly of which they cannot be deprived: and hence the advantage of limiting the charges and dividends: without discouraging enterprise, it affords a security that private individuals shall not reap an unusual and unlooked-for profit at the expense of the public.

In all those cases in which companies are formed for the prosecution of undertakings that may be carried on, with equal advantage to the public, by individuals; or where there are no very considerable difficulties to overcome, or risks to encounter; they ought to enjoy no privilege whatever, but should be regarded, in every point of view, as if they were mere individuals.

For accounts of the principal joint stock and regulated companies established in this country, see the articles BANK OF ENGLAND, DOCKS, EAST INDIA COMPANY, INSURANCE, RUSSIA COMPANY, &c. &c.

6. *Companies en Commandite.* — In France there is a sort of companies denominated *sociétés en commandite*. A society of this description consists of one or more partners liable, without limitation, for the debts of the company; and one or more partners, or *commanditaires*, liable only to the extent of the funds they have subscribed. A *commanditaire* must not, however, take any part in the business of the company; if he do this, he loses his inviolability, and makes himself responsible for the debts of the association. The names of the partners in such societies must be published, and the amount of the sums contributed by the *commanditaires*.

It has been proposed to introduce partnerships of this sort into this country; but it seems very doubtful whether any thing would be gained by such a measure. Partnerships *en commandite* may be very easily abused, or rendered a means of defrauding the public. It is quite visionary to imagine that the *commanditaires* can be prevented from indirectly influencing the other partners; and supposing a collusion to exist amongst them, it might be possible for them to divide large sums as profit, when, perhaps, they had really sustained a loss; and to have the books of the association so contrived, that it might be very difficult to detect the fraud. This, it is alleged, is by no means a rare occurrence in France.

7. *Civic Companies, or Corporations.* — Exclusive of the companies previously mentioned, a number of ancient companies or corporations exist in this and most other European countries, the members of which enjoy certain political as well as commercial privileges. When the feudal system began to be subverted by the establishment of good order and regular government in the towns, the inhabitants were divided into certain trades or corporations, by which the magistrates and other functionaries were chosen. The members of these trades, or corporations, partly to enhance the value of their privileges, and partly to provide a resource, in case of adversity, for themselves, acquired or usurped the power of enacting by-laws regulating the admission of new members, and at the same time set about providing a fund for the support of such as accident or misfortune might reduce to a state of indigence. Hence the origin of apprenticeships, the refusal to allow any one not a member of a corporation to carry on any business within the precincts of any town corporate, and the various regulations that had to be submitted to, and the fees that had to be paid by the claimants for inrolment in corporations. For a lengthened period these privileges and regulations were very oppressive. Within the last century, however, their influence has been progressively diminishing. In France, where the abuses inseparable from the system had attained to a very great height, it was entirely swept off by the Revolution: and though corporations still exist in this country, they have been stripped of several of their peculiar franchises; and should now, for the most part, be regarded more, perhaps, in the light of charitable than of political institutions. It would be well, however, were they reduced entirely to the former character; and were the few political and commercial privileges, which they still enjoy, communicated to the rest of the citizens. At their first institution, and for some time after, corporations, considered as political bodies, were probably useful: but such is no longer the case; and in so far as they now possess any special immunities, they tend to obstruct that free competition that is so advantageous.

The following extract from a *Report on the Commerce and Manufactures of the United*

States, drawn up by Albert Gallatin, Esq., then secretary to the Treasury, and laid before Congress in 1816, sets the superior advantages resulting from the unrestricted freedom of industry in a very striking point of view. "No cause," says he, "has, perhaps, more promoted in every respect the general improvement of the United States, than the absence of those systems of internal restriction and monopoly which continue to disfigure the state of society in other countries. No laws exist here, directly or indirectly, confining men to a particular occupation or place, or excluding any citizen from any branch he may, at any time, think proper to pursue. Industry is, in every respect, free and unfettered; every species of trade, commerce, and profession, and manufacture, being equally open to all, *without requiring any regular apprenticeship, admission, or licence*. Hence the improvement of America has not been confined to the improvement of her agriculture, and to the rapid formation and settlement of new states in the wilderness; but her citizens have extended their commerce to every part of the globe, and carry on with complete success even those branches for which a monopoly had heretofore been considered essentially necessary."

There is in *Rees's Cyclopædia*, article *Company*, a list of the different Civic Companies belonging to the City of London, in which the periods of their incorporation, and various other important particulars with respect to several of them, are specified.

COMPASS (Ger. *Ein Kompass*; Du. *Zeekompass*; Da. *Söekompass*; Sp. *Sjöcompass*; Fr. *Boussole, Compas de mer*; It. *Bussola*; Sp. *Aguja de marear*; Port. *Compasso de marear*; Rus. *Kompass korabelnüi*), or mariner's compass, an instrument composed of a needle and card, by which the ship's course is directed. The needle, with little variation, always points towards the north; and hence the mode of steering by the compass.

The common opinion is that the compass was invented by Flavio Gioia, a citizen of the once famous republic of Amalphi, very near the beginning of the fourteenth century. Dr. Robertson has adopted this opinion, and regrets that contemporary historians furnish no details as to the life of a man to whose genius society is so deeply indebted.—(*Hist. of America*, vol. i. p. 47. 8vo ed.) But though Gioia may have made improvements on the compass, it has been shown that he has no claim to be considered as its discoverer. Passages have been produced from writers who flourished more than a century before Gioia, in which the polarity of the needle, when touched by the magnet, is distinctly pointed out. Not only, however, had this singular property been discovered, but also its application to the purposes of navigation, long previously to the fourteenth century. Old French writers have been quoted (*Macpherson's Annals of Commerce*, anno 1200; *Rees's Cyclopædia*), that seem fully to establish this fact. But whatever doubts may exist with respect to them, cannot affect the passages which the learned Spanish antiquary, Don Antonio de Capmany (*Questiones Criticas*, p. 73—132.) has given from a work of the famous Raymond Lully (*De Contemplatione*) published in 1272. In one place Lully says, "as the needle, when touched by the magnet, naturally turns to the north" (*sicut acus per naturam vertitur ad septentrionem dum sit tacta à magnete*). This is conclusive as to the author's acquaintance with the polarity of the needle; and the following passage from the same work—"as the nautical needle directs mariners in their navigation" (*sicut acus nautica dirigit marinarios in sua navigatione, &c.*) is no less conclusive as to its being used by sailors in regulating their course. There are no means of ascertaining the mode in which the needle Raymond Lully had in view was made use of. It has been sufficiently established—(see the authorities already referred to, and *Azuni, Dissertation sur l' Origine de la Boussole,*)—that it was usual to float the needle, by means of a straw, on the surface of a basin of water; and Capmany contends that we are indebted to Gioia for the card and the method now followed of suspending the needle; improvements which have given to the compass all its convenience, and a very large portion of its utility. But this part of his *Dissertation*, though equally learned and ingenious, is by no means so satisfactory as the other. It is difficult to conceive how mariners at sea could have availed themselves of a floating needle; but, however this may be, it seems most probable that Gioia had considerably improved the construction of the compass; and that, the Amalphitans having been the first to introduce it to general use, he was, with excusable partiality, represented by them, and subsequently regarded by others, as its inventor.

The reader will not consider these details out of place in a work on commerce, which the compass has done so much to extend. "Its discovery," to borrow the language of Mr. Macpherson, "has given birth to a new æra in the history of commerce and navigation. The former it has extended to every shore of the globe, and increased and multiplied its operations and beneficial effects in a degree which was not conceivable by those who lived in the earlier ages. The latter it has rendered expeditious, and comparatively safe, by enabling the navigator to launch out upon the ocean free from the danger of rocks and shoals. By the use of this noble instrument, the whole world has become one vast commercial commonwealth, the most distant inhabitants of the earth

are brought together for their mutual advantage, ancient prejudices are obliterated, and mankind are civilised and enlightened." — (Vol. i. p. 366.)

COMPOSITION, in commerce, commonly implies the dividend or sum paid by an insolvent debtor to his creditors, and accepted by them in payment for their debts.

CONEY WOOL (Ger. *Kaninchenwolle*; Du. *Konynhair*; Fr. *Poil de lapin*; It. *Pelo di Caniglio*; Sp. *Conejuna*), the fur of rabbits. This article is extensively used in the hat manufacture; and besides the large supplies raised at home, a great deal is imported. The imports usually range from about 300,000 to about 500,000 skins a year.

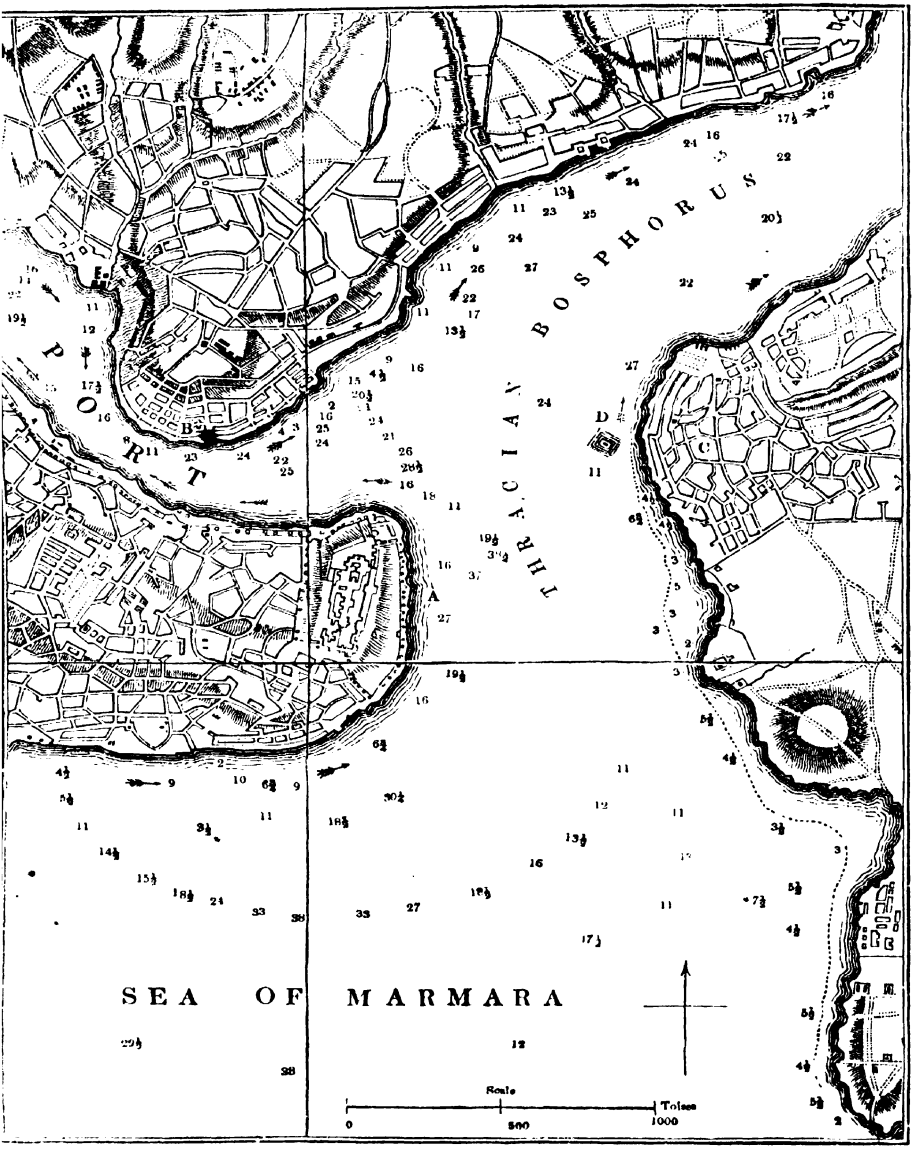
CONSTANTINOPLE, a famous city of South-eastern Europe, formerly the metropolis of the Eastern, as it still is of the Turkish Empire, on a triangular point or land, on the European side of the Sea of Marmara (Propontis), at the point where it unites with the Bosphorus, or channel leading to the Black Sea, lat. 41° 0′ 12″ N., lon. 28° 59′ 2″ E. Population variously estimated at from 300,000 to 600,000, but believed, by the best authorities, to be about 450,000. The situation of this renowned city is, in a commercial point of view, one of the finest imaginable. Standing on the narrow straits uniting the Mediterranean and Euxine Seas, she at once commands, and is the *entrepôt* for, the commerce between them. The harbour is most excellent. It consists of an extensive inlet, or arm of the sea, stretching along the north-east side of the city, which it divides from the suburbs of Galata and Pera. It has sufficient depth of water to float the largest ships, and can accommodate more than 1,000 sail. The strong current that sets through the Bosphorus into the sea of Marmara strikes against Seraglio Point — (see Plan); a part of the water, being in consequence forced into the harbour, runs along its south-western side in the direction marked by the arrows — (see Plan), till, arriving at its extremity, it escapes by the opposite side. In the middle the water is still. On leaving the port, it is necessary to keep well over to the northern side; for otherwise the ship might be taken by the current, and driven on Seraglio Point. It may be worth while, however, to remark, that, notwithstanding this inconvenience, the current has been of signal service to the city, by scouring the harbour, and carrying away the filth and ballast by which it must otherwise have been long since choked up. The distance across from Seraglio Point to the opposite suburb of Scutari, on the Asiatic coast, is rather more than an English mile. Within less than ¼ of a mile of the latter is a rocky islet, upon which is a tower and light-house, known by the name of the Tower of Leander. Foreigners reside in Galata, Pera, and the suburbs on the eastern side of the harbour; and it is there, consequently, that the principal trade of the place is carried on. The quays are good, and ships lie close alongside.

The Bosphorus, or channel of Constantinople, runs in a N. E. by N. direction about 15 miles, varying in breadth from 1¼ to ½ a mile. It is swept by a rapid current, which it requires a brisk gale to stem, and has throughout a great depth of water. The Hellespont, or strait of the Dardanelles, leading from the Archipelago to the Sea of Marmara, is about 13 leagues in length. Its direction is nearly N. E. Where narrowest, it is little more than a mile across. It also is swept by a strong current, and has deep water throughout.

The subjoined plan of part of Constantinople and its port is copied, without reduction, from the beautiul plan of the city and Bosphorus, drawn and engraved by M. Merzoff Robert of Munich, and published by Mr. Wilde, of this city.

Nothing can be more imposing than the appearance of the city when seen from the sea, but on landing the illusion vanishes. The streets are narrow, dark, ill-paved, and irregular. Owing to the want of any effective system of police, and of the most ordinary attention to cleanliness, they are extremely filthy; and are infested with herds of dogs, and also with rats, which perform the functions of scavengers. The houses are mostly built of wood, and fires are very frequent. Most of these happen designedly; the burning of a few hundred houses being deemed the readiest and most effectual means of making the government aware of the public dissatisfaction, and of procuring a redress of grievances!

Money. — Accounts are kept in piastres of 40 paras, or 120 aspers. The Turkish coin has been so much degraded, that the piastre, which a few years ago was worth 2*s.* sterling, is now worth little more than 4*d.* A bag of silver (*kefer*) = 500 piastres, and a bag of gold (*kise*) = 30,000 piastres.



Weights and Measures. — The commercial weights are — 176 drams = 1 rottolo; 2·272 rottoli = 1 oke; 6 okes = 1 batman; 7½ batmans = 1 quintal or cantaro = 124·457 (124½ very nearly) lbs. avoirdupois = 56·437 kilogrammes = 116·527 lbs. of Hamburg. The quintal of cotton is 45 okes = 127·2 lbs. avoirdupois.

The pik, or pike, is of two sorts, the greater and the less. The greater, called *halebi* or *arschim*, used in the measurement of silks and woollens, is very near 28 inches (27·9). The lesser, called *endese*, used in the measuring of cottons, carpets, &c. = 27 inches. Hence 100 long piks = 77·498 English yards, and 100 short piks = 75·154 do. But in ordinary commercial affairs, the pik is estimated at ¾ of an English yard.

Corn is measured by the *kisloz* or *killow* = 0·941 of a Winchester bushel; 8½ kisloz = 1 quarter. The *fortin* = 4 kisloz.

Oil and other liquids are sold by the *alma* or *meter* = 1 gallon 3 pints English wine measure. The alma of oil should weigh 8 okes. — (*Nelkenbrecher* and *Dr. Kelly.*)

The *Port Charges* on account of English vessels in the harbours of the Ottoman empire are fixed by treaty at 300 aspers, neither more nor less.

Trade, &c. — Owing to the vicious institutions of the Turks, and the disorganised state of the empire, the trade of Constantinople is very far from being so extensive as might be supposed from its situation and population. The imports consist of corn, iron, timber, tallow, and furs, principally from the Black Sea; and of cotton stuffs and yarn, coal, tin, tin plates, woollens, silks, cutlery, watches and jewellery, paper, glass, furniture, indigo, cochineal, &c. from England and other European countries. Corn and coffee are imported from Alexandria; but considerable quantities of Brazil and West India coffee are also imported, particularly in British and American bottoms. Sugar is partly imported from the East, but principally from the West Indies. The exports consist of silk, which is by far the most important article, carpets, hides, wool, Angola goats' hair, yellow berries, boxwood, opium, galls, bullion and diamonds, and a few

other articles. But the exports are always very much less than the imports; and ships carrying goods to Constantinople, either return in ballast, or get return cargoes at Smyrna, Odessa, Salonica, &c., on which places they frequently procure bills at Constantinople. Trade is chiefly in the hands of English, French, and other European merchants (denominated Franks), and of Armenians and Greeks. Bargains are negotiated on their account by Jew brokers, some of whom are rich.

If we formed an estimate of the trade of Constantinople from the number of vessels by which its port is visited, it would appear to be much greater than it really is. This arises from the circumstance of almost all the vessels passing from the Mediterranean to the Black Sea, and from the latter to the former, calling here, where they frequently discharge and take on board part of their cargoes. In 1842 the port was visited by 250 ships from the U. Kingdom, respecting which the consul has supplied the following details.

Vessels.		*Tons.*		
69	of the burden of	12,394	arrived from	Liverpool.
27	—	5,880	—	London.
95	—	21,450	—	England with coals.
1	—	166	—	Bristol.
1	—	161	—	Newport.
11	—	2,047	—	Cardiff.
11	—	2,756	—	Malta.
35	—	7,251	—	Foreign.
250		55,105		

The articles imported in the Liverpool vessels were principally British cotton manufactured goods, some woollen goods, colonial produce, and a little iron and tin. In the London vessels East and West India produce, and various descriptions of articles of British manufacture.

Of the 69 vessels from Liverpool —
1 touched at Syra, and delivered a part of her cargo.
1 — Smyrna, — —
1 — Athens, — —
2 — Syra, — nearly all their cargoes.

Of the remaining 64 vessels —
8 took on a part of their cargoes to Odessa.
3 — Trebizond.
1 — Galacz.
3 took on the whole of their cargoes to Galacz.

Of the 27 vessels from London —
3 touched at Syra, and delivered a part of their cargoes.
1 — Pirœus, and delivered a part of her cargo.

Of the remaining 23 vessels —
18 took on a part of their cargoes to Odessa.
1 took on a part of her cargo to Trebizond.

The quantity of coals brought to this port amounted to 32,360 tons, of which 3,300 were taken on to Trebizond and Sinope, and 1,460 tons to Galacz.

The quantity of iron imported amounted to 3,550 tons.

The cargoes from Liverpool may be estimated at an average value of about 18,000*l.* each. Those from London may be estimated at about 10,000*l.* According to this calculation the value of the importation by the preceding vessels would be as follows: —

	£	£	£	£
69 vessels from Liverpool @ 18,000			1,242,000	
Deduct ¼ of 3 cargoes landed at Syra, Smyrna, and Athens	-	13,500		
Deduct ½ of 2 cargoes landed at Syra		31,500		
Deduct ⅛ of 8 cargoes taken on to Odessa, and 3 to Trebizond	-	24,750		
Deduct ½ of 1 cargo taken on to Galacz	-	9,000		
Deduct 3 whole cargoes taken on to Galacz	-	54,000		
			132,750	
				1,109,250
27 vessels from London @ 10,000*l.*	-	-	270,000	
Deduct ⅓ of 2 cargoes and ⅛ of 1 cargo landed at Syra	-	13,333		
Deduct ½ of 1 cargo landed at the Pirœus	-	5,000		
Deduct ¼ of 19 cargoes taken on to Odessa and Taganrog	-	47,500		
			65,833	
				204,167
1 vessel from Bristol	-	-	10,000	
Deduct ½ of the cargo landed at Smyrna	-	-	5,000	
				5,000

	£	£
32,360 tons of coals @ 10*s.* ℔ ton	-	16,180
Deduct 3,300 tons taken to Trebizond and Sinope - -	1,650	
Deduct 1,460 tons taken to Galacz	730	
		2,380
		13,800
3,550 tons of iron @ 7*l.* ℔ ton	- -	24,850
Total	-	£1,357,067

35 vessels arrived from foreign ports, some with cargoes, others with parts of cargoes, and some in ballast; the value of the merchandise brought by them is not noticed, not being the produce of Great Britain or the colonies, and only affording employment to British shipping.

19 vessels were loaded in this port during the year for Great Britain; the articles of Turkish produce known to have been exported in them were as follows: — (It is possible that more may have been exported than what has been declared, but it is not believed to have been of any great amount.)

Silk	- - -	bales and cases	2,877
Opium	- - -	cases	65
Brass	- - -	—	3
Tobacco	- - -	—	10
Pipe bowls	- - -	—	4
Angola goats' wool	- -	bales	5,469
Sheep's wool	- - -	—	614
Mohair yarn	- - -	—	173
Refuse silk	- - -	—	12
Hare skins	- - -	—	51
Ox hides	- - -	—	10
Yellow berries	- - -	sacks	568
Galls	- - -	—	554
Linseed	- - -	—	90
Madder roots	- - -	—	18
Boxwood (about)	- - -	tons	750
Valonea	- - -	casks	17
Mastic	- - -	—	12
Salep	- - -	—	66
Copper	- - -	pieces	19
Wheat	- - -	kilos	48,235

The following goods were also taken to Smyrna by British vessels: —

Boxwood (about)	-	tons	200
Wool	- - -	bales	141
Ditto	- - -	kintals	200
Sheep skins	- -	bales	75
Lamb ditto	- -	—	37
Pipe sticks	- -	case	1
Hazel nuts (from Trebizond)		kintals	1,709

1 vessel loaded valonea at Pandermus, and another bones at Rodosto, both for England.

5 vessels loaded at Galacz and Ibraila the following articles for England: —

Wheat (Galacz measure)	-	kilos	734
Linseed	- - -	sacks	346
Yellow berries	- -	—	104
Tallow	- - -	hhds. and casks	1,335
Salt beef	- - -	casks	52
Wool	- - -	bales	156
Silk	- - -	—	7

5 vessels loaded full cargoes of bones at Galacz, and 2 at Sulina, for England.

Steam Navigation. — Constantinople is now visited by steamers from Trieste, Odessa, the Danube, Smyrna, and other places; and its commerce, as well as that of the empire, has, in consequence, been materially promoted. These steamers principally belong to the *Lloyd-Austriaco* at Trieste, and the Danube Steam Company; on which they are said to reflect the greatest credit.

Commercial Policy of the Turks. — It is singular that as respects commerce, the policy of the Turkish government, whether originating in design or carelessness, is entitled to the highest praise. "No restrictions," says Mr. Thornton, "are laid on commerce, except in the instance of a general prohibition of exporting the articles necessary for the support of human life to foreign countries, especially from the capital, where alone it is rigorously enforced; and this impolitic restraint will no doubt be removed when the Turkish government shall become sensible, that what is intended as the means of securing abundance, is, in fact, the sole cause of that scarcity which is sometimes experienced. With this one exception, commerce is perfectly free and unfettered. Every article of foreign or domestic growth or manufacture is conveyed into every port, and over every province, without any interference on the part of the magistrates, after payment of the duties. On this subject I speak from actual experience, and may appeal

to every foreign or native merchant in Turkey for its general truth." — (*Present State of Turkey*, vol. i. p. 82.)

The duties, too, are extremely moderate, being only *three* per cent. on imports, and as much on exports; so that, in almost all that relates to her commercial regulations, Turkey is entitled to read a lesson to the most civilised European powers; and this she has done in a very able manner, in an official paper published in the *Moniteur Ottoman*, in September, 1832. We extract a few paragraphs from this interesting document.

"It is recognised throughout Europe that it would be useful to the great majority to substitute, for the system of prohibitions, that of liberty, which theoretical men advocate; the difficulty is, to find means to separate the future from the past without a violent rupture. Hence the difficulties of government in satisfying all the exigencies of agriculture, industry, and commerce, driven in a circle where every measure in favour of one acts immediately in an inverse sense on the other. The endeavour is vain to establish, between so many crossing interests, a factitious equilibrium which absolute liberty of exchange alone can give.

"Thus, one of the most important questions which occupies the meditation of statesmen in Europe, is, to discover how the palings which pen commerce up in narrow spaces may be thrown down without shocks that might endanger public order.

"Good sense, tolerance, and hospitality have long ago done for the Ottoman empire, what the other states of Europe are endeavouring to effect by more or less happy political combinations. Since the throne of the sultans has been elevated at Constantinople, commercial prohibitions have been unknown; they opened all the ports of their empire to the commerce, to the manufactures, to the territorial produce of the Occident, or, to say better, of the whole world. Liberty of commerce has reigned here without limits, as large, as extended as it was possible to be.

"Never has the divan dreamed, under any pretext of national interest, or even of reciprocity, of restricting that faculty which has been exercised, and is to this day, in the most unlimited sense, by all the nations who wish to furnish a portion of the consumption of this vast empire, and to share in the produce of its territory.

"Here every object of exchange is admitted, and circulates without meeting any obstacle other than the payment of an infinitely small portion of the value to the Custom-house. The chimera of a balance of trade never entered into heads sensible enough not to dream of calculating whether there was most profit in buying or selling. Thus the markets of Turkey, supplied from all countries, refusing no objects which mercantile spirit puts in circulation, and imposing no charge on the vessels that transport them, are seldom or never the scenes of those disordered movements occasioned by the sudden deficiency of such or such merchandise, which, exorbitantly raising prices, are the scourges of the lower orders, by unsettling their habits, and by inflicting privations. From the system of restrictions and prohibitions arise those devouring tides and ebbs which sweep away in a day the labour of years, and convert commerce into a career of alarms and perpetual dangers. In Turkey, where this system does not exist, these disastrous effects are unknown.

"The extreme moderation of the duties is the complement of this régime of commercial liberty: and in no portion of the globe are the officers charged with the collection, of more confiding facility for the valuations, and of so decidedly conciliatory a spirit in every transaction regarding commerce.

"Away with the supposition that these facilities granted to strangers are concessions extorted from weakness! The dates of the contracts termed capitulations, which establish the rights actually enjoyed by foreign merchants, recall periods at which the Mussulman power was altogether predominant in Europe. The first capitulation which France obtained was in 1535 from Soliman the Canonist (the Magnificent). The dispositions of these contracts have become antiquated, the fundamental principles remain. Thus, 300 years ago, the sultans, by an act of munificence and of reason, anticipated the most ardent desires of civilised Europe, and proclaimed unlimited freedom of commerce."

Did the policy of Turkey in other respects harmonise with this, she would be one of the most civilised and powerful of nations, instead of being one of the most abject and degraded. Unfortunately, however, this is very far from being the case. Tyranny, corruption, and insecurity universally prevail. "The cultivator of the soil," says one of her eulogists, "is ever a helpless prey to injustice and oppression. The government agents have to suffer in their turn from the cruelty and rapacity of which they themselves have been guilty; and the manufacturer has to bear his full share of the common insecurity; he is fixed to the spot, and cannot escape the grasp of the local governor. The raw material monopolised by a bey or ayan, may be forced upon him at a higher price than he could purchase it himself, and perhaps of inferior quality; fines may be imposed upon him, he may be taken for forced labour, or troops may be quartered on his workshop." — (*Urquhart on Turkey and its Resources*, p. 139.)

This miserable system has overspread some of the fairest provinces of Europe and Asia with barbarism — turned their cities into villages, and their palaces into cottages; but the degradation in which they are involved would have been still more complete, but for the freedom of commerce they have always enjoyed. This has tended to keep alive the seeds of industry, and to counteract the destructive influence of oppression and insecurity. Had their intercourse with foreigners been either prohibited, or placed under oppressive restrictions, the barbarism of Turkey would have been completed, and it is difficult to suppose that there could have been either wealth or industry in the empire.

Trade of Turkey with England. — The trade between this country and Turkey is of much greater value and importance than is generally supposed. Cotton stuffs and twist are the great articles of export from Great Britain to Turkey; and notwithstanding the convulsed and distracted state of the latter, she has continued to take off a rapidly increasing amount of these staple articles. In 1825, for example, we exported direct for Turkey, (including what is now the kingdom of Greece), 13,674,000 yards of cotton cloth, and 446,462 lbs. of cotton twist; in 1831, we exported to Turkey (exclusive of the Morea),

24,565,000 yards of cloth, and 1,735,760 lbs. of twist. And in 1840, we exported to Turkey, exclusive of the Morea and of Syria and Palestine, no fewer than 45,000,000 yards cotton cloth, and 3,272,805 lbs. twist and yarn, being an increase in the course of 15 years of nearly 400 per cent. in the exports of stuffs, and of more than 600 per cent. in those of twist and yarn. In consequence, most of the Turkish establishments for the manufacture of cottons, except a few which use English yarn, have been given up. But the great consumption of Turkey consists of home-made fabrics, and hitherto these have been but little interfered with. Most part of the stuffs we send out are what are called plain goods; and if our coarser fabrics should once begin to supersede those made by the Turkish peasantry, it is not easy to say to what degree the demand for them might be extended.

Of the European states, Austria and Switzerland have been our most formidable rivals in the supply of Turkey with cottons. The stuffs were, in several respects, well fitted for the Eastern markets; but owing to the difficulty they lay under of getting returns, and the continued and rapid reduction in the price of English cottons, we seem to have gained a decided advantage over them, and are now nearly in the exclusive possession of the market. Cheapness is every where the grand desideratum. Though our muslins and chintzes be inferior in fineness to those of the East, and our red dye (a colour in great esteem in Turkey, Persia, &c.) be inferior in brilliancy, these defects are more than balanced by the greater cheapness of our goods; and from Smyrna to Canton, from Madras to Samareand, we are every where supplanting the native fabrics; and laying the foundations of a commerce that will be eminently beneficial to all parties.

Our commerce with Turkey would be considerably facilitated by the farther reduction of the duties on figs, currants, and oil. Nothing, however, would contribute so much to its extension, as the establishment of order and tranquillity throughout the country. But this, we fear, is beyond the ability of the Ottoman government. The abuses which have reduced the empire to its present state of degradation seem to be inherent in the structure of Turkish society, and to be in harmony with the habits and prejudices of the people. If such be the case, reform must come from without, and not from within. But of whatever other advantages a revolution might be productive, it is difficult to believe that it would bring along with it a more liberal system of commercial policy than that which at present exists.

Account of the Quantities of the principal Articles of Foreign and Colonial Produce imported into the United Kingdom from Turkey, including Continental Greece, but excluding Syria and Palestine, in 1840 and 1841; and of the Quantities and Values of the principal Articles of British and Irish Produce exported to the same in 1839 and 1840.

CONSUL, in commerce, an officer appointed by competent authority to reside in foreign countries, in the view of facilitating and extending the commerce carried on between the subjects of the country which appoints him, and those of the country or place in which he is to reside.

Origin and Appointment of Consuls. — The office of consul appears to have originated in Italy, about the middle of the twelfth century. Soon after this, the French and other Christian nations trading to the Levant began to stipulate for liberty to appoint consuls to reside in the ports frequented by their ships, that they might watch over the interests of their subjects, and judge and determine such differences with respect to commercial affairs as arose amongst them. The practice was gradually extended to other countries; and in the sixteenth century was generally established all over Europe. — (*Martens, Précis du Droit des Gens*, § 147.)

British consuls were formerly appointed by the Crown, upon the recommendation of great trading companies, or of the merchants engaged in the trade with a particular country or place; but they are now directly appointed by government, without requiring any such recommendation, though it, of course, is always attended to when made.

The right of sending consuls to reside in foreign countries depends either upon a

tacit or express convention. Hence their powers differ very widely in different states. In some they exercise a very extensive jurisdiction over the subjects of the state which appoints them; but the extent of this jurisdiction is not discretionary, and must, in all cases, be regulated either by an express convention between the state appointing and the state receiving the consul, or by custom. Consuls established in England have no judicial power; and the British government has rarely stipulated with other powers for much judicial authority for its consuls. Turkey, however, is an exception to this remark. English consuls enjoy in that country several peculiar privileges conferred by ancient treaties, and confirmed by that signed at the Dardanelles in 1809. It is there stipulated and agreed upon —

"That if there happen any suit, or other difference or dispute, among the English themselves, *the decision thereof shall be left to their own ambassador or consul*, according to their custom, without the judge or other governors, our slaves, intermeddling therein.

"That if an Englishman, or other subject of that nation, shall be involved in any lawsuit, or other affair connected with law, (with a Turk,) the judge shall not hear nor decide thereon, until the ambassador, consul, or interpreter shall be present; and all suits exceeding the value of 4,000 aspers shall be heard at the Sublime Porte, and nowhere else.

"That the consuls appointed by the English ambassadors in our sacred dominions, for the protection of their merchants, shall never, under any pretence, be imprisoned, nor their houses sealed up, nor themselves sent away; but all suits or differences in which they may be involved, shall be represented to our Sublime Porte, where their ambassador will answer for them.

"That in case any Englishman, or other person subject to that nation, or navigating under its flag, should happen to die in our sacred dominions, our fiscal and other officers shall not, upon pretence of its not being known to whom the property belongs, interpose any opposition or violence, by taking or seizing the effects that may be found at his death, but they shall be delivered up to such Englishman, whoever he may be, to whom the deceased may have left them by his will; and should he have died intestate, then the property shall be delivered up to the English consul, or his representative who may be then present; and in case there be no consul, or consular representative, they shall be registered by the judge, in order to his delivering up the whole thereof, whenever any ship shall be sent by the ambassador to receive the same."

Conformably to these capitulations, and the by-laws of the Levant Company, Nos. 39, 40, and 41., the consuls were authorised to administer justice in all cases of contention amongst British subjects within the Turkish dominions; and they were further authorised to send to England, in safe custody, any British subject resident in Turkey, who should decline their jurisdiction, or appeal from them to the courts of the Grand Signior, or of any other potentate. And the act 6 Geo. 4. c. 33. § 4., for the abolition of the Levant Company, expressly provides for the continuance to the consuls appointed by his Majesty, of the same rights and duties of jurisdiction over British subjects in Turkey, that were enjoyed by the consuls appointed by the Company.

At present, therefore, consuls in Turkey enjoy extensive judicial powers; but owing to the freedom of Turkish commerce, and the simplicity of the regulations under which it is carried on, their other functions, with the exception of furnishing statistical details, Mr. Urquhart, whose opinion as to all that respects Turkey is deservedly of considerable weight, seems to think that the judicial powers enjoyed by the European consuls in that country have been productive of much mischief. Still, however, we doubt whether they could be entirely dispensed with in a country so peculiarly situated. But there can be no doubt that it is highly necessary that the greatest care should be taken in the selection of the individuals to whom such powers are intrusted.

Other states have occasionally given to consuls similar powers to those conceded to them in Turkey. Thus, in the treaty between Sweden and the United States of America, ratified on the 24th of July, 1818, it is stipulated that the consuls appointed by either government to reside within the dominions of the other, or their substitutes, "shall, as such, have the right of acting as judges or arbiters in all cases of differences which may arise between the captains and crews of the vessels of the nation whose affairs are intrusted to their care. The respective governments shall have no right to interfere in these sort of affairs, except in the case of the conduct of the crews disturbing public order and tranquillity in the country in which the vessel may happen to be, or in which the consul of the place may be obliged to call for the intervention and support of the executive power, in order to cause his decision to be respected; it being, however, well understood, that this sort of judgment or arbitration cannot deprive the contending parties of their rights of appealing on their return to the judicial authorities of their country."

Duties of Consuls. — The duties of a consul, even in the confined sense in which they are commonly understood, are important and multifarious. It is his business to be always on the spot, to watch over the commercial interests of the subjects of the state whose servant he is; to be ready to assist them with advice on all doubtful occasions; to see that the conditions in commercial treaties are properly observed; that those he is appointed to protect are subjected to no unnecessary or unjustifiable demands in conducting their business; to represent their grievances to the authorities at the place where they reside, or to the ambassador of the sovereign appointing him at the court on which the consulship depends, or to the government at home; in a word, to exert himself to render the condition of the subjects of the country employing him, within the

limits of his consulship, as comfortable, and their transactions as advantageous and secure, as possible.

The following more detailed exposition of the *general* duties of a British consul, is taken from Mr. Chitty's work on *Commercial Law* : —

" A British consul, in order to be properly qualified for his employment, should take care to make himself master of the language used by the court and the magistracy of the country where he resides, so as to converse with ease upon subjects relating to his duties. If the common people of the port use another, he must acquire that also, that he may be able to settle little differences without troubling the magistracy of the place for the interposition of their authority ; such as accidents happening in the harbour, by the ships of his nation running foul of and doing damage to each other.

" He is to make himself acquainted, if he be not already, with the law of nations and treaties, with the tariff or specification of duties on articles imported or exported, and with all the municipal ordinances and laws.

" He must take especial notice of all prohibitions to prevent the export or import of any articles, as well on the part of the state wherein he resides, as of the government employing him ; so that he may admonish all British subjects against carrying on an illicit commerce, to the detriment of the revenues, and in violation of the laws, of either. And it is his duty to attend diligently to this part of his office, in order to prevent smuggling, and consequent hazard of confiscation or detention of ships, and imprisonment of the masters and mariners. — (*Beawes, Lex Merc.* vol. ii. p. 42.)

" It is also his duty to protect from insult or imposition British subjects of every description within his jurisdiction. If redress for injury suffered is not obtained, he is to carry his complaint by memorial to the British minister residing at the court on which the consulship depends. If there be none, he is to address himself directly to the court ; and if, in an important case, his complaint be not answered, he is to transmit the memorial to his Majesty's secretary of state. — (*Beawes, Warden, &c.*)

" When insult or outrage is offered by a British subject to a native of the place, and the magistrate thereof complains to the consul, he should summon, and in case of disobedience may by armed force bring before him the offender, and order him to give immediate satisfaction ; and if he refuse, he resigns him to the civil jurisdiction of the magistrate, or to the military law of the garrison ; nevertheless *always acting as counsellor or advocate at his trial*, when there is question of life or property.

" But if a British subject be accused of an offence alleged to have been committed at sea, within the dominion or jurisdiction of his sovereign, it is then the duty of the consul to claim cognizance of the cause for his sovereign, and to require the release of the parties, if detained in prison by the magistracy of the place on any such accusation brought before them, and that all judicial proceedings against them do instantly cease ; and he may demand the aid of the power of the country, civil and military, to enable him to secure and put the accused parties on board such British ship as he shall think fit, that they may be conveyed to Great Britain, to be tried by their proper judges. If, contrary to this requisition, the magistrates of the country persist in proceeding to try the offence, the consul should then draw up and transmit a memorial to the British minister at the court of that country ; and if that court give an evasive answer, the consul should, if it be a sea offence, apply to the Board of Admiralty at London, stating the case ; and upon their representation, the secretary for the proper department will lay the matter before the king, who will cause the ambassador of the foreign state, resident in England, to write to his court abroad, desiring that orders may immediately be given by that government, that all judicial proceedings against the prisoner be stayed, and that he be released. — (See *Case of Horseman and his Crew, Beawes*, vol. ii. p. 422.)

" It is the duty also of a British consul to relieve all distressed British mariners, to allow them 6*d.* daily for their support, to send them home in the first British vessels that sail for England, and to keep a regular account of his disbursements, which he is to transmit yearly, or oftener if required, to the Navy Office, attested by two British merchants of the place : this is provided for by positive enactment. — (1 *Geo.* 2. s. 2. c. 14. § 12.) He is also to give free passes to all poor British subjects wishing to return home, directed to the captains of the king's packet boats, or ships of war, requiring them to take them on board. — (See SEAMEN.)

" The consul is not to permit a British merchant ship to leave the port where he resides without his passport, which he is not to grant until the master and crew thereof have satisfied all just demands upon them ; and for this purpose he ought to see the governor's pass of a garrisoned town, or the burgomaster's ; unless the merchant or factor to whom the ship was consigned will make himself responsible. — (*Beawes, Lex Merc.* vol. ii. p. 423.)

" It is also his duty to claim and recover all wrecks, cables and anchors, belonging to British ships, found at sea by fishermen or other persons, to pay the usual salvage, and to communicate a report thereof to the Navy Board.

"The consuls and vice-consuls of his Majesty are, by express enactment (46 Geo. 3 c. 98. § 9.), empowered to administer oaths in all cases respecting quarantine, in like manner as if they were magistrates of the several towns or places where they respectively reside. It is also laid down, that a consul is to attend, if requested, all arbitrations where property is concerned between masters of British ships and the freighters, being inhabitants of the place where he resides." — (*Chitty on Commercial Law*, vol. i. pp. 58—61., and the numerous authorities there quoted.)

Any individual, whether he be a subject of the state by which he is appointed, or of another, may be selected to fill the office of consul, provided he be approved and admitted by the government in whose territory he is to reside. In most instances, however, but not always, consuls are the subjects of the state appointing them.

Much, however, of the peculiar duties of a consul must always depend on the nature of the intercourse with the country to which he is sent, and of the instructions given him. British consuls are regularly supplied with copies of all acts relating to trade and navigation, quarantine, slave trade suppression, emigration, &c., and with the treaties between this and other countries, and must, of course, shape their conduct accordingly. They are strictly forbidden from corresponding with private parties on public matters. We subjoin an extract from the *General Instructions for British Consuls.*

"He will bear in mind that it is his principal duty to protect and promote the lawful trade and trading interests of Great Britain, by every fair and proper means, taking care to conform to the laws and regulations in question; and whilst he is supporting the lawful trade of Great Britain, he will take special notice of all prohibitions with respect to the export or import of specified articles, as well on the part of the state in which he resides, as of the government of Great Britain, so that he may caution all British subjects against carrying on an illicit commerce to the detriment of the revenue, and in violation of the laws and regulations, of either country; and he will not fail to give to this department immediate notice of any attempt to contravene those laws and regulations.

"The consul will give his best advice and assistance, when called upon, to his Majesty's trading subjects, quieting their differences, promoting peace, harmony, and good-will amongst them, and conciliating as much as possible the subjects of the two countries, upon all points of difference which may fall under his cognizance. In the event of any attempt being made to injure British subjects, either in their persons or property, he will uphold their rightful interests, and the privileges secured to them by treaty, by due representation in the proper official quarter. He will, at the same time, be careful to conduct himself with mildness and moderation in all his transactions with the public authorities, and he will not upon any account urge claims, on behalf of his Majesty's subjects, to which they are not justly and fairly entitled. If redress cannot be obtained from the local administration, or if the matter of complaint be not within their jurisdiction, the consul will apply to his Majesty's consul-general, or to his Majesty's minister, if there be no consul-general in the country wherein he resides, in order that he may make a representation to the higher authorities, or take such other steps in the case as he may think proper; and the consul will pay strict attention to the instructions which he may receive from the minister or consul-general."

Emoluments of Consuls. Prohibition of Trading, &c. — The emoluments of our consuls were, until these few years, principally derived from certain fees, depending on the tonnage, length of the voyages, &c. of the British ships entering and clearing out of the limits of their consulships. But this mode of remunerating them was materially changed by the act of 6 Geo. 4. c. 87. The fees payable under this act — (see *post*) — are but inconsiderable: but the deficiency has been, partly at least, compensated by salaries allowed by government.

At present British consuls are, in some instances, permitted to carry on trade, while in others they are interdicted from having any thing to do with it. The principle on which the distinction is made does not seem very obvious. We observe, for example, that the consul at Petersburg, who must have a great deal to do, is allowed to trade; while the consul at Odessa, whose duties must be much lighter, is denied this privilege. There is the same distinction between the consuls at Venice and Trieste; the latter, whose duties must be the heavier of the two, being allowed to act as a merchant, while the other is not. If this distinction must be kept up, the preferable plan would seem to be to interdict all consuls resident at the great ports, and those resident at other ports, principally in the character of political agents, from trading; and to permit it to others. The public duties of the former are either quite sufficient wholly to engross their attention, or they are of such a kind as would make it very inexpedient for those employed in them to be occupied in mercantile pursuits; in the case of the smaller class of ports, but little frequented by British ships, and where the consuls have no peculiar political functions to discharge, there is a less urgent necessity for prohibiting them from carrying on business on their own account. At the same time, however, we are clearly of opinion that it would in *all* cases be better not to allow consuls to engage, either directly or indirectly, in any sort of industrious undertaking. The main end and purpose of their institution is the facilitating of commerce with the nation in which they reside; and in furtherance of such object they ought, on all occasions, to communicate the fullest and earliest information in their power touching commercial matters, not only to the government that appoints them, but to such of its subjects as may apply for their advice and assistance. But, however advantageous publicity may be to others, it may in various ways be extremely hostile to the interests of the consul considered in his capacity of a merchant; and, when his own advantage and his public duty are set in opposition, it requires little sagacity to discover

which will have the ascendancy. Hence the fair presumption is, that a trading consul will rather endeavour to profit by the peculiar information his situation may enable him to obtain, than to communicate it to others. His interests as a merchant must frequently, also, even when such is not really the case, appear to be in opposition to those of the parties for whose behoof he is said to be appointed; and under such circumstances, his proceedings, however fair, will always be liable to the suspicion of partiality. It is material, also, to observe that mercantile consuls labour under peculiar disadvantages in the obtaining of information. If a consul, not engaged in business, make a proper application to a public functionary, or merchant, for information as to any subject with which they may be acquainted, he will, in most instances, learn all that they know. But it is obvious, on general principles, and we have been assured of the fact by some of the most intelligent officers of the class, that if a trading consul make the same application, the chances are 10 to 1 he will either learn nothing, or nothing that is not false or misleading. The inquiries of the former excite no jealousy, those of the latter invariably do. The former is known to be actuated only by a feeling of liberal curiosity, or by a wish properly to discharge his public duties; but the latter, being engaged in business, gets credit only for selfish and interested motives, and is believed to be seeking the information merely that he may turn it to his own account. A mercantile consul is, therefore, uniformly the object of the suspicions of all parties, both of his countrymen, and of the foreigners amongst whom he resides. Instead of being, as he ought to be, an independent public functionary, he necessarily gets entangled in the cabals and intrigues of those whose differences it is his province to conciliate. He is tempted, also, to engage in smuggling adventures, contrary to his duty, and highly injurious to the character of his nation. And though he should be proof against temptations of this sort, he is, like all other individuals, subject to misfortune and bankruptcy; and may, in this way, bring discredit and embarrassment on the government that appoints him. These reasons seem to be far more than sufficient to vindicate the policy of interdicting consuls from trading. But were it otherwise, it is enough to decide the question to state, that if they be made properly to perform the functions of their office, it will occupy every moment of their time. To the argument in favour of the existing system derived from economical considerations, we do not attach the smallest weight. To attempt to save a few thousand pounds by allowing an important class of public functionaries to engage in avocations inconsistent with their duty, and destructive of their utility, would be something the very reverse of economy.

Cost of the Establishment. Improvements made in it. — We had occasion, in the former edition of this work, to complain of the cost and inadequacy of our consular establishment. But its expense has since been very much, and, in some instances perhaps, too much, reduced; at the same time that measures have been taken for increasing the duties of the consuls, by making them furnish details as to the trade, manufactures, duties, prices, &c. of the districts in which their consulships are situated. Hitherto this important department of what ought to be the peculiar duty of a consul has been most strangely neglected; but if it be properly attended to, it will occupy a large portion of the consul's time, and will be a field for the display of superior talents. Some of the answers made by the consuls to the *Circular Queries* prepared for the former edition of this work were drawn up with great care and intelligence, and reflected much credit on their authors. There were a good many certainly of a very inferior description; but this is not to be wondered at — it being hardly possible for those who have not given a good deal of their time to such subjects, to make a proper reply to queries relating to them. And if the system is to be perfected to the degree of which it is susceptible, the salaries allowed to the consuls ought to be such as to afford a sufficient remuneration for the services of gentlemen of character, familiar with the principles of public law, commerce, and statistics; and such only ought to be nominated to consular situations. We subjoin that part of the *General Instructions for the Consuls* that has reference to statistical inquiries.

"The consul will forward to the secretary of state, in duplicate, so soon as the information he can collect will enable him so to do, but at any rate within a period of 6 months from the date of his arrival at his residence, a general Report on the trade of the place and district, specifying the commodities, as well of the export as import trade, and the countries which supply the latter, together with the increase or decline in late years, and the probable increase or decline to be expected, and the causes in both cases. He will state the general regulations with respect to trade at the place where he is resident, and their effects. He will give the average market prices within the year of the several articles of export and import; he will particularise what articles, if any, are absolutely prohibited to be imported into the country wherein he resides; what articles are prohibited to be imported from any other places than from the place of their growth or production; whether there be any privileges of importation, and what those privileges are, in favour of ships that are of the built of, or belonging to, the country wherein he resides; whether there be any difference in the duty on goods when imported into that country in a foreign ship, and if so, whether it be general, or applicable only to particular articles; what are the rates of duty payable on goods imported into the said country; whether there be any tonnage duty or other port dues, and what, payable on shipping entering at, or clearing from, the ports

of that country; whether there be any (and, if so, what) ports in that country wherein goods may be warehoused on importation, and afterwards exported with or without payment of any duties, and under what regulations."

He is also to transmit an annual statement of the trade with the principal ports of his consulships; and quarterly returns of the prices of corn, &c. Mr. Macgregor's Tariffs have been mostly compiled from these returns.

The following are the provisions of the act 6 Geo. 4. c. 87. with respect to the salaries and charges of consuls: —

Salaries to Consuls. — "Whereas the provision which hath hitherto been made for the maintenance and support of the consuls general and consuls appointed by his Majesty to reside within the dominions of sovereigns and foreign states in amity with his Majesty, is inadequate to the maintenance and support of such consuls general and consuls, and it is expedient to make further and due provisions for that purpose;" it is therefore enacted, that it shall be lawful for his Majesty, by any orders to be issued by the advice of his privy council, to grant to all or any of the consuls general or consuls appointed by his Majesty to reside within any of the dominions of any sovereign or foreign state or power in amity with his Majesty, such reasonable salaries as to his Majesty shall seem meet, and by such advice from time to time to alter, increase, or diminish any such salaries or salary as occasion may require. — (6 *Geo.* 4. c. 87. § 1.)

Terms on which Salaries shall be granted. Leave of Absence. — Such salaries shall be issued and paid to such consuls general and consuls without fee or deduction; provided that all such salaries be granted during his Majesty's pleasure, and not otherwise, and be held and enjoyed by such consuls general and consuls so long only as they shall be actually resident at the places at which they may be so appointed to reside, and discharging the duties of such their offices: provided nevertheless, that in case his Majesty shall, by any order to be for that purpose issued through one of his principal secretaries of state, grant to any such consul general or consul leave of absence from the place to which he may be so appointed, such consul general or consul shall be entitled to receive the whole, or such part as to his Majesty shall seem meet, of the salary accruing during such period of absence. — § 2.

Salaries in lieu of Fees formerly paid. Consuls not to take other than the Fees hereinafter mentioned. — The salaries so to be granted shall be taken by the consuls general and consuls as a compensation for all salaries heretofore granted, and all fees of office and gratuities heretofore taken by them from the masters or commanders of British vessels, or from any other person, for any duties or services by such consuls general or consuls done or performed for any such persons; and no such consuls general or consuls shall, from the 1st of January, 1826, be entitled, on account of any thing by him done in the execution of such his office, or for any service by him rendered to any masters or commanders of British vessels, or to any other person in the execution of such his office, to ask or take any fees, recompence, gratuity, compensation, or reward, or any sum of money, save as hereinafter is excepted. — § 3.

Certain Fees still allowed to be taken. — It shall be lawful for all consuls general and consuls appointed by his Majesty, and resident within the dominions of any sovereign, or any foreign state or power in amity with his Majesty, to accept the several fees particularly mentioned in the tables to this present act annexed, marked with the letters A and B, for the several things and official acts and deeds particularly mentioned in the said schedules; and it shall be lawful for his Majesty, by any orders to be by him made, by the advice of his privy council, from time to time, as occasion may require, to diminish, or wholly to abolish, all or any of the fees aforesaid, and to establish and authorise the payment of any greater or smaller or new or additional fees for the several things mentioned in the said schedules, or for any other thing to be by any such consul general or consul done in the execution of such his office. — § 4.

Penalty on Consuls demanding more Fees than specified in the Schedule. — In case any consul general or consul appointed by his Majesty as aforesaid shall, by himself or deputy, or by any person authorised thereto in his behalf, ask or accept, for any thing by him done in the execution of such his office, or for any service or duty by him rendered or performed in such his office, for any person whomsoever, any other or greater fee or remuneration than is specified in the schedule, or than shall be sanctioned and specified in or by any such order in council, the person so offending shall forfeit and become liable to pay to his Majesty any sum of sterling British money, not exceeding the amount of the salary of such person for 1 year, nor less than the 12th part of such annual salary, at the discretion of the court in which such penalty may be recovered; and shall moreover upon a second conviction for any such offence forfeit such his office, and for ever after become incapable of serving his Majesty in the same or the like capacity. — § 5.

Table of Fees to be exhibited at Custom-houses. — A printed copy of the tables of fees allowed by this act, or which may be sanctioned or allowed by any order to be made in pursuance of this act by his Majesty in council, shall be exhibited in a conspicuous manner, for the inspection of all persons, in the Custom-house in the port of London, and in all other Custom-houses in the several ports and harbours of the U. Kingdom of Great Britain and Ireland; and printed copies thereof shall, by the collector or other chief officer of customs in all such ports and harbours, be delivered gratuitously, and without fee or reward, to every master of any vessel clearing out of any such port or harbour, and demanding a copy thereof. — § 6.

Table of Fees to be exhibited at Consuls' Offices. — A copy of the schedule or table of fees to this present act annexed, or which may be established and authorised by any such order in council, shall be hung up and exhibited in a conspicuous place in the public offices of all consuls general or consuls appointed by his Majesty, in the foreign places to which they may be so appointed, for the inspection of all persons interested therein; and any consul general or consul omitting or neglecting to exhibit any such copy of the schedules in such his public office, or refusing to permit the same to be inspected by any person interested therein, shall for every such offence forfeit and pay a sum of British sterling money not exceeding one half the amount of the salary of such person for 1 year, nor less than the 12th part of such annual salary, at the discretion of the court in which such penalty may be recovered. — § 7.

Superannuation. — "And whereas it is expedient that his Majesty should be enabled to grant to the said consuls general and consuls, appointed as aforesaid, allowances in the nature of superannuation or reward for meritorious public services;" it is further enacted, that all the regulations contained in 50 Geo. 3. c. 117., 3 Geo. 4. c. 113., 5 Geo. 4 c. 104., respecting superannuation allowances, are hereby extended to the said consuls general and consuls, so far as such regulations can be applied to the cases of such several persons respectively, as fully to all intents and purposes as if the same were repeated and re-enacted in this present act. — § 8.

Allowances during War. — If it shall at any time happen that by reason of any war which may hereafter arise between his Majesty and any sovereign, or foreign state or power, within the dominions of whom any such consul general or consul shall be appointed to reside, he shall be prevented from residing, and shall in fact cease to reside, at the place to which he may be so appointed, it shall be lawful for his Majesty, by any order to be issued by the advice of his privy council, to grant to any such consul general or consul, who may have served his Majesty in that capacity for any period not less than 3 years, nor more than 10 years next preceding the commencement of any such war, a special allowance not exceeding the proportion of their respective salaries to which such consuls general and consuls would be entitled

under the provisions of the said act of 3 Geo. 4., in case the period of their respective service had exceeded 10 years and had not exceeded 15 years: provided that in case any such consul general or consul shall have served in such his office for the space of 10 years and more, it shall be lawful for his Majesty, by any such order in council as aforesaid, to grant to him such a proportion of his salary, which, by the said act is authorised to be granted, as a superannuation allowance, according to the several periods of service exceeding 10 years, in the said act. — § 9.

Commencement. — This act shall take effect from the 1st of January, 1826, except where any other commencement is particularly directed. — § 22.

Tables of Fees allowed to be taken by Consuls General and Consuls, by the preceding Act of 6 *Geo.* 4. c. 87.

Table A. — Certificate of due landing of goods exported from the United Kingdom - - - 2 dollars.
Signature of ship's manifest - - - - 2 do.
Certificate of origin, when required - - 2 do.
Bill of health, when required - - - 2 do.
Signature of muster-roll, when required - 2 do.
Attestation of a signature, when required - 1 do.
Administering an oath, when required - - ½ do.
Seal of office, and signature of any other document not specified herein, when required - - - 1 do.

Table B. — Bottomry or arbitration bond - - 2 do.
Noting a protest - - - - - - 1 do.
Order of survey - - - - - - 2 do.
Extending a protest or survey - - - - 1 do.

Registrations - - - - - - - - 1 dollar.
Visa of passport - - - - - - - ½ do.
Valuation of goods - - - - - - 1 per cent.
Attending sales, ½ per cent. where there has been a charge for valuing; otherwise, 1 per cent.
Attendance out of consular office at a shipwreck, 5 dollars per diem for his personal expenses, over and above his travelling expenses.
Ditto on opening a will - - - - - - 5 dollars.
Management of property of British subjects dying intestate - - - - - 2½ per cent.

The dollars mentioned in the preceding tables are in all cases to be paid by the delivery of dollars, each of which is to be of the value of 4*s.* 6*d.* sterling, and no more, according to the rate of exchange prevailing at the place where such payment is made.

CONTRABAND, in commerce, a commodity prohibited to be exported or imported, bought or sold.

CONTRABAND is also a term applied to designate that class of commodities which neutrals are not allowed to carry during war to a belligerent power.

It is a recognised general principle of the law of nations, that ships may sail to and trade with all kingdoms, countries, and states in peace with the princes or authorities whose flags they bear; and that they are not to be molested by the ships of any other power at war with the country with which they are trading, unless they engage in the conveyance of *contraband* goods. But great difficulty has arisen in deciding as to the goods comprised under this term. The reason of the limitation suggests, however, the species of articles to which it principally applies. It is indispensable that those who profess to act upon a principle of neutrality, should carefully abstain from doing any thing that may discover a bias in favour of either party. But a nation who should furnish one of the belligerents with supplies of warlike stores, or with supplies of any article, without which that belligerent might not be able to carry on the contest, would obviously forfeit her neutral character; and the other belligerent would be warranted in preventing such succours from being sent, and confiscating them as lawful prize. All the best writers on international law admit this principle; which, besides being enforced during every contest, has been sanctioned by repeated treaties. In order to obviate all disputes as to what commodities should be deemed contraband, they have sometimes been specified in treaties or conventions. — (See the references in *Lampredi del Commercio de' Popoli Neutrali*, § 9.) But this classification is not always respected during hostilities; and it is sufficiently evident that an article which might not be contraband at one time, or under certain circumstances, may become contraband at another time, or under different circumstances. It is admitted on all hands, even by M. Hubner, the great advocate for the freedom of neutral commerce — (*De la Saisie des Bâtimens Neutres*, tom. i. p. 193.) — that every thing that may be made *directly available* for hostile purposes is contraband, as arms, ammunition, horses, timber for ship-building, and all sorts of naval stores. The greatest difficulty has occurred in deciding as to provisions, which are sometimes held to be contraband, and sometimes not. Lord Stowell has shown that the *character of the port* to which the provisions are destined, is the principal circumstance to be attended to in deciding whether they are to be looked upon as contraband. A cargo of provisions intended for an enemy's port, in which it was known that a warlike armament was in preparation, would be liable to arrest and confiscation; while, if the same cargo were intended for a port where none but merchantmen were fitted out, the most that could be done would be to detain it, paying the neutral the same price for it he would have got from the enemy.

By the ancient law of Europe, a ship conveying any contraband article was liable to confiscation as well as the article. But in the modern practice of the courts of admiralty of this and other countries, a milder rule has been adopted, and the carriage of contraband articles is attended only with the loss of freight and expenses, unless when the ship belongs to the owner of the contraband cargo, or when the simple misconduct of conveying such a cargo has been connected with other malignant and aggravating circumstances. Of these a false destination and false papers are justly held to be the worst. — (*5 Rob. Adm. Rep.* 275.)

The right of visitation and search is a right inherent in all belligerents; for it would be absurd to allege that they had a right to prevent the conveyance of contraband goods to an enemy, and to deny them the use of the only means by which they can give effect to such right. — (*Vattel*, book iii. c. 7. § 114.) The object of the search is twofold: *first*, to ascertain whether the ship is neutral or an enemy, for the circumstance of its hoisting a neutral flag affords no security that it is really such; and, *secondly*, to ascertain

whether it has contraband articles, or enemies' property, on board. All neutral ships that would navigate securely during war must, consequently, be provided with passports from their government, and with all the papers or documents necessary to prove the property of the ship and cargo — (see SHIP'S PAPERS); and they must carefully avoid taking any contraband articles or belligerent property on board. And hence, as Lampredi has observed, a merchant ship which seeks to avoid a search by crowding sail, or by open force, may justly be captured and subjected to confiscation.— (§ 12.)

It has, indeed, been often contended that *free ships make free goods* (*que le pavillon couvre la marchandise*), and that a belligerent is not warranted in seizing the property of an enemy in a neutral ship, unless it be contraband. The discussion of this important question would lead us into details which do not properly come within the scope of this work. We may, however, shortly observe, that no such privilege could be conceded to neutrals, without taking from belligerents the right, inseparable from a state of war, of seizing an enemy's property if found in places where hostilities may be lawfully carried on, as on the high seas. In fact, were the principle in question admitted, the commerce of a belligerent power with its colonies, or other countries beyond sea, might be prosecuted in neutral ships, with as much security during war as in peace; so that neutrals would, in this way, be authorised to render a belligerent more important assistance than, perhaps, they could have done had they supplied him with troops and ammunition! But it is surely unnecessary to say, that to act in this way is a proceeding altogether at variance with the idea of neutrality. Neutrals are bound to conduct themselves in the *spirit of impartiality*; and must not afford such aid or assistance to one party, as may the better enable him to make head against the other. It is their duty "*non interponere se bello, non hoste imminente hostem eripere.*" And yet it is manifest that the lending of neutral bottoms to carry on a belligerent's trade is in direct contradiction to this rule. The ships or cruisers of a particular power may have swept those of its enemy from the sea, and reduced him to a state of great difficulty, by putting a stop to his commerce with foreigners, or with his own colonies; but of what consequence would this be, if neutrals might step in to rescue him from such difficulties, by carrying on that intercourse for him which he can no longer carry on for himself? It is natural enough that such a privilege should be coveted by neutrals: but, however advantageous to them, it is wholly subversive of the universally admitted rights of belligerent powers, as well as of the principles of neutrality; and cannot, therefore, be truly said to be bottomed on any sound principle.

In the war of 1756, the rule was laid down by Great Britain, that neutrals are not to be allowed to carry on a trade during war, that they were excluded from during peace; so that, supposing a nation at war with Great Britain had, while at peace, prohibited foreigners from engaging in her colonial or coasting trade, we should not have permitted neutrals to engage in it during war. This rule has been much complained of; but the principle on which it is founded seems a sound one, and it may in most cases be safely adopted. The claims of neutrals cannot surely be carried further than that they should be allowed to carry on their trade during war, as they had been *accustomed* to carry it on during peace, except with places under blockade; but it is quite a different thing when they claim to be allowed to employ themselves, during war, in a trade in which they had not previously any right to engage. To grant them this, would not be to preserve to them their former rights, but to give them new ones which may be fairly withheld. Supposing, however, that either of the belligerent powers has *force sufficient to prevent any intercourse between the other and its colonies, or any intercourse between different ports of the other*, she might, in the exercise of the legitimate rights of a belligerent, exclude neutrals from such trade, even though it had formerly been open to them; because otherwise she would be deprived of the advantage of her superior force; and the neutrals would, in fact, when employed in this way, be acting as the most efficient allies of her enemy.

For a full discussion of this important and difficult question, and of the various distinctions to which it gives rise, see the work of Hubner (*De la Saisie des Bâtimens Neutres*, 2 tomes, 12mo. 1757), in which the different arguments in favour of the principle that "the flag covers the cargo," are stated with great perspicuity and talent. The opposite principle has been advocated by Lampredi, in his very able treatise *Del Commercio de' Popoli Neutrali*, § 10.; by Lord Liverpool, in his *Discourse on the Conduct of Great Britain in respect to Neutrals*, written in 1757; and, above all, by Lord Stowell, in his justly celebrated decisions in the Admiralty Court. Martens inclines to Hubner's opinion. — (See *Précis du Droit des Gens*, liv. 8. c. 7.)

CONVOY, in navigation, the term applied to designate a ship or ships of war, appointed by government, or by the commander in chief on a particular station, to escort or protect the merchant ships proceeding to certain ports. Convoys are mostly appointed during war; but they are sometimes, also, appointed during peace, for the security of ships navigating seas infested with pirates.

Individuals have not always been left to themselves to judge as to the expediency of sailing with or without convoy. The governments of most maritime states have thought proper, when they were engaged in hostilities, to oblige their subjects to place themselves under an escort of this sort, that the enemy might not be enriched by their capture. Acts to this effect were passed in this country during the American war and the late French war. The last of these acts (43 Geo. 3. c. 57.) enacted, that it should not be lawful for any ship belonging to any of his Majesty's subjects (except as therein provided) to depart from any port or place whatever, unless under such convoy as should be appointed for that purpose. The master was required to use his utmost endeavours to continue with the convoy during the whole voyage, or such part thereof as it should be directed to accompany his ship; and not to separate therefrom without leave of the commander, under very heavy pecuniary penalties. And in case of any ship departing without convoy contrary to the act, or wilfully separating therefrom, all insurances on the ship, cargo, or freight, belonging to the master, or to any other person directing or privy to such departure or separation, were rendered null and void. The customs officers were directed not to allow any ship that ought to sail with convoy to clear out from any place in the U. Kingdom for foreign parts, without requiring from the master, bond with one surety, with condition that the ship should not depart without convoy, nor afterwards desert or wilfully separate from it. The regulations of this act did not extend to ships not requiring to be registered, nor to those licensed to sail without convoy, nor to those engaged in the coasting trade, nor to those belonging to the East India Company, &c.

It is very common, during periods of war, to make *sailing or departing with convoy* a condition in policies of insurance. This, like other warranties in a policy, must be *strictly* performed. And if a ship warranted to sail with convoy, sail without it, the policy becomes void, whether this be imputable to any negligence on the part of the insured, or the refusal of government to appoint a convoy.

There are five things essential to sailing with convoy: viz. *first*, it must be with a regular convoy under an officer appointed by government; *secondly*, it must be from the place of rendezvous appointed by government; *thirdly*, it must be a convoy for the voyage; *fourthly*, the master of the ship must have sailing instructions from the commanding officer of the convoy; and *fifthly*, the ship must depart and continue with the convoy till the end of the voyage, unless separated by necessity.

With respect to the third of these conditions we may observe, that a warranty to sail with convoy generally means a convoy *for the voyage*; and it is not necessary to add the words "for the voyage" to make it so. Neither will the adding of these words in some instances, make the omission of them, in any case, the ground of a different construction. A warranty to sail with convoy does not, however, uniformly mean a convoy that is to accompany the ship insured the entire way from the port of departure to her port of destination; but such convoy as government may think fit to appoint as a sufficient protection for ships going the voyage insured, whether it be for the whole or only a part of the voyage.

Sailing instructions, referred to in the fourth condition, are written or printed directions delivered by the commanding officer of the convoy to the several masters of the ships under his care, that they may understand and answer signals, and know the place of rendezvous appointed for the fleet in case of dispersion by storm, or by an enemy, &c. These sailing instructions are so very indispensable, that no vessel can have the full protection and benefit of convoy without them: hence, when, through the negligence of the master, they are not obtained, the ship is not said to have sailed with convoy; and a warranty in a policy of insurance to that effect is held not to be complied with. If, however, the master do all in his power to obtain sailing instructions, but is prevented from obtaining them by any insuperable obstacle, as the badness of the weather; or if they be refused by the commander of the convoy; the warranty in the policy is held to be complied with.

For further information as to convoy, see *Abbot on the Law of Shipping*, part iii. c. 3.; *Marshall on Insurance*, book i. c. 9. § 5., and the *Act* 43 *Geo.* 3. c. 57, &c.

COPAIVA. See BALSAM.

COPAL, improperly called gum copal, is a valuable and singular kind of resin, that naturally exudes from different large trees, and is imported partly from America, and partly from the East Indies. The best copal is hard and brittle, in rounded lumps of a moderate size, easily reducible to a fine powder, of a light lemon yellow colour, beautifully transparent, but often, like amber, containing parts of insects and other small extraneous bodies in its substance. Its specific gravity varies from 1·045 to 1·139. It has neither the solubility in water common to gums, nor the solubility in alcohol common to resins, at least in any considerable degree. It may be dissolved by digestion in drying linseed oil, and other volatile menstrua. This solution forms a beautiful transparent varnish, which, when, properly applied, and slowly dried, is very hard and very durable.

Copal varnish was first discovered in France, and was long known by the name of *vernis martin*. It is applied to snuff-boxes, tea-boards, and other utensils. It preserves and gives lustre to paintings; and contributes to restore the decayed colours of old pictures, by filling up cracks, and rendering the surface capable of reflecting light more uniformly. Copal is liable to be confounded with *gum animé*, when the latter is very clear and good. But it is of importance to distinguish between them, as the animé, though valuable as a varnish, is much less so than the finest copal; the varnish with the former being darker coloured, and not so hard. Besides the external appearance of each, which is pretty distinct to a practised eye, the solubility in alcohol furnishes a useful test, — the animé being readily soluble in this fluid, while the copal is hardly affected by it; copal is also brittle between the teeth, whereas animé softens in the mouth. — (*Rees's Cyclopædia; Ure's Dictionary, &c.*)

The imports of gum animé and copal are not distinguished in the custom-house accounts The entries of both for home consumption amounted, in 1842, to about 983 cwts. The duty was, in the same year, reduced from 6*s.* to 1*s.* a cwt. Copal fetches in the London market from 3*l.* to 3*l.* 10*s.* a cwt.

COPENHAGEN, the capital of Denmark, on the E. coast of the island of Zealand, in the channel of the Baltic called the Sound; lat. 55° 41′ 4″ N., lon. 12° 35′ 46″ E. Population, in 1834, 119,292. It is a well-built, handsome city. In going into Copenhagen, the course is between the buoy on the Stubben Bank to the left, and the buoy on the Middle-grounds, and those in advance of the three Crown batteries on the right, W. S W. by compass. From the three crowns to the roads the course is S. S. W. The water in the channel is from 6 to 4 fathoms deep; but it is narrow, and the navigation rather difficult. There is no obligation to take a pilot on board; but if a vessel wish for one, she may heave to abreast of the battery, when he will come to her. Vessels not intending to come into harbour bring up in the roads, at from ¼ to ½ mile from shore, in about 4 fathoms, the town bearing S. S. W. In the harbour, within the boom, the water is from 17 to 18 feet deep. Vessels in harbour load and unload alongside the quay. The anchorage in the roads is good and safe.

Money. — Accounts are kept in rixdollars of 6 marcs, or 96 skillings, the rixdollar being formerly worth about 1*s* 1*d* sterling. But in 1813, a new monetary system was adopted, according to which the new or *Rigsbank* dollar is worth 2*s* 3½*d*, being half the value of the old specie dollar, and ⅔ of the old current dollar But the money generally used in commercial transactions is bank money, which is commonly at a heavy discount. The par of exchange, estimated by the Rigsbank dollar, would be 8 dollars 7 6 skillings per pound sterling.

Weights and Measures. — The commercial weights are, 16 pounds = 1 lispound, 20 lispound = 1 shippound, 100 lbs. = 110½ lbs. avoirdupois = 134 lbs. Troy = 101 lbs of Amsterdam = 103 of Hamburg.

The liquid measures are, 4 ankers = 1 ahm or ohm; 1½ ahm = 1 hogshead, 2 hogsheads = 1 pipe; 2 pipes = 1 quarter. The anker = 10 (very nearly) English wine gallons. A *fuder* of wine = 930 pots: and 100 pots = 25½ wine-gallons.

The dry measures are, 4 vertels = 1 scheffel, 8 scheffels = 1 toende or ton, 12 tons = 1 last = 47½ Winchester bushels. The last of oil, butter, herrings, and other oily substances should weigh 224 lbs nett.

The measure of length is the Rhineland foot = 12⅓ inches very nearly. The Danish ell = 2 feet; 100 ells = 68½ English yards.

Trade of Copenhagen. — This is not very considerable, and has latterly declined. Timber, pitch and tar are chiefly imported from Sweden and Norway; flax, hemp, masts, sail-cloth, and cordage, from Russia; West India produce, from the Danish and foreign West India islands; tobacco, from America; wines and brandy, from France: coal, earthenware, iron and steel, and salt, are the principal articles of direct importation from England. Of coal, we sent to Denmark (principally to Copenhagen), in 1840, 126,779 tons, and of salt, 684,460 bushels. Owing to the erroneous policy of the Danish government, which is attempting, at a great public loss, to raise and bolster up manufactures, the direct imports of woollens and cottons are inconsiderable. These articles are not, however, absolutely prohibited. Down to 1841 they were admitted on condition of their being stamped and put up to auction by the custom-house, which, after retaining 30 per cent. of the gross produce of the sale, paid over the surplus to the importer. In the above year, however, the duty, in imitation of the German plan, was ordered to be assessed partly according to the description of the goods, and partly according to their weight; so that the existing duty varies on cotton goods, from 3*l.* 15*s.* to 22*l.* 10*s.* per 100 lbs. Danish (equal to 110 lbs. English); and on woollens, from 2*l.* 16*s.* 3*d.* to 14*l.* 1*s.* 3*d.* per 100 lbs. Danish. But, though advantageous in some respects, this change will be mischievous in others; for, while it has facilitated the collection of the duties, and reduced those on the finer descriptions, it has added materially to those on the coarser and most essential fabrics. Hence we need not be surprised that there is an extensive illicit importation of these articles by the Elbe and Holstein frontier. The exports consist principally of the produce of the soil, as corn, rape seed, butter and cheese, beef and pork, horses and cattle, wool, hides and skins, bones, corn-brandy, &c. At an average of the seven years ending with 1839, the annual exports of corn from Denmark were: — wheat, 140,989 imp. qrs.; rye, 127,521 do.; barley, 588,068 do.; and oats, 125,986 do. In 1842 we imported from Denmark 89,683 qrs. wheat, 19,047 do. barley, and 38,046 do. oats. (See CORN LAWS.) We subjoin an

Account of the Quantity and Value of the principal Articles, the produce of Denmark and her Dependencies, exported from that Kingdom and the Duchies of Sleswick and Holstein, in 1836.

Rum			
		Total	1,959,116

We have no means of ascertaining the proportion shipped from Copenhagen, but it was very considerable.

Shipping. — In 1840, there entered the port of Copenhagen 4,630 ships of all sizes. There arrived during the same year 89 British ships of the burden of 16,408 tons, chiefly coal laden. In the following year, 1841, there arrived in the different Danish ports, 156 English ships of the burden of 27,000 tons.

Including vessels under 10 tons, there belonged, in 1839, to

	Ships.	Tonnage.
Denmark	1,558	65,433
Sleswick	965	35,811
Holstein	1,331	36,167
Total	3,854	137,411

Colonial Trade. — In the West Indies, the Danes possess the island of St. Croix, which, though small, is fertile, and well cultivated. All the ports of Denmark may send vessels thither, and import sugar or other produce, on payment of the duties. St. Croix produces about 25,000,000 lbs. sugar, and 1,400,000 gallons rum.

But since 1833, when the restrictions on the colonial trade were abolished, the exports of sugar from St. Croix to Denmark have materially diminished, large quantities being now sent from the island to the U. States. The imports of colonial sugar may at present (1843) be estimated at about 8,500,000 lbs., and those of rum at about 450,000 gallons. About two thirds of the trade with the West Indies is engrossed by Copenhagen, and the rest by Flensburg. About 6,500,000 lbs. foreign raw sugar are imported. It is stated that government intends to reduce the duty on raw sugar from 5*s.* 11*d.* a cwt., its present (1843) amount, to 2*s.* 9*d.* a cwt.

The trade to India and China, formerly a monopoly in the hands of a joint stock company, was opened to the public in 1840. Several vessels have since been fitted out for the trade; but it is doubtful, from the want of produce suitable for the Eastern markets, whether it can ever attain to any considerable importance.

Port Charges vary according as the vessel has come from this or the further side of Cape Finisterre, or from the Indian seas; as she is wholly, or only part loaded; and as she clears out with goods that have been *in transitu*, and are for the most part free of duty, or has on board a cargo of native produce subject to duty. On a ship of 300 tons belonging to a privileged nation from this side Cape Finisterre, unloading and loading mixed cargoes in Copenhagen, the different public charges, including Sound dues, brokerage, &c., would exceed 60*l.*; and from the further side of Cape Finisterre, the charges would be nearly 100*l.* When a ship is not fully loaded, lastage money and light dues are only charged in proportion to the cargo on board. Lastage money is not charged on ships outward bound, laden with transit goods, as tar, pitch, iron, &c. But notwithstanding these deductions, it is obvious that port charges are very heavy, and there can be no doubt that they are a material obstacle to the extension of trade.

Commission on purchases is generally 2 per cent., and on sales, 3 per cent., including 1 per cent. *del credere.*

Citizenship. — To enable a foreigner to trade as a merchant in Denmark, he must become a burgher, which costs about 100*l.*, and it will require about 60*l.* more to free him from the obligation of serving in the militia. The obstacles in the way of a foreigner establishing himself in Denmark as a manufacturer, are much greater, on account of the exclusive privileges enjoyed by the guilds or corporations into which the principal crafts or trades are divided.

Credit. — Goods imported into Copenhagen are commonly sold on credit; 3 months is the term generally allowed on most sorts of goods, and in a few instances 6 months. The discount for ready money is 4 per cent. Bankruptcy is of rare occurrence.

Insurance. — Marine insurance is effected, on liberal terms, by a company established in 1746. A good many risks are, however, insured at Amsterdam and Hamburg.

Careening, Ships' Stores, &c. — Copenhagen has good building-yards, and is in all respects an eligible place for the repair of ships, and for supplying them with provisions.

General Remarks. — On the whole, the commerce of Denmark may be pronounced to be in a stationary state; a consequence partly of the peculiar circumstances under which the country is placed, and partly of the policy of government. The latter has long been exerting itself to bolster up a manufacturing interest, by laying oppressive duties on most species of manufactured articles. Even under the most favourable circumstances, such conduct, though it may benefit a few individuals, is sure to be productive of great national loss. But in the case of Denmark, the circumstances are such as to render the restrictive system peculiarly injurious. All, or nearly all, the branches of industry carried on in the kingdom are subject to the government of guilds or corporations; no person can engage in any line of business until he has been authorised by its peculiar guild; and as the sanction of this body is rarely obtained without a considerable sacrifice, the real effect of the system is to fetter competition and improvement, and to perpetuate monopoly and routine. Even the Danish writers acknowledge that such is the influence of the present regulations. "*Nos ouvriers*," say they, "*sont chers, travaillent lentement, et souvent mal et sans goût; leur éducation est négligée. On ne les forme point à penser, et l'apprentif suit machinalement ce qu'il voit faire au maître.*" — (*Catteau, Tableau des Etats Danois*, tome ii. p. 260.) But, however favourably situated in other respects, it would be idle to expect that a country without waterfalls, and without coal, should be able to manufacture cottons, woollens, &c. at so cheap a rate as they may be imported from others enjoying greater natural facilities for their production. Happily, however, the staple business of Denmark, her agriculture and rural economy, has been most materially improved of late years; and, as already seen, her exports of raw produce are now of great value and importance.

The trade of the country suffers from the too great magnitude of the port dues and of the transit duties; and the Sound duties, being charged on native as well as foreign ships, operate as an inland duty on trade. Considerable improvements have, however, been effected in the commercial legislation of the country during the last dozen years, by the opening of the trade to the East and West Indies, and the abolition and reduction of other regulations and duties; and it may be fairly presumed that the benefits resulting from these measures will pave the way for the introduction of others of a similar character.

In compiling this article, we have consulted *Oddy's European Commerce*, pp. 330—369.; *Dictionnaire du Commerce* (*Ency. Méthodique*, tome ii. pp. 3—16.); *Catteau, Tableau des Etats Danois*, tome ii. pp. 292—371.; the valuable Reports of Mr. M'Gregor, consul at Elsinore, &c.

COPPER (Ger. *Kupfer*; Du. *Koper*; Da. *Kobber*; Sw. *Kopper*; Fr. *Cuivre*; It. *Rame*; Sp. *Cobre*; Port. *Cobre*; Rus. *Mjed*, *Krasnoi mjed*; Pol. *Miedz*; Lat. *Cuprum*; Arab. *Nehass*; Sans. *Tamra*), a well-known metal, so called from its having been first discovered, or at least wrought to any extent, in the island of Cyprus. It is of a fine red colour, and has a great deal of brilliancy. Its taste is styptic and nauseous; and the hands, when rubbed for some time on it, acquire a peculiar and disagreeable odour. It is harder than silver; its specific gravity varies according to its state, being,

when quite pure, near 9·000. Its malleability is great; it may be hammered out into leaves so thin as to be blown about by the slightest breeze. Its ductility is also considerable. Its tenacity is so great, that a copper wire 0·078 of an inch in diameter is capable of supporting 302·26 lbs. avoirdupois without breaking. Its liability to oxidation from exposure to air or damp is its greatest defect. The rust with which it is then covered is known by the name of verdigris, and is one of the most active poisons. —(*Thomson's Chemistry.*)

If we except gold and silver, copper seems to have been more early known than any other metal. In the first ages of the world, before the method of working iron was discovered, copper was the principal ingredient in all domestic utensils and instruments of war. Even now it is applied to so many purposes, as to rank next, in point of utility, to iron.

Alloys of Copper are numerous and of great value. Those of tin are of most importance. Tin added to copper makes it more fusible, less liable to rust, or to be corroded by the air and other common substances, harder, denser, and more sonorous. In these respects the alloy has a real advantage over unmixed copper: but this is in many cases more than counterbalanced by the great brittleness which even a moderate portion of tin imparts; and which is a singular circumstance, considering that both metals are separately very malleable.

Copper alloyed with from 1 to 5 per cent. of tin is rendered harder than before; its colour is yellow, with a cast of red, and its fracture granular: it has considerable malleability. This appears to have been the usual composition of many of the ancient edged tools and weapons, before the method of working iron was brought to perfection. The χαλκος of the Greeks, and, perhaps the *æs* of the Romans, was nothing else. Even their copper coins contain a mixture of tin. The ancients did not, in fact, possess (as has been often contended) any peculiar process for hardening copper, except by adding to it a small quantity of tin. An alloy in which the tin is from 0·1 to ¼ of the whole is hard, brittle, but still a little malleable, close grained, and yellowish white. When the tin is as much as ¼ of the mass, it is entirely brittle; and continues so in every higher proportion. The yellowness of the alloy is not entirely lost till the tin amounts to 0·3 of the whole.

Copper (or sometimes copper with a little zinc), alloyed with as much tin as will make from about 0·1 to ¼ of the whole, forms an alloy, which is principally employed for bells, brass cannon, bronze statues, and various other purposes. Hence it is called *bronze* or *bell metal*; and is excellently fitted for the uses to which it is applied, by its hardness, density, sonorousness, and fusibility. For cannon, a lower proportion of tin is commonly used. According to Dr. Watson, the metal employed at Woolwich consists of 100 parts of copper and from 8 to 12 of tin; hence it retains some little malleability, and, therefore, is tougher than it would be with a larger portion of tin. This alloy being more sonorous than iron, brass guns give a louder report than iron guns. A common alloy for bell metal is 80 parts of copper and 20 of tin: some artists add to these ingredients zinc, antimony, and silver, in small proportions; all of which add to the sonorousness of the compound. —(See BELL METAL.)

When, in an alloy of copper and tin, the latter metal amounts to about ¼ of the mass, the result is a beautiful compound, very hard, of the colour of steel, and susceptible of a very fine polish. It is well adapted for the reflection of light for optical purposes; and is therefore called *speculum metal*. Besides the above ingredients, it usually contains a little arsenic, zinc, or silver. The application of an alloy similar to the above, to the construction of mirrors, is of great antiquity, being mentioned by Pliny; who says, that formerly the best mirrors were reckoned those of Brundusium, of tin and copper mixed (*stanno et ære mistis*). — (*Hist. Nat.* lib. xxxiii. § 9.)

For the alloys of copper with zinc, see the articles BRASS, PINCHBECK. See, also, *Thomson's Chemistry*; *Rees's Cyclopædia*; *Dr. Watson's Chemical Essays*, vol. iv., *&c.*

British Copper Trade. — Great Britain has various copper mines, in Cornwall, Devonshire, Wales, &c., but particularly in the first. Though known long before, the Cornish copper mines were not wrought with much spirit till last century. From 1726 to 1735, they produced at an average about 700 tons a year of pure copper. During the ten years from 1766 to 1775, they produced, at an average, 2,650 tons. In 1798, the produce exceeded 5,000 tons; and it now amounts to from 10,000 to 12,000 tons, worth, at 100*l.* a ton, from 1,000,000*l.* to 1,200,000*l.* sterling! In 1768, the famous mines in the Parys mountain, near Amlwch, in Anglesea, were discovered. The supplies of ore furnished by them were for a long time abundant beyond all precedent; but for many years past the productiveness of the mine has been declining, and it now yields comparatively little copper. At present the mines in Anglesea, and other parts of Wales, yield from 1,750 to 2,000 tons of copper; those of Devonshire yield about 500 tons; the quantity produced in the other parts of England being quite inconsiderable. The Irish mines produce about 500 tons. Those of Scotland never were productive, and have been almost entirely abandoned. The entire produce of the copper mines of the empire may, therefore, be estimated at present at from 14,000 to 15,000 tons.

In consequence of the greatly increased supplies of copper that were thus obtained, England, instead of being, as formerly, dependent on foreigners for the greater part of her supplies of this valuable metal, became, previously to 1793, one of the principal markets for the supply of others. And notwithstanding the vastly increased demand for copper during the war for the sheathing of ships and other purposes, the exports continued to increase and the imports to diminish; the greater productiveness of the Cornish mines having sufficed not only to balance the increased demand, but also to make up for the falling off in the supplies from Anglesea.

Owing to the want of coal in Cornwall, the ores are not smelted on the spot, but are, for the most part, sent to Swansea; it being found cheaper to carry the ores to the coal than the contrary.

The East Indies and China, France, the U. States, and Italy, are the great markets for British copper. Thus, in 1842, of the total quantity exported, amounting, as seen above, to 194,061 cwts., 99,990 went to the East Indies and China, 21,292 to France, 16,378 to the U. States, and 10,765 to Italy. —(*Parl. Paper* No. 237. Sess. 1843.)

Foreign Copper.—Copper ores are abundant in Sweden, Russia, Persia, Japan, Cuba, Chili, Colombia, &c. Near Fahlun, in the province of Dalecaria, in Sweden, is the celebrated copper mine of the same name, supposed to have been wrought nearly 1,000 years. For a long time it was extremely productive, yielding, towards the beginning of the seventeenth century, an annual produce of about 8,000,000 lbs. of pure metal; but it has since greatly declined; and it is most probable that at no distant period it will be wholly abandoned. —(*Thomson's Travels in Sweden*, p. 221.) There are copper mines in other parts of Sweden; but the entire produce of copper in that country does not at present exceed from 750 to 800 tons, of a quality inferior to that of England. The produce of the copper mines in the government of Olonetz, in Russia, has been estimated at 210,000 poods, or 3,375 tons (Eng.) a year. —(*Schnitzler, Essai d'une Statistique Générale, &c.* p. 41.) The copper mines of Japan are said to be among the richest in the world. The Dutch and Chinese export considerable quantities of their produce, which is spread all over the East, and is regularly quoted in the price currents of Canton, Calcutta, and Singapore. It is uniformly met with in the shape of bars or ingots; and when the copper of S. America is worth in the

Canton market from 15 to 16 dollars per picul, that of Japan is worth from 18 to 20 per ditto. Copper, the produce of the Persian mines, is imported into Bombay and Calcutta from Bushire and Bussorah.

But, in a commercial point of view, the copper mines of Cuba and Chili are, after those of England, by far the most important. The working of the mines of Cuba, which had been abandoned for a lengthened period, was resumed a few years ago, principally by an English company, which has been eminently successful. Large quantities of Cuba ore are brought to Swansea to be smelted; and large quantities of Chili ore are also brought hither for the same purpose. Of the total imports of copper ore in 1842, amounting to above 50,000 tons, Cuba furnished 32,270 tons, and Chili 12,643 ditto; the rest being supplied by Colombia, Brazil, &c. Foreign copper imported into this country, and the copper obtained from the smelting of foreign ore, were, previously to 1842, wholly, or almost wholly, re-exported (*Geographical Dictionary*, arts. *Cuba* and *Chili*; *Parl. Paper* No. 237. Sess. 1843, &c.); the duty on the copper or ore when it was taken or smelted for home use being so very heavy, as to make it be altogether exported in an unwrought state. But, in 1842, the duty on copper ores and unwrought copper was so much reduced, that it is believed that considerable quantities of foreign copper, and of copper derived from foreign ore, will in future be brought into use in this country.

Account of the Copper produced from the Mines in Cornwall since 1800; showing the Quantity of *Ore*, (in tons of 21 cwt.) of Metal or Fine Copper, the Value of the Ores in Money, the average Percentage or Produce, and the average Standard or Miner's Price of Fine Copper, made up to the end of June in each Year.

N.B.—The quantity of copper smelted from foreign ores in the U. Kingdom in 1842 was almost exactly equal to the quantity of British copper exported.

Customs Regulations.—Old copper sheathing, old copper utensils, and old copper and pewter utensils of British manufacture, imported from British plantations, and also old copper stripped off vessels in ports in the U. Kingdom, may be admitted to entry, duty free, under the following regulations; viz.—

1st. Old copper sheathing stripped off British vessels in ports in the British possessions, upon proof to the satisfaction of the commissioners of customs that such sheathing was stripped off in such ports, and also that the said sheathing is the property of the owner of the ship from which it was so stripped, to be delivered to such owner.

2d. Old copper sheathing stripped off any ship in any port in the U. Kingdom, upon the fact being certified by the landing-waiter superintending the process; the old copper to be delivered only to the coppersmith who may re-copper the vessel from which the copper was stripped, he making proof to that fact.

3d. Old worn-out British copper and pewter utensils to be in all cases delivered when brought from British possessions abroad in British ships, upon the consignee submitting proof that they had been used on a particular estate, and are consigned on account of the owner of that estate, and that he (the consignee) verily believes them to have been of British manufacture.—(*Min. Com. Cus.*, 15th of Feb. 1833.)

The act 7 & 8 Geo. 4. c. 58. § 23. authorised copper ore to be taken out of warehouses to be smelted, on proper notice being given to the customs officers, and giving sufficient security, by bond, for returning

the computed quantity of fine copper in it; but this provision was repealed by the act 5 & 6 Victoria, cap. 47. § 9.

Copper is in extensive demand all over India; being largely used in the dock-yards, in the manufacture of cooking utensils, in alloying spelter and tin, &c. The funeral of every Hindoo brings an accession to the demand, according to his station; the relatives of the deceased giving a brass cup to every Brahmin present at the ceremony: so that 5, 10, 50, 100, 1,000, and sometimes more than 10 times this last number, are dispensed upon such occasions.—(*Bell's Commerce of Bengal.*)

COPPERAS, a term employed by the older chemists, and popularly as synonymous with vitriol. There are three sorts of copperas: the *green*, or sulphate of iron; the *blue*, or sulphate of copper; and the *white*, or sulphate of zinc. Of these, the first is the most important.

Sulphate of iron is distinguished in common by a variety of names, as Martial vitriol, English vitriol, &c. When pure, it is considerably transparent, of a fine bright, though not very deep, grass green colour; and of a nauseous astringent taste, accompanied with a kind of sweetness. Its specific gravity is 1·834. It uniformly reddens the vegetable blues. This salt was well known to the ancients; and is mentioned by Pliny (*Hist. Nat.* lib. xxxiv. § 12.) under the names of *misy*, *sory*, and *chalchantum*. It is not made in the direct way, because it can be obtained at less charge from the decomposition of pyrites on a large scale in the neighbourhood of collieries. It exists in two states; one containing oxide of iron, with 0·22 of oxygen, which is of a pale green, not altered by gallic acid, and giving a white precipitate with prussiate of potass. The other, in which the iron is combined with 0·30 of oxygen, is red, not crystallisable, and gives a black precipitate with gallic acid, and a blue with prussiate of potass. In the common sulphate, these two are often mixed in various proportions.

Sulphate of iron is of great importance in the arts. It is a principal ingredient in dyeing; in the manufacture of ink, and of prussian blue: it is also used in tanning, painting, medicine, &c. Sulphuric acid, or oil of vitriol, was formerly manufactured from sulphate of iron.—(See Acids.)

Sulphate of copper, or *blue* vitriol, commonly called Roman or Cyprian vitriol, is of an elegant sapphire blue colour, hard, compact, and semi-transparent; when perfectly crystallised, of a flattish, rhomboidal, decahedral figure; its taste is extremely nauseous, styptic, and acrid; its specific gravity is 2·1943. It is used for various purposes in the arts, and also in medicine.

Sulphate of zinc, or *white* vitriol, is found native in the mines of Goslar and other places. Sometimes it is met with in transparent pieces, but more commonly in white efflorescences. These are dissolved in water, and crystallised into large irregular masses, somewhat resembling fine sugar, having a sweetish, nauseous, styptic taste. Its specific gravity, when crystallised, is 1·912; when in the state in which it commonly occurs in commerce, it is 1·3275. Sulphate of zinc is prepared in the large way from some varieties of the native sulphuret. The ore is roasted, wetted with water, and exposed to the air. The sulphur attracts oxygen, and is converted into sulphuric acid; and the metal, being at the same time oxidized, combines with the acid. After some time the sulphate is extracted by solution in water; and the solution being evaporated to dryness, the mass is run into moulds. Thus, the white vitriol of the shops generally contains a small portion of iron, and often of copper and lead.—(*Lewis's Mat. Medica; Ure's Dictionary; Rees's Cyclopædia; Thomson's Chemistry*, &c.)

COPYRIGHT. See Books.

CORAL (Ger. *Korallen*; Du. *Koraalen*; Fr. *Corail*; It. *Corale*; Sp. and Port. *Coral*; Rus. *Korallü*; Lat. *Corallium*; Arab. *Besed*; Pers. *Merjan*; Hind. *Moonga*), a marine production, of which there are several varieties. It was well known to the ancients, but it was reserved for the moderns to discover its real nature. It is, in fact, the nidus or nest of a certain species of vermes, which has the same relation to coral that a snail has to its shell. As an ornament, black coral is most esteemed; but the red is also very highly prized. Coral is found in very great abundance in the Red Sea, the Persian Gulph, in various places in the Mediterranean, on the coast of Sumatra, &c. It grows on rocks, and on any solid submarine body; and it is necessary to its production that it should remain fixed to its place. It has generally a shrub-like appearance. In the Straits of Messina, where a great deal is fished up, it usually grows to nearly a foot in length, and its thickness is about that of the little finger. It requires 8 or 10 years to arrive at its greatest size. The depth at which it is obtained is various—from 10 to 100 fathoms or more: but it seems to be necessary to its production that the rays of the sun should readily penetrate to the place of its habitation. Its value depends upon its size, solidity, and the depth and brilliancy of its colour; and is so very various, that while some of the Sicilian coral sells for 8 or 10 guineas an ounce, other descriptions of it will not fetch 1*s.* a pound. It is highly prized by opulent natives in India, as well as by the fair sex throughout Europe. The inferior or worm-eaten coral is used in some parts of the Madras coast, in the celebration of funeral rites. It is also used medicinally. Besides the fishery in the Straits of Messina already alluded to, there are valuable

fisheries on the shores of Majorca and Minorca, and on the coast of Provence. A good deal of Mediterranean coral is exported to India, which, however, draws the largest portion of its supplies from the Persian Gulph. The produce of the fishery at Messina is stated by Spallanzani (*Travels in the Two Sicilies*, vol. iv. p. 408, &c.) to amount to 12 quintals of 250 lbs. each.

The manner of fishing coral is nearly the same every where. That which is most commonly practised in the Mediterranean is as follows:—Seven or 8 men go in a boat, commanded by the proprietor; the caster throws his net, if we may so call the machine which he uses to tear up the coral from the bottom of the sea; and the rest work the boat, and help to draw in the net. This is composed of two beams of wood tied crosswise, with leads fixed to them to sink them: to these beams is fastened a quantity of hemp, twisted loosely round, and intermingled with some loose netting. In this condition the machine is let down into the sea; and when the coral is pretty strongly entwined in the hemp and nets, they draw it up with a rope, which they unwind according to the depth, and which it sometimes requires half a dozen boats to draw. If this rope happen to break, the fishermen run the hazard of being lost. Before the fishers go to sea, they agree for the price of the coral; and the produce of the fishery is divided, at the end of the season, into 13 parts; of which the proprietor has 4, the caster 2, and the other 6 men 1 each; the thirteenth belongs to the company for payment of boat-hire, &c.—(See *Ainslie's Mat. Indica*; *Rees's Cyclopædia*; *Ency. Metrop.*; *Bell's Com. of Bengal*, &c.)

CORDAGE (Ger. *Tauwerk*; Du. *Touwwerk*; Fr. *Manœuvres*, *Cordage*; It. *Caolame*; Sp. *Jarcia*, *Cordaje*), a term used in general for all sorts of cord, whether small, middling, or great, made use of in the rigging of ships. The manufacture of cordage is regulated by the act 5 Geo. 4. c. 56., which specifies the sort of materials that are to be employed in the manufacture of cables, hawsers, and other ropes, the marks that are to be affixed to them, and the penalties of non-compliance with their respective enactments.—(See Cable.) Masters of British ships are obliged, on coming into any port in Great Britain or the colonies, to report, under a penalty of 100*l*., the foreign cordage, not being standing or running rigging, in use on board such ship.—(3 & 4 *Will. 4.* cap. 52. § 8.)

The following table shows how many fathoms, feet, and inches, of a rope of any size, not exceeding 14 inches, make 1 cwt.

At the top of the table, marked inches, fathoms, feet, inches, the first column is the circumference of a rope in inches and quarters; the second, the fathoms, feet, and inches that make up 1 cwt. of such a rope. One example will make it plain.

Suppose it is required how much of a 7-inch rope will make 1 cwt.: find 7 in the 3d column, under inches, or circumference of the rope, and immediately opposite to it you will find 9, 5, 6; which shows that in a rope of 7 inches, there will be 9 fathoms 5 feet 6 inches required to make 1 cwt.

CORK (Ger. *Kork*; Du. *Kork*, *Kurk*, *Vlothout*; Fr. *Liège*; It. *Sughero*, *Suvero*; Sp. *Corcho*; Port. *Cortica* (*de Sovreiro*); Rus. *Korkowoe derewo*; Lat. *Suber*), the thick and spongy bark of a species of oak (*Quercus Suber* Lin.), abundant in dry mountainous districts in the south of France, and in Spain, Portugal, Italy, and Barbary. The tree grows to the height of 30 feet or more, has a striking resemblance to the *Quercus Ilex*, or evergreen oak, and attains to a great age. After arriving at a certain state of maturity, it periodically sheds its bark; but this valuable product is found to be of a much better quality when it is artificially removed from the tree, which may be effected without any injury to the latter. After a tree has attained to the age of from 26 to 30 years, it may be barked; and the operation may be subsequently repeated once every 8 or 10 years *, the quality of the cork improving with the increasing age of the tree. The bark is taken off in July and August; and trees that are regularly stripped are said to live for 150 years, or more.—(*Poiret, Hist. Philosophique des Plantes*, tom. vii. 419.)

Cork is light, porous, readily compressible, and wonderfully elastic. It may be cut into any sort of figure, and notwithstanding its porosity, is nearly impervious to any common liquor. These qualities make it superior to all other substances for stoppers for bottles, in the manufacture of which it is principally made use of. It is also employed as buoys to float nets, in the construction of life-boats, the making of waterproof shoes, and in various other ways. Before being manufactured into stoppers, the

* Beckmann (vol. ii. p. 115. Eng. ed.) says, that "when the tree is 15 years old, it may be barked, and this can be done successively for 8 years." This erroneous statement having been copied into the article

cork is charred on each side; this makes it contract, lessens its porosity, and consequently fits it the better for cutting off all communication between the external air and the liquid in the bottle. Spanish black is made of calcined cork.

The Greeks and Romans were both well acquainted with cork. They seem also to have occasionally used it as stoppers for vessels (*Cadorum obturamentis*, Plin. Hist. Nat. lib. xvi. cap. 8.); but it was not extensively employed for this purpose till the 17th century, when glass bottles, of which no mention is made before the 15th century began to be generally introduced.—(*Beckmann's Hist. Invent.* vol. ii. pp. 114—127. Eng. ed.)

The duty on manufactured cork is prohibitory; and on the rude article it is very heavy, being no less than 8*s.* a cwt. or 8*l.* a ton. The quantity entered for home consumption amounts, at an average, to from 40,000 to 45,000 cwts. Its price, including duty, varies with the variations in its quality, from about 20*l.* to about 70*l.* a ton. The Spanish is the best, and fetches the highest price.

CORN (Ger. *Corn, Getreide;* Du. *Graanen, Koren;* Da. *Korn;* Sw. *Sad, Spanmal;* Fr. *Bleds, Grains;* It. *Biade, Grani;* Sp. *Granos;* Rus. *Chljeb;* Pol. *Zboze;* Lat. *Frumentum*), the grain or seed of plants separated from the spica or ear, and used for making bread, &c. CORN LAWS AND CORN TRADE. — From the circumstance of corn forming, in this and most other countries, the principal part of the food of the people, the trade in it, and the laws by which that trade is regulated, are justly looked upon as of the highest importance. But this is not the only circumstance that renders it necessary to enter at some length into the discussion of this subject. Its difficulty is at least equal to its interest. The enactments made at different periods with respect to the corn trade, and the opinions advanced as to their policy, have been so very various and contradictory that it is indispensable to submit them to some examination, and, if possible, to ascertain the *principles* which ought to pervade this department of commercial legislation.

I. HISTORICAL SKETCH OF THE CORN LAWS.
II. PRINCIPLES OF THE CORN LAWS.
III. BRITISH CORN TRADE.
IV. FOREIGN CORN TRADE.

I. HISTORICAL SKETCH OF THE CORN LAWS.

For a long time the regulations with respect to the corn trade were principally intended to promote abundance and low prices. But though the purpose was laudable, the means adopted for accomplishing it had, for the most part, a directly opposite effect. When a country exports corn, it seems, at first sight, as if nothing could do so much to increase her supplies as the prevention of exportation: and even in countries that do not export, its prohibition seems to be a prudent measure, and calculated to prevent the supply from being diminished, upon any emergency, below its natural level. These are the conclusions that immediately suggest themselves upon this subject; and it requires a pretty extensive experience, an attention to facts, and a habit of reasoning upon such topics, to perceive their fallacy. These, however, were altogether wanting when the regulations affecting the corn trade began to be introduced into Great Britain and other countries. They were framed in accordance with what were supposed to be the dictates of common sense; and their object being to procure as large a supply of the prime necessary of life as possible, its exportation was either totally forbidden, or forbidden when the home price was above certain limits.

The principle of absolute prohibition seems to have been steadily acted upon, as far as the turbulence of the period would admit, from the Conquest to the year 1436, in the reign of Henry VI. But at the last-mentioned period an act was passed, authorising the exportation of wheat whenever the home price did not exceed 6*s.* 8*d.* (equal in amount of pure silver to 12*s.* 10¾*d.* present money) per quarter, and barley when the home price did not exceed 3*s.* 4*d.* In 1463, an additional benefit was intended to be conferred on agriculture by prohibiting importation until the home price exceeded that at which exportation ceased. But the fluctuating policy of the times prevented these regulations from being carried into full effect; and, indeed, rendered them in a great measure inoperative.

In addition to the restraints laid on exportation, it has been common in most countries to attempt to increase the supply of corn, not only by admitting its unrestrained importation from abroad, but by holding out extraordinary encouragement to the importers. This policy has not, however, been much followed in England. During the 500 years immediately posterior to the Conquest, importation was substantially free; but it was seldom or never promoted by artificial means; and during the last century and a half it has, for the most part, been subjected to severe restrictions.

Besides attempting to lower prices by prohibiting exportation, our ancestors attempted to lower them by proscribing the trade carried on by corn dealers. This most useful class of persons were looked upon with suspicion by every one. The agriculturists concluded that they would be able to sell their produce at higher prices to the consumers, were the corn dealers out of the way: while the consumers concluded that the profits of the dealers were made at their expense; and ascribed the dearths that were then very prevalent entirely to the practices of the dealers, or to their buying up corn and withholding it from market. These notions, which have still a considerable degree of influence, led to various enactments, particularly in the reign of Edward VI., by which the freedom of the internal corn trade was entirely suppressed. The *engrossing* of corn, or the buying of it in one market with intent to sell it again in another, was made an offence punishable by imprisonment and the pillory; and no one was allowed to carry corn from one part to another without a licence, the privilege of granting which was confided by a statute of Elizabeth to the quarter sessions. But as the principles of commerce came to be better understood, the impolicy of these restraints gradually grew more and more obvious. They were considerably modified in 1624; and, in 1663, the engrossing of corn was declared to be legal so long as the price did not exceed 48*s.* a quarter — (15 *Chas.* 2. c. 7.); an act which, as Dr. Smith has justly observed, has, with all its imperfections, done more to promote plenty than any other law in the statute book. In 1773, the last remnant of the *legislative* enactments restraining the freedom of the internal corn dealers, was entirely repealed. But the engrossing of corn has, notwithstanding, been since held to be an offence at common law; and, so late as 1800, a corn dealer was convicted of this imaginary crime. He was not, however, brought up for judgment; and it is not very likely that any similar case will ever again occupy the attention of the courts.

The acts of 1436 and 1463, regulating the prices when exportation was allowed and when importation was to cease, continued, nominally at least, in force till 1562, when the prices at which exportation might take place were extended to 10*s.* for wheat and 6*s.* 8*d.* for barley. But a new principle — that of imposing duties on exportation — was soon after introduced; and, in 1571, it was enacted that wheat might be exported, paying a duty of 2*s.* a quarter, and barley and other grain a duty of 1*s.* 4*d.*, whenever the home price of wheat did not exceed 20*s.* a quarter, and barley and malt 12*s.* At the Restoration, the limit at which exportation might take place was very much extended; but as the duty on exportation was, at the same time, so very high as to be almost prohibitory, the extension was of little or no service to the agriculturists. This view of the matter seems to have been speedily taken by the legislature; for in 1663, the high duties on exportation were taken off, and an *ad valorem* duty imposed in their stead, at the same time that the limit of exportation was extended. In 1670, a still more decided step was taken in favour of agriculture; an act being then passed which extended the exportation price to 53*s.* 4*d.* a quarter for wheat, and other grain in proportion, imposing, at the same time, prohibitory duties on the importation of wheat till the price rose to 53*s.* 4*d.*, and a duty of 8*s.* between that price and 80*s.* But the real effects of this act were not so great as might have been anticipated. The extension of the limit of exportation was rendered comparatively nugatory, in consequence of the continuance of the duties on exportation caused by the necessities of the Crown; while the want of any proper method for the determination of prices went far to nullify the prohibition of importation.

At the accession of William III. a new system was adopted. The interests of agriculture were then looked upon as of paramount importance: and to promote them, not only were the duties on exportation totally abolished, but it was encouraged by the grant of a *bounty* of 5*s.* on every quarter of wheat exported, while the price continued at or below 48*s.*; of 2*s.* 6*d.* on every quarter of barley or malt, while their respective prices did not exceed 24*s.*; and of 3*s.* 6*d.* on every quarter of rye, when its price did not exceed 32*s.* — (1 *Will. & Mary*, c. 12.) A bounty of 2*s.* 6*d.* a quarter was subsequently given upon the exportation of oats and oatmeal, when the price of the former did not exceed 15*s.* a quarter. Importation continued to be regulated by the act of 1670.

Much diversity of opinion has been entertained with respect to the policy of the bounty. That it was intended to raise the price of corn is clear, from the words of the statute, which states, "that the exportation of corn and grain into foreign parts, *when the price thereof is at a low rate in this kingdom*, hath been a great advantage not only to the owners of land, but to the trade of the kingdom in general; therefore," &c. But admitting this to have been its object, it has been contended that the low prices which prevailed during the first half of last century show that its real effect was precisely the reverse; and that, by extending tillage, it contributed to reduce prices. It will be afterwards shown that this could not really be the case; and the fall of prices may be sufficiently accounted for by the improved state of agriculture, the gradual consolidation of farms, the diminution of sheep husbandry, &c., combined with the slow increase of the population. In point of fact, too, prices had begun to give way 30 years before the bounty was

granted; and the fall was equally great in France, where, instead of exportation being encouraged by a bounty, it was almost entirely prohibited; and in most other Continental states. — (For proofs of what is now stated, see the article *Corn Laws*, in the new edition of the *Ency. Brit.*)

The Tables annexed to this article show that, with some few exceptions, there was, during the first 66 years of last century, a large export of corn from England. In 1750, the wheat exported amounted to 947,000 quarters; and the total bounties paid during the 10 years from 1740 to 1751 reached the sum of 1,515,000*l.* But the rapid increase of population subsequently to 1760, and particularly after the peace of Paris, in 1763, when the commerce and manufactures of the country were extended in an unprecedented degree, gradually reduced this excess of exportation, and occasionally, indeed, inclined the balance the other way. This led to several suspensions of the restrictions on importation; and at length, in 1773, a new act was framed, by which foreign wheat was allowed to be imported on paying a nominal duty of 6*d.* whenever the home price was at or above 48*s.* a quarter, and the bounty * and exportation were together to cease when the price was at or above 44*s.* This statute also permitted the importation of corn at any price, duty free, in order to be again exported, provided it were in the mean time lodged under the joint locks of the king and the importer.

The prices when exportation was to cease by this act seem to have been fixed too low; and, as Dr. Smith has observed, there appears a good deal of impropriety in prohibiting exportation altogether the moment it attained the limit when the bounty given to force it was withdrawn; yet, with all these defects, the act of 1773 was a material improvement on the former system, and ought not to have been altered unless to give greater freedom to the trade.

The idea that this law must, when enacted, have been injurious to the agriculturists, seems altogether illusory; the permission to import foreign grain, when the home price rose to a moderate height, certainly prevented their realising exorbitant profits, in dear years, at the expense of the other classes; and prevented an unnatural proportion of the capital of the country from being turned towards agriculture. But as the limit at which importation at a nominal duty was allowed was fixed a good deal above the average price of the reign of George II., it cannot be maintained that it had any tendency to reduce previous prices, which is the only thing that could have discouraged agriculture: and, in fact, no such reduction took place.

It is, indeed, true, that, but for this act, we should not have imported so much foreign grain in the interval between 1773 and 1791. This importation, however, was not a consequence of the decline of agriculture; for it is admitted that every branch of rural economy was more improved in that period than in the whole of the preceding century; but arose entirely from a still more rapid increase of the manufacturing population, and hence, of the effective demand for corn.

By referring to the Tables annexed to this article, it will be seen that, in 1772, the balance on the side of wheat imported amounted to 18,515 quarters; and in 1773, 1774, and 1775, all years of great prosperity, the balance was very much increased. But the loss of a great part of our colonial possessions, the stagnation of commerce, and difficulty of obtaining employment, occasioned by the American war, diminished the consumption; and this, combined with unusually productive harvests, rendered the balance high on the side of exportation, in 1778, 1779, and 1780. In 1783 and 1784 the crops were unusually deficient, and considerable importations took place; but in 1785, 1786, and 1787 the exports again exceeded the imports; and it was not till 1788, when the country had fully recovered from the effects of the American war, and when manufacturing improvements were carried on with extraordinary spirit, that the imports permanently overbalanced the exports.

The growing wealth and commercial prosperity of the country had thus, by increasing the population and enabling individuals to consume additional quantities of food, caused the home supply of corn to fall somewhat short of the demand; but it must not therefore be concluded that agriculture had not at the same time been very greatly meliorated. "The average annual produce of wheat," says Mr. Comber, "at the beginning of the reign of George III. (1760), was about 3,800,000 quarters, of which about 300,000 had been sent out of the kingdom, leaving about 3,500,000 for home consumption. In 1773, the produce of wheat was stated in the House of Commons to be 4,000,000 quarters, of which the whole, and above 100,000 imported, were consumed in the kingdom. In 1796, the consumption was stated by Lord Hawkesbury to be 500,000 quarters per month, or 6,000,000 quarters annually, of which about 180,000 were imported; showing an increased produce in about 20 years of 1,820,000 quarters. It is evident, therefore, not only that no defalcation of produce had taken place in consequence of the cessation of exportation, as has been too lightly assumed from the

* The bounty amounted to 5*s.* on every quarter of wheat; 2*s.* 6*d.* on every quarter of barley; 3*s* 6*d.* on every quarter of rye; and 2*s.* 6*d* on every quarter of oats.

occasional necessity of importation, but that it had increased with the augmentation of our commerce and manufactures."—(*Comber on National Subsistence*, p. 180.)

These estimates are, no doubt, very loose and unsatisfactory; but the fact of a great increase of produce having taken place is unquestionable. In a report by a committee of the House of Commons on the state of the *waste lands*, drawn up in 1797, the number of acts passed for enclosing, and the number of acres enclosed, in the following reigns, are thus stated: —

	Number of Acts.	Number of Acres.
In the reign of Queen Anne -	2	1,439
George I. - -	16	17,960
George II. -	226	318,778
George III. to 1797	1,532	2,804,197

It deserves particular notice, that from 1771 to 1791, both inclusive, the period during which the greater number of these improvements were effected, there was no rise of prices.

The landholders, however, could not but consider the liberty of importation granted by the act of 1773 as injurious to their interests, inasmuch as it prevented prices from rising with the increased demand. A clamour, therefore, was raised against that law; and in addition to this interested feeling, a dread of becoming habitually dependent on foreign supplies, operated on many, and produced a pretty general acquiescence in the act of 1791. By this act, the price when importation could take place from abroad at the low duty of 6*d.* was raised to 54*s.*; under 54*s.* and above 50*s.* a middle duty of 2*s.* 6*d.*; and under 50*s.* a prohibiting duty of 24*s.* 3*d.* was exigible. The bounty continued as before, and exportation without bounty was allowed to 46*s.* It was also enacted, that foreign wheat might be imported, stored under the king's lock, and again exported free of duty; but, if sold for home consumption, it became liable to a warehouse duty of 2*s.* 6*d.* in addition to the ordinary duties payable at the time of sale.

In 1797, the Bank of England obtained an exemption from paying in specie; and the consequent facility of obtaining discounts and getting a command of capital, which this measure occasioned, gave a fresh stimulus to agriculture; the efficacy of which was most powerfully assisted by the scarcity and high prices of 1800 and 1801. Inasmuch, however, as the prices of 1804 would not allow the cultivation of the poor soils, which had been broken up in the dear years, to be continued, a new corn law was loudly called for by the farmers, and passed in 1804. This law imposed a prohibitory duty of 24*s.* 3*d.* per quarter on all wheat imported when the home price was at or below 63*s.*; between 63*s.* and 66*s.* a middle duty of 2*s.* 6*d.* was paid, and above 66*s.* a nominal duty of 6*d.* The price at which the bounty was allowed on exportation was extended to 50*s.*, and exportation without bounty to 54*s.* By the act of 1791, the maritime counties of England were divided into 12 districts, importation and exportation being regulated by the particular prices of each; but by the act of 1804 they were regulated, in England, by the *aggregate average* of the maritime districts; and in Scotland by the aggregate average of the 4 maritime districts into which it was divided. The averages were taken 4 times a year, so that the ports could not be open or shut for less than 3 months. This manner of ascertaining prices was, however, modified in the following session; it being then fixed that importation, both in England and Scotland, should be regulated by the average price of the 12 maritime districts of England.

In 1805, the crop was very considerably deficient, and the average price of that year was about 22*s.* a quarter above the price at which importation was allowed by the act of 1804. As the depreciation of paper, compared with bullion, was at that time only *four* per cent., the high price of that year must have been principally owing to the new law preventing importation from abroad till the home price was high, and then fettering mercantile operations; and to the formidable obstacles which the war threw in the way of importation. In 1806 *, 1807, and 1808, the depreciation of paper was nearly 3 per cent.; and the price of wheat in those years being generally from 66*s.* to 75*s.*, the importations were but small. From autumn 1808, to spring 1814, the depreciation of the currency was unusually great; and several crops in that interval being likewise deficient, the price of corn, influenced by both causes, rose to a surprising height. At that time no vessel could be laden in any Continental port for England without purchasing a licence, and the freight and insurance were at least 5 times as high as during peace. But the destruction of Napoleon's anti-commercial system, in the autumn of 1813, having increased the facilities of importation, a large quantity of corn was poured into the kingdom; and, in 1814, its *bullion* price fell below the price at which importation was allowed.

* Several impolitic restraints had been for a long time imposed on the free importation and exportation of corn between Great Britain and Ireland, but they were wholly abolished in 1806; and the act of that year (46 Geo. 3. c. 97.), establishing a free trade in corn between the 2 great divisions of the empire, was not only a wise and proper measure in itself, but has powerfully contributed to promote the general advantage.

Before this fall of price, a committee of the House of Commons had been appointed to inquire into the state of the laws affecting the corn trade; and recommended in their Report (dated 11th of May, 1813) a very great increase of the prices at which exportation was allowable, and when importation free of duty might take place. This recommendation was not, however, adopted by the House; but the fact of its having been made when the home price was at least 112*s.* a quarter, displayed a surprising solicitude to exclude foreigners from all competition with the home growers.

The wish to lessen the dependence of the country on foreign supplies formed the sole ostensible motive by which the committee of 1813 had been actuated, in proposing an alteration in the act of 1804. But after the fall of price in autumn 1813, and in the early part of 1814, it became obvious, on comparing our previous prices with those of the Continent, that without an alteration of the law in question this dependence would be a good deal increased; that a considerable extent of such poor lands as had been brought into cultivation during the high prices, would be again thrown into pasturage; and that rents would be lowered. These consequences alarmed the landlords and occupiers; and in the early part of the session of 1814, a series of resolutions were voted by the House of Commons, declaring that it was expedient to repeal the bounty, to permit the free exportation of corn whatever might be the home price, and to impose a graduated scale of duties on the importation of foreign corn. Thus, foreign wheat imported when the home price was at or under 64*s.* was to pay a duty of 24*s.*; when at or under 65*s.* a duty of 23*s.*; and so on, till the home price should reach 86*s.*, when the duty was reduced to 1*s.*, at which sum it became stationary. Corn imported from Canada, or from the other British colonies in North America, was to pay half the duties on other corn. As soon as these resolutions had been agreed to, two bills founded on them — one for regulating the importation of foreign corn, and another for the repeal of the bounty, and for permitting unrestricted exportation — were introduced. Very little attention was paid to the last of these bills; but the one imposing fresh duties on importation encountered a very keen opposition. The manufacturers, and every class not directly supported by agriculture, stigmatised it as an unjustifiable attempt artificially to keep up the price of food, and to secure excessive rents and large profits to the landholders and farmers at the expense of the consumers. Meetings were very generally held, and resolutions entered into strongly expressive of this sentiment, and dwelling on the fatal consequences which, it was affirmed, a continuance of the high prices would have on manufactures and commerce. This determined opposition, coupled with the indecision of ministers, and perhaps, too, with an expectation on the part of some of the landholders that prices would rise without any legislative interference, caused the miscarriage of this bill. The other bill, repealing the bounty, and allowing an unlimited freedom of exportation, was passed into a law.

Committees had been appointed in 1814, by both Houses of Parliament, to examine evidence and report on the state of the corn trade; and, in consequence, a number of the most eminent agriculturists were examined. The witnesses were unanimous in this only, — that the protecting prices in the act of 1804 were insufficient to enable the farmers to make good the engagements into which they had subsequently entered, and to continue the cultivation of the inferior lands lately brought under tillage. Some of them thought that 120*s.* should be fixed as the lowest limit at which the importation of wheat free of duty should be allowed: others varied from 90*s.* to 100*s.* — from 80*s.* to 90*s.* — and a few from 70*s.* to 80*s.* The general opinion, however, seemed to be that 80*s.* would suffice; and as prices continued to decline, a set of resolutions founded on this assumption were submitted to the House of Commons by Mr. Robinson, of the Board of Trade (now Lord Ripon); and having been agreed to, a bill founded on them was, after a very violent opposition, carried in both Houses by immense majorities, and finally passed into a law (*55* Geo. 3. c. 26.). According to this act, all sorts of foreign corn, meal, or flour might be imported at all times free of duty into any port of the United Kingdom, in order to be warehoused; but foreign corn was not permitted to be imported for home consumption, except when the average prices of the several sorts of British corn were as follows: viz. wheat, 80*s.* per quarter; rye, peas, and beans, 53*s.*; barley, bear, or bigg, 40*s.*; and oats, 26*s.*: and all importation of corn from any of the British plantations in North America was forbidden, except when the average home prices were at or under — wheat, 67*s.* per quarter; rye, peas, and beans, 44*s.*; barley, bear, or bigg, 33*s.*; and oats, 22*s.*

The agriculturists confidently expected that this act would immediately raise prices, and render them steady at about 80*s.* But, for reasons which will be afterwards stated, these expectations were entirely disappointed; and a more ruinous fluctuation of prices took place during the period it was in existence, than in any previous period of our recent history. In 1821, when prices had sunk very low, a committee of the House of Commons was appointed to inquire into the causes of the depressed state of agriculture, and to report their observations thereon. This committee, after ex-

amining a number of witnesses, drew up a report, which, though not free from error, is a valuable document. It contains a forcible exposition of the pernicious influence of the law of 1815, of which it suggested several important modifications. These, however, were not adopted; and as the low prices, and consequent distress of the agriculturists, continued, the subject was brought under the consideration of parliament in the following year. After a good deal of discussion, a new act was then passed (3 Geo. 4. c. 60.), which enacted, that after prices had risen to the limit of free importation fixed by the act of 1815, that act was to cease and the new statute to come into operation. This statute lowered the prices fixed by the act of 1815, at which importation could take place for home consumption, to the following sums, viz. —

	For corn not of the British Possessions in North America.	For Corn of the British Possessions in North America.
Wheat	70*s.* per quarter.	66*s.* per quarter.
Rye, peas, and beans	46*s.* —	39*s.* —
Barley, bear, or bigg	35*s.* —	30*s.* —
Oats	25*s.* —	20*s.* —

But, in order to prevent any violent oscillation of prices from a large supply of grain being suddenly thrown into the market, it was enacted, that a duty of 17*s.* a quarter should be laid on all wheat imported from foreign countries during the first 3 months after the opening of the ports, if the price was between 70*s.* and 80*s.* a quarter, and of 12*s.* afterwards; that if the price was between 80*s.* and 85*s.*, the duty should be 10*s.* for the first 3 months, and 5*s.* afterwards; and that if the price should exceed 85*s.*, the duty should be constant at 1*s.*; and proportionally for other sorts of grain.

This act, by preventing importation until the home price rose to 70*s.*, and then loading the quantities imported between that limit and the limit of 85*s.* with heavy duties, was certainly more favourable to the views of the agriculturists than the act of 1815. But, unluckily for them, the prices of no species of corn, except barley, were sufficiently high, while this act existed, to bring it into operation.

In 1825, the first approach was made to a better system, by permitting the importation of wheat from British North America, without reference to the price at home, on payment of a duty of 5*s.* a quarter. But this act was passed with difficulty, and was limited to one year's duration.

Owing to the drought that prevailed during the summer of 1826, there was every prospect that there would be a great deficiency in the crops of that year; and, in order to prevent the disastrous consequences that might have taken place, had importation been prevented until the season was too far advanced for bringing supplies from the great corn markets in the north of Europe, his Majesty was authorised to admit 500,000 quarters of foreign wheat on payment of such duties as the order in council for its importation should declare. And when it was ascertained that the crops of oats, peas, &c. were greatly below an average, ministers issued an order in council, on their own responsibility, on the 1st of September, authorising the immediate importation of oats on payment of a duty of 2*s.* 2*d.* a boll; and of rye, peas, and beans, on payment of a duty of 3*s.* 6*d.* a quarter. A considerable quantity of oats was imported under this order, the timely appearance of which had undoubtedly a very considerable effect in mitigating the pernicious consequences arising from the deficiency of that species of grain. Ministers obtained an indemnity for this order on the subsequent meeting of parliament.

Nothing could more strikingly evince the impolicy of the acts of 1815 and 1822, than the necessity, under which the legislature and government had been placed, of passing the temporary acts and issuing the orders alluded to. The more intelligent portion of the agriculturists began, at length, to perceive that the corn laws were not really calculated to produce the advantages that they had anticipated; and a conviction that increased facilities should be given to importation became general throughout the country. The same conviction made considerable progress in the House of Commons; so much so, that several members who supported the measures adopted in 1815 and 1822, expressed themselves satisfied that the principle of exclusion had been carried too far, and that a more liberal system should be adopted. Ministers having participated in these sentiments, Mr. Canning moved a series of resolutions, as the foundation of a new corn law, on the 1st of March, 1827, to the effect that foreign corn might always be imported, free of duty, in order to be warehoused; and that it should always be admissible for home consumption upon payment of certain duties. Thus, in the instance of wheat, it was resolved that, when the home price was at or above 70*s.* a quarter, the duty should be a fixed one of 1*s.*; and that for every shilling that the price fell below 70*s.* a duty of 2*s.* should be imposed; so that when the price was at 69*s.* the duty on importation was to be 2*s.*, when at 68*s.* the duty was to be 4*s.*, and so on. The limit at which the constant duty of 1*s.* a quarter was to take place in the case of barley was originally fixed at 37*s.*; but it was subsequently raised to 40*s.*, the duty increasing by 1*s.* 6*d.* for every 1*s.* when the price fell below that limit. The

limit at which the constant duty of 1*s.* a quarter was to take place in the case of oats was originally fixed at 28*s.*; but it was subsequently raised to 33*s.*, the duty increasing at the rate of 1*s.* a quarter for every shilling that the price fell below that limit. The duty on colonial wheat was fixed at 6*d.* the quarter when the home price was above 65*s.*; and when the price was under that sum the duty was constant at 5*s.*; the duties on other descriptions of colonial grain were similar. These resolutions were agreed to by a large majority; and a bill founded on them was subsequently carried through the House of Commons. Owing, however, to the change of ministers, which took place in the interim, several peers, originally favourable to the bill, and some, even, who assisted in its preparation, saw reason to become amongst its most violent opponents; and a clause moved by the Duke of Wellington, interdicting all importation of foreign corn until the home price exceeded 66*s.* having been carried in the Lords, ministers gave up the bill, justly considering that such a clause was entirely subversive of its principle.

A new set of resolutions with respect to the corn trade were brought forward in 1828 by Mr. Charles Grant (now Lord Glenelg). They were founded on the same principles as those which had been rejected during the previous session. But the duty was not made to vary equally, as in Mr. Canning's resolutions, with every equal variation of price; it being 23*s.* 8*d.* when the home price was 64*s.* the Imperial quarter; 16*s.* 8*d.* when it was 69*s.*; and 1*s.* only when it was at or above 73*s.* After a good deal of debate, Mr. Grant's resolutions were carried, and embodied in the act 9 Geo. 4. c. 60.

The crops having been deficient in 1829 and 1830, there was a large importation of corn in these years, its average price being at the same time about 65*s.* a quarter. But the crops from 1831 to 1836 having been more than usually abundant, importation almost wholly ceased, and the price of wheat sunk in 1835 to 39*s.* 4*d.* a quarter, being less than it had been in any previous year since 1776. In consequence of this succession of good harvests and low prices, the corn laws ceased for a while to attract any considerable portion of the public attention, and an impression began to gain ground that the improvement of agriculture was so very rapid, that, despite the increase of population and the existence of the corn laws, our prices would fall to about the level of those of the Continent. But the cycle of favourable seasons having terminated in 1837, the crops of that and the succeeding 5 years were considerably deficient; so much so that prices rose in 1839 to 70*s.* 8*d.* a quarter, the importations in that and the 3 following years being also very large. This increase in the price of corn, combined with the depressed state of the commerce of the country, originating in the pecuniary revulsion in the U. States and other causes, again attracted a great deal of attention to the corn laws; and the oppressive magnitude and injurious operation of the duties were very strongly animadverted upon at public meetings in the manufacturing towns and elsewhere. The subject having been at last forced on the attention of government, ministers, in 1841, actuated partly by a conviction of the mischievous influence of the duties, and partly, no doubt, by a wish to strengthen their declining popularity, brought forward a plan for remodelling the corn laws, by repealing the sliding scale and imposing in its stead a constant duty of 8*s.* a quarter on wheat, and in proportion on other grain. But, having no majority in parliament, ministers were obliged to resort to a dissolution; and their proposal having, notwithstanding its moderation, excited the greatest apprehensions among the agriculturists, without being very warmly supported by the other classes, a new parliament was returned, which gave a decided majority to the opposition. It was, however, felt on all hands to be necessary to make some considerable change in the existing law, and in 1842 a measure was introduced in that view by Sir Robert Peel, which was subsequently passed into a law, 5 Victoria, 2d Sess. c. 14., by which the corn trade is now regulated.

Unfortunately, however, this measure, like that by which it was preceded, proceeds on the principle of making the duties vary with the variations in the price of corn; and though the duties are decidedly less oppressive than those imposed by the 9 Geo. 4. c. 60., still they are in no ordinary degree objectionable, as well from their too great magnitude as from their adding to the natural insecurity of the corn trade, and increasing the chances and severity of fluctuations. We need not, therefore, be surprised that the new measure has given but little satisfaction, and that continued efforts have been made to have the trade placed on a more liberal footing.

Before closing this imperfect sketch of the history of the corn laws, we may observe that in 1842 the legislature of Canada passed a law imposing a duty of 3*s.* a quarter on all wheat imported into the province, unless from the U. Kingdom, stating in the preamble to this act, that it was passed in the expectation and belief that a corresponding reduction would be made in the duties on wheat and wheat-flour imported into the U. Kingdom from Canada. And conformably to this anticipation, the act 6 & 7 Vict. c. 29., passed in the course of the present year (1843), has reduced the duty on wheat imported

from Canada to 1*s.* a quarter, and proportionally on wheat-flour. This act met with a good deal of opposition from the agricultural interest in this country, who contended that it would lead to the introduction of unlimited supplies of corn from the U. States at a duty of only 4*s.* a quarter, or, allowing for smuggling, at perhaps only half that amount. We believe, however, that the expectations of any large supply of corn coming to us from this quarter will most likely turn out to be destitute of any good foundation. The wheat brought into Canada from the U. States must be ground in the former before it can be shipped as flour for England. And it is farther to be observed, that instead of exporting, the New England states are large importers of corn, and that the U. States corn imported into England under this law must be derived partly from the western parts of the state of New York, bordering on lake Ontario, but principally, no doubt, from the northern parts of Ohio, bordering on lake Erie. The navigation thence to Montreal, partly by natural and partly by artificial channels, is tedious, difficult, and expensive; and when the wheat has arrived at the latter or at Quebec, and been ground, the voyage to England is longer, the risk greater, and the rate of freight materially higher than from New York or Baltimore. It is, therefore, we apprehend, quite idle to suppose that any very large quantity of American flour should reach us by this channel. The fact is, that prices in America are too high, and the voyage too distant, to admit of her supplying us under any arrangement of duties, except in peculiarly dear years, with any considerable supply of corn. In this respect the countries in the N. of Europe have a decided advantage over America.

II. Principles of the Corn Laws.

1. *Internal Corn Trade.* — It is needless to take up the reader's time by endeavouring to prove by argument the advantage of allowing the free conveyance of corn from one province to another. Every one sees that this is indispensable, not only to the equal distribution of the supplies of food over the country, but to enable the inhabitants of those districts that are best fitted for the raising and fattening of cattle, sheep, &c. to addict themselves to these or other necessary occupations not directly connected with the production of corn. We shall, therefore, confine the few remarks we have to make on this subject, to the consideration of the influence of the speculations of the corn merchants in buying up corn in anticipation of an advance. Their proceedings in this respect, though of the greatest public utility, have been the principal causes of that odium to which they have been long exposed.

Were the harvests always equally productive, nothing would be gained by storing up supplies of corn; and all that would be necessary would be to distribute the crop equally throughout the country and throughout the year. But such is not the order of nature. The variations in the aggregate produce of a country in different seasons, though not perhaps so great as are commonly supposed, are still very considerable; and experience has shown that two or three unusually luxuriant harvests seldom take place in succession; or that when they do, they are invariably followed by those that are deficient. The speculators in corn anticipate this result. Whenever prices begin to give way in consequence of an unusually luxuriant harvest, speculation is at work. The more opulent farmers withhold either the whole or a part of their produce from market; and the more opulent dealers purchase largely of the corn brought to market, and store it up in expectation of a future advance. And thus, without intending to promote any one's interest but their own, speculators in corn become the benefactors of the public. They provide a reserve stock against those years of scarcity which are sure at no distant period to recur; while, by withdrawing a portion of the redundant supply from immediate consumption, prices are prevented from falling so low as to be injurious to the farmers, or at least are maintained at a higher level than they would otherwise have reached; provident habits are maintained amongst the people; and that waste and extravagance are checked, which always take place in plentiful years, but which would be carried to a much greater extent if the whole produce of an abundant crop were to be consumed within the season.

It is, however, in scarce years that the speculations of the corn merchants are principally advantageous. Even in the richest countries, a very large proportion of the individuals engaged in the business of agriculture are comparatively poor, and are totally without the means of withholding their produce from market, in order to speculate upon any future advance. In consequence the markets are always most abundantly supplied with produce immediately after harvest; and in countries where the merchants engaged in the corn trade are not possessed of large capitals, or where their proceedings are fettered and restricted, there is then, almost invariably, a heavy fall of prices. But as the vast majority of the people buy their food in small quantities, or from day to day, as they want it, their consumption is necessarily extended or contracted according to its price at the time. Their views do not extend to the future; they have no means of

judging whether the crop is or is not deficient. They live, as the phrase is, from hand to mouth; and are satisfied if, in the mean time, they obtain abundant supplies at a cheap rate. But it is obvious, that were there nothing to control or counteract this improvidence, the consequence would very often be fatal in the extreme. The crop of one harvest must support the population till the crop of the other harvest has been gathered in; and if that crop should be deficient — if, for instance, it should only be adequate to afford, at the usual rate of consumption, a supply of 9 or 10 months' provisions instead of 12 — it is plain that, unless the price were so raised immediately after harvest as to enforce economy, and put, as it were, the whole nation on short allowance, the most dreadful famine would be experienced previously to the ensuing harvest. Those who examine the accounts of the prices of wheat and other grain in England, collected by Bishop Fleetwood and Sir F. M. Eden, will meet with abundant proofs of the accuracy of what has now been stated. In those remote periods when the farmers were generally without the means of withholding their crops from market, and when the trade of a corn dealer was proscribed, the utmost improvidence was exhibited in the consumption of grain. There were then, indeed, very few years in which a considerable scarcity was not experienced immediately before harvest, and many in which there was an absolute famine. The fluctuations of price exceeded every thing of which we can now form an idea; the price of wheat and other grain being 4 or 5 times as high in June and July as in September and October. Thanks, however, to the increase of capital in the hands of the large farmers and dealers, and to the freedom given to the operations of the corn merchants, we are no longer exposed to such ruinous vicissitudes. Whenever the dealers, who, in consequence of their superior means of information, are better acquainted with the real state of the crops than any other class of persons, find the harvest likely to be deficient, they raise the price of the corn they have warehoused, and bid against each other for the corn which the farmers are bringing to market. In consequence of this rise of prices, all ranks and orders, but especially the lower, who are the great consumers of corn, find it indispensable to use greater economy, and to check all improvident and wasteful consumption. Every class being thus immediately put upon short allowance, the pressure of the scarcity is distributed equally throughout the year; and instead of indulging, as was formerly the case, in the same scale of consumption as in seasons of plenty, until the supply became altogether deficient, and then being exposed without resource to the attacks of famine and pestilence, the speculations of the corn merchants warn us of our danger, and compel us to provide against it.

It is not easy to suppose that these proceedings of the corn merchants should ever be injurious to the public. It has been said that in scarce years they are not disposed to bring the corn they have purchased to market until it has attained an exorbitant price, and that the pressure of the scarcity is thus often very much aggravated; but there is no real ground for any such statement. The immense amount of capital required to store up any considerable quantity of corn, and the waste to which it is liable, render most holders disposed to sell as soon as they can realise a fair profit. In every extensive country in which the corn trade is free, there are infinitely too many persons engaged in it to enable any sort of combination or concert to be formed amongst them; and though it were formed, it could not be maintained for an instant. A large proportion of the farmers and other small holders of corn are always in straitened circumstances, more particularly if a scarce year has not occurred so soon as they expected; and they are consequently anxious to relieve themselves, as soon as prices rise, of a portion of the stock on their hands. Occasionally, indeed, individuals are found, who retain their stocks for too long a period, or until a reaction takes place, and prices begin to decline. But instead of joining in the popular cry against such persons, every one who takes a dispassionate view of the matter will perceive that, inasmuch as their miscalculation must, under the circumstances supposed, be exceedingly injurious to themselves, we have the best security against its being carried to such an extent as to be productive of any material injury or even inconvenience to the public. It should also be borne in mind, that it is rarely, if ever, possible to determine beforehand, when a scarcity is to abate in consequence of new supplies being brought to market; and had it continued a little longer, there would have been no miscalculation on the part of the holders. At all events, it is plain that, by declining to bring their corn to market, they preserved a resource on which, in the event of the harvest being longer delayed than usual, or of any unfavourable contingency taking place, the public could have fallen back; so that, instead of deserving abuse, these speculators are most justly entitled to every fair encouragement and protection. A country in which there is no considerable stock of grain in the barnyards of the farmers, or in the warehouses of the merchants, is in the most perilous situation that can easily be imagined, and may be exposed to the severest privations, or even famine. But so long as the sagacity, the miscalculation, or the avarice of merchants and dealers retain a stock of grain in the warehouses, this last extremity cannot take place. By refusing to sell it till it has reached a very high price, they put an

effectual stop to all sorts of waste, and husband for the public those supplies which they could not have so frugally husbanded for themselves.

We have already remarked that the last remnant of the shackles imposed by statute on the freedom of the internal corn dealer was abolished in 1773. It is true that engrossing, forestalling, and regrating — (see ENGROSSING, &c.) — are still held to be offences at common law; but there is very little probability of any one being in future made to answer for such ideal offences.

2. *Exportation to Foreign Countries.* — The fallacy of the notion so long entertained, that the prevention of exportation was the surest method of increasing plenty at home, is obvious to every one who has reflected upon such subjects. The markets of no country can ever be steadily and plentifully supplied with corn, unless her merchants have power to export the surplus supplies with which they may be occasionally furnished. When a country without the means of exporting grows nearly her own average supplies of corn, an abundant crop, by causing a great overloading of the market, and a heavy fall of price, is as injurious to the farmer as a scarcity. It may be thought, perhaps, that the greater quantity of produce in abundant seasons will compensate for its lower price; but this is not the case. It is uniformly found that variations in the quantity of corn exert a much greater influence over prices, than equal variations in the quantity of almost any thing else offered for sale. Being the principal necessary of life, when the supply of corn happens to be less than ordinary, the mass of the people make very great, though unavailing, exertions, by diminishing their consumption of other and less indispensable articles, to obtain their accustomed supplies of this prime necessary; so that its price rises much more than in proportion to the deficiency. On the other hand, when the supply is unusually large, the consumption is not proportionally extended. In ordinary years, the bulk of the population is about adequately fed; and though the consumption of all classes be somewhat greater in unusually plentiful years, the extension is considerable only among the lowest classes, and in the feeding of horses. Hence it is that the increased supply at market, in such years, goes principally to cause a glut, and consequently a ruinous decline of prices. These statements are corroborated by the widest experience. Whenever there is an inability to export, from whatever cause it may arise, an unusually luxuriant crop is uniformly accompanied by a very heavy fall of price, and severe agricultural distress; and when two or three such crops happen to follow in succession, the ruin of a large proportion of the farmers is completed.

If the mischiefs resulting from the want of power to export stopped here, they might, though very great, be borne; but they do not stop here. It is idle to suppose that a system ruinous to the producers can be otherwise to the consumers. A glut of the market, occasioned by luxuriant harvests, and the want of power to export, cannot be of long continuance: for, while it continues, it can hardly fail, by distressing all classes of farmers, and causing the ruin of many, to give a check to every species of agricultural improvement, and to lessen the extent of land in tillage. When, therefore, an unfavourable season recurs, the reaction is, for the most part, appalling. The supply, being lessened, not only by the badness of the season, but also by a diminution of the quantity of land in crop, falls very far below an average; and a severe scarcity, if not an absolute famine, is most commonly experienced. It is, therefore, clear, that if a country would render herself secure against famine and injurious fluctuations of price, she must give every possible facility to exportation in years of unusual plenty. If she act upon a different system, — if her policy make exportation in such years impracticable, or very difficult, — she will infallibly render the bounty of Providence an injury to her agriculturists; and two or three abundant harvests in succession will be the forerunners of scarcity and famine.

3. *Bounty on the Exportation of Corn.* — In Great Britain, as already observed, we have not only been allowed to export for a long series of years, but from the Revolution down to 1815 a bounty was given on exportation, whenever the home prices were depressed below certain limits. This policy, however, erred as much on the one hand as a restriction on exportation errs on the other. It causes, it is true, an extension of the demand for corn: but this greater demand is not caused by natural, but by artificial means; it is not a consequence of any really increased demand on the part of the foreigner, but of our furnishing the exporters of corn with a *bonus*, in order that they may sell it abroad below its natural price! To suppose that a proceeding of this sort can be a public advantage, is equivalent to supposing that a shopkeeper may get rich by selling his goods below what they cost. (See BOUNTY.)

4. *Importation from Foreign Countries.* — If a country were, like Poland or Russia, uniformly in the habit of exporting corn to other countries, a restriction on importation would be of no material consequence; because, though such restriction did not exist, no foreign corn would be imported, unless its ports were so situated as to serve for an *entrepôt*. A restriction on importation is sensibly felt only when it is enforced in a country which, owing to the greater density of its population, the limited extent of its

fertile land, or any other cause, would, either occasionally or uniformly, import. It is familiar to the observation of every one, that a total failure of the crops is a calamity that but rarely occurs in an extensive kingdom; that the weather which is unfavourable to one description of soil, is generally favourable to some other description; and that, except in anomalous cases, the total produce is not very different. But what is thus generally true of single countries, is always true of the world at large. History furnishes no single instance of a universal scarcity; but it is uniformly found, that when the crops in a particular country are unusually deficient, they are proportionally abundant in some other quarter. It is clear, however, that a restriction on importation excludes the country which enacts it from profiting by this beneficent arrangement. She is thrown entirely on her own resources. Under the circumstances supposed, she has nothing to trust to for relief but the reserves in her warehouses; and should these be inadequate to meet the exigency of the crisis, there are apparently no means by which she can escape experiencing all the evils of scarcity, or, it may be, of famine. A country deprived of the power to import is unable to supply the deficiencies of her harvests by the surplus produce of other countries; so that her inhabitants may starve amidst surrounding plenty, and suffer the extreme of scarcity, when, but for the restrictions on importation, they might enjoy the greatest abundance. If the restriction be not absolute, but conditional; if, instead of absolutely excluding foreign corn from the home markets, it merely loads it with a duty, the degree in which it will operate to increase the scarcity and dearth will depend on the magnitude of that duty. If the duty be constant and moderate, it may not have any very considerable effect in discouraging importation; but if it be fluctuating and heavy, it will, by falsifying the speculations of the merchants, and making a corresponding addition to the price of the corn imported, be proportionally injurious. In whatever degree foreign corn may be excluded in years of deficient crops, to the same extent must prices be artificially raised, and the pressure of the scarcity rendered so much the more severe.

Such would be the disastrous influence of a restriction on importation in a country which, were there no such obstruction in the way, would sometimes import and sometimes export. But its operation would be infinitely more injurious in a country which, under a free system, would uniformly import a portion of her supplies. The restriction, in this case, has a twofold operation. By preventing importation from abroad, and forcing the population to depend for subsistence on corn raised at home, it compels recourse to comparatively inferior soils; and thus, by increasing the cost of producing corn above its cost in other countries, adds proportionally to its average price. The causes of fluctuation are, in this way, increased in a geometrical proportion; for, while the prevention of importation exposes the population to the pressure of want whenever the harvest happens to be less productive than usual, it is sure, at the same time, by raising average prices, to hinder exportation in a year of unusual plenty, until the home prices fall ruinously low. It is obvious, therefore, that a restriction of this sort must be alternately destructive of the interests of the consumers and producers. It injures the former by making them pay, at an average, an artificially increased price for their food, and by exposing them to scarcity and famine whenever the home crop proves deficient; and it injures the latter, by depriving them of the power to export in years of unusual plenty, and by overloading the market with produce, which, under a free system, would have met with an advantageous sale abroad.

The principle thus briefly explained, shows the impossibility of permanently keeping up the home prices by means of restrictions on importation, at the same time that it affords a clue by which we may trace the causes of most part of the agricultural distress experienced in this country since the peace. The real object of the Corn Law of 1815 was to keep up the price of corn to 80*s.* a quarter; but to succeed in this, it was indispensable not only that foreign corn should be excluded when prices were under this limit, but that the markets should never be overloaded with corn produced at home: for it is clear, according to the principle already explained, that if the supply should in ordinary years be sufficient to feed the population, it must, in an unusually abundant year, be more than sufficient for that purpose; and when, in such a case, the surplus is thrown upon the market, it cannot fail, in the event of our average prices being considerably above the level of those of the surrounding countries, to cause a ruinous depression. Now, this was the precise situation of this country at the end of the war. Owing partly to the act of 1804, but far more to the difficulties in the way of importation, and the depreciation of the currency, prices attained to an extraordinary elevation from 1809 to 1814, and gave such a stimulus to agriculture, that we grew, in 1812 and 1813, sufficient corn for our own supply. And, such being the case, it is clear, though our ports had been hermetically sealed against importation from abroad, that the first luxuriant crop must have occasioned a ruinous decline of prices. It is the exclusion, not the introduction, of foreign corn that has caused the distress of the agriculturists; for it is this exclusion that has forced up the price of corn in this country,

in scarce and average years, to an unnatural level, and that, consequently, renders exportation in favourable seasons impossible, without such a fall of prices as is most disastrous to the farmer. It may be mentioned, in proof of what is now stated, that the average price of wheat in England and Wales in 1814 was 74*s.* 4*d.* a quarter, and in 1815 it had fallen to 65*s.* 7*d.* But as these prices would not indemnify the occupiers of the poorest lands brought under tillage during the previous high prices, they were gradually relinquishing their cultivation. A considerable portion of them had been converted into pasture; rents had been generally reduced, and wages had begun to decline; but the legislature having prohibited the importation of foreign corn, the operation of this natural principle of adjustment was unfortunately counteracted, and the price of 1816 rose to 78*s.* 6*d.* This rise was, however, insufficient to occasion any new improvement; and as foreign corn was now excluded, and large tracts of bad land had been thrown out of cultivation, the supply was so much diminished, that, notwithstanding the increase in the value of money, prices rose in 1817, partly, no doubt, in consequence of the bad harvest of the previous year, to 96*s.* 11*d.*; and in 1818 to 86*s.* 3*d.* These high prices had their natural effect. They revived the drooping spirits of the farmers, who imagined that the corn law was, at length, beginning to produce the effects anticipated from it, and that the golden days of 1812, when wheat sold for 126*s.* 6*d.* a quarter, were about to return! But this prosperity carried in its bosom the seeds of future mischief. The increased prices necessarily occasioned a fresh extension of tillage; capital was again applied to the improvement of the soil; and this increase of tillage, conspiring with favourable seasons, and the impossibility of exportation, sunk prices to such a degree, that they fell, in October, 1822, so low as 38*s.* 1*d.*, the average price of that year being only 44*s.* 7*d.*

It is thus demonstrably certain, that the recurrence of periods of distress, similar to those which have been experienced by the agriculturists of this country since the peace, cannot be warded off by restricting or prohibiting importation. A free corn trade is the only system that can give them that security against fluctuations that is so indispensable. The increased importation that would take place, were the ports always open, as soon as any considerable deficiency in the crops was apprehended, would prevent prices from rising to an oppressive height; while, on the other hand, when the crops were unusually luxuriant, a ready outlet would be found for the surplus in foreign countries, without its occasioning any very heavy fall. To expect to combine steadiness of prices with restrictions on importation, is to expect to reconcile what is contradictory and absurd. The higher the limit at which the importation of foreign corn into a country like England is fixed, the greater will be the oscillation of prices. If we would secure for ourselves abundance, and avoid fluctuation, we must renounce all attempts at exclusion, and be ready to deal in corn, as we ought to be in every thing else, on fair and liberal principles.

That the restrictions imposed on the foreign corn trade during the last 12 years should not have been productive of more disastrous consequences than those that have actually resulted from them, is partly and principally to be ascribed to the unparalleled improvement of tillage in Great Britain during the last 20 years, and partly, also, to the great increase that has taken place in the imports from Ireland. Previously to 1806, when a perfectly free corn trade between Great Britain and Ireland was for the first time established, the yearly imports did not amount to 400,000 quarters, whereas they now amount to nearly 3,000,000; and any one who has ever been in Ireland, or is aware of the wretched state of agriculture in it, and of the amazing fertility of the soil, must be satisfied that a very slight improvement would occasion an extraordinary increase in the imports from that country; and it is believed by those best qualified to form an opinion on such a subject, that the check that has latterly been given to the pernicious practice of splitting farms, and the increase of population, has, in this respect, already had great influence, and that it will eventually lead to the most material improvements. Hence it is by no means improbable, as previously stated, that the rapid spread of improvement at home, and the growing imports from Ireland, may, at no distant period, reduce our prices to the level of those of the Continent, and even render us an occasionally exporting country. These, however, are contingent and uncertain results; and supposing them to be ultimately realised, the corn laws must in the mean time be productive of great inconvenience, and must, in all time to come, materially aggravate the misery inseparable from bad harvests.

Nothing but the great importance of the subject could excuse us for dwelling so long on what is so very plain. To facilitate production, and to make commodities cheaper and more easily obtained, are the grand motives which stimulate the inventive powers, and which lead to the discovery and improvement of machines and processes for saving labour and diminishing cost; and it is plain that no system of commercial legislation deserves to be supported, which does not conspire to promote the same objects: but a restriction on the importation of corn into a country like England, which has made a great comparative advance in population and manufacturing industry, is diametrically

opposed to these principles. The density of our population is such, that any exclusion of foreign corn forces us to resort to soils of less fertility than those that are under cultivation in the surrounding countries; and, in consequence, our average prices are comparatively high. We have resolved that our people should not confine their attention to the culture of the better class of soils, and to those branches of manufacturing and commercial industry in which they have a decided advantage over every other country; but that they should, also, be made to force comparatively barren soils that yield but a scanty return for their outlay. If we could, by laying out 1000*l.* on the manufacture of cottons or hardware, produce a quantity of these articles that would exchange for 500 quarters of American or Polish wheat; and if the same sum, were it expended in cultivation in this country, would not produce more than 400 quarters; the prevention of importation occasions an obvious sacrifice of 100 out of every 500 quarters consumed in the empire; or, which is the same thing, it occasions an artificial advance of 20 per cent. in the price of corn. We do not mean to say that this statement exactly represents the amount of injury inflicted by the corn laws; but, at all events, it clearly illustrates the principle which they embody. In a public point of view, the impolicy of such a system is obvious; but it seems, at first sight, as if it were advantageous to the landlords. The advantage is, however, merely apparent: at bottom there is no real difference between the interests of the landlords and those of the rest of the community. It would be ridiculous, indeed, to imagine for a moment that the landlords can be benefited by a system in which those fluctuations of prices, so subversive of all agricultural prosperity, are inherent; but though these could be got rid of, the result would be the same. The prosperity of agriculture must always depend upon, and be determined by, the prosperity of other branches of industry; and any system which, like the corn laws, is injurious to the latter, cannot but be injurious to the former. Instead of being publicly advantageous, high prices are in *every case* distinctly and completely the reverse. The smaller the sacrifice for which any commodity can be obtained, so much the better. When the labour required to produce, or the money required to purchase, a sufficient supply of corn, is diminished, it is as clear as the sun at noon-day that more labour or money must remain to produce or purchase the other necessaries, conveniences, and amusements of human life, and that the sum of national wealth and comforts must be proportionally augmented. Those who suppose that a rise of prices can ever be a means of improving the condition of a country might, with equal reason, suppose that it would be improved by throwing its best soils out of cultivation, and destroying its most powerful machines. The opinions of such persons are not only opposed to the plainest and best established principles, but they are opposed to the obvious conclusions of common sense, and the universal experience of mankind.

Experience of the injurious effects resulting from the corn laws has induced many that were formerly their zealous advocates to come round to a more liberal way of thinking. It would, however, be unjust not to mention that there has always been a large and respectable party amongst the landlords, opposed to all restrictions on the trade in corn, and who have uniformly thought that their interests, being identified with those of the public, would be best promoted by the abolition of restrictions on importation. A protest expressive of this opinion, subscribed by 10 peers, was entered on the Journals of the House of Lords, against the corn law of 1815. This document is said to have been drawn up by the late Lord Grenville, distinguished as an enlightened advocate of sound commercial principles. Its reasoning is so clear and satisfactory, that we are sure we shall gratify our readers, as well as strengthen the statements previously made, by laying it before them.

"*Dissentient.*—I. Because we are adverse in principle to all new restraints on commerce. We think it certain that public prosperity is best promoted by leaving uncontrolled the free current of national industry; and we wish rather, by well considered steps, to bring back our commercial legislation to the straight and simple line of wisdom, than to increase the deviation by subjecting additional and extensive branches of the public interest to fresh systems of artificial and injurious restrictions.

"II. Because we think that the great practical rule, of leaving all commerce unfettered, applies *more peculiarly*, and on still stronger grounds of justice as well as policy, to the corn trade than to any other. Irresistible, indeed, must be that necessity which could, in our judgment, authorise the legislature to tamper with the sustenance of the people, and to impede the free purchase of that article on which depends the existence of so large a portion of the community.

"III. Because we think that the expectations of ultimate benefit from this measure are founded on a delusive theory. We cannot persuade ourselves that this law will ever contribute to produce plenty, cheapness, or steadiness of price. So long as it operates at all, its effects must be the opposite of these. *Monopoly is the parent of scarcity, of dearness, and of uncertainty.* To cut off any of the sources of supply, can only tend to lessen its abundance; to close against ourselves the cheapest market for any commodity, must enhance the price at which we purchase it; and to confine the consumer of corn to the produce of his own country, is to refuse to ourselves the benefit of that provision which Providence itself has made for equalising to man the variations of climate and of seasons.

"IV. But whatever may be the future consequences of this law at some distant and uncertain period, we see with pain that these hopes must be purchased at the expense of a great and present evil. To compel the consumer to purchase corn dearer at home than it might be imported from abroad, is the immediate practical effect of this law. In this way alone can it operate. Its present protection, its promised extension of agriculture, must result (if at all) from the profits which it creates by keeping up the price of corn to an artificial level. These future benefits are the consequences expected, but, as we con-

fidently believe, erroneously expected, from giving a bounty to the grower of corn, by a tax levied on its consumer.

"V. Because we think the adoption of any permanent law for such a purpose, required the fullest and most laborious investigation. Nor would it have been sufficient for our satisfaction, could we have been convinced of the general policy of a hazardous experiment. A still further inquiry would have been necessary to persuade us that the present moment is fit for its adoption. In such an inquiry, we must have had the means of satisfying ourselves what its immediate operation will be, as connected with the various and pressing circumstances of public difficulty and distress with which the country is surrounded; with the state of our circulation and currency, of our agriculture and manufactures, of our internal and *external* commerce, and, above all, with the condition and reward of the industrious and labouring classes of our community.

"On all these particulars, as they respect this question, we think that parliament is almost wholly uninformed; on all we see reason for the utmost anxiety and alarm from the operation of this law.

"Lastly. Because, if we could approve of the principle and purpose of this law, we think that no sufficient foundation has been laid for its details. The evidence before us, unsatisfactory and imperfect as it is, seems to us rather to disprove than to support the propriety of the high price adopted as the standard of importation, and the fallacious mode by which that price is to be ascertained. And on all these grounds we are anxious to record our dissent from a measure so precipitate in its course, and, as we fear, so injurious in its consequences."

Attempts have sometimes been made to estimate the pecuniary burden which the restrictions on importation entail in ordinary years upon the country. This, however, is a subject with respect to which it is not possible to obtain any accurate data. But supposing the total quantity of corn annually produced in Great Britain and Ireland to amount to 62,000,000 quarters, every shilling that is added to its price by the corn laws is equivalent to a tax on corn of 3,100,000*l.*; and estimating the average rise on all sorts of grain at 3*s.* a quarter, the total sum will be 9,300,000*l.* So great a quantity of corn is, however, consumed by the agriculturists themselves, as food, in seed, the keep of horses, &c., that not more than a half, perhaps, of the whole quantity produced is brought to market. If we are nearly right in this hypothesis, and in the previous estimates, it will follow that the restrictions cost the classes not engaged in agriculture no less than 4,650,000*l.*, exclusive of their other pernicious consequences. Of this sum a *fifth*, probably, or 930,000*l.*, may go to the landlords as rent; and this is *all* that the agriculturists can be said to gain by the system, for the additional price received by the farmer on that portion of the produce which is exclusive of rent is no more than the ordinary return for his capital and labour. His profits, indeed, like those of all other capitalists, instead of being increased by this system, are really diminished by it; and though, nominally at least, it somewhat increases the rents of the landlords, it is, notwithstanding, abundantly certain that it is anything but advantageous to them. It would require a far larger sum to balance the injury which fluctuations of price occasion to their tenants, and the damage done to their estates by over-cropping when prices are high, than all that is derived from the restrictions.

5. *Duties on Importation.* — A duty may be equitably imposed on imported corn, for two objects; that is, either for the sake of revenue, or to balance any excess of taxes laid on the agriculturists over those laid on the other classes. — (See the edition of *Wealth of Nations* by the author of this work, 1 vol. 8vo. pp. 522—524.) With respect, however, to a duty imposed for the sake of revenue, it may be doubted whether corn be a proper subject for taxation. At all events, a duty for such an object should be exceedingly moderate. It would be most inexpedient to attempt to add largely to the revenue by laying heavy duties on the prime necessary of life.

If it be really true that agriculture is more heavily taxed than any other Branch of industry, the agriculturists are entitled to demand that a duty be laid on foreign corn when imported corresponding to the *excess* of burdens affecting them. It has been doubted, however, whether they are in this predicament. But though the question be not quite free from difficulty, it would be easy to show, were this a proper place for such inquiries, that, owing to the local and other direct and indirect burdens laid on the land, those occupying it are really subjected to heavier taxes than any other class. It is difficult, or rather, perhaps, impossible, to estimate with any degree of precision what the *excess* of taxes laid on the agriculturists beyond those laid on manufacturers and merchants may amount to: but we have elsewhere shown, that if we estimate it as making an addition of 5*s.* or 6*s.* to the quarter of wheat, we shall certainly be beyond the mark. — (*Wealth of Nations, ubi suprà.*) However, we should, in a case of this sort, reckon it safer to err on the side of too much protection than of too little; and would not, therefore, object to a fixed duty of 5*s.* or even 7*s.* a quarter being laid on wheat, and a proportional duty on other species of grain. Under such a system the ports would be always open. The duty would not be so great as to interpose any very formidable obstacle to importation. Every one would know beforehand the extent to which it would operate; at the same time that the just rights and interests of the agriculturists and of every other class would be maintained unimpaired.

When a duty is laid on the importation of foreign corn, for the equitable purpose of countervailing the peculiar duties laid on the corn raised at home, an *equivalent drawback* should be allowed on its exportation. "In allowing this drawback, we are merely returning to the farmer a tax which he has already paid, and which he must have, to

place him in a fair state of competition in the foreign market, not only with the foreign producer, but with his own countrymen who are producing other commodities. It is essentially different from a bounty on exportation, in the sense in which the word bounty is usually understood; for by a bounty, is generally meant a tax levied on the people for the purpose of rendering corn unnaturally cheap to the foreign consumer; whereas what I propose is, to sell our corn at the price at which we can really afford to produce it, and not to add to its price a tax which shall induce the foreigner rather to purchase it from some other country, and deprive us of a trade which, under a system of free competition, we might have selected." — *Ricardo on Protection to Agriculture*, p. 53.)

A duty accompanied with a drawback, as now stated, would not only be an equitable arrangement, but it would be highly for the advantage of farmers, without being injurious to any one else. The radical defect, as already shown, of the system followed from 1815 down to the present moment, in so far, at least, as respects agriculture, is, that it forces up prices in years when the harvest is deficient, while it leaves the market to be glutted when it is abundant. But while a constant duty of 5*s*. would secure to the home growers all the increase of price which the regard due to the interests of others should allow them to realise in a bad year, the drawback of 5*s*., by enabling them to export in an unusually plentiful year, would prevent the markets from being overloaded, and prices from falling to the ruinous extent that they now occasionally do. Such a plan would render the businesses of the dealers in and growers of corn comparatively secure; and would, therefore, provide for the continued prosperity of both. We are astonished that the agriculturists have not taken this view of the matter. If they be really entitled to a duty on foreign corn, on account of their being heavier taxed than the other classes of their fellow citizens (and they are not entitled to it on any other gronnd), they must also be entitled to a corresponding drawback. And it admits of demonstration, that *their* interests, as well as those of the community, would be far better promoted by such a duty and drawback as we have suggested, than they can ever be by any system of mere duties, how high soever they may be carried.

The principal objection to this plan proceeds on the assumption that it would not be possible to levy the duty when the home price became very high, and that, consequently, it would be every now and then necessary to suspend it. It might, however, be easily shown that in cases of scarcity a reasonable duty on importation would not really have any influence over prices; and that, instead of being borne by the consumers, it would then be deducted from the profits of the foreigners who supply the imported corn. But without insisting on these considerations, though they are of the essence of this question, it may, we think, be concluded on unassailable grounds, that were the ports constantly open under a moderate fixed duty and an equivalent drawback, extreme fluctuations of price would be very rare. Supposing it were enacted, that when the home price rises above a certain high level, as 70*s*., the duty should cease, the popular prejudice on the subject would be conciliated, at the same time that the clause would very seldom come into operation; and those who object that it is not fair to the farmers to deprive them of the full advantage to be derived from the highest prices, should recollect that in matters of this sort it is not always either possible, or, if possible, prudent to carry the soundest principles to an extreme; and that, generally speaking, the public interests will be better consulted by guarding against scarcity and dearth, than by securing, at all hazards, a trifling though just advantage to a particular class.

III. British Corn Trade.

1. *Quantity of Corn consumed in Great Britain.* — Attempts have sometimes been made to estimate the quantity of corn raised in a country, from calculations founded on the number of acres in tillage, and on the average produce per acre; but it is plain that no accurate account can ever be framed of the extent of land under cultivation. It is perpetually changing from year to year; and the amount of produce varies not only with the differences of seasons, but also with every improvement of agriculture. This method, therefore, is now rarely resorted to, and the growth of corn is generally estimated from the *consumption*. The conclusions deduced from this criterion must indeed be subject to error, as well from variations in the consumption, occasioned by variations in the price of corn, as from the varying extent to which other food is used. But supposing the prices of corn to be reduced to an average, if the consumption of a considerable number of persons, of all ranks and orders, and of all ages and sexes, were accurately determined, we should be able, supposing the census of the population to be nearly correct, to make a pretty close approximation to the total consumption of the country. Mr. Charles Smith, the well-informed and intelligent author of the Tracts on the Corn Trade, made many curious investigations, with a view to discover the mean annual consumption of corn; and reducing it to *the standard of wheat*, he found it to be at the rate of about *a quarter for each individual*, young and old. This estimate has been confirmed

by a variety of subsequent researches; and among others, by inquiries made during the scarcity of 1795 and 1796, by the magistrates of Suffolk, in 42 different parishes, in the view of ascertaining the average consumption of each family, which they found to correspond very closely with Mr. Smith's estimate. It is also worthy of remark, that M. Paucton, the intelligent author of the *Metrologie*, estimates the mean annual average consumption in France, when reduced to the standard of wheat, at about 10 bushels for each individual; and as the French consume more bread and less animal food than the English, this estimate affords a strong proof of the correctness of that of Mr. Smith.

Having taken the population of England and Wales in 1765 at 6,000,000, Mr. Smith reckoned the consumers of each kind of grain, the quantity consumed by each individual, and hence, the whole consumed by man, to be as follows: —

Estimated Population of England and Wales.	Average Consumption of each Person.	Consumed by Man. Qrs.
3,750,000 consumers of wheat, at 1 quarter each	-	3,750,000
739,000 do. of barley, at 1⅔ do.	-	1,016,125
888,000 do. of rye, at 1⅛ do.	-	999,900
623,000 do. of oats, at 2⅞ do.	-	1,791,225
Consumed by man	-	7,556,350
In addition to this, Mr. Smith estimated the wheat distilled, made into starch, &c.	-	90,000
Barley used in malting, &c.	-	3,417,000
Rye for hogs, &c.	-	31,000
Oats for horses, &c.	-	2,461,500
Total of home consumption	-	13,555,850
Add excess of exports over imports	-	398,624
		13,954,474
Add seed (one tenth)	-	1,395,447
Total growth of all kinds of grain in England and Wales in 1765	-	15,349,921

This estimate, it will be observed, does not include either Scotland or Ireland; and later inquiries have rendered it probable that Mr. Smith underrated the population of England and Wales by nearly 1,000,000. The most eminent agriculturists seem also to be of opinion, that the allowance for seed ought to be stated as high as a *sixth* or a *seventh*.

Mr. Chalmers, availing himself of the information respecting the numbers of the people furnished under the Population Act of 1800, estimated the total consumption of the different kinds of grain in Great Britain at that epoch at 27,185,300 quarters, whereof wheat constituted 7,676,100 quarters. The crops of 1800 and 1801 being unusually deficient, the importation in these years was proportionally great; but excluding these scarcities, the total average excess of all sorts of grain imported from Ireland and foreign countries into Great Britain over the exports had previously amounted to about 1,000,000 quarters, which, deducted from 27,185,300, leaves 26,185,300, to which if we add *one sixth* as seed, we shall have 30,549,516 quarters as the average growth of Great Britain in 1800.

According to Dr. Colquhoun, the consumption of corn in Great Britain and Ireland, in 1814, amounted to about 35,000,000 quarters. We subjoin his estimate.

Species of Grain.	Estimated Average of the Population of Great Britain and Ireland.	Each Person averaged.	Consumed by Man.	Consumed by Animals.	Used in Beer and Spirits.	Used in various Manufactures.	Total Quarters.
		Quarters.	Quarters.	Quarters.	Quarters.	Quarters.	
Wheat	9,000,000	1	9,000,000	-	-	170,000	9,170,000
Barley	1,500,000	1¼	1,875,000	210,000	4,250,000	-	6,335,000
Oats	4,500,000	1½	6,750,000	10,200,000	-	-	16,950,000
Rye	500,000	1¼	625,000	59,000	-	1,000	685,000
Beans and peas	500,000	1	500,000	1,360,000	-	-	1,860,000
Totals	16,000,000		18,750,000	11,829,000	4,250,000	171,000	35,000,000

But though this estimate be compiled with greater care, and is entitled to more confidence, than most of those put forth by its author, it is in some respects grossly inaccurate and defective. There can, for example, be no manner of doubt that the consumption of oats is underrated by at least 2,250,000 quarters, or by ½ quarter in the quantity assigned to each of the 4,500,000 individuals Dr. Colquhoun supposed were fed on them. And besides underrating the consumption of oats, the learned Dr. has made no allowance for seed, though it be unnecessary to say that the expenditure of corn as seed is as indispensable, and its consumption as effectual, as if it were employed in the feeding of men or of horses. Adding, therefore, to the 37,250,000 quarters which Colquhoun's estimate should have amounted to, ⅛th for seed, we have, on his

data, 43,458,000 quarters for the total consumption of corn in the U. Kingdom in 1814.

But instead of a population of 16 millions, which is assumed as the basis of the above estimate, the U. Kingdom had, in 1841, a population of 26,861,796. If, therefore, the estimate of Dr. Colquhoun were accurate, and the consumption, as compared with the population, were about the same as in 1814, it should now amount to about 70,000,000 quarters. But, during the last 30 years, the proportion of wheat used as food has been materially increased; and at present the consumers of barley certainly amount to nothing like 1,500,000 individuals; probably to not more than 500,000. And though the consumption of oats has, also, increased very materially, partly and principally from the great increase in the number of horses and their better keep, and partly, also, from the increase of population in Ireland and the greater proportion of its inhabitants that now use oats; still it is abundantly certain that the expenditure of corn on the lower animals, and in breweries, distilleries, &c. does not now amount to any thing like twice the quantity at which it was estimated by Colquhoun.

On the whole, we are inclined to think that the consumption of the various kinds of corn in the U. Kingdom may, at present (1842), be estimated as follows: —

	Qrs.	Total Qrs.
I. Consumed by man: —		
Wheat	15,000,000	
Oats, rye, and maslin, (a mixture of rye and wheat)	15,000,000	
Barley for malting, food, &c.	6,000,000	
Beans and peas as meal	600,000	
		36,600,000
II. Consumed by the lower animals: —		
Corn (principally oats) used in the feeding of horses and other animals, in distillation, manufactories, &c.		18,000,000
Total consumed by man and the lower animals, &c.		54,600,000

But it appears from No. VIII. of the subjoined tables, that at an average of the 13 years ending with 1842, the annual entries of foreign corn for home consumption were, wheat 1,281,721 quarters, barley 187,911 do., oats 280,098 do., rye 21,620 do., peas 72,558 do., and beans 75,341 do., making an aggregate importation of 1,919,246 quarters a year. And, therefore, if from the annual consumption by man and the lower animals, amounting to 54,600,000 quarters, we deduct the above average annual importation, we have 52,680,754 quarters for the portion of such consumption supplied by the native corn of the U. Kingdom; and adding to the latter $\frac{1}{6}$th part, or 8,780,125 quarters, for seed, we have 61,460,879 quarters for the total average annual growth of all sorts of corn in the U. Kingdom.

The total entries of foreign corn in 1839 amounted to 4,615,262 quarters, being the largest quantity ever entered in any single year. But as this quantity does not amount to $\frac{1}{13}$th part of the entire corn raised at home, it would seem as if the greatest importation could have but a very slight influence over prices; but it has been already shown that a very large proportion, perhaps a half, of the corn produced in the empire is never brought to market, but is partly consumed by the agriculturists, and partly used as seed and in the feeding of farm horses, &c. Hence, if we be nearly right in this estimate, it follows that an importation of 4,615,262 quarters is really equivalent to between $\frac{1}{8}$th and $\frac{1}{4}$th part of the entire produce brought to market in an average year, and must consequently have a very material influence in alleviating the pressure of scarcity in a bad year, and in checking the rise of prices.

Regulations under which the Corn Trade of the U. Kingdom is at present conducted. — These regulations are embodied in the act 5 Vict. 2 sess. cap. 14., of which an abstract is subjoined. This act is, as already stated, substantially the same in principle with that of 9 Geo. 4. cap. 60., by which the trade in corn was previously regulated. It permits, like the former act, the free importation and warehousing of all sorts of foreign corn; imposing, like it, duties on such corn when entered for consumption, which vary according to the variations of prices in the home market. Thus there is a duty of 20*s.* a quarter on wheat, when the home price is at or under 51*s.* a quarter; the duty decreasing, though not regularly, till the price reaches 73*s.* or upwards, when it amounts to 1*s.* only. But though the duties imposed by this act be, in consequence of their reduction, decidedly preferable to those which they superseded, still they are much too high, and must go far, indeed, to prevent all importation under ordinary circumstances, till the home price rises to, or exceeds, 63*s.* a quarter, when the duty is no less than 10*s.*; and besides their influence in obstructing importation till the home price rises very decidedly above what would otherwise be its natural level, a variable scale of duties has the incurable defect of adding to the uncertainty incident to the corn trade; and of preventing, so long as it is kept up, its establishment on sound principles.

From the extreme difficulty of forming anything like correct conclusions as to the state of the crops at any given period in any extensive country, and still more of es-

timating the supply and probable price of corn at any future period, though but a little remote, the risk attending the corn trade is proverbially great. Under such circumstances, if government interfere at all, it should certainly be to lessen such hazards; and, at all events, it should take especial care to do nothing to increase them. Hence, if a duty be imposed on importation, it should be constant, so that its influence may always be estimated beforehand; for if the amount of duty depend on accidental circumstances, or on anything so fluctuating and incapable of previous estimation as the prices in the home market, it must necessarily, by increasing the hazard of all speculations in corn, tend to augment those inequalities in its supply and price, that should, in as far as possible, be diminished. To show the direct influence of such duties, it may suffice to mention that if, under the late corn law, a merchant had commissioned a quantity of wheat when the home price was 71*s.* a quarter, he would, in the event of the price falling to 68*s.* before the importation took place, have lost no less than 13*s.* a quarter by the transaction, viz. 8*s.* a quarter by the fall of price, and 10*s.* a quarter by the increase of duty! The new scale is not, luckily, so bad as this; but still its influence, though diminished, is of the same pernicious kind, and in most cases doubles the risk. Should a merchant, for example, order a quantity of foreign wheat when the home price is from 57*s.* to 58*s.* a quarter, he will, in the event of the price falling 3*s.* a quarter before the wheat can be entered for consumption, lose 6*s.* a quarter by the speculation; 3*s.* by the fall of price, and 3*s.* by the rise of duty.

It may, perhaps, be said that if, on the one hand, the present scale of duties be injurious to the merchant when prices are falling, and when importation is consequently either unnecessary or of less advantage, it is, on the other hand, equally advantageous to him when prices are rising, and when the public interests require that importation should be encouraged: but the prices in the view of the merchant when he gives an order are always such as he supposes will yield a fair profit; and if they rise, this rise would, supposing the duty to be constant, yield such an extra profit as would make him increase his imports to the utmost. If it were possible to devise a system that should diminish the losses incurred in unfavourable speculations, by making a proportional deduction from the profits of such as were unusually successful, something, perhaps, might be found to say in its favour. But the system we have adopted proceeds on quite opposite principles: its effect is not to diminish risks, but to increase them; it adds to the loss resulting from an unsuccessful, and to the profit resulting from a successful, speculation!

But there are other considerations that serve to set the pernicious operation of a fluctuating duty in a still more striking point of view. Should a tract of unfavourable weather occur before harvest, and a deficient crop be anticipated, prices rise, and the duty falls to next to nothing: but now suppose that the weather becomes fine, and that the anticipations of a short crop are dispelled, and observe what, under such circumstances, is the operation of the sliding-scale. In such a case, prices immediately begin to give way, and, to avoid the consequent increase of duty, every bushel of foreign corn warehoused in the country, and, indeed, in every contiguous foreign port, is forthwith entered for consumption, and thrown upon a falling market! With a fixed duty, or with no duty at all, the merchants would distribute the supply of corn according to the best estimate they could form of the real wants and necessities of the people. But the operation of a sliding scale goes far to exclude such considerations. Besides doubling the hazards of the trade, it tempts the merchants, when prices are rising, to hold back, in the expectation of being able to enter their corn at a reduced duty; and when, on the other hand, a fall of prices is anticipated, the market, as already seen, is overloaded, and prices ruinously depressed by the supplies forced upon it to escape the increase of duty! It is thus alternately injurious to the manufacturing and the agricultural classes; entailing the severest privations on the former, by making the importers withhold their corn from market till the price attains to a ruinously high level; and, on the latter, by making the same parties throw it on a market which is already depressed. The extreme low prices of 1821 and 1822, and of 1833, 1834, and 1835, were, no doubt, in part occasioned by the excess of the foreign entries for consumption arising out of the circumstances now mentioned.

Were our ports always open under a moderate duty, nothing, it is plain, would be gained by pouring in supplies at any particular moment; they would only be furnished when necessary, and would be limited by the necessity; and when prices were low, or falling, a large proportion of the imports would be warehoused in anticipation of a future rise. But at present there is no room for consideration or combination; every thing must be done on the moment, and by fits and starts. We may not have brought a bushel of wheat from the Baltic for a year or two; but prices have risen in this country, and, the duty having fallen still more rapidly, we have an instantaneous demand for all the corn that can be had! Not being expected, no provision is made for meeting such sudden and capricious demands; and prices rise to such a degree as to make our pre-

sence in the foreign markets hateful to every one, except the few who may happen to have on hand stocks of corn. It is plain, too, that a commerce, if so we may call it, conducted in this way cannot be carried on by an interchange of goods for corn, as it would be were the ports constantly open. We may have a demand this year for ten times the quantity of Polish corn that we required last year, but it is abundantly certain that the Poles will not reciprocate by taking off corresponding quantities of our cottons, woollens, or hardware. Under ordinary circumstances, an increase of imports is always accompanied by a corresponding increase of exports; but, to bring this about, the increase must neither be sudden nor excessive; for, if so, the chances are a thousand to one that the foreign demand for our products will not increase to an equal extent. Corn is the principal means which the Poles have of paying for English goods; and, as we frequently shut it wholly out, their imports from England are unavoidably below even the average amount of their exports; so that, when we have an extraordinary demand for corn, the greater part of the excess must be paid for in bullion; and, instead of being benefited by its occurrence, our commercial and manufacturing interests are deeply injured.

But it is unnecessary to dwell on what is so well known. Most fortunately, we did not require to import any foreign corn in 1835 and 1836; for no one, either in the Bank of England or out of it, acquainted with the circumstances, can have the smallest doubt that, had it been then necessary to make the same payments for foreign corn we had to make in 1830 and 1831, and in 1838 and 1839, the Bank must have stopped payment; and a shock would have been given to the credit and financial interests of the country, from which they might never have recovered. The severe pressure on the money market in 1839 mainly originated in the same circumstances; and who can doubt that that pressure was productive of incomparably greater loss and inconvenience to the agriculturists than any advantage they gained by the rise of prices in that year?

It is in these respects that the existing corn law is most inimical to manufactures and commerce. The disorder occasioned by a sudden and extensive demand for corn affects the prices of every article, and vitiates every speculation. The mischief is sometimes ascribed to the conduct of the directors of the Bank of England: but they have little or nothing to do in the matter; they are merely endeavouring to provide, as is their bounden duty, for the safety of the Bank, which is suddenly called upon to advance *four*, *five*, or *six* millions of bullion to be sent abroad in payment of foreign corn! It is plain that the real origin of the pressure is to be found in that system of commercial legislation that produces every now and then such sudden and heavy drains on the resources of the Bank and the country.

In every point of view, therefore, it is of the highest importance that the regulations as to the corn trade should be placed on such a footing, that, 1st, they may at no time give any serious obstruction to importation; and 2d, that the supply may be admitted according to our wants, and when it is really required. In their present form, the corn laws are opposed to both the principles now laid down, and are adverse alike to agriculture, commerce, and credit.

It must not, however, be supposed, from any thing now said, that we mean to state or insinuate that it is possible by any contrivance, or by the utmost possible degree of freedom, to avert all fluctuations in the supply and price of corn. Any such idea would be alike chimerical and absurd. Variations of the harvests, in so rich and populous a country as Great Britain, must always, and under any circumstances, have a powerful influence over prices; not only here, but also in those foreign markets whence we are in the habit of drawing a portion of our supplies. But it admits of demonstration, that the adoption of a system as to importation, in which there shall be no fluctuation of duties, is the best means by which to mitigate the influence of variations of harvests, and to secure the greatest steadiness of price. Under such a system, the merchants of this and other countries would be able to form their plans without the fear of their being overturned by accident or contingent circumstances; and the fact that we every now and then require a large supply of foreign corn would make capitalists, here and elsewhere, warehouse, in abundant years, large supplies, in anticipation of the demand when a deficiency occurs. The merchant would then have to deal only with real wants and necessities; and these it is comparatively easy to provide against. In a matter of this kind all restrictions and interferences are unalloyed evils. Freedom is all that is required to place the trade on the best possible footing.

It is, therefore, obvious that a constant duty on importation is, in all respects, preferable to one that fluctuates. When the duty is constant, all classes, farmers as well as merchants, are aware of its amount, and can previously calculate the extent of its influence. But the influence of a duty that fluctuates with fluctuations of price can never be previously appreciated. Its magnitude depends on contingent and accidental circumstances; and it must, therefore, of necessity, occasion that uncertainty, and those sudden and capricious movements, that are so destructive of the interests of all classes.

It is further to be observed that, with a fluctuating duty, there can be no corresponding drawback on exportation; and so long, therefore, as it is maintained, prices, in unusually favourable years, must, as previously explained, sink so low as to be ruinous to the agriculturists; and that justice will be denied to the latter, to which they have an undoubted claim.

At the same time it is but fair to state, that the pernicious operation of the corn laws has been grossly, and indeed ludicrously, exaggerated. According to the statements put forth by the itinerant demagogues who have of late years been haranguing the public on this favourite theme, one would be led to suppose that the repeal of the corn laws would be a universal panacea; that it would obviate every abuse or defect in our social system; and that the price of corn would immediately fall to something like a half or a third part of its present amount! But every man of sense knows that there is no real room or ground for such statements, which are alike false and deluding. Thanks to the extraordinary spread of improvement at home, and to the increased amount of our imports from Ireland, the corn laws, notwithstanding the rapid increase of population, are now far less objectionable than they were a few years ago. The statements that will be laid before the reader in a subsequent part of this article show, that supposing foreign wheat were always admitted for consumption on payment of a fixed duty of only *5s.* a quarter, there are no grounds whatever for thinking that its average price would be under *53s.* or *54s.* a quarter.

We do not say this by way of apology for the corn laws, or in extenuation of the serious injury they really occasion. But misrepresentation and misstatements on such subjects cannot be too much condemned. The progress of sound commercial legislation can never be advanced, while it may be and has been very decidedly obstructed, by the violence, agitation, and declamatory trash of which the proposed repeal of the corn laws has been the pretext.

We subjoin an abstract of the act 5 Victoria, 2 sess. cap. 14.

Section 1. repeals the act 9 Geo. 4. c. 60., under which the corn trade had previously been conducted.

Corn may be imported from Foreign Countries and from British Possessions on Payment of the specified Duties. — And whereas it is expedient that corn, grain, meal, and flour, the growth, produce, and manufacture of any foreign country, or of any British possession out of Europe, should be allowed to be imported into the U. Kingdom for consumption, upon the payment of duties to be regulated from time to time according to the average price of British corn made up and published in manner hereinafter required: be it therefore enacted, that from and after the passing of this act there shall be levied and paid upon all corn, grain, meal, or flour entered for home consumption in the U. Kingdom, from parts beyond the seas, the several duties specified and set forth in the table annexed to this act; and that the said duties shall be raised, levied, collected, and paid in the same manner in all respects as the several duties of customs enumerated in the table of duties annexed to act 3 & 4 Will. 4. c. 56. — § 2.

We subjoin the table referred to.

An Account of the Duties chargeable on all Kinds of Grain.

If imported from any Foreign Country.

* The fractions under oatmeal are so many 120 parts of a penny; under barrel of flour, so many 32 parts of a penny.

Note.—Flour is rated to pay for every barrel of 196 lbs. a duty equal in amount to the duty payable on 381 gallons of wheat; and oatmeal for every 1814 lbs., a duty equal in amount to the duty payable on a quarter of oats. It is the practice to enter the above by the cwt.

If the produce of and imported from any British Possession in North America, or elsewhere out of Europe.

Wheat. — Whenever the average price of wheat shall be under *55s.* the duty shall be

	£ *s.* *d.*	
- - -	0 5 0	per qr.
55s. and under *56s.* - - -	0 4 0	
56s. — *57s.* - - -	0 3 0	
57s. — *58s.* - - -	0 2 0	
58s. and upwards - - -	0 1 0	

Barley. — Whenever the average price of barley shall be under *28s.* the duty shall be

	£ *s.* *d.*	
- - -	0 2 6	per qr.
28s. and under *29s.* - - -	0 2 0	
29s. — *30s.* - - -	0 1 6	
30s. — *31s.* - - -	0 1 0	
31s. — — - - -	0 0 6	

	£	s.	d.	
Oats. — Whenever the average price of oats shall be under 22*s.* the duty shall be	-	-	- 0	2 0 per qr.
22*s.* and under 23*s.*	-	-	- 0	1 6
23*s.*	-	-	- 0	0 6
Rye, Peas, and Beans. — Whenever the average price of rye, peas, and beans shall be under 30*s.* the duty shall be			0	3 0
30*s.* and under 31*s.*	-	-	- 0	2 6
31*s.* — 32*s.*	-	-	- 0	2 0
32*s.* — 33*s.*	-	-	- 0	1 6
33*s.* and under 34*s.*	-	-	- 0	1 0 per qr.
34*s.*	-	-	- 0	0 6

Wheat, Meal, and Flour. — For every barrel, being 196 lbs., a duty equal to the duty payable on 38½ galls. wheat.

Oatmeal. — For every 181½ lbs., a duty equal to the duty payable on a quarter of oats.

Maize, or Indian Corn, Buckwheat, Bear, or Bigg. — For every quarter a duty equal to the duty payable on a quarter of barley.

With respect to importation from Canada, see *ante*, p. 397.

Section 3. permits foreign corn to be imported into the Isle of Man, on payment of the duties specified in this act.

Regulations to be observed on shipping Corn from any British Possession out of Europe. — No corn, grain, meal, or flour shall be shipped from any British possession out of Europe as the produce of any such possession until the owner or proprietor or shipper thereof have made and subscribed, before the collector or other chief officer of customs at the port of shipment, a declaration in writing, specifying the quantity of each sort of such corn, grain, meal, or flour, and that the same was the produce of some British possession out of Europe to be named in such declaration, nor until such owner or proprietor or shipper shall have obtained from the collector or other chief officer of the customs of the said port a certificate, under his signature, of the quantity of corn, grain, meal, or flour so declared to be shipped; and before any corn, grain, meal, or flour shall be entered at any port or place in the U. Kingdom as being the produce of any British possession out of Europe, the master of the ship importing the same shall produce and deliver to the collector or other chief officer of customs of the port or place of importation a copy of such declaration, certified to be a true and accurate copy thereof, under the hand of the collector and other chief officer of customs at the port of shipment before whom the same was made, together with the certificate, signed by the said collector or other chief officer of customs, of the quantity of corn so declared to be shipped; and such master shall also make and subscribe, before the collector or other chief officer of customs at the place of importation a declaration in writing that the several quantities of corn, grain, meal, or flour on board such ship, and proposed to be entered under the authority of such declaration, are the same that are mentioned and referred to in the declaration and certificate produced by him, without any admixture or addition; and if any person shall in any such declaration wilfully and corruptly make any false statement respecting the place of which any such corn, grain, meal, or flour was the produce, or respecting the identity of any such corn, grain, meal, or flour, such person shall forfeit and become liable to pay to her Majesty the sum of 100*l.*, and the corn, grain, meal, or flour to such person belonging on board any such ship shall also be forfeited; and such forfeiture may be sued for, recovered, and applied in the same manner in all respects as any forfeiture incurred under and by virtue of the said act 3 & 4 Will. 4. c. 58.— § 5.

Prohibition of Importation of Malt. — It shall not be lawful to import from parts beyond the seas into the U. Kingdom, for consumption there, any malt, or any corn ground, except wheat meal, wheat flour, and oatmeal; and if any such article be imported contrary to this provision, the same shall be forfeited; and such forfeitures shall be sued for, recovered, &c. under the act 3 & 4 Will. 4. c. 56., in all respects as any forfeiture incurred under and by virtue of the said Customs Duties Act. — § 6.

Accounts of Corn imported, &c. to be published monthly. — The commissioners of customs shall once in each month publish in the London Gazette an account of the total quantity of each sort of corn, grain, meal, and flour respectively imported into the U. Kingdom, and also an account of the total quantity of each sort of corn, grain, meal, and flour upon which duties of importation have been paid in the U. Kingdom during the month next preceding, and of the several rates of duty which shall from time to time during such month have been payable upon each sort of corn, grain, meal, and flour respectively, with an account of the total quantity of each sort of corn, grain, meal, and flour remaining in warehouse at the end of such next preceding month. — § 7.

Section 8. enacts, that if any foreign state subject British vessels, goods, &c. to any higher duties or charges than are levied on the vessels of other countries, &c. her Majesty may prohibit the importation of corn from such state.

Section 9. enacts, that weekly returns of purchases and sales of corn shall be made in the places named in the schedule of cities and towns which is here annexed.

[The towns marked with an asterisk were not referred to in taking the averages under the late act.]

Section 10. gives her Majesty power of appointing a comptroller of corn returns.

Section 11. enacts that the comptroller shall execute his office in person, but that a deputy may be appointed to act in certain cases.

Sections 12. and 13. authorise the Lord Mayor and aldermen to appoint an inspector of corn returns for the city of London, under the same conditions as the general comptroller.

Section 14. authorises the chancellors of the universities of Oxford and Cambridge to appoint and remove inspectors of corn returns for the said city and town.

Section 15. enacts that no person dealing in corn, flour, or malt be appointed inspector or deputy-inspector of corn returns for the cities of London or Oxford, or town of Cambridge.

Section 16. enacts that the appointments of inspectors for London, Oxford, and Cambridge be enrolled.

Dealers in Corn in and near London to deliver in a Declaration to the Lord Mayor, &c. — Every person carrying on trade or business in the city of London, or within 5 miles from the Royal Exchange in the said city, as a corn factor, or as an agent employed in the sale of British corn, and every person who shall sell any British corn within the Corn Exchange in Mark Lane in the said city, or within any other building or place which is or may hereafter be used within the city of London, or within 5 miles from the Royal Exchange in the said city, for such and the like purposes for which the said Corn Exchange in Mark Lane hath been and is used, shall, before he or they shall carry on such trade or business, or sell any corn in manner aforesaid, make and deliver to the Lord Mayor, or one of the aldermen of the city of London, a declaration in the following words; (that is to say,)

"I *A. B.* do declare, that the returns to be by me made, conformably to an act passed in the fifth year of the reign of her Majesty Queen Victoria, intituled [*here set forth the title of this act*], of the quantities and prices of British corn which henceforth shall be by or for me sold or delivered, shall, to the best of my knowledge and belief, contain the whole quantity, and no more, of the corn *bonâ fide* sold and delivered by or for me within the periods to which such returns respectively shall refer, with the prices of such corn, and the names of the buyers respectively, and of the persons for whom such corn shall have been sold by me respectively, and to the best of my judgment the said return shall in all respects be conformable to the provisions of the said act."

Which declaration shall be in writing, and shall be subscribed by the person so making the same; and the Lord Mayor or alderman aforesaid of the city of London for the time being shall and is hereby required to deliver a certificate thereof, under his hand, to the inspector of corn returns for the city of London, to be by him registered in a book to be provided and kept for that purpose. — § 17.

Dealers in Corn to make Returns to Corn Inspector. — Every corn factor and other person as aforesaid who is herein-before required to make and who shall have made such declaration as aforesaid, shall and he or she is hereby required to return or cause to be returned, on Wednesday in each and every week, to the inspector of corn returns for the city of London, an account in writing, signed with his or her own name, or the name of his or her agent duly authorised in that behalf, of the quantities of each sort of British corn by him or her sold during the week ending on and including the next preceding Tuesday, with the prices thereof, and the amount of every parcel, with the total quantity and value of each sort of corn, and by what measure or weight the same was sold, and the names of the buyers thereof, and of the persons for and on behalf of whom such corn was sold; and it shall be lawful for any such inspector of corn returns to deliver to any person making or tendering any such returns a notice in writing requiring him or her to declare and set forth therein where and by whom and in what manner any such British corn was delivered to the purchaser or purchasers thereof; and every person to whom any such notice shall be so delivered shall and he or she is hereby required to comply therewith, and to declare and set forth in such his or her return, or in a separate statement in writing, the several particulars aforesaid. — § 18.

Section 19. enacts that the present comptroller, deputy-comptroller, and inspectors of corn returns for London, Oxford, and Cambridge continue in office, and that the appointments of the other inspectors of returns shall cease on the 24th day of June next after the passing of this act.

Section 20. enacts that in cities and towns, other than London, Oxford, and Cambridge, officers of excise are to act as corn inspectors, and attend at places appointed.

Section 21. enacts that the commissioners of excise shall make known the place to be appointed for delivering returns of corn purchased.

Section 22. authorises the commissioners of treasury to continue, if they think fit, the present inspectors of corn returns in their offices.

Dealers in Corn in Cities and Towns to make Declaration. — Every person who shall deal in British corn at or within any city or town named in the prefixed list of towns, excepting the city of London, or who shall at or within any such city or town engage in or carry on the trade or business of a corn factor, miller, maltster, brewer, or distiller, or who shall be the owner or proprietor, or part owner or proprietor, of any stage coaches, waggons, carts, or other carriages carrying goods or passengers for hire to and from any such city or town, and each and every person who, as a merchant, clerk, agent or otherwise, shall purchase at any such city or town any British corn for sale, or for the sale of meal, flour, malt, or bread made or to be made thereof, shall, before he or she shall so deal in British corn at any such city or town, or shall engage in or carry on any such trade or business as aforesaid, or shall purchase any British corn for any such purpose as aforesaid, at or within any such city or town, make and deliver a declaration in the following words; (that is to say,)

"¶ *A. B.* do declare, that the returns to be by me made, conformably to the act passed in the fifth year of the reign of her Majesty Queen Victoria, intituled [*here set forth the title of this act*], of the quantities and prices of British corn which henceforward shall by or for me be bought, shall, to the best of my knowledge and belief, contain the whole quantity, and no more, of the British corn *bonâ fide* bought for or by me within the periods to which such returns respectiveiy shall refer, with the prices of such corn and the names of the sellers respectively, and to the best of my judgment the said returns shall in all respects be conformable to the provisions of the said act."

Which declaration shall be in writing, and shall be subscribed with the hand of the person so making the same, and shall by him or her, or by his or her agent, be delivered to the mayor or chief magistrate, or to some justice of the peace for such city or town, or for the county, riding, or division in which the same is situate, who are hereby required to deliver a certificate thereof to the officer of excise acting as inspector of corn returns for such city or town as aforesaid, or to such continuing inspector of corn returns as aforesaid for such city or town (as the case may be), to be by such officer or inspector registered in a book to be provided and kept for that purpose. — § 23.

Section 24. authorises the inspectors of corn returns to require the above declaration from corn dealers.

Corn Dealers to make Returns in Writing to Inspectors of the Corn bought by them. — All persons who are herein-before required to make and who shall have made such declaration as aforesaid shall and they are hereby required, on the first market day which shall be holden in each and every week within each and every city or town named in the said schedule hereunto annexed, except the city of London, at or within which they shall respectively deal in corn, or engage in or carry on any such trade or business as aforesaid, or purchase any corn for any such purpose as aforesaid, to return or cause to be returned to the officer of excise acting as inspector of corn returns for such city or town, at the place appointed for receiving such returns, or to the continuing inspector of corn returns for such city or town, or to the inspector of corn returns for the city of Oxford, or the town of Cambridge (as the case may be), an account in writing, signed with their names respectively, of the amount of each and every parcel of each respective sort of British corn so by them respectively bought during the week ending on and including the day next preceding such first market day as aforesaid, with the price thereof, and by what weight or measure the same was so bought by them, with the names of the sellers of each of the said parcels respectively, with the names of the person or persons, if any, other than the person making such return, for or on account of whom the same was so bought and sold; and it shall be lawful for any officer of excise acting as inspector of corn returns, or any continuing inspector of corn returns as aforesaid, to deliver to any person making or tendering any such return a notice in writing requiring him or her to declare and set forth where and by whom and in what manner any such British corn was delivered to him or her; and every person to whom any such notice shall be so delivered shall and he or she is hereby required to comply therewith, and to declare and set forth in such his or her return, or in a separate statement in writing, the several particulars aforesaid. — § 25.

Inspectors to enter Returns made to them in a Book, &c. — The inspector of corn returns for the city of London, the city of Oxford, and the town of Cambridge, and every officer of excise acting as inspector of corn returns for the several other cities and towns aforesaid, and every continuing inspector of corn returns for any of such other cities or towns as aforesaid, shall duly and regularly enter in a book, to be by him provided and kept for that purpose, the several accounts of the quantities and prices of corn returned to him by such persons respectively as aforesaid; and every inspector of corn returns for any of the cities and towns enumerated in the said schedule shall in each and every week return to the comptroller of corn returns an account of the weekly quantities and prices of the several sorts of British corn sold in the city of London, or in the city or town for which he shall be or act as inspector, according to the returns so made to him as aforesaid, and in such form as shall be from time to time prescribed and directed by the said comptroller of corn returns; and the said returns shall be so made to the said comptroller by the inspector of corn returns for the city of London on Friday in each week, and by the respective inspectors of corn returns for the city of Oxford and the town of Cambridge, and by the respective officers of excise acting as inspectors of corn returns, and by the respective continuing inspectors of corn returns, for the several other cities and towns aforesaid, within three days next after the first market day holden in each and every week in any such city or town. — § 26.

Section 27. enacts that inspectors shall not include returns until they have ascertained that the persons making them have taken the declaration required.

Average Prices to be made up and published every Week. — The average prices of all British corn, by which the rate and amount of the said duties shall be regulated, shall be made up and computed on Thursday in each week, in manner following; (that is to say,) the said comptroller of corn returns shall on such Thursday in each week, from such returns as shall be received by him during the week next preceding, ending on and including the Saturday in such preceding week, add together the total quantities of each sort of British corn respectively appearing by such returns to have been sold, and the total prices for which the same shall thereby appear to have been sold, and shall divide the amount of such total prices respectively by the amount of such total quantities of each sort of British corn respectively, and the sum produced thereby shall be added to the sums in like manner produced in the 5 weeks immediately preceding the same, and the amount of such sums so added shall be divided by 6, and the sum thereby given shall be deemed and taken to be the aggregate average price of each such sort of British corn respectively, for the purpose of regulating and ascertaining the rate and amount of the said duties; and the said comptroller of corn returns shall cause such aggregate weekly averages to be published in the next succeeding Gazette, and shall on Thursday in each week transmit a certificate of such aggregate average prices of each sort of British corn to the collector or other chief officer of the customs at each of the several ports of the U. Kingdom, and to the said functionary at the port of Douglas in the Isle of Man; and the rate and amount of the duties to be paid under the provisions of this act shall from time to time be regulated and governed at each of the ports of the U. Kingdom by the aggregate average

prices of British corn at the time of the entry for home consumption of any corn, grain, meal, or flour chargeable with any such duty, as such aggregate average prices shall appear and be stated in the last of such certificates received by the collector or other chief officer of customs at such port. — § 28.

How Quantities of Corn are to be computed. — In the returns to be made as aforesaid to the comptroller of corn returns, and in the publications to be made from time to time in the London Gazette, and in the certificate to be transmitted to the said comptroller of corn returns to collectors or other chief officers of customs, the quantities of each sort of British corn respectively shall be computed and set forth by, according, and with reference to the imperial standard gallon, as the same is declared and established by the act 5 Geo. IV. cap. 74. amended or altered by the act 6 Geo. 4. cap. 12., and by the act 5 & 6 Will. 4 cap. 63. — § 29.

Until sufficient Number of Returns are made, Comptroller may use the present Averages. — Until a sufficient number of weekly returns have been received by the said comptroller of corn returns under this act to afford such aggregate average prices of British corn as aforesaid, the weekly average prices of British corn published by him immediately before the passing of this act shall be used and referred to in making such calculations as aforesaid, in such manner as if the same had been made up and taken under this act. — § 30.

What shall be deemed British Corn. — All corn or grain the produce of the U. Kingdom shall be deemed and taken to be British corn for the purposes of this act. — § 31.

Any Corn Return believed fraudulent may be omitted in the Computation. — If the said comptroller of corn returns shall at any time see cause to believe that any return made to any inspector of corn returns is fraudulent or untrue, the said comptroller is hereby required, with all convenient expedition, to lay before the Lords of the Committee of Privy Council (for Trade) a statement of the grounds of such his belief; and if upon consideration of any such statement the said Lords of said Committee shall direct the comptroller to omit any such return in the computation of such aggregate weekly average price, then and in that case, but not otherwise, the said comptroller of corn returns shall be authorised to omit such return in the computation of such aggregate weekly average price. — § 32.

Section 33. enacts that corn dealers having made the declaration previous to this act shall transmit returns, and comply with the rules hereby required.

Comptroller to issue Directions respecting the Inspection of Books of Inspectors. — The comptroller of corn returns is hereby authorised from time to time, in pursuance of any instructions which he shall receive in that behalf from the Lords of the Committee of Privy Council (for Trade), to issue to the inspectors of corn returns for the city of London, the city of Oxford, and the town of Cambridge respectively, any general or special directions respecting the inspection by any person or persons of the books so directed as aforesaid to be kept by such inspector of corn returns; and no such inspectors for the city of London, the city of Oxford, or the town of Cambridge, shall permit or suffer any person to inspect any such book, or to peruse or transcribe any entry therein, except in compliance with some such general or special directions from the said comptroller of corn returns. — § 34.

Copy of last Return to be affixed on Market Place on each Market Day. — The inspector of corn returns for every city or town other than the city of London shall and is hereby required, on each and every market day, to put up or cause to be put up in the market place of the city or town for which he shall act as inspector, or if there shall be no market place, then in some other conspicuous place therein near to where the corn market is usually held, a copy of the last return made by him to the comptroller of corn returns, omitting the names of the parties who may have sold and bought the said corn; and every such officer or inspector shall also again put up such account on the market day immediately following that on which it shall first have been put up, in case the same shall from accident or any other cause have been removed, and shall take due care that the same shall remain up for public inspection until a new account for the ensuing week shall have been prepared and set up. — § 35.

Sections 36, 37, 38. relate to the payment of comptrollers and inspectors.

Penalty on Corn Dealers for not making Declarations or Returns. — If any person hereby required to make and deliver the declaration or declarations herein-before particularly mentioned and set forth, or either of them, shall not make and deliver such declaration or declarations at the time and in the form and manner and to the person or persons herein-before directed and prescribed in that behalf, every person so offending shall forfeit and pay a sum not exceeding 20*l.* for each and every calendar month during which he shall neglect or delay to make and deliver such declaration; and if any person who is herein-before required to make any return to any inspector or officer of corn returns shall not make such returns to such inspector or officer at the time and in the form and manner herein-before directed and prescribed, every such offender shall for such his offence forfeit and pay a sum not exceeding 20*l.* — § 39.

Section 40. relates to the recovery and application of penalties.

Penalty on Witness not attending when required. — If any person who shall be summoned as a witness to give evidence before any justices of the peace, touching any matter of fact contained in any information or complaint for any offence against this act, either on the part of the prosecutor or of the person or persons accused, shall, after a reasonable sum of money for his or her charges and expences shall have been paid or been tendered to him or her, refuse or neglect to appear at the time and place for that purpose appointed, without a reasonable excuse for his, her, or their neglect, or appearing shall refuse to be examined on oath and give evidence before such justices of the peace, then and in either of such cases such person shall forfeit for every such offence any sum not exceeding 10*l.* — § 41.

Punishment for making false Returns. — If any person shall make any false and fraudulent statement in any such return as he is herein-before directed and required to make, or shall falsely and wilfully include, or procure or cause to be included, in any such return, any British corn which was not truly and *bonâ fide* sold or bought to, by, or on behalf of the person or persons in any such return mentioned in that behalf, in the quantity and for the price therein stated and set forth, every such offender shall be and be deemed guilty of a misdemeanor. — § 42.

Section 43. declares that the act shall not affect the practice of measuring or privileges of the city of London.

Limitation of Actions. — Actions brought under this act must be within 3 months of the matter or thing done. Defendants may plead the general issue; and if judgment be given against the plaintiffs, defendants shall have treble costs. — § 44.

Substitution of Wheat Flour or Biscuit for bonded Wheat. — Our readers are, no doubt, generally aware, that of late years efforts have occasionally been made in the House of Commons to get a law enacted authorising the delivery of bonded wheat from the warehouse, on the substitution in its stead of a proportional quantity of wheat flour or biscuit. But this proposal encountered the hostility of the more zealous partisans of the corn laws, principally on the alleged ground that it would open a door to fraud, and lead to the clandestine introduction of large quantities of foreign wheat. In the course, however, of the past year (1842), the project was again introduced by the president of the board of trade (Mr. Gladstone), and, having been supported by government, was passed into a law, 5 & 6 Victoria, cap. 92. We believe the measure will be productive of considerable advantage. It will enable millers, bakers, and others in this country to take advantage of such openings in the home and foreign markets as

may offer for the manufacture and sale of flour and biscuit; and to make such changes in the nature of their stocks as may be thought most advantageous. There do not seem to be any very good grounds for thinking that it will afford any considerable facilities for the commission of fraud by the introduction of wheat without a countervailing deposit of flour; but supposing it did, who is to be injured by such introduction? This, in truth, is one of the few cases in which fraud is advantageous rather than otherwise. We subjoin an abstract of the act now referred to.

Warehoused Wheat to be delivered Duty free upon substituting an equivalent Quantity of Wheat Flour or Biscuit.—Whereas it will be of advantage to the trade and commerce of the country that wheat may be delivered duty-free from the warehouse or from the vessel, upon the deposit in the warehouse, or due exportation therefrom, of an equivalent quantity of wheat flour and biscuit; be it therefore enacted, that it shall be lawful for the principal officer of customs having charge of any warehouse, in which wheat may be warehoused without payment of duty upon the first entry thereof, to deliver any quantity thereof duty-free upon there being deposited in warehouse in lieu thereof fine wheat flour or biscuit, as under.

For every 96 lbs. of kiln-dried wheat, or for every 100 lbs. of wheat not being kiln-dried, not less than 78 lbs. of fine wheat flour, or 68 lbs. of captain's biscuit, or 80 lbs. of biscuit of the standard of the biscuit supplied to her Majesty's navy, or 118 lbs. of common ship's biscuit; and so in proportion for any less quantity than 96 lbs. of kiln-dried wheat, or 100 lbs. of wheat not kiln-dried; such flour or biscuit having been manufactured in the U. Kingdom, or such flour having been duly imported and the duty thereon having been paid. — § 1.

Section 2. enacts, that fine wheat flour and biscuit may be deposited in warehouse, and certificate of such deposit granted, to entitle the holder to an equivalent quantity of warehoused wheat duty-free any time within six weeks of the date thereof.

Section 3. enacts, that persons making deposits of flour and biscuit be entitled to have equivalent quantities of wheat entered duty-free from the vessel.

Section 4. orders that three days' notice in writing be given to the collector of the quantity of wheat required to be delivered from the warehouse and of the day of delivery.

Section 5. orders that no wheat shall be delivered duty-free until the substituted article has been deposited and the certificate duly examined.

Section 6. enacts that substituted flour and biscuit shall be subject to the warehousing laws, but shall not be taken out for home consumption.

Section 7. enacts that such substituted flour and biscuit shall not be re-imported.

Section 8. imposes penalties for depositing articles of inferior quality.

Section 9. enacts that the act shall continue till the 31st of August 1845.

3. Tables showing the Prices of the different Sorts of Grain in Great Britain, the Quantities imported and exported, &c.

The Eton Account of Prices commenced in 1595; the accuracy of the returns in the first years cannot however be so implicitly relied on, as those quoted above.—Bishop Fleetwood and Sir F. M. Eden have collected, with great industry, almost all the existing information respecting the state of prices in England during the last *six hundred* years.

* From this year, inclusive, the account at Eton College has been kept according to the bushel of 8 gallons, under the provision of the act 31 Geo. 3. c. 30. § 82.

III. Account of the Average Prices of British Corn, per Imperial Quarter, from the 15th of July, 1828, to the 29th April, 1842, being the whole Period during which the Act 9 Geo. 4. cap. 60. was in operation. —(*Parl. Paper* No. 511. Sess. 1842.)

IV. FOREIGN CORN TRADE.

Polish Corn Trade. — Dantzic is the port whence we have hitherto always derived the largest portion of our supplies in deficient seasons; and as it is most probable that our principal importations will continue to be drawn from the same source, it becomes peculiarly important to ascertain the cost of wheat in Dantzic, and the expense of its importation into this country.

According to the data collected by Mr. Jacob in his reports on the agriculture and corn trade of the north of Europe, the ordinary price of wheat at Dantzic free on board would amount to about 40*s.* a quarter, made up as follows: —

	s.	*d.* per quarter.
Cost of wheat at Warsaw - - -

made large importations, we have hardly, in a still greater number, brought away a single bushel of corn; so that the average prices of this period may be taken as pretty correctly representing the prices of corn in Dantzic in seasons when the export is rather under a medium.

Account exhibiting the Lowest, the Highest, and the Average Prices of Wheat in Dantzic, in Sterling Money, per Imperial Quarter, in each of the 11 Years, from 1831 to 1841, both inclusive, with the Averages for the whole Period.

Years.	Lowest Prices ℔ Quarter.	Highest Prices ℔ Quarter.	Average Prices ℔ Quarter.	Years.	Lowest Prices ℔ Quarter.	Highest Prices ℔ Quarter.	Average Prices ℔ Quarter.
	s. *d.*	*s.* *d.*	*s.* *d.*		*s.* *d.*	*s.* *d.*	*s.* *d.*
1831	41 1	51 6	46 3½	1839	31 9	61 1	46 5
1832	32 5	43 7	38 0	1840	39 0	62 9	50 10½
1833	28 5	32 9	30 7	1841	45 9	57 0	51 4½
1834	25 1	29 11	27 6				
1835	21 0½	26 3½	23 8	Average of 11 Years from 1831 to 1841	30 8½	45 2	37 11
1836	22 3	35 7	28 11				
1837	24 9	34 8½	29 8½				
1838	26 6½	61 9	44 1½				

It appears from this table that the average price of wheat in Dantzic during the 11 years ending with 1841 was 37*s.* 11*d.* a quarter; making, with the addition of 10*d.* a quarter for shipping charges, its average price free on board, 38*s.* 9*d.* a quarter. Now, if to this last sum we add 12*s.* or 13*s.* for the expense of its importation and delivery to the millers in London, it is plain, judging from the experience of the last 11 years, that the average cost of Dantzic wheat in England, independent of duty, may be estimated, in round numbers, at from 51*s.* to 52*s.* a quarter.

It is material, however, to bear in mind that no very large quantity could be shipped at the above prices. They represent only average years: and whenever there is any unusual demand for corn, or when from 150,000 to 300,000 quarters are wanted for this country, the price immediately rises, as seen above, to from 45*s.* to 50*s.* a quarter and upwards.

That the charges on importation into England, warehousing here, and then delivering to the millers, exclusive of duty and profit, would amount to about 10*s.* a quarter, appears from the following statements * : —

Account of the Ordinary Charges on 100 Quarters of Wheat, shipped from Dantzic on Consignment, and landed under Bond in London. — (*Parl. Paper* No. 333. Sess. 1827. p. 28.)

				245	13	8

* The first was furnished by Messrs. Richard Birkett and Sons to the Lords' Committee of 1827, on the price of foreign corn; the other was obligingly furnished by Mr. Irvine, corn factor, in 1841.

According to this statement, the cost of importation would be 9*s* 1½*d.* per quarter; but to this has to be added an allowance for waste, and 2*s.* 6*d.* or 3*s.* a quarter for profit, which would raise the cost to about 12*s.* 6*d.* or 13*s.* a quarter.

We are well convinced that it is not possible successfully to controvert any portion of these statements; and such being the case, we are entitled to say that nothing can be more perfectly unfounded than the notions so prevalent in this country as to the extreme cheapness of corn in Dantzic. The truth is, that no considerable quantity of corn can be derived from her without resorting to Gallicia and other provinces from 500 to 700 miles inland. The corn is thence conveyed to the city in boats suited to the navigation of the rivers; but, owing to the uncertain supply of water in the latter, the communication is sometimes entirely broken off, and it is always very tedious and expensive. In proof of this, we may mention that, in November, 1838, when wheat sold in Dantzic for 41*s.* 6*d.* a quarter, it was selling in Lemberg, the principal corn market of Gallicia, for 15*s.*; the difference, amounting to 26*s.* 6*d.*, being the measure of the cost and risk of conveyance from Lemberg to Dantzic! It is, in fact, quite nugatory to suppose that any large supplies should be furnished by Dantzic, were the shipping price under 40*s.* or 45*s.* But, supposing that we could in ordinary years ship considerable supplies even for 35*s.*, still it is plain it could not be sold in London, under a low duty of 5*s.* or 7*s.*, for less than 53*s.* or 55*s.* a quarter.

It is difficult to draw any conclusions on which it would be safe to place much reliance as to the supplies of corn that might be obtained from Dantzic, were our ports constantly open under a reasonable duty. Mr. Jacob gives the following

Account of the Total annual Average Quantity of Wheat and Rye exported from Dantzic, in Periods of 25 Years each, for the 166 Years ending with 1825.

Years.	Wheat, Qrs.	Rye, Qrs.	Total, Qrs.	Years.	Wheat, Qrs.	Rye, Qrs.	Total, Qrs.
1651 to 1675	81,775	225,312	307,087	1751 — 1775	141,080	208,140	349,220
1676 — 1700	124,897	227,482	352,379	1776 — 1800	150,299	103,045	253,344
1701 — 1725	59,795	170,100	229,895	1801 — 1825	200,330	67,511	267,841
1726 — 1750	80,624	119,771	200,395				

"The average of the whole period," Mr. Jacob observes, "gives an annual quantity of wheat and rye of 279,794 quarters; and this surplus may be fairly considered as the nearest approach that can be made, with existing materials, to what is the usual excess of the produce of bread corn above the consumption of the inhabitants, when no extraordinary circumstances occur to excite or check cultivation." —(*Report*, p. 49.)

We incline, however, to think that Mr. Jacob has underrated the capabilities of improvement of the countries traversed by the Vistula, the Bug, &c.; and that were our ports open under a fixed duty of 5*s.* or 7*s.* a quarter on wheat, and other grain in proportion, we might, supposing our average prices not to fall below 50*s.* or 55*s.* a quarter, reckon upon getting from Dantzic an annual supply of from 350,000 to 450,000 quarters. It should, however, be observed, that Mr. Meek, who visited the N. of Europe in the latter part of 1841 and early in 1842, concurs with Mr. Jacob in thinking it improbable that any considerable increase of exportation would take place from Dantzic under any modification of our corn laws.—(*Parl. Paper* No. 7. Sess. 1842, p. 31.) But it is difficult to believe that such should be the case. Hitherto, owing to the fluctuating and capricious nature of our demand, it has proved of little advantage to the Polish cultivators; and but little corn has been raised in the expectation of its finding its way to England. But it might be quite another thing were our ports always open. The supply of our markets might, under such circumstances, be an object of importance to the Polish agriculturists; and if so, there can be little doubt, they would endeavour to extend and improve their tillage, and the means of bringing corn to market. At the same time, however, nothing positive can be stated on the subject, inasmuch as the stimulus given to polish agriculture by any change in our corn laws would wholly depend on the extent of our demand; and if, as we apprehend would be the case, it should, in ordinary seasons, be much more limited than is commonly supposed, it would have comparatively little influence. We subjoin an

Account exhibiting the Quantities of the different Varieties of Corn and the Quantities of Flour shipped from Dantzic during each of the Seven Years ending with 1840, with the Prices of Wheat in Dantzic during the same Period.

Years.	Wheat.	Rye.	Barley.	Oats.	Flour.	Average Price of Wheat.

Quality of Dantzic Wheat. — The price of wheat in Dantzic is usually about 7*s.* a quarter above its average price in Hamburg, and about 2*s.* above the average of Amsterdam. This difference is entirely owing to the superior quality of the Dantzic wheat. Though small grained, and not so heavy as several other sorts, it is remarkably thin-skinned, and yields the finest flour. Some of the best white, or, as it is technically termed, "high mixed" Dantzic wheat, is superior to the very best English; but the quantity of this sort is but limited, and the average quality of all that is exported from Dantzic is believed to approach very nearly to the average quality of English wheat. Allowing for its superior quality, it will be found that wheat is, speaking generally, always cheaper in Dantzic than in any of the Continental ports nearer to London. There are but few seasons, indeed, in which Dantzic wheat is not largely imported into Amsterdam; and it frequently, also, finds its way into Hamburg. But it is quite impossible that such should be the case, unless, taking quality and other modifying circumstances into account, it were really cheaper than the native and other wheats met with in these markets. When there is any considerable importation into England, it is of every day occurrence for merchants to order Dantzic wheat in preference to that of Holstein, or of the Lower Elbe, though the latter might frequently be put into warehouse here for 20*s.* a quarter less than the former! It is, therefore, quite indispensable, in attempting to draw any inferences as to the comparative prices of corn in different countries, to make the requisite allowances for differences of quality. Unless this be done, whatever conclusions may be come to can hardly fail of being false and misleading; and when they happen to be right, they can only be so through the merest accident.

Dantzic being by far the greatest port for the exportation of corn in the north of Europe, its price may be assumed as the general measure of the price in other shipping ports. At all events, it is certain that when Dantzic is exporting, wheat cannot be shipped, taking quality into account, at a cheaper rate from any other place. The importer invariably resorts to what he believes to be, all things considered, the cheapest market; and it is a contradiction and an absurdity to suppose that he should burden himself with a comparatively high freight, and other charges for wheat in Dantzic, provided he could buy an equally good article in so convenient a port as Hamburg at the same or a lower price.

If, therefore, we are right in estimating the lowest price at which wheat could be imported from Dantzic under a duty of 5*s.* or 7*s.*, at from 53*s.* to 55*s.*, we may be assured that this is the lowest importation price. The greater cheapness of the imports from other places is apparent only; and is uniformly countervailed by a corresponding inferiority of quality. — (For further details as to the Dantzic and Polish corn trade, see the articles DANTZIC, KÖNIGSBERG, &c.)

Russian Corn Trade. — Russia exports large quantities of wheat, rye, oats, and meal. The wheat is of various qualities; but the greater portion of it is small-grained, coarse, brown, and very badly dressed. The hard, or Kubanka, is the best; it keeps well, and is in considerable demand for mixing with other wheats that are old or stale. Russian oats are very thin; but, being dried in the straw, they weigh better than could be expected from their appearance, and are reckoned wholesome food. Our imports from Russia in 1839 were unusually large, she having supplied us with no fewer than 371,693 quarters wheat, 316,823 do. oats, and 14,000 do. rye. Generally, however, our imports do not exceed a fifth part of this quantity. — (The reader will find notices of the Russian corn trade under the articles ARCHANGEL, PETERSBURG, and RIGA. For an account of the corn trade by the Black Sea, see *post*, and the article ODESSA.)

Danish Corn Trade. — The export of wheat from Denmark Proper, that is, from Jutland and the islands, is but inconsiderable. There is, however, a pretty large exportation of wheat and other grain, as well as of butter, cheese, beef, &c., from Sleswick and Holstein. As already stated, the quality of the wheat is inferior; for, though it looks plump, it is coarse and damp. The chief shipping port for Danish corn is Kiel; but, owing to the superior facilities enjoyed by Hamburg, the greater portion of it is consigned to that city. In 1841 we imported from Denmark 236,250 quarters wheat, 81,947 do. barley, 25,088 do. oats, and 1,719 do. rye. — (For an account of the exports of raw produce from Denmark, see COPENHAGEN.)

Corn Trade of the Elbe, &c. — Next to Dantzic, Hamburg is, perhaps, the greatest corn market in the north of Europe, being a depôt for large quantities of Baltic corn, and for the produce of the extensive countries traversed by the Elbe. The exports of wheat from Hamburg amounted, as seen below, at an average of the 11 years ending with 1841, to 210,871 quarters a year. The price of wheat, as already stated, is frequently less in Hamburg than in Dantzic; but this lowness of price is altogether ascribable to the inferiority of the Holstein and Hanover wheats, which are generally met with in great abundance in Hamburg. Wheat from the Upper Elbe is of a better quality. Bohemian wheat is occasionally forwarded by the river to Hamburg;

but the charges attending its conveyance from Prague amount to full 15*s.* a quarter, and prevent its being sent down, except when the price is comparatively high. In 1841, the shipments of wheat from Hamburg amounted to 507,400 quarters, of which 460,900 were for England. Perhaps we might be able, did our prices average about 55*s.*, to import in ordinary years from 350,000 to 450,000 quarters of wheat from Denmark and the countries intersected by the Weser and the Elbe.

Account of the Exports of the various Descriptions of Corn from Hamburg during each of the Eleven Years ending with 1841.

Average exports of wheat for the above 11 years, 210,870$\frac{10}{11}$ quarters.

N. B. — The Hamburg last is equal to about 11 imperial quarters.

Amsterdam is an important depôt for foreign corn, every variety of which may be found there. Only a small part of its consumption is supplied by corn of native growth; so that the prices in it are for the most part dependent on those at which corn can be brought from Dantzic, Kiel, Hamburg, and other shipping ports. During 1840, they fluctuated from 35*s.* to 58*s.* a quarter. The corn trade of Holland was formerly conducted under a fixed duty; but in 1836 a law was enacted which imposes duties on exportation and importation which vary with the price. We subjoin

A Statement of the existing Duties on the Importation, Exportation, and Transit of Wheat in Holland.

When the Average Price is		The Import Duty is		The Export is		The Transit Duty is

Rotterdam is a very advantageous port for warehousing foreign corn, being conveniently situated, and the warehouse rent low, not exceeding 2*d.* or 2½*d.* per quarter per month.

French Corn Trade. — It appears, from the accounts given by the Marquis Garnier in the last edition of his translation of the *Wealth of Nations*, that the price of the *hectolitre* of wheat in the market of Paris amounted, at an average of the 19 years ending with 1819, to 20 fr. 53 cents; equal to 30 fr. 80 cents the septier; or, taking the exchange at 25 fr., to 45*s.* 6*d.* the quarter. Chaptal, in his valuable work, *Sur l'Industrie Française* (tom. i. p. 226.), published in 1819, estimates the ordinary average price of wheat throughout France at 18 fr. the hectolitre, or 42*s.* 10*d.* the quarter. In 1840, however, the price of wheat in Paris in June varied from 63*s.* to 64*s.* 6*d.*, falling to about 45*s.* after harvest. The various expenses attending the importation of a quarter of French wheat into London and its delivery to the millers may be taken, at a medium, at about 8*s.* a quarter. France, however, has but rarely any surplus produce to dispose of; so that it would be impossible for us to import any considerable quantity of French corn without occasioning a great advance of price; and, in point of fact, our imports from France have been generally inconsiderable, except in years when our prices were much above an average.

The mean of the different estimates framed by Vauban, Quesnay, Expilly, Lavoisier, and Arthur Young, gives 61,519,672 septiers, or 32,810,000 quarters, as the total average growth of the different kinds of grain in France. — (*Peuchet, Statistique Elémentaire*, p. 290.) We, however, took occasion formerly to observe (*Supp. to Encyc. Brit.* art. *Corn Laws*) that there could not be a doubt that this estimate was a great deal too low; and the more careful investigations of late French statisticians fully confirm this remark. The annual produce of the harvest of France is at present (1843) estimated, from returns obtained under official authority, at 69,558,000 hectolitres of wheat, and 112,958,000 do. of other sorts of grain; making in all 182,517,000 hectolitres, or 62,740,000 Imp. quarters. Of this quantity it is supposed that about 16 per cent. is consumed as seed, 19 per cent. in the feeding of different species of animals, and 2 per cent. in distilleries and breweries.

The reader will not fail to observe that, according to this statement, the consumption of corn in France, which has a population of about 35,000,000, is not more than equal to that of the U. Kingdom, the population of which may be taken at 27,000,000. And we have no doubt that such is the fact; for, though the consumption of corn in France materially exceeds its proportional consumption in Ireland, it is very far below the proportional consumption of Great Britain. The corn expended in this country in the keep of horses and in distilleries would, of itself, suffice to feed a third part of the people of France.

The foreign corn trade of France was regulated till within these few years by a law which forbade exportation, except when the home prices were below certain limits; and which restrained and absolutely forbade importation except when they were above certain other limits. The prices regulating importation and exportation differed in the different districts into which the kingdom was divided. Latterly, however, importation has been at all times allowed under graduated duties, which, like those of this country, become prohibitory when the prices sink to a certain level. The frontier departments are divided into 4 separate districts, the prices in each district governing the duties on importation into it, so that it sometimes happens that corn warehoused in a particular port, where it is not admissible except under a high duty, has been carried to another port in another district, and admitted at a low duty. An official announcement is issued on the last day of each month, of what the duties are to be in each district during the succeeding month.

Spanish Corn Trade. — The exportation of corn from Spain was formerly prohibited under the severest penalties. But in 1820, grain and flour were both allowed to be freely exported; and in 1823, this privilege was extended to all productions (*frutos*), the growth of the soil. There is now, in fact, no obstacle whatever, except the expense of carriage, to the conveyance of corn to the sea-ports, and thence to the foreigner. Owing, however, to the corn-growing provinces being principally situated in the interior, and to the extreme badness of the roads, which renders carriage to the coast both expensive and difficult, the exports are reduced within comparatively narrow limits: the same difficulty of carriage frequently gives rise to very great differences in the prices in markets, in all parts of the country, only a few leagues distant. Were the means of communication improved, and any thing like security given to the husbandman, Spain would, in no long time, become one of the principal exporting countries of Europe. Old Castile, Leon, Estremadura, and that part of Andalusia to the south and east of Seville, are amongst the finest corn countries of Europe, and might be made to yield immense supplies. But owing to the disturbed state of the country, and the want of a market for their produce, they can hardly be said to be at all cultivated. And yet such is their natural fertility, that in good seasons the peasants only reap those fields nearest to the villages!

In 1831 we imported 146,134 quarters of wheat from Spain, principally from Bilbao, Santander, and other northern towns. But from that period down to 1840, when we imported 46,939 quarters, exportation from Spain had almost entirely ceased. The imports of wheat from Spain in 1842 amounted to 68,451 quarters. — (See BILBAO.)

Corn Trade of Odessa. — Odessa, on the Black Sea, is the only port in Southern Europe from which any considerable quantity of grain is imported. But the exports from her are not nearly so extensive as is generally supposed, and they cannot be materially increased without a previous increase in the facilities of conveying corn from the interior. At present it is almost wholly brought to the town in carts drawn by oxen; and the supply of corn depends almost as much on the number of cattle that may be employed for this purpose as on the productiveness of the harvests. It appears from an official statement published in Odessa, that the quantity of corn brought to the town in the undermentioned years has been —

1834	-	-	691,000 chetwerts.*	1838	-	-	1,241,000 chetwerts.
1835	-	-	378,700	1839	-	-	1,150,000
1836	-	-	878,700	1840	-	-	680,000
1837	-	-	950,498				

During the three years ending with 1840, the average price of the best Odessa wheat, which, however, is inferior to that of England, was 34*s.* 6*d.* per quarter on the spot; and owing to the length and tediousness of the voyage from Odessa, and the risk of the grain heating on the passage, the charges attending its importation, including insurance, &c., amount to from 15*s.* to 16*s.* a quarter. It is plain, therefore, that the Odessa wheat brought to England during the above three years must, speaking generally, have cost the importer about 50*s.* a quarter exclusive of profit; and, supposing its price in Odessa to be reduced under a system of free intercourse to 30*s.* a quarter, still it is plain it could not be sold in London, under a duty of 5*s.* or 7*s.* a quarter, for less than

* A chetwert is about 5·8 bushels.

52s. to 54s. a quarter; that is, for less than the price of Dantzic wheat, which is superior to it by at least 5s. or 6s. a quarter.

N. B. For an account of the exports of corn from Odessa in 1842, and for farther details as to the corn trade of Southern Russia, and of the countries on the Lower Danube, see the articles ODESSA and GALACZ.

Both soft and hard wheat are exported from Odessa; but the former, which is by far the most abundant, is only brought to England. Supposing British wheat to sell at about 60s., Odessa wheat, in good order, would not be worth more than 52s. in the London market; but it is a curious fact, that in the Mediterranean the estimation in which they are held is quite the reverse; at Malta, Marseilles, Leghorn, &c., Odessa wheat fetches a decidedly higher price than British wheat.

The hard wheat brought from the Black Sea comes principally from Taganrog. It is a very fine species of grain, being full 10 per cent. heavier than British wheat, with not more than half the bran. It is used in Italy for making maccaroni and vermicelli, and things of that sort; very little of it has found its way to England.

The voyage from Odessa to Britain is of uncertain duration, but generally very long. It is essential to the importation of the wheat in a good condition, that it should be made during the winter months. When the voyage is made in summer, unless the wheat be very superior, and be shipped in exceedingly good order, it is almost sure to heat; and has sometimes, indeed, been injured to such a degree as to require to be dug from the hold with pickaxes. Unless, therefore, means be devised for lessening the risk of damage during the voyage, there is little reason to think that Odessa wheat will ever be largely imported into Britain. — (See the evidence of J. H. Lander, Esq. and J. Schneider, Esq. before the Lords' Committee of 1827, on the price of foreign corn.) We subjoin a

Statement of the probable Cost of importing 2,000 Chetwerts or 1453 Quarters of Wheat from Odessa to London.

Charges in London.	£	s.	d.	£	s.	d.	£	s.	d.
Policy duty on 1,200*l.* at ¼ per cent.	3	0	0						
Insurance on 1,150*l.* at 2*l.* 2*s.* per cent.	24	3	0						
				27	3	0			
Commission do. ½ per cent.	-		-	5	15	0			
Freight on 1,453 quarters wheat at 12*s.* per quarter	871	10	0						
Primage, 10 per cent.	87	3	7						
Gratification	10	10	0						
				969	9	7			
Charterparty, 1*l.*; custom-house entries, 10*s.*	-		-	1	10	0			
Metage on ship, at 4*s.* 3½*d.* per last	-		-	31	3	7			
Lastage	-		-	1	4	2			
Lighterage of 1,453 quarters at 4*d.*	-		-	24	4	4			
Landing, wharfage, housing, and delivering, at 9*d.*	-		-	54	9	8			
Rent 4 weeks, at 5*s.* per 100 quarters per week	-		-	14	10	7			
Metage, &c. ex granary	-		-	7	5	0			
				£1,136	15	0			
				Or per quarter			0	15	8

And in addition to the above, the charge for probable damage on the voyage may be estimated at 2*s.* a quarter.
And the factorage in London at 1*s.* per quarter.

American Corn Trade. — The prices of wheat at New York and Philadelphia may be taken, at an average, at from 40*s.* to 43*s.* a quarter; and as the cost of importing a quarter of wheat from the United States into England amounts to from 13*s* to 14*s.*, it is seen that no considerable supply could be obtained from that quarter, were our prices under 53*s.* or 56*s.* It should also be remarked, that prices in America are usually higher than in the Baltic; so that but little can be brought from the former, except when the demand is sufficient previously to take off the cheaper wheats of the northern ports.

The exports of wheat from the United States are, however, comparatively trifling; it being in the shape of flour that almost all their exports of corn are made. The shipments of this important article from Baltimore, Philadelphia, New York, New Orleans, and other ports, have occasionally been very large, though latterly they have been rather decreasing, and in some late years there was, in fact, a considerable exportation of corn from England, the Hanse Towns, &c., for the U. States. In proof of this it may be mentioned, that in the year ending the 30th of September, 1837, 3,921,259 bushels of foreign wheat were imported into the U. States, of which 792,675 bushels were from England. The British West Indies, Cuba, Mexico, Brazil, England, and France are the principal markets to which American flour is sent. All sorts of flour, whether made of wheat, rye, Indian corn, &c., exported from the U. States, must previously be submitted to the inspection of officers appointed for that purpose. The law further

directs, that the barrels, in which it is shipped, shall be of certain dimensions, and that each barrel shall contain 196 lbs. of flour, and each half barrel 98 lbs. The inspector, having ascertained that the barrels correspond with the regulations as to size, weight, &c., decides as to the quality of the flour: the first or best sort being branded *Superfine;* the second, *Fine;* the third, *Fine Middlings;* and the fourth, or lowest quality, *Middlings*. Such barrels as are not merchantable are marked *Bad;* and their exportation, as well as the exportation of those deficient in weight, is prohibited. Rye flour is divided into 2 sorts, being either branded *Superfine Rye Flour*, or *Fine Rye Flour*. Maize flour is branded *Indian Meal;* flour made from buck-wheat is branded *B. Meal*. Indian meal may be exported in hhds. of 800 lbs. Flour for home consumption is not subjected to inspection. The inspection must take place at the time and place of exportation, under a penalty of 5 dollars per barrel. Persons altering or counterfeiting marks or brands forfeit 100 dollars; and persons putting fresh flour into barrels already marked or branded, or offering adulterated wheaten flour for sale, forfeit in either case 5 dollars for each barrel.

The fees of branding were reduced in 1832. They amount, in New York, to 3 cents for each hogshead, and 1 cent for each barrel and half barrel of full weight. A fine of 30 cents is levied on every barrel or half barrel below the standard weight, exclusive of 20 cents for every pound that is deficient.

The act 5 Vict. sess. ii. c. 14. enacts, that every barrel of wheaten flour imported shall be deemed equivalent to 38½ gallons of wheat, and shall be charged with a corresponding duty (*antè*, p. 415). Hence, when the price of British wheat per quarter is between 52*s.* and 53*s.*, the duty on the barrel of flour is 10*s.* 9·3*d.*; when wheat is between 60*s.* and 61*s.*, the duty on flour is 7*s.* 2*d.*; and when wheat is between 69*s.* and 70*s.*, the duty on flour is 3*s.* 3*d.* We subjoin

An Account of the Exports of Wheat and Wheat-flour from the United States in each Year, from 1810 to 1840, both inclusive, with the Prices of Wheat per Barrel in Philadelphia, and the Annual Shipments of Flour for England.

The usual price of wheat in Canada, when there is a demand for the English market, is about 40*s.* a quarter; but taking it as low as 35*s.*, if we add to this 13*s.* a quarter for the expenses of carriage and warehousing, it will make its price in Liverpool, when delivered to the consumer, 48*s.*; and being spring wheat, it is not so valuable, by about 6*s.* a quarter, as English wheat. We have already noticed the act of the present year (1843) relative to the admission of Canadian wheat and flour.—(See *antè*, p. 397.)

We subjoin a statement, compiled by authority, from returns made by the British consuls in 1841, exhibiting the probable amount of corn which they suppose might be furnished by the principal continental ports, in the event of importation being always free in England under a moderate duty, and the probable average price of such corn free on board. There may be, and probably are, errors in this statement; but, on the whole, its general correctness may be depended on; and it strikingly corroborates the statements already laid before the reader.

	Quantity of Grain of each Kind that could be exported to England, from the Consular Districts, if the Trade in Corn in England were constantly open, at a moderate Duty.				Average Prices, free on board, per Imperial Quarter.

Inferences from the above Review of Prices. — We may, we think, satisfactorily conclude, from this pretty lengthened review of the state of the foreign corn trade, that in the event of all restrictions on the importation of corn into our markets being abolished, it could not, in ordinary years, be imported for less than 50*s.* or 52*s.* a quarter. But taking it so low as 48*s.*, it is plain it could not, in the event of its being charged with a duty of 5*s.* or 7*s.*, be sold for less than 53*s.* or 55*s.*

Now, it appears, from the previous account, No. III., that the average price of wheat in England and Wales, during the whole period (from the 15th of July 1828 to the 28th of April 1842) that the late corn act, the 9 Geo. IV. cap. 60., was in operation, amounted to 59*s.* 4*d.* a quarter; and it will be observed that the crops from 1828 to 1831, and from 1837 to 1841, inclusive, were very deficient, and that the importations in those years were extremely large. But, without taking this circumstance into account, it is clear, from the previous statements, that the opening of the ports under a fixed duty of 5*s.* or 7*s.* could not occasion a reduction of more than 4*s.*, or, at the outside, of 6*s.* a quarter in the average prices of the above period.

We feel pretty confident that these statements cannot be successfully controverted; and they show, conclusively, how erroneous it is to suppose that the repeal of the existing corn laws, and the opening of the ports for importation, under a low duty of 5*s.* or 7*s.*, would cause a ruinous decline in the price of corn, or give any serious check to agriculture. The price of wheat in England, at an average of the ten years ending with 1820, was no less than 86*s.* 3*d.* a quarter. Its average price has since, as we have just seen, been reduced to 59*s.* 4*d.* a quarter; and yet, notwithstanding this tremendous fall, a most extraordinary improvement has taken place in agriculture since 1820; so much so that we now provide for an additional population of above seven millions, with but a slight increase of importation in unfavourable years, and in favourable years with no importation at all. Under such circumstances, can any thing be more childish than to suppose that a fall of 5*s.* or 6*s.* a quarter in the average price of corn should have any disastrous, or indeed sensible, influence over agriculture? Improvements of all sorts were never more vigorously prosecuted than in 1836 and 1837, and yet the average price of corn in those years did not exceed 52*s.* 2*d.*; that is, it did not exceed its probable future price with open ports, and a fixed duty of only 5*s.* a quarter!

It is also seen from the previous account, No. VI., that at an average of very nearly the

* In the answers from Petersburg, Liebau, and Hamburg, the gross amount that could be exported to *Foreign Countries* seems to have been given, not the quantity which might be shipped to England.

† The return from Hamburg includes those from Lubeck, Bremen, Rostock, &c.

‡ This quantity could be exported in years of abundant harvest *only*.

whole period during which the late corn law was in operation, the rate of duty on wheat imported amounted to only *5s. 7d.* a quarter; and it has now been sufficiently established, that with a fixed duty of this amount, average prices would undergo very little variation. It is plain, therefore, that the system we have ventured to recommend would occasion little or no inconvenience; at the same time, however, it would have the advantage of obviating the injurious fluctuations that grow out of the present system, and of getting rid of the eternal agitation of this question.

At all events the landlords and farmers may dismiss their unreasonable fears and apprehensions. Their prosperity does not depend on restrictive regulations, but is the effect of the fertility of the soil which belongs to them, of the absence of all oppressive feudal privileges, and of the number and wealth of the consumers of their produce. It would, for the reasons already stated, be unjust wholly to deprive them of protection; but we are well convinced that, though it were entirely abolished, their interests would not be seriously compromised; and that in no very lengthened period agriculture would be as flourishing as ever.

COTTON (Ger. *Baumwolle*; Du. *Katoen*. *Boomwol*; Da. *Bomuld*; Sw. *Bomull*; Fr. *Coton*; It. *Cotone*, *Bambagia*; Sp. *Algodon*; Port. *Algodao*; Rus. *Chlobtschataja bumaja*; Pol. *Bawelna*; Lat. *Gossypium*, *Bombax*; Arab. *Kutun*; Sans. *Kapasa*; Hind. *Ruhi*; Malay, *Kapas*), a species of vegetable wool, the produce of the *Gossypium herbaceum*, or cotton shrub, of which there are many varieties. It is found growing naturally in all the tropical regions of Asia, Africa, and America, whence it has been transplanted, and has become a most important object of civilisation, in the southern parts of the U. States, and to some extent also in Europe.

Cotton is distinguished in commerce by its colour, but more especially by the length, strength, and fineness of its fibre. White is usually considered as characteristic of secondary quality. Yellow, or a yellowish tinge, when not the effect of accidental wetting or inclement seasons, is considered as indicating greater fineness.

There are many varieties of raw cotton in the market, their names being principally derived from the places whence they are brought. They are usually classed under the denominations of *long and short stapled*. The best of the first is the *sea-island* cotton, or that brought from the shores of Georgia; but its qualities differ so much that the price of the finest specimens is often three times as great as that of the inferior. The superior samples of Brazil cotton are reckoned among the long-stapled. The cottons of the U. States, with the exception of sea-island, belong to the short-stapled variety, as do those of India.

The estimation in which the different kinds of cotton wool are held may be learned from the following statement of their prices in Liverpool during the first week of January, 1843. The inferiority of Surat cotton is sometimes ascribed to the defective mode in which it is prepared; but Mr. Horace H. Wilson doubts whether it can he grown in India of a better kind. The raw cotton of the Indian islands has hitherto been almost entirely consumed on the spot.

The manufacture of cotton has been carried on in Hindostan from the remotest antiquity. Herodotus mentions (lib. iii. c. 106.) that in India there are wild trees that produce a sort of wool superior to that of sheep, and that the natives dress themselves in cloth made of it. — (See, to the same effect, *Arrian Indic.* c. 16. 582.) The manufacture obtained no footing worth mentioning in Europe till last century.

1. *Rise and Progress of the British Cotton Manufacture.* — The rapid growth and prodigious magnitude of the cotton manufacture of Great Britain are, beyond all question, the most extraordinary phenomena in the history of industry. Our command of the finest wool naturally attracted our attention to the woollen manufacture, and paved the way for that superiority in it which we long since attained: but when we undertook the cotton manufacture, we had comparatively few facilities for its prosecution, and had to struggle with the greatest difficulties. The raw material was produced at an immense distance from our shores; and in Hindostan and China the inhabitants had arrived at such perfection in the arts of spinning and weaving, that the lightness and delicacy of their finest cloths emulated the web of the gossamer, and seemed to set competition at defiance. Such, however, has been the influence of the stupendous discoveries

and inventions of Hargreaves, Arkwright, Crompton, Cartwright, and others, that we have overcome all these difficulties — that neither the extreme cheapness of labour in Hindostan, nor the excellence to which the natives had attained, has enabled them to withstand the competition of those who buy their cotton; and who, after carrying it 5,000 miles to be manufactured, carry back the goods to them. This is the greatest triumph of mechanical genius: and what perhaps is most extraordinary, our superiority is not the late result of a long series of successive discoveries and inventions; on the contrary, it has been accomplished in a very few years. Little more than half a century has elapsed since the British cotton manufacture was in its infancy; and it *now* forms the principal business carried on in the country, — affording an advantageous field for the accumulation and employment of millions upon millions of capital, and of thousands upon thousands of workmen! The skill and genius by which these astonishing results have been achieved, have been one of the main sources of our power: they have contributed in no common degree to raise the British nation to the high and conspicuous place she now occupies. Nor is it too much to say that it was the wealth and energy derived from the cotton manufacture that bore us triumphantly through the late dreadful contest, at the same time that it gives us strength to sustain burdens that would have crushed our fathers, and could not be supported by any other people.

The precise period when the manufacture was introduced into England is not known; but it is most probable that it was some time in the early part of the 17th century. The first authentic mention of it is made by Lewis Roberts, in his *Treasure of Traffic*, published in 1641, where it is stated, "The town of Manchester, in Lancashire, must be also herein remembered, and worthily for their encouragement commended, who buy the yarne of the Irish in great quantity, and weaving it, returne the same again into Ireland to sell. Neither doth their industry rest here; for they buy cotton wool in London that comes first from Cyprus and Smyrna, and at home worke the same, and perfect it into fustians, vermillions, dimities, and other such stuffes, and then return it to London, where the same is vented and sold, and not seldom sent into foreign parts, who have means, at far easier termes, to provide themselves of the said first materials."—(Orig. ed. p. 32.) It is true, indeed, that mention is frequently made by previous writers, and in acts of the legislature passed at a much earlier period *, of "Manchester cottons," "cotton velvets," "fustians," &c.; but it is certain that these articles were *wholly composed of wool*, and had most probably been denominated cottons from their having been prepared in imitation of some of the cotton fabrics imported from India and Italy.

From the first introduction of the cotton manufacture into Great Britain down to the comparatively late period of 1773, the weft or transverse threads of the web, only, were of cotton; the warp, or longitudinal threads, consisting wholly of linen yarn, principally imported from Germany and Ireland. In the first stage of the manufacture, the weavers, dispersed in cottages throughout the country, furnished themselves as well as they could with the warp and weft for their webs, and carried them to market when they were finished: but about 1760 a new system was introduced. The Manchester merchants began about that time to send agents into the country, who employed weavers, whom they supplied with foreign or Irish linen yarn for warp, and with raw cotton, which being carded and spun, by means of a common spindle or distaff, in the weaver's own family, was then used for weft. A system of domestic manufacture was thus established; the junior branches of the family being employed in the carding and spinning of the cotton, while its head was employed in weaving the linen and cotton yarn into cloth. This system, by relieving the weaver from the necessity of providing himself with linen yarn for warp and raw cotton for weft, and of seeking customers for his cloth when finished, and enabling him to prosecute his employment with greater regularity, was an obvious improvement on the system that had been previously followed; but it is at the same time clear that the impossibility of making any considerable division among the different branches of a manufacture so conducted, or of prosecuting them on a large scale, added to the interruption given to the proper business of the weavers, by the necessity of attending to the cultivation of the patches of ground which they generally occupied, opposed invincible obstacles to its progress, so long as it was conducted in this mode.

It appears from the Custom-house returns, that the total quantity of cotton wool annually imported into Great Britain, at an average of the *five* years ending with 1705, amounted to only 1,170,881 lbs. The accounts of the imports of cotton from 1705 to 1770 have been but imperfectly preserved; but until the last half dozen years of that period the manufacture increased very slowly, and was of very trifling amount. Dr. Percival, of Manchester, who had the best means of being accurately informed on the subject, states that the entire value of all the cotton goods manufactured in Great Britain, at the accession of George III. in 1760, was estimated to amount to only

* In an act of 5 & 6 Edw. 6. (1552), entitled, for the true making of WOOLLEN cloth, it is ordered, "*That all cottons called Manchester, Lancashire, and Cheshire cottons*, full wrought for sale, shall be in length," &c. This proves incontestably, that what were then called cottons were made wholly of wool.

200,000*l.* a year, and the number of persons employed was quite inconsiderable: but in 1767, a most ingenious person, James Hargreaves, a carpenter at Blackburn in Lancashire, invented the *spinning jenny*. At first, this admirable machine enabled *eight* threads to be spun with the same facility as one; and it was subsequently brought to such perfection, that a little girl was able to work no fewer than from *eighty* to *one hundred and twenty* spindles.

The jenny was applicable only to the spinning of cotton for weft, being unable to give to the yarn that degree of firmness and hardness which is required in the longitudinal threads or warp: but this deficiency was soon after supplied by the introduction of the *spinning-frame*, — that wonderful piece of machinery which spins a vast number of threads of any degree of fineness and hardness, leaving to man merely to feed the machine with cotton, and to join the threads when they happen to break. It is not difficult to understand the principle on which this machine is constructed, and the mode of its operation. It consists of two pairs of rollers, turned by means of machinery. The lower roller of each pair is furrowed or fluted longitudinally, and the upper one is covered with leather, to make them take a hold of the cotton. If there were only one pair of rollers, it is clear that a carding of cotton passed between them would be drawn forward by the revolution of the rollers, but it would merely undergo a certain degree of compression from their action. No sooner, however, has the carding, or *roving* as it is technically termed, begun to pass through the first pair of rollers, than it is received by the second pair, which are made to revolve with (as the case may be) 3, 4, or 5 times the velocity of the first pair. By this admirable contrivance, the roving is drawn out into a thread of the desired degree of tenuity; a twist being given to it by the adaptation of the spindle and fly of the common flax-wheel to the machinery.

Such is the principle on which Sir Richard Arkwright constructed his famous spinning frame. It is obvious that it is radically and completely different from the previous methods of spinning, either by the common hand-wheel or distaff, or by the jenny, which is only a modification of the common wheel. Spinning by rollers was an entirely original idea; and it is difficult which to admire most — the profound and fortunate sagacity which led to so great a discovery, or the consummate skill and address by which it was so speedily perfected, and reduced to practice.*

Since the dissolution of Sir Richard Arkwright's patent, in 1785, the progress of discovery and improvement in every department of the manufacture has been most rapid. The *mule-jenny* — so called from its being a compound of the jenny and the spinning frame — invented by Mr. Crompton, and the *power-loom*, invented by the Rev. Mr. Cartwright, are machines that have had the most powerful influence over the manufacture; and in consequence of their introduction, and of innumerable other inventions and improvements, the prices of cotton cloth and yarn have gone on progressively diminishing. But as the demand for cottons has been, owing to their extraordinary cheapness, extended in a still greater degree, the value of the goods produced, and the number of persons employed in the manufacture, are now decidedly greater than at any previous period.

2. *Imports of Cotton Wool. Countries whence it is imported. Prices, Duties, &c.* — The following Tables have been partly taken from official documents, and partly from the accounts of merchants of great experience. We believe they may be relied on as approaching as near to accuracy as it is possible to attain to in such matters.

Cotton Wool imported, exported, and entered for Consumption, from 1820 to 1841.

* There is, in the new edition of the *Encyclopædia Britannica*, a pretty full account of the life of Sir Richard Arkwright. The question as to his merit as an original discoverer is still undecided. Recently, however, it has been ascertained that a patent for spinning by rollers, revolving with different degrees of velocity, was taken out by Messrs. Wyatt and Paul, so early as 1738. — (See the *History of the Cotton Manufacture*, by Edward Baines, jun., Esq.) But it does not appear that the inventors had been able to give effect to their happy idea, and all traces of the invention seem to have been lost. The statements in the case printed by Sir Richard Arkwright and his partners in 1782 show that he was aware of the attempts made in the reign of George II. to spin by machinery; but there is no evidence to prove that he was acquainted with the principle on which those attempts had been made, or that he had seen the patent referred to. Undoubtedly, however, the probability seems to be that he had. But, admitting this to be the case, it detracts but little from the substantial merits of Sir Richard Arkwright. If the idea of spinning by rollers did not spring up spontaneously in his mind, he was, at all events, the first who made it available in practice, and showed how it might be rendered a most prolific source of wealth.

Account of the Imports and Exports of Cotton Wool into and from Great Britain, from 1697 to 1819.

In 1786, the supplies of cotton wool were derived from the following sources:—

	Lbs.		Lbs.
From the British West Indies - -	5,800,000	From the Portuguese colonies - -	2,000,000
French and Spanish colonies	5,500,000	Smyrna and Turkey - -	5,000,000
Dutch colonies - -	1,000,000		Lbs. 19,900,000

Previously to 1790, North America did not supply us with a single pound weight of raw cotton. A little had, indeed, been raised in some of the Southern States, for domestic use, before the revolutionary war, but the quantity was quite inconsiderable. In 1791, it began, for the first time, to be exported; the trifling quantity of 189,316 lbs. having been shipped in the course of that year, and 138,328 lbs. in 1792. Such was the late and feeble beginning of the American cotton trade. There is nothing in the history of industry to compare with its subsequent increase, unless it be the growth of the manufacture in this country.

American cotton, which is of two kinds, is generally known by the names of *sea-island* and *upland*. The first, which is the finest cotton imported into Britain, grows on the small sandy islands and along the low sandy shores of Carolina and Virginia. It is long in the staple, of an even silky texture, and is easily separated from the seed. Unluckily, however, it can be raised only in certain situations; so that its quantity is limited, and has not, in fact, been increased since 1805. The upland, of which the supply may be considered as unlimited, though of varying qualities, is all short stapled; and its separation from the seed is so very difficult, that if it be done by the hand, the cotton is hardly worth the labour. This, however, was the only way in which it could be made available for home use, or exportation, previously to 1793; and had any one then ventured to predict that 10,000,000 lbs. of upland cotton would ever be exported, he would have been looked upon as a visionary dreamer. But the genius of Mr. Eli Whitney did for the planters of the Southern States what the genius of Arkwright and Watt did for the manufacturers of England. He invented a machine by which the wool of the upland cotton is separated from the seed with the greatest facility and expedition, and by so doing laid the foundations of a new and most important branch of industry, and doubled the wealth and means of employment of his countrymen!—(*Pitkin's Statistics of the United States*, p. 109. ed. 1835.) Whitney's invention came into operation in 1793, and in 1794, 1,601,760 lbs., and, in 1795, 5,276,300 lbs. of cotton were exported. And so astonishing has been the growth of cotton in the interval, that the exports from the United States in 1841 amounted to the prodigious quantity of 530,204,100 lbs.! of which 523,966,676 lbs. were upland!

Account of the Quantities of Cotton Wool imported into the United Kingdom during the Seven Years ending with 1841, specifying the Quantities brought from different Countries, the Total Quantities exported, and the Quantities entered for Consumption.—(Compiled from *Parl. Papers*.)

It has for many years been the practice to levy a duty on cotton wool, when imported. But the policy of such a duty is very questionable; and it is indispensable that, if imposed at all, it should be kept at a low rate. For a number of years previously to 1831, it amounted (on foreign cotton) to 6 per cent. *ad valorem*; but, in order to make up, in part at least, for the loss of revenue caused by the repeal of the duty on printed cottons (see CALICO), it was raised in that year to *5s.* 10*d.* a cwt. Such a duty would, however, have materially affected the imports of the inferior species of cotton, and the price of coarse goods; and being, in consequence, justly objected to, it was reduced in 1833 to *2s.* 11*d.* a cwt. The duty on cotton from a British possession is little more than nominal, being only 4*d.* a cwt. In 1842, the duties on cotton produced *567,156l.*

The subjoined table, taken from the carefully compiled and comprehensive annual statement of Messrs. George Holt and Co., eminent cotton brokers of Liverpool, dated 30th of December, 1843, shows in a very striking manner the progress of the manufacture in this country, and the fall in the price of cotton wool.

N.B. — Messrs. Holt and Co. estimate the average weight of the packages imported in 1843 at 350 lbs. per bag Upland; 430 lbs. Orleans and Alabama; 350 lbs. Sea-island; 182 lbs. Brazil; 207 lbs. Egyptian; 378 lbs. East Indian; and 165 lbs. West Indian.

3. *Value of the British Cotton Manufacture in* 1842. *Amount of Capital, and Number of Persons employed in it.*— It would be very desirable to be able to form a tolerably accurate estimate of the present value of the cotton manufacture, and of the number of persons employed in its different departments; but the data on which such estimates are founded being necessarily very loose, it is impossible to arrive at any thing like precision. Perhaps, however, the following calculations may not be very wide of the mark.

In 1817, Mr. Kennedy, an extremely well-informed manufacturer, in a paper pub-

lished in the *Manchester Transactions*, estimated the number of persons employed in the *spinning* of cotton in Great Britain at 110,763; the aid they derived from steam engines as equal to the power of 20,768 horses; and the number of spindles in motion at 6,645,833. Mr. Kennedy further estimated the number of hanks of yarn annually produced at 3,987,500,000; and the quantity of coal consumed in their production at 500,479 tons. We subjoin Mr. Kennedy's statement for the year 1817:—

Raw cotton converted into yarn in the United Kingdom	- - - -	110,000,000 lbs.
Loss in spinning estimated at 1¼ oz. per lb.	- - - -	10,312,500
Quantity of yarn produced	- - - - - - - -	99,687,500 lbs.
Number of hanks, taking the average at 40 per lb.	- - - - - - - -	3,987,500,000
Number of spindles employed, each spindle being supposed to produce 2 hanks per day, at 300 working days in the year	- - - - - - - -	6,645,833
Number of persons employed in spinning, supposing each to produce 120 hanks per day	- - - -	110,763
Horse power employed, equal in number to	- - - -	20,768

Four ounces and a half of coal estimated to produce one hank of No. 40.; and 130 lbs. of coal per day equal to one horse power.

But the cotton manufacture has increased rapidly since 1817. Mr. Huskisson stated, in his place in the House of Commons, in March, 1824, that he estimated the total value of the cotton goods and yarn then annually manufactured in Great Britain at the sum of *thirty-three and a half* millions; but this, certainly, was very far beyond the mark; and we do not think we should be warranted in estimating their value in 1842 at above *thirty-four* millions. If, indeed, we took the increase in the imports of the raw material as any test of the increase in the value of the manufacture, we should estimate it a great deal higher. But it will be afterwards seen that the improvements that have been made in the different processes, and the fall in the price of raw cotton, have had so powerful an influence in reducing the price of the goods brought to market, that, notwithstanding the increase of their quantity, their total value must have remained, for some time past, nearly constant.

The average annual quantity of cotton wool imported, after deducting the exports, may be taken at about 430,000,000 lbs. weight. It is supposed, that of this quantity about 30,000,000 lbs. are used in a raw or half manufactured state, leaving a balance of 400,000,000 lbs. for the purposes of manufacturing, the cost of which may be taken, at an average, at 6*d.* per lb. Deducting, therefore, from the total value of the manufactured goods, or 34,000,000*l.*, the value of the raw material, amounting to 10,000,000*l.*, there remains 24,000,000*l.*; which, of course, forms the fund whence the wages of the persons employed in the various departments of the manufacture, the profits of the capitalists, the sums required to repair the wear and tear of buildings, machinery, &c., the expense of coals, &c. &c., must all be derived. If, then, we had any means of ascertaining how this fund is distributed, we should be able, by taking the average of wages and profits, to form a pretty accurate estimate of the number of labourers, and the quantity of capital employed. But here, unfortunately, we have only probabilities and analogies to guide us. It may, however, be confidently assumed, in the first place, that in consequence of the extensive employment of highly valuable machinery in all the departments of the cotton manufacture, the proportion which the profits of capital, and the sum to be set aside to replace its wear and tear, bears to the whole value of the manufacture, must be much larger than in any other department of industry. We have heard this proportion variously estimated, at from a fourth to a half of the total value of the manufactured goods, exclusive of the raw material; and as the weight of authority seems to be pretty much divided on the subject, we shall take an intermediate proportion. Assuming, therefore, that the profits of the capital employed in the cotton manufacture, the wages of superintendence, &c., the sum required to replace the wear and tear of machinery, buildings, &c., and to furnish coals, &c., amount together to *one third* part of the value of the manufactured goods, exclusive of the raw material, or to 8,000,000*l.*, a sum of 16,000,000*l.* will remain as the wages of the spinners, weavers, bleachers, &c. engaged in the manufacture; and taking, inasmuch as a large proportion of women, and children under 16 years of age, are employed, the average rate of wages at only 20*l.* a year, we shall have (dividing 16,000,000 by 20) 800,000 as the total number of persons directly employed in the different departments of the manufacture.

We should mistake, however, if we supposed that this number, great as it certainly is, comprised the whole number of persons to whom the cotton manufacture furnishes subsistence, exclusive of the capitalists. Of the sum of 8,000,000*l.* set apart as the profit of the capitalists, and the sum required to furnish coal, and to defray the wear and tear of machinery, &c., a large proportion must annually be laid out in paying the wages of engineers, machine-makers, iron-founders, smiths, joiners, masons, bricklayers, &c. It is not easy to say what this proportion may amount to; but taking it at a *third*, or 2,666,000*l.*, and supposing the rate of wages of each individual to average 30*l.* a year, the total number employed in the various capacities alluded to will be (2,666,000 divided by 30) 88,000; and a sum of 5,334,000*l.* will remain to cover the profits of the capital employed in the various branches of the manufacture, to repair the different parts of the

machinery and buildings as they wear out, and to buy coal, flour *, &c. The account will, therefore, stand as under: —

Total value of every description of cotton goods annually manufactured in Great Britain		£34,000,000
Raw material, 100,000,000 lbs. at 10*d.* per lb.	£10,000,000	
Wages of 800,000 weavers, spinners, bleachers, &c. at 20*l.* a year each	16,000,000	
Wages of 88,000 engineers, machine-makers, smiths, masons, joiners, &c. at 30*l.* a year each	2,666,000	
Profits of the manufacturers, wages of superintendence, sums to purchase the materials of machinery, coals, &c.	5,334,000	
		34,000,000
The capital employed may be estimated as follows: —		
Capital employed in the purchase of the raw material		£5,000,000
Capital employed in payment of wages		9,000,000
Capital vested in spinning-mills, power and hand looms, workshops, warehouses, stocks on hand, &c.		20,000,000
		£34,000,000

Now, this sum of 34,000,000*l.*, supposing the interest of capital, inclusive of the wages of superintendence &c., to amount to 10 per cent., will yield a sum of 3,400,000*l.*; which being deducted from the 5,334,000*l.* profits, &c., leaves 1,934,000*l.*, to purchase materials to repair the waste of capital, the flour required for dressing, the coals necessary in the employment of the steam engines, to effect insurances, and to meet all other outgoings.

The aggregate amount of wages, according to the above estimate, is 18,666,000*l.*; but there are not many departments of the business in which wages have to be advanced more than 6 months before the article is sold. We, therefore, incline to think that 9,000,000*l.* is a sufficient (perhaps too great) allowance for the capital employed in the payment of wages.

It has been said by some that this estimate is under, and by others that it is overrated; but we believe it will be found to be nearly correct, though, if any thing, it may, perhaps, be a little in excess. No doubt we estimated, in the former edition of this work, the value of the cotton stuffs and yarn produced in the United Kingdom in 1834, at 34,000,000*l.*; but farther inquiry has convinced us that this estimate was too high; and it is to be borne in mind, that though the consumption of raw cotton has increased fully 50 per cent. since 1834, there has been in the interval a very considerable fall in the value of the raw material, in the wages and profits of those engaged in the manufacture, and in the prices of the manufactured articles. The declared value of the exports of cotton goods and yarn, at an average of 1841 and 1842, amounted to about 22,500,000*l.*; and estimating the value of those consumed at home at half the value of those exported, we shall have 33,750,000*l.* for the total value of the manufacture. Perhaps it may be thought that in this estimate we have underrated the home consumption of cottons; but the truth is, that, if any thing, we have rather inclined to the other extreme. If, indeed, we were to deduce the value of the home consumption from the quantity of yarn, as given in Burns' *Glance* and other publications of authority, it might be supposed that we had very much overrated the home consumption. But this would not be a fair criterion, both because it might, we incline to think, be shown that the weight of the yarn left for home consumption is underrated in the publications referred to, and because the great bulk of the cotton goods manufactured at home are of a superior fabric, and much more costly than those sent abroad. On the whole, therefore, we are disposed to believe that in estimating the present value of the products of the British cotton manufacture at 34,000,000*l.* a year, we shall not be very wide of the mark; and moderate as this estimate may appear as compared with others put forth on the same subject †, it strikingly evinces the great value and importance of the manufacture.

Allowance being made for old and infirm persons, children, &c. dependent on those actually employed in the various departments of the cotton manufacture, and in the construction, repair, &c. of machinery and buildings required to carry it on, it must furnish, on the above hypothesis, subsistence for from 1,200,000 to 1,300,000 persons! And for this new and most prolific source of wealth we are indebted partly and principally, as already shown, to the extraordinary genius and talent of a few individuals; but, in a great degree, also, to that security of property and freedom of industry which give confidence and energy to all who embark in industrious undertakings, and to that universal diffusion of intelligence which enables those who carry on any work to press every power of nature into their service, and to avail themselves of productive capacities of which a less instructed people would be wholly ignorant.

The effect that the sudden opening of so vast and profitable a field for the employment of capital and labour has had on the populations of the different towns of Lancashire and Lanarkshire, the districts where the cotton manufacture is principally carried

* This is a much more important item than might be at first supposed. Flour is indispensable in the dressing of webs; and we are well assured that its consumption in this way is not less than 300,000 barrels a year!

† Messrs. Macqueen and Spackman, for example, who have respectively estimated the value of the cotton manufacture at 52½ and 60 millions sterling!

on, has been most striking. In 1774, for example, the townships of Manchester and Salford were estimated to contain 27,246 inhabitants — a number which was swelled, in 1831 to 182,812; the entire population of the *boroughs* of Manchester and Salford having amounted, in that year, to 227,808, and in 1841 to 296,183. The population of Preston, in 1780, is said not to have exceeded 6,000; whereas it amounted, in 1841, to 50,131. In like manner, the population of Blackburn has increased from 11,980, in 1801, to 36,629, in 1841; that of Bolton has increased, in the same period, from 17,416 to 49,763; that of Wigan, from 10,989 to 25,517, &c. But the progress of Liverpool is most extraordinary, and can be matched only by the progress of one or two cities in the United States. Liverpool is not properly one of the seats of the cotton manufacture; but she is, notwithstanding, mainly indebted to it for the unparalleled rapidity of her growth. She is the grand emporium of the cotton district—the port where almost all the raw cotton, and the various foreign articles required for the employment and subsistence of the persons engaged in the manufacture, are imported, and whence the finished goods are exported to other countries. She has, therefore, become a place of vast trade, and is now, in that respect, second only to London. In 1700, according to the best accounts that can be obtained, the population of Liverpool amounted to only 5,145; in 1750 it had increased to 18,450; in 1770 it amounted to 34,050. The cotton manufacture now began rapidly to extend, and, in consequence, the population of Liverpool increased, in 1801, to 77,653; in 1821, to 118,972; in 1831, to 165,175; and in 1841 it amounted to 222,954. The progress of population in Lanarkshire and Renfrewshire has been equally striking. In 1780, the city of Glasgow contained only 42,832 inhabitants; in 1801, that number had increased to 77,385; in 1831, to 202,426; and in 1841, to 274,533!

Since the repeal of the Irish protecting duties, in 1823, the cotton manufacture has made considerable progress in Ireland. It is principally centred in Belfast, and employs in all about 4,700 hands. But the unsettled state of the country and the want of coal are insuperable obstacles to the continued increase of the manufacture.

We subjoin the account, previously referred to, given in Burns' *Glance*, of the consumption of cotton in England in 1842. It will be observed that the statements in it differ in some respects, though to no very great extent, from those of Messrs. Holt and Co., which we believe to be of the highest authority. Such disagreements must necessarily, however, occur in all accounts not drawn up from official sources, and founded in part upon estimate and conjecture.

Statement of the Cotton spun in England and Scotland in 1842, and of the Quantity of Yarn produced; showing, also, how the Quantity spun in England was disposed of.

Description.	Number of Bags consumed.	Average Weight of Bags.	Total Weight in Pounds.	Weekly Consumption of Bags describing each Sort.

* These numbers will not always agree with those in the population returns, as the limits of the boroughs have in some instances been varied. In the above statements the limits are supposed to have been invariable.

Exports of Cotton Goods and Yarn. Fall of Prices, &c. — For a very long period the woollen manufacture was the great staple of the country. But the progress of improvement in the spinning and manufacturing of cotton, since 1770, being so much more rapid than any that has taken place in the woollen manufacture, the value of the former is now vastly greater than that of the latter. It appears, from the accounts of the declared or real values of the different sorts of exported commodities given by the Custom-house, that the exports of cotton goods, including yarn, amount, at an average, to about 22,500,000*l.* sterling, being about two thirds the value of the whole manufacture; and forming of themselves about *two thirds* of the total value of all the wove fabrics exported from the empire. We subjoin a statement, compiled from the Annual Finance Accounts, of the declared or real values of the cotton manufactured goods, cotton yarn, woollen and silk manufactures, and the totals of all other articles of British produce and manufacture, exported from Great Britain to all parts of the world (except Ireland) annually since 1816.

	Years.	Cotton Manufactures.	Cotton Yarn.	Manufactures.			Total of Wove Fabrics.	Total of all other Articles.

We may here remark, that while the *declared* or real value of the exports of cotton stuffs and yarn has increased but slowly since 1816, their *official* value (now merely an index of quantity) has increased with comparative rapidity. This circumstance has given rise to a great deal of irrelevant discussion; and has even been referred to as proving that the manufacture is in a declining state! But it proves precisely the contrary. It shows that the decline in the price of the raw material, and the improvements in the machinery and processes used in the manufacture, have been so great, that we are now able to export and sell with a profit, (for, unless such were the case, the exportation would very speedily cease,) nearly double the quantity of cotton goods we exported in 1816, for about the same price.

In illustration of this view of the matter, we beg to subjoin the following statement of the production and cost of the different species of cotton yarn in England, in 1812 and 1830. It was furnished by

Mr. Kennedy, of Manchester, to the committee on the East India Company's affairs; so that no doubt can be entertained of its accuracy.

Hanks per Day, per Spindle.			Price of Cotton and Waste per lb.		Labour per lb.*		Cost per lb.

The fall in the price of most species of cotton goods since 1830 has been most striking. This is evident from the subjoined

Account of the Prices of the principal Descriptions of Cotton Goods on the 10th of January each Year, from 1836 to 1843. — (From the valuable Circular of Messrs. Barbour of Manchester.)

The Table on the opposite page is interesting, from its exhibiting the state of our trade in wrought cottons with the different countries of the world. It sets the importance of the markets of India and South America, as outlets for our cottons, in a very striking point of view.

Such being the vast extent and importance of the cotton manufacture, the probability of our preserving our ascendancy in it becomes a very interesting topic of inquiry. But it is obvious that a great deal of conjecture must always insinuate itself into our reasonings with respect to the future state of any branch of manufacturing industry. They are all liable to be affected by so many contingent and unforeseen circumstances, that it is impossible to predicate, with any thing like certainty, what may be their condition a few years hence. It is not to be denied that a business which depends in so great a degree on foreign demand, and which may, consequently, be materially influenced, not only by foreign legislation and foreign discoveries and inventions, but also by the mutations of fashion at home and abroad, is in rather a perilous situation; and that those dependent on it must necessarily be exposed to the most trying vicissitudes. These, no doubt, are natural to all businesses of this description; and may not be of a kind to shake the stability of the manufacture, or to endanger our superiority in it, provided they do not disturb tranquillity at home. But when a vast number of persons depend on a manufacture, the privations to which many of them are not unfrequently exposed, and the efforts that are made to inflame their prejudices, by relpresenting their sufferings (which in nine out of ten instances spring from accidental or uncontrollable causes) as the result of vicious legislation, the tyranny or selfishness of their masters, and bad institutions, may easily lead them to commit outrages. And if that feeling of security which has led to the investment of such immense sums in

* Wages are estimated at the same rate, or at 20*d.* a day, for every person employed, men, women, and children, in 1812 and 1850; the saving being entirely in the better application of the labour.

mills and machinery should once be seriously impaired, the fall of the manufacture might be even more rapid than its rise. Any thing that tends to keep alive and encourage disaffection and agitation is the bane of every country, but especially of one so deeply engaged in manufactures as this: and while, therefore, it is the bounden duty of government to endeavour, by modifying or suppressing prohibitions, and repealing all unjust or partial laws, to give freedom to industry, and to take away all good cause for agitation, every individual interested in the public welfare should endeavour, by every means in his power, to discourage the efforts of those who, to advance their own unworthy ends, endeavour to keep alive a spirit of discontent among the labouring classes, that cannot fail, in the long run, to be subversive alike of good order, industry, and prosperity.

But, abstracting from the influence of such considerations, and of national struggles and commotions, which can neither be foreseen nor estimated, we do not think that there is any thing in our state, or in that of the different commercial and manufacturing countries of the world, that should lead us to anticipate that the gloomy forebodings of those who contend that the cotton manufacture of England has reached its zenith, and that it must now begin to decline, will be realised. The natural capabilities we possess for carrying on the business of manufacturing are, all things considered, decidedly superior to those of any other people. But the superiority to which we have already arrived is, perhaps, the greatest advantage in our favour. Our master manufacturers, engineers, and artisans are more intelligent, skilful, and enterprising, than those of any other country; and the extraordinary inventions they have already made, and their familiarity with all the principles and details of the business, will not only enable them to perfect the processes already in use, but can hardly fail to lead to the discovery of others. Our establishments for spinning, weaving, printing, bleaching, &c. are infinitely more complete and perfect than any that exist elsewhere; the division

of labour in them is carried to an incomparably greater extent; the workmen are trained from infancy to industrious habits, and have attained that peculiar dexterity and sleight of hand in the performance of their separate tasks, that can only be acquired by long and unremitting application to the same employment. Why, then, having all these advantages on our side, should we not keep the start we have already gained? Every other people that attempt to set up manufactures must obviously labour under the greatest difficulties as compared with us. Their establishments cannot, at first, be sufficiently large to enable the division of employments to be carried to any considerable extent, at the same time that expertness in manipulation, and in the details of the various processes, can only be attained by slow degrees. It appears, therefore, reasonable to conclude that such new beginners, having to withstand the competition of those who have already arrived at a very high degree of perfection in the art, must be immediately driven out of every market equally accessible to both parties; and that nothing but the aid derived from restrictive regulations and prohibitions will be effectual to prevent the total destruction of their establishments in the countries where they are set up.

4. *Progress of the Manufacture in other Countries.*—But notwithstanding what has now been stated, a notion seems to be spreading abroad, that we shall have no little difficulty in maintaining our ground against the competition of the Americans, Swiss, Austrians, French, &c., and a good deal of evidence upon this subject was taken before the committee of the House of Commons appointed in 1833 to inquire into the state of manufactures, commerce, and shipping. Such apprehensions appear to us to be quite destitute of any real foundation. Provided we have no agitation, that public tranquillity and security in fact and opinion be maintained unimpaired, we need be under no sort of uneasiness as to any competition to which we may be exposed. The tariff has forced cotton, woollen, iron, and other manufactures into a premature existence in the United States; but excepting the coarser fabrics, and those in which the value of the raw material bears a large proportion to the value of the manufactured article, we have nothing to fear from the Americans. Neither has their progress in the manufacture of this description of goods been at all remarkable; for the official accounts published by order of congress (21st July 1842) show that the value of all descriptions of cotton goods exported from the United States, during the year ended the 30th of September 1841 (p. 232.), amounted to only 3,122,546 doll., or about 620,000*l.*, of which the raw material certainly amounted to more than a half.

Among the singular statements that have been put forth as to the cotton manufactures of America, one is, that the wages of labour are lower there than here! To dwell on the absurdity of such a statement would be an insult to the reader. But though it were true that wages were as low in Massachusetts as in England, that would afford no real ground for anticipating any formidable competition from America in this department. The price of cottons depends more on the profits of stock than on the wages of labour; and, so far as we know, it has not yet been alleged that the former are lower in America than here. Suppose an English and an American manufacturer have each 100,000*l.* vested in cotton mills, and in the floating stock required to carry on the business; if profits in England be 1 per cent. less than in America, the English manufacturer can afford, *cæteris paribus*, to sell his goods for 1,000*l.* less than the American. We are very far from insinuating or believing that this lowness of profit is an advantage; but whatever may be its influence in other respects, so long as it continues, it gives our manufacturers a decided superiority over those of every other country where profits are higher, in the manufacture and sale of all articles, such as cotton yarn and stuffs, principally produced by machinery. It is ludicrous, indeed, to suppose that a half-peopled country like America, possessed of boundless tracts of unoccupied land of the highest degree of fertility, should be able successfully to contend in manufacturing industry, with an old settled, fully peopled, and very rich country like Great Britain. The government which encourages such a misdirection of the public capital and industry, and those who suppose it can end in any thing else than ruin to the parties, are ignorant of the merest elements of the science of wealth.

The following results as to the state of the American cotton manufacture in 1840 are given in the census of that year.

Number of factories	1,240	Number of persons employed	72,112
Spindles	2,484,651	Value of manufactured articles	$ 44,360,433
Dyeing and printing works	129	Amount of capital invested	— 31,102,359

The following statement, though not official, is said to represent with considerable accuracy the consumption of cotton in the American manufactures in the 16 years ending with 1841-42.

Years.	Cotton consumed.	Years.	Cotton consumed.	Years.	Cotton consumed.
1841-42	bales 267,800	1836-37	222,540	1830-31	bales 189,142
1840-41	— 217,288	1835-36	— 236,733	1829-30	— 126,512
1839-40	— 295,193	1834-35	— 216,868	1828-29	— 118,853
1838-39	— 276,018	1833-34	— 196,413	1827-28	— 120,502
1837-38	— 246,063	1832-33	— 194,413	1826-27	— 103,483
		1831-32	178,800		

Little as we have to fear from American, we have still less to fear from Swiss or Saxon competition. America has some advantage over England in the greater cheapness of the raw material; but Switzerland and Saxony, situated almost in the centre of Europe, can only draw their supplies of raw cotton by a distant land carriage by way of Hamburg, Marseilles, and Genoa; and we have the best authority for affirming, that a bale of cotton may be conveyed at a less expense from Charleston to Manchester, than from Genoa, Amsterdam, or Hamburg, to Switzerland or Saxony. Switzerland is altogether destitute of coal; all that she does is done by water power, and that is said to be nearly exhausted. It is not, however, to be wondered at that the Swiss and Saxons should have succeeded in supplying their own markets, and some of those immediately contiguous, with certain species of yarn; or that they should export hosiery and such other articles as they can manufacture on a small scale, in their cottages; but it is idle to suppose that they should ever be able to do much more than this.

It was stated before a committee of the House of Commons, in 1833, that the French cotton manufacture had increased, between 1812 and 1826, in the ratio of 310 per cent., while in England its increase was only 270 per cent. This statement was, we believe, accurate as far as it went; and yet it was eminently calculated, though, no doubt, without being so intended, to mislead. In 1812, and for some years previously, it was hardly possible to import cotton wool into France, and its price was quite excessive. When, therefore, the manufacturers got wool after the return of peace at an ordinary price, it was impossible, seeing that foreign cottons are excluded from France, but that the manufacture should increase with extraordinary rapidity, until the home demand was pretty well supplied. An advance of this sort is assuredly no proof of the capacity of France to prosecute the manufacture with advantage, or to export cottons without the aid of a bounty. Had the manufacture gone on increasing in the above ratio, down to the present time, the circumstance might have justly excited attention; but such has not been the case. No doubt it has made considerable progress in the interval; which is not to be wondered at, seing the increase of wealth and population in France, and seeing also the peculiar facilities which the French enjoy for smuggling cotton stuffs and other prohibited products across the Pyrenees into Spain, where they are taken off in large quantities. But until the French government reduces or repeals the duties on raw cotton, and on foreign iron and other articles indispensable to the cheap construction of cotton factories, it were idle to suppose that, how ingenious soever, the French should be formidable competitors in the production of cottons. We subjoin

An Account of the Quantities of Cotton Wool annually imported into France and taken for Consumption, from 1826 down to 1840, both inclusive; specifying, also, the Amount of Duty derived from the same.

Years.	Quantities of Cotton.				Value.	Duty levied.
	From Turkey and Egypt.	From United States.	From Brazil and other Countries.	Total.

1840	2,130,000	48,581,000	2,231,000	52,942,000	94,006,000	11,345,000

It is supposed by some, that the competition we have to fear from the Continent does not consist so much in the spinning as in the weaving of cottons; and that the probability is, that our exports of yarn will increase, and our exports of manufactured goods diminish. We do not, however, imagine there is much in this. Our power looms are superior to those of any other country; and it is unhappily true, that the wages of hand loom weavers here are sunk below the general level of Europe. There is not, in fact, with the exception of the dyes, a single particular connected with the cotton manufacture in which we have not a manifest superiority over the Swiss, Saxons, French, Prussians, and every Continental nation. Certainly, however, we are inferior to some of them in the brilliancy and durability of their dyes; and this circumstance occasioned a considerable demand for German and Swiss printed cottons in many parts of the East, where vivid colours are held in the highest estimation. But even there, the greater cheapness of our goods is proving an overmatch for the greater brilliancy of those of our rivals

On the whole, therefore, we see no reason to think that the British cotton manufacture has reached, much less passed, its zenith. At the same time, however, it can hardly be necessary to observe, considering the vast importance of the trade, that while, on the one

hand, nothing should be left undone that may serve to widen its foundations, and to promote its prosperity, on the other, nothing should be attempted that may, by possibility, have an opposite effect. The subsistence of 1,400,000 people is not to be endangered on slight grounds. The abuses even of such a business must be cautiously dealt with, lest, in eradicating them, we shake or disorder the whole fabric. No doubt, however, the case of children employed in the cotton factories is one that calls fairly for legislative regulation; and we believe that the regulations that have been enacted, carried out as they have been under the vigilant superintendence of the inspectors, have been productive of much good.

5. Statutory Regulations as to the Employment of Children in Factories.

No statutory restrictions respecting the employment of children in the mills and factories of the United Kingdom existed until the year 1802, when an act of parliament was passed (42 Geo. 3.) for the preservation of the health and morals of apprentices and others employed in cotton and other factories, and directing the local magistrates to report whether the factories were conducted according to law, and to adopt such sanitary regulations as they might think fit. This act was followed, in 1816, by an act, generally called Sir Robert Peel's Act, imposing various regulations on the employment of children in cotton mills.

Both of these acts were repealed in 1831, by an act 1 & 2 Will. 4. c. 39., commonly called Sir John Hobhouse's Act, which provided, that in cotton factories, to which alone it related, no child could legally be employed till it had attained the age of 9 years; and that no person under 18 years of age could be suffered to remain in the factories more than 12 hours in one day; and that on Saturdays they should only be employed in the factories for 9 hours.

Sir John Hobhouse's act was repealed in 1833, by the act 3 & 4 Will. 4. c. 103., which contains the following provisions, comprehending the whole statutory regulations at present applicable to cotton and other factories in the United Kingdom: —

1. That after the 1st of January, 1834, no person under 18 years of age shall be allowed to work in the night, that is, between ½ past 8 P. M. and ½ past 5 A. M., in any cotton or other factory in which steam or water, or any other mechanical power, is or shall be used to propel the machinery, excepting in lace factories.

2. That no person under 18 shall be employed more than 12 hours in one day, nor more than 69 hours in one week.

3. That there shall be allowed, in the course of every day, not less than 1½ hour for meals to every person restricted to the performance of 12 hours' work.

4 That after the 1st of January, 1834, no child, except in silk mills, shall be employed, who shall not be 9 years old.

5 That after the 1st of March, 1834, no child, except in silk mills, shall be employed in any factory more than 48 hours in any one week, nor more than 9 hours in any day, who shall not be 11 years old; nor after the 1st of March, 1835, who shall not be 12 years old; nor after the 1st of March, 1836, who shall not be 13 years old; and that these hours of work shall not be exceeded, even if the child has worked during the day in more factories than one.

6. That children and young persons, whose hours of work are regulated, shall be entitled to 2 holidays and 8 half holidays in every year.

7. That children, whose hours of work are restricted to 9 hours a day, are not to be employed without obtaining a certificate from a physician or surgeon, certifying that they are of the ordinary strength and appearance of children of the age before mentioned, which certificate is to be countersigned by some inspector or justice.

8. That it shall be lawful for his Majesty to appoint, during pleasure, 4 persons to be inspectors of factories, with extensive powers, as magistrates, to examine the children employed in the factories, and to inquire respecting their condition, employment, and education; and that one of the secretaries of state shall have power, on the application of an inspector, to appoint superintendents to superintend the execution of the act.

9. That those inspectors are to make all rules necessary for the execution of the act, and to enforce the attendance at school, for at least 2 hours daily out of 6 days in the week, of children employed in factories from whose weekly wages a deduction, not exceeding 1 penny in every shilling, for schooling shall be made.

10. That no child shall be employed, who shall not on Monday of every week, give to the factory master a certificate of his or her attendance at school for the previous week.

11. That the interior walls of every mill shall be whitewashed every year.

12. That a copy or abstract of the act shall be hung up in a conspicuous part of every mill.

13. That the inspectors shall regularly, once a year, report their proceedings to one of the secretaries of state

The act also contains regulations extending the hours of work where time shall be lost by the want of, or an excess of, water, in mills situated upon a stream of water; respecting the steps to be taken in order to obtain regular certificates of age for the children requiring them; respecting the erection of schools, where necessary; and respecting the proceedings to be had before inspectors and magistrates for enforcing the act, and the right to appeal from their decisions.

COWHAGE, or COWITCH (Hind. *Kiwach*), the fruit or bean of a perennial climbing plant (*Dolichos pruriens* Lin.). It is a native of India, as well as of several other Eastern countries, and of America. The pod is about 4 or 5 inches long, a little curved, and contains from 3 to 5 oval and flattish seeds; the outside is thickly covered with short, bristly, brown hairs, which, if incautiously touched, stick to the skin, and occasion intolerable itching. Syrup thickened with the hairs is prescribed in certain complaints. — (*Ainslie's Materia Indica.*)

COWRIES (Ger. *Kauris*; Du. *Kauris*; Fr. *Coris, Cauris, Bouges*; It. *Cori, Porcellane*; Sp. *Bucios Zimbos*) are small shells brought from the Maldives, which pass current as coin in smaller payments in Hindostan, and throughout extensive districts in Africa. They used to be imported into England previously to the abolition of the slave trade, in which they were subsequently employed. They are an article of trade at Bombay. The best are small, clean, and white, having a beautiful gloss; those that are yellow, large, and without lustre, should be rejected. The freight is calculated at 20 cwt. to the ton. — (*Milburn's Orient. Com.*)

CRANBERRIES, or RED WHORTLEBERRIES, the fruit of a moss plant,

the *Vaccinium oxycoccus* of Linnæus. The berries are globular, about the size of currants; are found in mossy bogs in different parts of Scotland, but not in great numbers: they were once common in Lincolnshire, and the northern parts of Norfolk; but since the bogs have been drained and cultivated, they are rarely met with. Cranberries have a peculiar flavour, and a sharp, acid, agreeable taste; they are easily preserved, and are extensively used in making tarts. They are very abundant in North America, and in the northern parts of Russia; the latter being of a superior quality. We import from 30,000 to 35,000 gallons annually. It is said that some very fine ones have recently been brought from New South Wales.

CRAPE (Fr. *Crêpe*; Ger. *Flohr*, *Krausflohr*; It. *Espumilla*, *Soplillo*; Rus. *Flior*; Sp. *Crespon*), a light transparent stuff, in manner of gauze, made of raw silk gummed and twisted on the mill and woven without crossing. It is principally used in mourning. Crape was originally manufactured in Bologna; but that made in this country is now deemed superior to any made in Italy.

CREAM OF TARTAR. See ARGAL.

CREDIT, the term used to express the trust or confidence placed by one individual in another, when he assigns him money, or other property in loan, or without stipulating for its immediate payment. The party who lends is said to give credit, and the party who borrows to obtain credit.

Origin and Nature of Credit. — In the earlier stages of society, credit is in a great measure unknown. This arises partly from the circumstance of very little capital being then accumulated, and partly from government not having the means, or not being sufficiently careful, to enforce that punctual attention to engagements so indispensable to the existence of confidence and credit. But as society advances, capital is gradually accumulated, and the observance of contracts is enforced by public authority. Credit then begins to grow up. On the one hand, those individuals who have more capital than they can conveniently employ, or who are desirous of withdrawing from business, are disposed to lend, or to transfer, a part or the whole of their capital to others, on condition of their obtaining a certain stipulated premium or interest for its use, and what they consider sufficient security for its repayment; and, on the other hand, there are always individuals to be met with, disposed to borrow, partly (and among merchants principally) in order to extend their business beyond the limits to which they can carry it by means of their own capital, or to purchase commodities on speculation, and partly to defray debts already contracted. These different classes of individuals mutally accommodate each other. Those desirous of being relieved from the fatigues of business find it very convenient to lend their capital to others; while such as are anxious to enlarge their businesses obtain the means of prosecuting them to a greater extent.

It is plain, that to whatever extent the power of the borrower of a quantity of produce or a sum of money, to extend his business, may be increased, that of the lender must be equally diminished. The same portion of capital cannot be employed by two individuals at the same time. If A. transfer his capital to B., he necessarily, by so doing, deprives himself of a power or capacity of production which B. acquires. It is most probable, indeed, that this capital will be more productively employed in the hands of B. than of A.; for the fact of A. having lent it shows that he either had no means of employing it advantageously, or was disinclined to take the trouble; while the fact of B. having borrowed it shows that he conceives he can advantageously employ it, or that he can invest it so as to make it yield an interest to the lender, and a profit to himself. It is obvious, however, that except in so far as credit contributes, in the way now mentioned, to bring capital into the possession of those who, it may be fairly presumed, will employ it most beneficially, it conduces nothing to the increase of wealth.

The most common method of making a loan is by selling commodities on credit, or on condition that they shall be paid for at some future period. The price is increased proportionally to the length of credit given; and if any doubt be entertained with respect to the punctuality or solvency of the buyer, a further sum is added to the price, in order to cover the risk that the seller or lender runs of not receiving payment, or of not receiving it at the stipulated period. This is the usual method of transacting where capital is abundant, and confidence general; and there can be no manner of doubt that the amount of property lent in Great Britain, the Netherlands, and most other commercial countries, in this way, is infinitely greater than all that is lent in every other way.

When produce is sold in the way now described, it is usual for the buyers to give their bills to the sellers for the price, payable at the period when the credit is to expire; and it is in the effects consequent to the negotiation of such bills that much of that magical influence that has sometimes been ascribed to credit is believed to consist. Suppose, to illustrate this, that a paper-maker, A., sells to a printer, B., a quantity of paper, and that he gets his bill for the sum, payable at 12 months after date: B. could not have entered

into the transaction had he been obliged to pay ready money; but A., notwithstanding he has occasion for the money, is enabled, by the facility of negotiating or discounting bills, to give the requisite credit, without disabling himself from prosecuting his business. In a case like this, both parties are said to be supported by credit; and as cases of this sort are exceedingly common, it is contended that half the business of the country is carried on by its means. All, however, that such statements really amount to is, that a large proportion of those engaged in industrious undertakings do not employ their own capital, but that of others. In the case in question, the printer employs the capital of the paper-maker, and the latter employs that of the banker or broker who discounted the bill. This person had most likely the amount in spare cash lying beside him, which he might not well know what to make of; but the individual into whose hands it has now come, will immediately apply it to useful purposes, or to the purchase of the materials, or the payment of the wages of the workmen employed in his establishment. It is next to certain, therefore, that the transaction will have been advantageous. But still it is essential to bear in mind that it will have been so, not because credit is of itself a means of production, or because it can give birth to capital not already in existence; but because, through its agency, capital finds its way into those channels in which it has the best chance of being profitably employed.

The real advantage derived from the use of bills and bank-notes as money consists, as has been already shown, in their substituting so cheap a medium of exchange as paper, in the place of one so expensive as gold, and in the facilities which they give to the transacting of commercial affairs. If a banker lend A. a note for 100*l.* or 1,000*l.*, the latter will be able to obtain an equivalent portion of the land or produce of the country in exchange for it; but that land or produce was already in existence. The issue of the note did not give it birth. It was previously in some one's possession; and it will depend wholly on the circumstance of A.'s employing it more or less advantageously than it was previously employed, whether the transaction will, in a public point of view, be profitable or not. On analysing any case of this kind, we shall invariably find that all that the highest degree of credit or confidence can do, is merely to change the distribution of capital — to transfer it from one class to another. These transfers are occasionally, too, productive of injurious results, by bringing capital into the hands of spendthrifts: this, however, is not, except in the case of the credit given by shopkeepers, a very common effect; and there can be no doubt that the vast majority of regular loans are decidedly beneficial.

Abuses of the present Credit System in Great Britain. Means of obviating them. — The previous observations refer rather to the credit given to individuals engaged in business, who mean to employ the capital which they borrow in industrious undertakings, than to that which is given to individuals not so engaged, and who employ the advances made to them in supporting themselves and their families. In neither case is credit of advantage, unless it be granted with due discrimination, and with reference to the character, condition, and prospects of those receiving it. In this country, however, these considerations have been in a great measure lost sight of, in the granting of credit by shopkeepers and tradesmen of all descriptions. Owing to the competition of such persons, their extreme eagerness to secure customers, and the general indolence of opulent persons, which disinclines them to satisfy every small debt when it is contracted, the system of selling upon credit has become almost universal. Few among us think of paying ready money for any thing; seven tenths of the community are in the constant practice of anticipating their incomes; and there is hardly one so bankrupt in character and fortune as to be unable to find grocers, bakers, butchers, tailors, &c. ready to furnish him upon credit with supplies of the articles in which they respectively deal. We look upon this facility of obtaining accommodations as a very great evil. They are not, in one case out of five, of any real advantage to the parties receiving them, while they are productive of very pernicious results. The system tempts very many, and sometimes even the most considerate individuals, to indulge in expenses beyond their means; and thus becomes the most fruitful source of bankruptcy, insolvency, and bad faith. To guarantee themselves from the extraordinary risk to which such proceedings expose them, tradesmen are obliged to advance the price of their goods to a most exorbitant height; so that those who are able, and who really mean to pay the debts they contract, are, in fact, obliged to pay those of the hosts of insolvents and swindlers maintained by the present system. Many tradesmen consider themselves as fortunate, if they recover from two thirds to three fourths of the sums standing in their books, at the distance of several years.

The extraordinary extent to which the credit practice is carried may be learned from the inquiries of the Parliamentary Committee on Small Debts. It appears from them, that hatters, shoemakers, &c. in the metropolis, have often 4,000*l.* and upwards on their books in debts below 10*l.*, and that *five sixths of their book debts are below that sum!* A large proportion of these debts are irrecoverable; but owing to the artificial enhance-

ment of prices, those that are good are sufficient to indemnify the traders for the loss of the bad.

It is not easy, we think, to imagine any system better fitted to generate improvidence and fraud. The vast majority of those who become insolvent, or are imprisoned for debt, consist of labourers, artisans, half-pay officers, clerks in public and other offices, annuitants, &c. — persons whom no prudent shopkeeper would ever allow to get permanently into his debt. The following Table exhibits some of the effects resulting from this system : —

Number of Persons committed for Debt to the several Prisons of the Metropolis in the Year 1842, and the Sums for which they were committed.

	For Sums above 100*l.*	For Sums between 50*l.* and 100*l.*	For Sums between 50*l.* and 20*l.*	For Sums under 20*l.*	Total.	In Custody January 1. 1843.
Queen's Bench prison	132		96	160	460	
Fleet prison - -	59		26	12	120	288
Marshalsea prison -	2		29	70	106	
Whitecross Street prison	183	265	570	1929	2937	399
Horsemonger Lane prison	28	55	127	146	356	74
				2317	3979	761

It is time, certainly, that something effectual were done to put an end to such flagrant abuses — to a system that sends 1,929 persons to a single prison for debts under 20*l.* ! We do not mean to say or insinuate that credit may not frequently be given to the labouring classes with the best effects : but it is of its abuse that we complain, — of its being indiscriminately granted to every one ; to those whom it encourages to continue in a course of idleness and profligacy, as well as to those industrious and deserving persons to whom it may occasionally be of the greatest service. To secure the advantages of credit to the public, free from the enormous evils that result from its abuse, is an object of the highest importance ; and few things, we believe, would do so much to secure it, as the taking from creditors the power to arrest and imprison for debt. — (See BANKRUPTCY.)

It was stated in the House of Commons, (19th of February, 1827,) that in the space of 2½ years, 70,000 persons were arrested in and about London, at an expense to the parties, it may be estimated, of between 150,000*l.* and 200,000*l.* ! In 1827, in the metropolis and two adjoining counties, 23,515 warrants to arrest were granted, and 11,317 bailable processes were executed. Hence it may be concluded, that in this single year, within the above limits, no fewer than 12,000 persons were deprived of their liberty, on the mere allegation of others, without any *proof* that they owed them a farthing ! Well might Lord Eldon say that "*the law of arrest is a permission to commit acts of greater oppression and inhumanity than are to be met with in slavery itself*, and that the redress of such a grievance would not be attended with any fatal consequences to the country."

The following Table, which shows that 1,078 persons were committed to Horsemonger Lane prison, in 1842, for debts amounting, in all, to only 2,321*l.* 16*s.* 9¾*d.*, being, at an average, no more than 2*l.* 3*s.* 8¼*d.* each, proves that the discussions which have taken place with respect to the law of arrest and imprisonment, have not, in any material degree, lessened its mischievous operation. Whatever else may be dear in England, the fact that thousands of people are annually imprisoned for such miserable trifles shows that personal liberty is, at all events, abundantly cheap.

A Return from Horsemonger Lane Gaol of the Number of Debtors committed to the said Gaol, on Process out of Courts of Request, during the Year ending 1st of January, 1843 ; stating separately the aggregate Amount of Debts and Costs ; showing, in Classes, the Number confined from One to less than Ten Days, for Ten Days and less than Thirty, Fifty, Seventy, and One Hundred Days ; and stating, also, the Amount paid out of the County or other Rates, for the Maintenance and Support of such Prisoners, as accurately as possible.

Number committed in the year -		1,078	
	£	s.	d.
Aggregate amount of debts - -	2,321	16	9¾
costs - -	618	12	11
Number confined from 1 to less than 10 days		423	
for 10 and - 30		402	
30 - - 50		160	
50 - - 70		44	
70 - - 100		15	
100 days and more		34	
Amount paid out of the county rate for the maintenance and support of such prisoners, viz. : —	£	s.	d.
For victuals - -	256	17	0
Proportionate share of expenses of the gaol, for salaries of officers, bedding, fuel, water, rent, &c. - - - - -			

We defy any one to show that the law of arrest and imprisonment has a single good consequence to be placed as a set-off against the evils of which it is productive. Tradesmen depend, as is clearly evinced by the above statements, upon the despotical

power which it puts in their hands, to get them out of scrapes; and believe that the fear of being subjected to arrest will stimulate even the most suspicious portion of their debtors to make payment of their accounts. The records of our prisons, and of our insolvent and other courts, show how miserably these expectations are disappointed. We believe, indeed, that we are warranted in affirming that the more respectable classes of shopkeepers and tradesmen are now generally satisfied that the present system requires some very material modifications. The law of arrest and imprisonment is, in fact, advantageous to none but knaves and swindlers, and the lowest class of attorneys, who frequently buy up small accounts and bills, that they may bring actions upon them, and enrich themselves at the expense of the poor, by the magnitude of their charges. Such oppressive proceedings are a disgrace to a civilised country. Were the law in question repealed, credit would be granted to those only who deserved it; for, generally speaking, tradesmen, supposing they had nothing to trust to but their own discretion, would not deal, except for ready money, with those of whose character and situation they were not perfectly informed; and the difficulty under which all idle and improvident persons would thus be placed of obtaining loans, would do much to wean them from their vicious courses, and to render them industrious and honest. "Those," says Dr. Johnson, "who have made the laws, have apparently considered that every deficiency of payment is the crime of the debtor. But the truth is, that the creditor always shares the act, and often more than shares the guilt, of improper trust. It seldom happens that any man imprisons another but for debts which he suffered to be contracted in hope of advantage to himself, and for bargains in which he proportioned his profit to his own opinion of the hazard; and there is no reason why one should punish another for a contract in which both concurred."

The power of taking goods in execution for debts is also one that requires to be materially modified. At present, the household furniture of every man, and even the *implements used in his trade*, should there be nothing else to lay hold of, may be seized and sold in satisfaction of any petty claim. It seems to us quite clear that some limits should be set to this power; and that such articles as are indispensable either to the subsistence or the business of any poor man ought to be exempted from execution, and, perhaps, distress. The present practice, by stripping its victims of the means of support and employment, drives them to despair, and is productive only of crimes and disorders.

We are glad to observe that there seems to be a growing conviction among mercantile men, of the inconveniences arising from the present practice. A petition against imprisonment for small debts, subscribed by many of the most eminent merchants, manufacturers, bankers, &c. of the city of Glasgow, was presented to the House of Commons in 1833. It contains so brief, and at the same time so forcible, an exposition of the evils resulting from the present system, that we shall take the liberty of laying it before our readers.

"Your petitioners have been long and seriously impressed with the belief that very great evils have arisen and do arise from the imprisonment of debtors in Scotland, especially for small sums.

"The petitioners will not here question the policy of the existing laws which authorise the imprisonment of debtors for considerable sums, nor do they intend to object to the creditor retaining the fullest power over the property and effects of his debtor; but they are humbly of opinion that, in so far as these laws give creditors the power to imprison debtors for small sums, such as for 8*l*. and under, they are not only injurious to the public, and ruinous to the debtor, but even hurtful to the creditor himself.

"It would be a waste of time to dwell upon the hardship of subjecting debtors to imprisonment for small debts, contracted sometimes certainly under circumstances of real distress, but more frequently from the improper use of credit, with which they are too readily supplied. The creditor takes care that his profit shall be commensurate with his risk; and the debtor is induced to purchase freely, and at any price, that which he is not immediately called upon to pay: the creditor coolly and cruelly calculates upon the power which the law has granted him over the person of his debtor if he fail to discharge his debt to him, while the debtor forgets that, by the credit so imprudently afforded him, he is preparing the way for his own ruin, and that of all who have any dependence upon him.

"The total number of debtors imprisoned in the gaol of Glasgow alone, for debts of 8*l*. and under, was, in the year 1830, 353; in 1831, 419; and in 1832, 437; while the whole number of incarcerations in that gaol for sums of every description were, in the year 1830, 557; in 1831, 630; and in 1832, 696; the proportion of sums of 8*l*. and under being nearly two thirds of the whole on the average of these 3 years.

"To remedy these evils, your petitioners humbly submit that means should be adopted for the repeal of the laws at present in force, in so far as they sanction the recovery of small debts by imprisonment, reserving their effect in every other respect; the result of which would be, that credit for small sums would be greatly limited, if not entirely extinguished, and the poorer classes rendered more provident; and by purchasing with money at a cheaper rate what they now buy at an extravagant price, they would be enabled to procure for themselves additional comforts, from the more economical employment of their small incomes.

"May it therefore please your Honourable House to take this matter into your consideration, and to adopt such means as you in your wisdom shall see proper, to prevent the incarceration of debtors for sums under 8*l*., and thereby remove or greatly mitigate the evils of improvidence on the part of the debtor, and of oppression on the part of the creditor, which necessarily arise under the present system."

So reasonable a proposal, supported by such conclusive statements, could not fail to make a deep impression; and a bill was soon after introduced, and passed into a law, (stat. 6 & 7 Will. 4. cap. 70.) taking away the power of imprisonment in Scotland for debts under 8*l*. 6*s*. 8*d*. over and above interest and expenses, except in cases of fraud. This bill is admitted to have been eminently beneficial; and it is to be hoped that the

advantages of which it has been productive may lead to the extension and general application of its principle.

Propriety of placing all small Debts beyond the Pale of the Law. — The taking away the power of arrest and imprisonment, except in the case of fraudulent bankruptcy, would certainly be a material improvement upon the existing system. But we are satisfied that it does not go far enough; and that by far the most desirable and beneficial reform that could be effected in this department would be *to take away all action for debts under a given sum, as 50l. or 100l.* The only exception to this rule should be in the case of *claims for wages*, or labour done under executory contracts. To prevent the measure from being defeated, no action should be granted on bills under *50l.* or *100l.*, except upon those drawn by or upon regular bankers. This would be a radical change certainly; but we are fully satisfied that it would be highly advantageous to every class of the community, and most of all to labourers, retail dealers, and small tradesmen. It would protect the former from oppression, at the same time that it would tend powerfully to render them more provident and considerate; it would teach the latter to exercise that discretion in the granting of credit which is so very indispensable; and it would be publicly beneficial, by strengthening the moral principle, and making the contraction of debts for small sums, without the means of paying them, at once difficult and disgraceful.

We agree entirely in opinion with those who think that it is to no purpose to attempt to remedy the defects now pointed out, by multiplying courts and other devices for facilitating the speedy recovery of small debts. This is beginning at the wrong end; or rather it is attempting to obviate the influence of one abuse by instituting another. No wise statesman will ever be easily persuaded to fill the country with petty local courts; for these, when not absolutely necessary, are the merest nuisances imaginable; and he would, at all events, exert himself, in the first instance, to do away, in so far as possible, with the circumstances that make individuals resort to them. But it is certain that nine tenths of the cases in county courts originate in questions as to simple contract debts under *50l.*; and were such debts placed, as they ought to be, beyond the pale of the law, the courts would be wholly unnecessary. Our object ought not to be to provide means for enforcing the payment of trifling debts, but *to prevent their contraction.* We believe, indeed, that, instead of lessening, the multiplication of district courts will materially aggravate, all the evils of the present credit system. The belief that they may readily enforce their claims by resorting to them will make shopkeepers and tradesmen still more disposed than at present to give credit, while the unprincipled, the inconsiderate, and the necessitous will eagerly grasp at this increased facility. What there is of caution amongst our retail dealers is in no inconsiderable degree owing to the want of those petty tribunals so many are anxious to have universally established. The more they are increased, the less will caution prevail. But instead of diminishing this virtue, — for such it really is, — it cannot be too much increased. Nothing will ever deter those who ought not to obtain credit from taking it while in their power; but those who give it may be made to exercise greater discretion; they may be made to know that it is a private transaction between themselves and those to whom they grant it; and that in the case of petty debts they have only their own sagacity to look to, such transactions not being cognizable by law. A measure of the sort here proposed would not, as some appear to imagine, annihilate credit. It would, no doubt, annihilate that spurious indiscriminating species of credit, that is as readily granted to the spendthrift and prodigal, as to the frugal and industrious individual; but to the same extent that it deprived the former of the means of obtaining accommodation, it would extend those of the latter. Nothing short of this — nothing but the placing all small debts beyond the pale of the law — will ever fully impress tradesmen with a conviction of the vast advantages that would result to themselves from their withdrawing their confidence from courts and prisons, and preventing every one from getting upon their books, of whose situation and circumstances they are not fully aware; nor will anything else be able completely to eradicate the flagrant abuses inherent in the present credit system, and which have gone far to render it a public nuisance.

One of the worst consequences of the present system is the sort of thraldom in which it keeps thousands of labourers and other individuals, whom the improper facilities for obtaining credit originally led into debt. Such persons dare not leave the shops to which they owe accounts; and they dare neither object to the quality of the goods offered to them, nor to the prices charged. Dr. Johnson has truly observed, that "he that once owes more than he can pay, is often obliged to bribe his creditor to patience by increasing his debt. Worse and worse commodities at a higher and higher price are forced upon him; he is impoverished by compulsive traffic; and at last overwhelmed in the common receptacles of misery by debts which, without his own consent, were accumulated on his head." By taking away all right of action upon small debts, this system of invisible but substantial coercion would be put an end to. The tradesman would

take care who got, in the first instance, upon his books; and instead of forcing articles upon him, would cease to furnish him with any unless he found he was regular in making his payments; while the customer to whom credit was of importance would know that his only chance of obtaining it would depend upon his character and reputation for punctuality. The abuses of the sort now alluded to, that grew out of what has been denominated the truck system, justly occasioned its abolition; but these were trifling compared with those that originate in the bringing of petty debts within the pale of the law.

When the former edition of this work was published, we were not aware that it had been previously proposed to take away all action for debts under 50*l.* or 100*l.*; but we have since met with a pamphlet, entitled *Credit Pernicious*, published in 1823, in which this plan is proposed and ably supported. There are also some valuable remarks and observations on the topics now treated of, in the *Treatise on the Police, &c. of the Metropolis*, by the author of the "Cabinet Lawyer," pp. 114—134.

CREW, the company of sailors belonging to any ship or vessel No ship is admitted to be a British ship, unless duly registered and navigated as such by a crew, *three fourths* of which are British subjects, besides the master. —(3 & 4 *Will.* 4. c. 54. § 12.) The master or owners of any British ship having a foreign seaman on board not allowed by law, shall for every such seaman forfeit 10*l.*; unless they can show, by the certificate of the British consul, or of two British merchants, or shall satisfactorily prove, that the requisite number of British seamen could not be obtained at the place where the foreign seaman was taken on board. It is also ordered that the master of every British vessel arriving from the West Indies shall deliver, within 10 days after arrival, to the Custom-house, a list of the crew on board at the time of clearing out from the United Kingdom, and of arrival in the West Indies, and of every seaman who has deserted or died during the voyage, and the amount of wages due to each so dying, under a penalty of 50*l.* —(3 & 4 *Will.* 4. c. 54. § 19.; 3 & 4 *Will.* 4. c. 52. § 16.)

CUBEBS (Ger. *Kubeben*; Fr. *Cubebes*; It. *Cubebi*; Sp. *Cubebas*; Rus. *Kubebü*; Lat. *Piper Cubeba*; Arab. *Kebābeh*; Javan. *Kumunkus*; Hind. *Cubab-chinie*), the produce of a vine or climber, the growth of which is confined exclusively to Java. It is a small dried fruit, like a pepper corn, but somewhat longer. Cubebs have a hot, pungent, aromatic, slightly bitter taste; and a fragrant, agreeable odour. They should be chosen large, fresh, sound, and the heaviest that can be procured. The duty on cubebs was reduced in 1842 from 6*d.* to 1*d.* per lb., and in that year the quantity entered for home consumption amounted to 67,093 lbs., producing a nett revenue of 500*l.* 17*s.* 4*d.* Their price in the London market, in bond, varied, in June 1843, from 1*l.* 12*s.* to 2*l.* per cwt.

CUCUMBER, a tropical plant, of which there are many varieties, largely cultivated in hothouses in England.

CUDBEAR, a purple or violet coloured powder used in dyeing violet, purple, and crimson, prepared from a species of lichen (*Lichen tartareus* Lin.), or crustaceous moss, growing commonly on limestone rocks in Sweden, Scotland, the north of England, &c. About 130 tons of this lichen are annually exported from Sweden. It commonly sells in the port of London for about 20*l.* per ton; but to prepare it for use it must be washed and dried; and by these operations the weight is commonly diminished a half, and the price, in effect, doubled. Though possessing great beauty and lustre at first, the colours obtained from cudbear are so very fugacious, that they ought never to be employed but in aid of some other more permanent dye, to which they may give body and vivacity. In this country it is chiefly used to give strength and brilliancy to the blues dyed with indigo, and to produce a saving of that article; it is also used as a *ground* for madder reds, which commonly incline too much to yellow, and are made *rosy* by this addition. The name cudbear was given to this powder by Dr. Cuthbert Gordon, who, having obtained a patent for the preparation, chose in this way to connect it with his own name.—(*Bancroft, Philosophy of Permanent Colours*, vol. i. pp. 300—304.)

CUMMIN SEED (Ger. *Kumin*; Fr. *Cumin*; It. *Comino, Cumino*; Sp. *Comino*; Arab. *Kemun*), the seeds of an annual plant (*Cuminum Cyminum* Lin.), a native of Egypt, but extensively cultivated in Sicily and Malta. They have a strong, peculiar, heavy odour, and a warm, bitterish, disagreeable taste. They are long and slender.

CURRANTS (Fr. *Raisins de Corinthe*; Ger. *Korinthen*; It. *Uve passe di Corinto*; Lat. *Passulæ Corinthiacæ*; Rus. *Korinka, Opsek*; Sp. *Pasas de Corinto*), a small species of grape, largely cultivated in Zante, Cephalonia, and Ithaca, of which islands they form the staple produce; and in the Morea, in the vicinity of Patras. The plant is delicate; and as 6 or 7 years must elapse, after a plantation has been formed, before it begins to produce, its cultivation requires a considerable outlay of capital. The crop is particularly liable to injury from rains in harvest, and is altogether of a very precarious description. After being dried in the sun, the currants are exported packed in large butts. They are in extensive demand in this country; and, when mixed with flour and suet, make a dish that is peculiarly acceptable to the lower classes. But, as if it had been intended

to put them beyond the reach of all but the richest individuals, they were burdened, down to 1834, with the exorbitant duty of 44*s.* 4*d.* a cwt. In that year, however, the duty was reduced a half, or to 22*s.* 2*d.* a cwt., and their importation has been in consequence very materially increased. Inasmuch, however, as the price of currants in bond varies from about 20*s.* to 35*s.* a cwt., it is plain that the duty is still too high; and it is no doubt mainly owing to this that the consumption has not increased to a decidedly greater extent than it has done. The duty should not in fact exceed 10*s.* or 12*s.* a cwt.; and we are well convinced, that were it reduced to this amount, its produce would in no very lengthened period, be about as great as ever; while, at the same time, a very considerable benefit would be conferred on the consumers in this country, and a powerful stimulus given to the trade with Greece and the Ionian islands, currants being the principal product which they have to export.

Account of the Quantities of Currants entered for Consumption in the United Kingdom in 1840, 1841, and 1842, and of the Amount of Duty received thereon, with the Averages for the above Three Years.

	Quantities.	Duty.
	Cwts. qrs. lbs.	*£ s. d.*
1840 - - - -	164,921 0 22	188,780 1 7
1841 - - - -	190,071 1 21	221,197 6 4
1842 - - - -	196,515 1 4	228,701 16 0
Average of 3 years - -	183,835 3 25	212,894 1 2½

No abatement of duties is made on account of any damage received by currants.

Currants, the produce of Europe, are not to be imported for home use except in British ships, or in ships of the country of which they are the produce, or of the country whence they are imported. — (3 & 4 *Will.* 4. c. 54. §§ 2. 22.)

A Treasury letter of the 30th of March, 1816, directs the following tares to be allowed, with liberty to the merchant and officers to take the actual tare when either party is dissatisfied.

Currants in casks from Zante -	- 13 per cent.
Leghorn -	- 10 —
Trieste -	- 10 —

CUSTOM-HOUSE, the house or office where commodities are entered for importation or exportation; where the duties, bounties, or drawbacks payable or receivable upon such importation or exportation are paid or received; and where ships are cleared out, &c.

For information as to the proceedings necessary at the Custom-house on importing or exporting commodities, see the article IMPORTATION AND EXPORTATION.

The principal British Custom-house is in London; but there are Custom-houses subordinate to the latter in all considerable sea-port towns.

CUSTOMS, are duties charged upon commodities on their being imported into or exported from a country.

Customs duties seem to have existed in every commercial country. The Athenians laid a tax of a fifth on the corn and other merchandise imported from foreign countries, and also on several of the commodities exported from Attica. The *portoria*, or customs payable on the commodities imported into, and exported from, the different ports in the Roman empire, formed a very ancient and important part of the public revenue. The rates at which they were charged were fluctuating and various, and little is now known respecting them. Cicero informs us, that the duties on corn exported from the ports of Sicily were, in his time, 5 per cent. Under the Imperial government, the amount of the *portoria* depended as much on the caprice of the prince as on the real exigencies of the state. Though sometimes diminished, they were never entirely remitted, and were much more frequently increased. Under the Byzantine emperors, they were as high as 12½ per cent. — (*Encyc. Brit.* art. *Taxation.*)

Customs duties seem to have existed in England before the Conquest; but the king's claim to them was first established by stat. 3 Edw. 1. These duties were, at first, principally laid on wool, woolfels (sheep-skins), and leather when exported. There were also extraordinary duties paid by aliens, which were denominated *parva costuma*, to distinguish them from the former, or *magna costuma*. The duties of tonnage and poundage, of which mention is so frequently made in English history, were custom duties; the first being paid on wine by the tun, and the latter being an *ad valorem* duty of so much a pound on all other merchandise. When these duties were granted to the Crown, they were denominated *subsidies*; and as the duty of poundage had continued for a lengthened period at the rate of 1*s.* a pound, or 5 per cent., a subsidy came, in the language of the customs, to denote an *ad valorem* duty of 5 per cent. The *new subsidy* granted in the reign of William III. was an addition of 5 per cent. to the duties on most imported commodities.

The various custom duties were collected, for the first time, in a book of rates published in the reign of Charles II.; a new book of rates being again published in the reign of George I. But, exclusive of the duties entered in these two books, many more had been imposed at different times; so that the accumulation of the duties, and the complicated regulations to which they gave rise, were productive of the greatest embarrassment. The evil was increased by the careless manner in which new duties were added to the old; a percentage being sometimes added to the original tax; while at

other times the commodity was estimated by a new standard of bulk, weight, number, or value, and charged with an additional impost, without any reference to the duties formerly imposed. The confusion arising from these sources was still further augmented by the special appropriation of each of the duties, and the consequent necessity of a separate calculation for each. The intricacy and confusion inseparable from such a state of things proved a serious injury to commerce, and led to many frauds and abuses.

The Customs Consolidation Act, introduced by Mr. Pitt in 1787, did much to remedy these inconveniences. The method adopted was, to abolish the existing duties on all articles, and to substitute in their stead one single duty on each article, equivalent to the aggregate of the various duties by which it had previously been loaded. The resolutions on which the act was founded amounted to about 3,000. A more simple and uniform system was at the same time introduced into the business of the Custom-house. These alterations were productive of the very best effects; and several similar consolidations have since been effected; particularly in 1825, when the various statutes then existing relative to the customs, amounting, including parts of statutes, to about 450, were consolidated and compressed into only 11 statutes of a reasonable bulk, and drawn up with great perspicuity. They were again amended in 1833, by the acts 3 & 4 Will. 4. cap. 51. 52. 56. and 58.; since which they have not been very materially varied.

The Board of Customs consists at present (1843) of 9 commissioners. The Treasury may, if they see cause, appoint 1 commissioner and 2 assistant commissioners, to act for Scotland and Ireland.

Officers of customs taking any fee or reward, whether pecuniary or of any other sort, on account of any thing done, or to be done, by them in the exercise of their duty, from any one, except by the order or permission of the commissioners of the customs, shall be dismissed their office; and the person giving, offering, or promising such gratuity, fee, &c. shall forfeit 100*l.*

Any officer of customs who shall accept of any bribe, recompence, or reward, to induce him to neglect his duty, or to do, conceal, or connive at any act whereby any of the provisions of the customs laws shall be evaded, shall be dismissed the service, and be rendered incapable of serving his Majesty in future in any capacity whatever; and the person offering such bribe, recompence, &c. shall, whether the offer be accepted or not, forfeit 500*l.*

Customs duties, like all duties on particular commodities, though advanced in the first instance by the merchant, are ultimately paid by those by whom they are consumed. When a government lays a duty on the foreign commodities which enter its ports, the duty falls entirely on such of its own subjects as purchase these commodities; for the foreigners would cease supplying its markets with them, if they did not get the full price of the commodities, exclusive of the tax; and, for the same reason, when a government lays a duty on the commodities which its subjects are about to export, the duty does not fall on them, but on the foreigners by whom they are bought. If, therefore, it were possible for a country to raise a sufficient revenue by laying duties on exported commodities, such revenue would be wholly derived from others, and it would be totally relieved from the burden of taxation, except in so far as duties might be imposed by foreigners on the goods it imports from them. Care, however, must be taken, in imposing duties on exportation, not to lay them on commodities that may be produced at the same, or nearly the same, cost by foreigners; for the effect of the duty would then be to make the market be supplied by others, and to put an entire stop to their exportation. But in the event of a country possessing any decided natural or acquired advantage in the production of any sort of commodities, a duty on their exportation would seem to be the most unexceptionable of all taxes. If the Chinese chose to act on this principle, and had the power, they might derive a considerable revenue from a duty on exported teas, which would fall entirely on the English and other foreigners who buy them. The coal and tin, and perhaps, also, some of the manufactured goods produced in this country, seem to be in this predicament.

The revenue derived from the custom duties in 1590, in the reign of Elizabeth, amounted to no more than 50,000*l.* In 1613, it had increased to 148,075*l.* 4 of which no less than 109,572*l.* were collected in London. In 1660, at the Restoration, the customs produced 421,582*l.*; and at the Revolution, in 1688, they produced 781,987*l.* During the reigns of William III. and Anne, the customs revenue was considerably augmented, the nett payments into the exchequer in 1712 being 1,315,423*l.* During the war terminated by the peace of Paris in 1763, the nett produce of the customs revenue of Great Britain amounted to nearly 2,000,000*l.* In 1792, it amounted to 4,407,000*l.* In 1815, at the close of the war, it amounted to 11,360,000*l.*; and last year (1842) it amounted to 20,312,897*l.* 15*s.* 9*d.*, and including Ireland, to 22,523,513*l.* 5*s.*

Astonishing, however, as the increase of the customs revenue has certainly been, it is

not quite so great as it appears. Formerly the duties on some considerable articles, such as sugar, brandy, wine, &c. imported from abroad, were divided partly into customs duties charged on their importation, and partly into excise duties on their being taken into consumption. But these duties have since been wholly transferred to the customs; the facilities afforded, by means of the warehousing system, for paying the duties in the way most convenient for the merchant, having obviated the necessity of dividing them into different portions.

It will be seen from various articles in this work—(See BRANDY, GENEVA, SMUGGLING, TEA, TOBACCO, &c.) — that the exorbitant amount of the duties laid on many articles imported from abroad leads to much smuggling and fraud; and requires, besides, an extraordinary expense in many departments of the customs service, which might be totally avoided were these duties reduced within reasonable limits. This, however, is the business of government, and not of those intrusted with the management of the customs; and it would be unjust to the latter not to mention that this department has been essentially improved, during the last few years, in respect of economy, whatever may be thought of its efficiency. The following extracts from a letter to the Right Hon. H. Goulburn, ascribed to the present chairman of the Board of Customs (R. B. Dean, Esq.), give a brief but satisfactory view of the improvements that have been effected: —

"As regards the department of customs in 1792, the principal officers engaged in the receipt of the duties in the port of London were patent officers.

"The first Earl of Liverpool was collector inwards.

"The late Duke of Manchester, collector outwards.

"The Duke of Newcastle, and afterwards the Earl of Guilford, comptroller inwards and outwards.

"Lord Stowell, surveyor of subsidies and petty customs.

"These noblemen took no part in the official duties, but merely exercised the right of appointing deputies and clerks.

"Both principals and deputies were remunerated by fees. The patentees received the fees denominated patent, and the deputies retained the fees called the fees of usage for their own use. In addition to these fees, both deputies and clerks received fees for despatch.

"The same system prevailed throughout the whole department. The salaries of the officers were nominal; and the principal proportion of all official income was derived from fees. These fees were constantly varying both in rate and amount, and formed a continual source of dispute and complaint between the merchant and the officer.

"This system (after having been repeatedly objected to by various commissions of inquiry, and finally by the committee of finance in 1797,) was put an end to in the year 1812, by the act 51 Geo. 3. c. 71., by which all patent offices and fees were abolished, and compensation allowances granted to the patent officers, and fixed salaries established.

"The additional salaries granted under this arrangement amounted to about 200,000*l.*, and the temporary compensation allowances to about 40,000*l.* per annum.

"The fees abolished, and from which the public were relieved, amounted to about 160,000*l.* per annum.

"In addition to the amount of fees from which the public were relieved, various allowances made by the Crown to officers for quarantine, coal poundage, poundage on seizures, and many other incidental allowances, which did not appear on the establishment, were also abolished, and the salaries of every officer placed at one view upon the establishment.

"The effect of these salutary measures has been to give a great apparent increase to officers' salaries since 1791; and, upon a mere comparison of the establishment of 1792 with 1830, without the above explanation, it would appear that the pay of the officers had been most materially augmented, whereas, in point of fact, the difference is in the mode of payment: and the incomes of the officers at the present period (as compared with 1792) are in general less; and, consequently, the public are less taxed for the performance of the same duty *now* than in 1792.

"In the year 1792, the warehousing system had not been established. Officers were admitted at all ages, and there was no system of classification or promotion. The officers at the out-ports and in London were generally appointed through local influence; and were too often persons who had failed in trade, or had been in menial service, and who regarded their situations rather as a comfortable provision for their families than as offices for which efficient services were required. The superintendence and powers of the Board were cramped and interfered with by circumstances and considerations which prevented the enforcement of wholesome regulation. The whole system was so imperfect, so far back only as 1818, that a special commission was appointed to inquire into the department; and, upon the recommendation of that commission, various regulations have been adopted.

"The age of admission has been limited; a system of classification and promotion of officers, and a graduated scale of salaries, established throughout the whole department; and, by this means, local interference in the promotion of officers has been abolished; the attendance of officers increased, regulated, and strictly enforced; holidays reduced from 46 in the year to 3; viz. Good Friday, the King's birthday, and Christmas-day; useless oaths, and bonds, and forms of documents of various kinds, discontinued; increased facility and despatch afforded to the merchants' business; the accounts kept in the different offices, and returns of all kinds, revised, simplified, and reduced; and various minor regulations of detail established; the whole machinery of the department remodelled, and adapted to the trade and commerce of the country.

"In Ireland, the number of officers employed at all the ports, in the year ended the 5th of January, 1830, and the salaries and charges, did not much exceed the number and expense at the port of Dublin alone in 1818: and within the space of 11 years, nearly two thirds of the officers employed at the ports in Ireland have been discontinued; the number having been, in 1818, 1755; in 1829, 544: and an annual reduction in salaries and charges has been effected to the extent of 173,724*l.*; the amount having been, in 1818, 285,115*l.*; in 1829, 111,391*l.* (103,813*l.* of that amount having been reduced between the years 1823 and 1828), upon an expenditure of 285,115*l.*; and the receipts were nearly equal, in 1827, to those of 1818 and 1823, notwithstanding the total repeal of the cross Channel duties, amounting to about 340,000*l.* per annum, subsequent to the latter period.

"Already has government relinquished, it may be said, any interference with promotion in the department of the customs, and the road is open to advancement to the meritorious officer.

"Influence is no longer allowed to prevail; and in many cases which have recently occurred, and in which the patronage of government might have been fairly exercised, it has been at once abandoned, in order to give way to arrangements by which the services of some very intelligent and highly respectable officers, whose offices had been abolished, could be again rendered available with a material saving to the public.

"By a recent order from the Lords of the Treasury, of the 20th of February, 1830, the salaries of the commissioners, and of other officers, have been prospectively reduced, and directions given to revise the whole establishment in the spirit of that order, with a view to every possible reduction."

Defective Organisation of the Customs Establishment.—The above are great improvements, certainly, and reflect credit alike on the government and the board of customs. But it must, notwithstanding, be admitted that the existing constitution of the customs department is exceedingly defective. This is proved by the recent discovery of the extensive frauds that have been carried on in the port of London for a lengthened period, in the entry of silks, gloves, and other highly taxed articles, with the connivance of the customs officers. The origin, no doubt, of these, as of most similar frauds, may be traced to the exorbitancy of the duties, and to the consequent temptation which they hold out to smuggling on the part of the importers and the corruption of the officers. But, admitting this, it is, at the same time, abundantly clear that had anything like an efficient supervision and check been exercised by the commissioners and their superior officers, these frauds could not possibly have been carried on so long, or to such an extent. It would, however, appear that the former do little more than decide on the claims of private parties for a remission of duties, or on references made to them by the Treasury; and that they are in the habit of committing the enforcement of all the regulations necessary to be observed in the entry of goods to the care of the surveyors-general. But this, as it appears to us, is to abdicate or neglect what is by far the most important part of their peculiar duty. They are appointed to carry the Customs Acts into effect, so that every possible facility and accommodation may be given to the trader consistent with the security of the revenue; and it is impossible they can do this without being thoroughly acquainted with the details of every department, and with the abuses to which it is peculiarly liable. The commissioners could not but suspect that frauds of no common magnitude were taking place in the entry of goods in the Thames. Private parties had assured them that such was the case; and, independently of this, the fact must have been established to the conviction of every reasonable person by comparing the accounts given by the French custom-house of the exportation of silks, gloves, &c. from France for England, with the entries of the same in our customs returns; and it was the bounden duty of the commissioners, on seeing this extraordinary discrepancy, to have themselves immediately entered on a searching inquiry into its origin, and not have devolved that duty on others, or waited till the frauds were discovered by the confessions of some of those engaged in carrying them on.

We confess, too, that we are not of the number of those who think that the adoption of the suggestions in the Report of the commissioners appointed to inquire into the frauds in question will be of any material advantage. The Board of Commissioners should, in fact, be either wholly abolished, or reconstructed on a new principle. We

incline to think that, if they are to be continued, the better plan would be to reduce their numbers to three, and to make their duties entirely executive. The preferable plan, we believe, would be to refer all questions as to mitigation of duties and references from the Treasury on such matters, to a lawyer well versed in mercantile law, connected with the customs department, and acting on his undivided responsibility; so that the duties of the Board might be entirely confined to the enforcement of the laws and regulations for the collection of the revenue and the facilitating of trade.

We hope it will not be supposed, from anything now stated, that we have any wish to extenuate the guilt of the officers who have participated in the plunder of the revenue; but, how much and how deservedly soever we may blame them, we need not be surprised, considering their situation in life, the smallness of their salaries, and the carelessness of their superiors, that they should have yielded to the powerful temptations to which they have been exposed.

The smuggling that is still carried on, despite the officers, is principally occasioned by the oppressive duties on foreign spirits, tobacco, and a few other articles. It is difficult, indeed, seeing that these duties would be much more productive were they reduced to half their present amount, to discover for what purpose they are kept up, unless it be to encourage smuggling. The land guard, and the preventive water guard, costing together above 360,000*l.* a year, might be wholly dispensed with, were the duties now referred to adequately reduced.

In Scotland, separate Custom-houses seem to be multiplied to an absurd extent. Within these few years, indeed, a very considerable change for the better was effected in the Scotch Custom-house; but it is still susceptible of, and ought to be subjected to, great curtailment. Why should a collector, comptroller, cl[illegible]ks, &c. be hired to transact business that in many instances would not afford half employment for a single officer?

The reader will find, in the accounts of most imported articles of any consequence given in this work, statements of the customs duty paid on their importation. It may be gratifying, however, to have them all brought together in one point of view, as in the following Table: —

An Account of the Gross and Nett Produce of the Customs Revenue of Great Britain, in the Year ended 5th January, 1843; distinguishing the Amount collected on each Article usually contributing 1,000*l.* or more to the Revenue of the U. Kingdom.

Office of Inspector General of Imports and Exports. — The office of inspector general of imports and exports was established in 1696. The accounts of the trade and navigation of the country, annually laid before parliament, are furnished by this office; and, owing to the ability of the officers, and the improved manner in which these accounts are now made out, they have become of great public importance. Their accuracy must, of course, depend on the accuracy of the entries; but, as respects articles on which the duties are reasonable, or low, and in which, consequently, there is no great temptation to clandestine importation, they may be regarded as nearly accurate. It is now usual to give statements of the quantities of the principal articles exported and imported, as well as of their declared or real values; which is a great improvement. But, on all occasions in which it is practicable, the rates of duty as well as the quantities should be given; for it is needless to say, that without being aware of the former, no sound conclusion can be drawn as to the consumption of any article.

CUTLERY, a term used to designate all manner of sharp and cutting instruments made of iron or steel, as knives, forks, scissors, razors, shears, scythes, &c. Sheffield is the principal seat of the cutlery manufacture; but the knives and other articles made in London are said to be of superior quality.

The act 59 Geo. 3. c. 7. gives the manufacturers of cutlery made of *wrought* steel, the privilege of marking or stamping them with the figure of a hammer; and prohibits the manufacturers of any articles of cutlery, edge tools, or hardware, *cast or formed in a mould*, or manufactured otherwise than by means of a hammer, from marking or impressing upon them the figure of a hammer, or any symbol or device resembling it, on pain of forfeiting all such articles, and 5*l.* for every dozen. A penalty of 10*l.* per dozen, exclusive of forfeiture, is also imposed upon every person having articles of cutlery in his possession for the purpose of sale, marked with the words *London*, or *London made*, unless the articles so marked have been really manufactured within the city of London, or a distance of 20 miles from it.

CYPRESS, a forest tree of which there are many varieties, the species denominated the evergreen cypress (*Cupressus sempervirens*) and the white cedar (*Cupressus Thyoides*) being the most celebrated.

The cypress is indigenous to the southern parts of Europe, to several parts of Asia, and to America. It grows to a great size, and is a most valuable species of timber. It is never attacked by worms; and exceeds all other trees, even the cedar, in durability. Hence the Athenians, when desirous to preserve the remains of their heroes and other great men, had them enclosed in cypress coffins; and hence, also, the external covering of the Egyptain mummies is made of the same enduring material. The cypress is said to live to a great age; and this circumstance, combined with its thick dark green foliage, has made it be regarded as the emblem of death and the grave.

In his *Geography and History of the Western States of America*, Mr. Timothy Flint has given the following account of the cypress trees found in the southern parts of the valley of the Mississippi: — "These noble trees rear their straight columns from a large cone-shaped buttress, whose circumference at the ground is, perhaps, 3 times that of the regular shaft of the tree. This cone rises from 6 to 10 feet, with a regular and sharp taper, and from the apex of the cone towers the perpendicular column, with little taper after it has left the cone, from 60 to 80 feet clear shaft. Very near the top it begins to throw out multitudes of horizontal branches, which interlace with those of the adjoining trees, and, when bare of leaves, have an air of desolation and death, more easily felt than described. In the season of vegetation the leaves are short, fine, and of a verdure so deep as almost to seem brown, giving an indescribable air of funereal solemnity to this singular tree. A cypress forest, when viewed from the adjacent hills, with its numberless interlaced arms covered with this dark brown foliage, has the aspect of a scaffolding of verdure in the air. It grows, too, in deep and sickly swamps, the haunts of fever, mosquitoes, moccassin snakes, alligators, and all loathsome and ferocious animals, that congregate far from the abodes of man, and seem to make common cause with nature against him. The cypress loves the deepest, most gloomy, inaccessible swamps; and, south of 33°, is generally found covered with sable festoons of long moss, hanging, like shrouds of mourning wreaths, almost to the ground. It seems to flourish best when water covers its roots for half the year. Unpromising as are the places and circumstances of its growth, no tree of the country where it is found is so extensively useful. It is free from knots, is easily wrought, and makes excellent planks, shingles, and timber of all sorts. It is very durable, and incomparably the most valuable tree in the southern country of this valley." — (Vol. i. p. 62.)

D.

DAMAGED GOODS, in the language of the customs, are goods, subject to duties, that have received some injury either in the voyage home or in the bonded warehouses.

It is enacted by the 3 & 4 Will. 4. c. 52., that if any goods rated to pay duty according to the number, measure, or weight thereof (except those after mentioned), shall receive damage during the voyage, an abatement of such duties shall be allowed proportionally to the damage so received; provided proof be made to the satisfaction of the commissioners of customs, or of officers acting under their direction, that such damage was received after the goods were shipped abroad in the ship importing the same, and before they were landed in the U. Kingdom; and provided claim to such abatement of duties be made at the time of the first examination of such goods. — § 30.

It is further enacted, that the officers of customs shall examine such goods, and may state the damage which, in their opinion, they have so received, and may make a proportionate abatement of duties; but if the officers of customs be incompetent to estimate such damage, or if the importer be not satisfied with the abatement made by them, the collector and comptroller shall choose 2 indifferent merchants experienced in the nature and value of such goods, who shall examine the same, and shall make and subscribe a declaration, stating in what proportion, according to their judgment, the goods are lessened in value by such damage, and the officers of customs may make an abatement of the duties according to the proportion of damage declared by such merchants. — § 31.

Provided always, that no abatement of duties shall be made on account of any damage received by any of the sorts of goods herein enumerated; viz. cocoa, coffee, oranges, pepper, currants, raisins, figs, tobacco, lemons, and wine. — § 32.

DAMAR, a kind of indurated pitch or turpentine exuding spontaneously from various trees indigenous to most of the Indian islands. Different trees produce different species of resin, which are designated according to their colour and consistence. "One is called *Damar-batu* in Malay, or *Damar-selo* in Javanese, which means hard or stony rosin; and another in common use, *Damar-Puteh*, or white rosin, which is softer. The trees which produce the damar yield it in amazing quantity, and generally without the necessity of making incisions. It exudes through the bark; and is either found adhering to the trunk or branches in large lumps, or in masses on the ground under the trees. As these often grow near the sea-side, or on the banks of rivers, the damar is frequently floated away, and collected in distant places as drift. It is exported in large quantities to Bengal and China; and is used for all the purposes to which we apply pitch, but principally in paying the bottoms of ships. By a previous arrangement, almost any quantity may be procured at Borneo, at the low rate of ¼ dollar per picul."— (*Crawfurd, East. Archip.* vol. i. p. 455., vol. iii. p. 420.)

DAMASK (Ger. *Damasten Tafelzeug*; Du. *Damaskwerk*; Fr. *Venise, Damas*; It. *Tela damaschina*; Sp. *Tela adamascada*; Rus. *Kamtschatniüi salffiki*), a species of table linen. — (See LINEN.)

DANTZIC, one of the principal emporiums of the north of Europe, in West Prussia, lat. 54° 20′ 48″ N., lon. 18° 38′ E. Population, in 1838, 56,257. It is situated on the left or western bank of the Vistula, about 4 miles from its embouchure. The harbour, Neufahrwasser, at the mouth of the river, is defended on each side by pretty strong forts. The town is traversed by the small river Motlau, which has been rendered navigable for vessels drawing 8 or 9 feet water.

Roads, Port, &c. — The road or bay of Dantzic is covered on the west side by a long, narrow, low, sandy tongue of land, extending from Reserhoft Point (on which is a light-house), in lat. 54° 50½′, lon. 8° 23′ 15″, upwards of 20 miles, in an E. by S. direction, having the small town of Heela, or Heel, near its termination. A light-house, elevated 123 feet (Eng.) above the level of the sea, has been erected within about ¼ mile of the extremity of this point. The flashes of the light, which is a revolving one, succeed each other every ¼ minute. Dantzic lies about S. ¼ W. from the Heel; its port being distant about 4 leagues. There is good anchorage in the roads for ships of any burden; but they are exposed, except immediately under the Heel, to the north and north-easterly winds. There are harbour lights at the entrance to the port. All ships entering the Vistula must heave to about a mile off the port, and take a pilot on board; and pilots must always be employed in moving ships in the harbour, or in going up and down the river. The usual depth of water at the mouth of the river is from 12 to 13 feet (Eng.); in the harbour, from 13 to 14 feet; at the confluence of the Motlau with the Vistula, from 9 to 9½ feet; and in town, from 8 to 9 feet. Moles have been erected on both sides the entrance to the harbour: that on the eastern side, which is most exposed, is constructed of granite, but is not yet completed; the other is partly of stone and partly of timber.

Trade of Dantzic. — Next to Petersburg, Dantzic is the most important commercial city in the north of Europe. It owes its distinction in this respect to its situation; the Vistula, with its important tributaries the Bug, Narew, &c. giving it the command of a great internal navigation, and rendering it the *entrepôt* where the surplus products of West Prussia, Poland as far as Hungary, and part of Lithuania, are exchanged for those imported from the foreigner. The exports of wheat from Dantzic are greater than from any other port in the world, Odessa, perhaps, excepted. There are four sorts of wheat distinguished here; viz. *white, high-mixed, mixed,* and *red,* according as the white or red predominates. The quality of Dantzic wheat is for the most part excellent; for, though small in the berry, and not so heavy as many other sorts, it is remarkably thin skinned, and yields the finest flour. The white Polish wheat exported here is the best in the Baltic. Rye is also very superior, being both clean and heavy; the exports are very large. The exports of barley and oats are comparatively inconsiderable, and the qualities but indifferent. Very fine white peas are exported. Next to grain, timber is the most important article of export from Dantzic; but latterly the supply has been diminishing, and the quality is said not to be so good as formerly.—(*Meek.*) The principal supply of fir timber, masts, &c. is brought by the River Narew, which, with its branches, rises in Old Prussia and Lithuania, and falls into the Bug near the confluence of the latter with the Vistula. Oak plank, staves, &c. are brought down from the higher parts of the Vistula, and the tributary streams of Dunajetz, Wieprez, &c. Weed ashes, pearlashes, bones, zinc, wool, spruce beer, feathers, &c. are also exported.

Imports. — These consist principally of herrings, sugar, coffee, wine, cotton and cotton yarns; iron and steel, spices, furs, woollens, hardware, silks, indigo, dyewoods, &c., but their value is inconsiderable, as compared with that of the exports.

Money. — Accounts used formerly to be wholly kept in guilders, guilders, or florins of 30 groschen. The rixdollar = 3 florins = 90 groschen = 270 schillings = 1,620 pfennings. The florin or guilder = 9*d.* sterling, and the rixdollar = 2*s.* 3*d.*

A new system was, however, introduced into all parts of the Prussian dominions, conformably to the decrees of the 30th of September, 1821, and of the 22d of June, 1825.

The Cologne mark (containing 3,609 Eng. grains) is the weight at present used in the Prussian mint in weighing the precious metals. The fineness of the coins is not determined, as previously, by carats or loths, but the mark is divided for this purpose into 288 grains. Accounts are now kept in the public offices in thalers or dollars (R.), silver groschen, and pfennings: 1 dol. = 30 sil. gr.; 1 sil. gr. = 12 pf.

The only silver monies now coined are dollars and ½ dollar pieces; but smaller coins are in circulation, of former coinages.

The Prussian silver coins have ½ of alloy; and as the mark is coined into 14 dollars, each should contain 257·68 Eng. grains pure silver, and be worth about 2*s.* 11½*d.* sterling; but the assays do not always strictly coincide with the mint valuation.

The gold coins are Frederick d'ors, double, single, and half pieces. The mark of 288 grains, having 960 grains of fine gold, is coined into 35 Fred. d'ors. The Fred. d'or is worth from 5 dol. 18 sil. gr. to 5 dol. 22 sil. gr. according to the demand.

Weights and Measures. — The commercial weights are,

32 Loths = 1 Ounce.
16 Ounces = 1 Pound.
164 Pounds = 1 Lispound.
20 Pounds = 1 Small stone.
33 Pounds = 1 Large stone.

110 lbs. = 1 centner; 3 centners = 1 shippound (330 lbs.); 100 lbs. of Dantzic = 103·3 lbs. avoirdupois = 46·85 kilog. = 94·7 lbs. of Amsterdam = 96·6 lbs. of Hamburg.

The liquid measures are, for beer,

5 Quarts = 1 Anker.
4 Ankers = 1 Ahm.
1¼ Ahm = 1 Hhd.
½ Hhds. = 1 Both.
2 Both = 1 Fuder.
2 Fuder = 1 Last = 620·4 Eng. wine gallons.

In wine measure, which is less than beer measure, the ahm = 594 Eng. gallons. The pipe = 2 ahms.

The last of corn = 3½ malters = 60 scheffels = 240 viertels = 960 metzen; and weighs 4,680 lbs. Dantzic weight in rye. The scheffel = ·547 of a hectolitre = 1·554 Winchester bushel. Hence the last of 60 scheffels = 11 quarters 3 bushels; the last of 56½ scheffels = 10 quarters 7 bushels.

The Dantzic foot = 11·3 Eng. inches, or 100 Dantzic feet = 94·16 Eng. feet. The ell is 2 feet Dantzic measure. The Rhineland or Prussian foot = ·3138 French metres, or 12·356 Eng. inches: hence 100 Prussian = 104·8 English feet. The Prussian or Berlin ell has 2½ Prussian inches = 26·256 Eng. ditto. 100 Berlin ells = 72·93 Eng. yards; and 137·14 Berlin ells = 100 Eng. yards. 14½ Prussian miles are equal to 15 geographical miles.

Oak planks, deals, and pipe staves are sold by the sheck of 60 pieces; wheat, rye, &c. are sold by the last of 56½ scheffels. — (*Kelly's Cambist; Nolkenbrecher, Manuel Universel.*)

Corn Trade of Dantzic. — The reader will find, under the head CORN LAWS AND CORN TRADE (p. 420, &c.), a pretty full account of the Polish corn trade. But the importance of the subject will excuse our giving a few additional details. Grain is almost wholly brought to Dantzic by water, in flat-bottomed boats suited to the navigation of the Vistula, Bug, &c. Mr. Consul Gibson estimated the expense of the conveyance of wheat and rye hither, including the duty at Thorn and the charges of turning on the river, till put into the granary, as follows: —

	Per Imp. qr. *s. d.* *s. d.*
From the upper provinces on the Bug, a distance of from 700 to 800 miles - - - -	9 2 to 7 10
From the provinces of Cracow, Sendomir, and Lublin, 550 to 350 miles - - - -	6 6 - 5 4
From Warsaw and its neighbourhood, about 240 miles - - - - - - -	4 9 - 3 11
From Wlaciawock and its neighbourhood, about 140 miles - - - - -	4 2 - 3 5
From Graudentz, a distance of about 70 miles, no duty at Thorn, and when not turned on the river - - - - - - -	0 10 - 0 9

N.B. — These are the ordinary charges; but they are higher when there is any unusual demand for exportation.

The Bug has many windings, and its navigation, which is tedious and uncertain, can only be attempted in the spring, when the water is high. It is the same, though in a less degree, with some of the rivers that fall into the Vistula before it reaches Warsaw; and towards Cracow the Vistula itself is frequently

unnavigable, especially in dry seasons, except in spring, and after the midsummer rains, when the snow melts on the Carpathian mountains. The navigation of the Polish rivers in some seasons is more than usually bad. The corn from the upper provinces does not reach Dantzic till from 2 to 4 months later than usual, and is burdened with a very heavy additional expense. In fact, the supplies of grain at Dantzic depend quite as much on the abundance of water in the rivers, or on their easy navigation in summer, as on the goodness of the harvests.

"There are," says Mr. Jacob, "two modes of conveying wheat to Dantzic by the Vistula. That which grows near the lower parts of the river, comprehending Polish Russia, and part of the province of Plock, and of Masovia, in the kingdom of Poland, which is generally of an inferior quality, is conveyed in covered boats, with shifting boards that protect the cargo from the rain, but not from pilfering. These vessels are long, and draw about 15 inches water, and bring about 150 quarters of wheat. They are not, however, so well calculated for the upper parts of the river. From Cracow, where the Vistula first becomes navigable, to below the junction of the Bug with that stream, the wheat is mostly conveyed to Dantzic in open flats. These are constructed on the banks, in seasons of leisure, on spots far from the ordinary reach of the water, but which, when the rains of autumn, or the melted snow of the Carpathian mountains in the spring, fill and overflow the river, are easily floated.

"Barges of this description are about 75 feet long, and 20 broad, with a depth of 2½ feet. They are made of fir, rudely put together, fastened with wooden treenails, the corners dovetailed and secured with slight iron clamps, — the only iron employed in their construction.

"A large tree, the length of the vessel, runs along the bottom, to which the timbers are secured. This roughly cut keelson rises 9 or 10 inches from the floor, and hurdles are laid on it, which extend to the sides. They are covered with mats made of rye-straw, and serve the purpose of dunnage; leaving below a space in which the water that leaks through the sides and bottom is received. The bulk is kept from the sides and ends of the barge by a similar plan. The water which these ill-constructed and imperfectly caulked vessels receive, is dipped out at the end and sides of the bulk of wheat.

"Vessels of this description draw from 10 to 12 inches water, and yet they frequently get aground in descending the river. The cargoes usually consist of from 180 to 200 quarters of wheat.

"The wheat is thrown on the mats, piled as high as the gunwale, and left uncovered, exposed to all the inclemencies of the weather, and to the pilfering of the crew. During the passage, the barge is carried along by the force of the stream, oars being merely used at the head and stern, to steer clear of the sand banks, which are numerous and shifting, and to direct the vessel in passing under the several bridges. These vessels are conducted by 6 or 7 men. A small boat precedes, with a man in it, who is employed sounding, in order to avoid the shifting shoals. This mode of navigating is necessarily very slow; and during the progress of it, which lasts several weeks, and even months, the rain, if any fall, soon causes the wheat to grow, and the vessel assumes the appearance of a floating meadow. The shooting of the fibres soon forms a thick mat, and prevents the rain from penetrating more than an inch or two. The main bulk is protected by this kind of covering, and, when that is thrown aside, is found in tolerable condition.

"The vessels are broken up at Dantzic, and usually sell for about ⅓ of their original cost. The men who conduct them return on foot.

"When the cargo arrives at Dantzic or Elbing, all but the grown surface is thrown on the land, spread abroad, exposed to the sun, and frequently turned over, till any slight moisture it may have imbibed is dried. If a shower of rain falls, as well as during the night, the heaps of wheat on the shore are thrown together in the form of a steep roof of a house, that the rain may run off, and are covered with a linen cloth. It is thus frequently a long time after the wheat has reached Dantzic, before it is fit to be placed in the warehouses.

"The warehouses (*speichers*) are very well adapted for storing corn. They consist generally of 7 stories, 3 of which are in the roof. The floors are about 9 feet asunder. Each of them is divided by perpendicular partitions, the whole length, about 4 feet high, by which different parcels are kept distinct from each other. Thus the floors have 2 divisions, each of them capable of storing from 150 to 200 quarters of wheat, and leaving sufficient space for turning and screening it. There are abundance of windows on each floor, which are always thrown open in dry weather to ventilate the corn. It is usually turned over 3 times a week. The men who perform the operation throw it with their shovels as high as they can, and thus the grains are separated from each other, and exposed to the drying influence of the air.

"The whole of the corn warehouses now left (for many were burnt during the siege of 1814) are capable of storing 500,000 quarters of wheat, supposing the quarters to be large enough to fill each of the 2 divisions of the floors with a separate heap; but as of late years it has come down from Poland in smaller parcels than formerly, and of more various qualities, which must of necessity be kept distinct, the present stock of about 280,000 quarters is found to occupy nearly the whole of those warehouses which are in repair, or are advantageously situated for loading the ships. Ships are loaded by gangs of porters, with great despatch, who will complete a cargo of 500 quarters in about 3 or 4 hours." — (*First Report.*)

Mr. Meek gives, in his excellent Report on the Prices of Corn and other Articles in the N. of Europe, the following details with respect to Dantzic: —

"Wheat of moderate quality in ordinary seasons cannot be brought from Poland and delivered at Dantzic at less than 35*s.* per quarter, and that only when no excitement exists in the foreign markets. Some time since a very large accumulation of grain had in the course of several years taken place in the granaries at Dantzic; but the great export which has occurred during the last 3 or 4 years has so reduced the magazines, that the stock at the close of the present season (1841) was not expected to exceed from 80,000 to 100,000 quarters. The demand has been so great during the last 2 or 3 years, that every effort has been made to collect in Poland all the supplies that were available, and to bring them to Dantzic for exportation. If the corn trade in England was so modified as to be constantly open at a moderate duty, it is not likely, under such circumstances, that shipments of wheat from Dantzic would materially exceed that of the last 2 or 3 years. Not more than 5,000 quarters are consumed annually in Dantzic, by a population of 60,000 persons, the people generally preferring and living upon rye bread. Of the corn exported from Dantzic, one-third comes from that part of Poland which belongs to Prussia, and the remaining two-thirds from the Russian territory. Apprehensions were expressed here, as in other places, of the competition of Odessa and America, in the event of any material reduction of the duty on corn in England. The party making the observation, who is a leading corn merchant in Dantzic, said he had at that moment a cargo of Odessa corn in London which stood him in 49*s.* per quarter, and that he could purchase there Odessa wheat of similar quality at 48*s.* per quarter. The same apprehensions were expressed by others as to Odessa, exports from which place having already been largely made to Italy and other parts of the Mediterranean; and recently, it was added, several cargoes had been shipped to England. On pressing one of the most intelligent merchants in Dantzic to state what price was paid to the landed proprietor or farmer in Poland for a quarter of wheat on the estate where it was grown, or at the nearest market to that estate, he replied, that it was generally bought by the Jews upon the estates from the landowners or their agents, and afterwards sold by the former to the merchants at Dantzic, deliverable at Dantzic; that in some instances the princes and great landowners sent their own commissioners to Dantzic to effect sales to the merchants; that a Russian prince, who had 10,000 serfs, had acted upon the principle very recently; that under such circumstances it would not be right to take less than 30*s.* per quarter, as the price at which wheat, when there was a fair average crop, could be delivered at Dantzic, from which, deducting 12*s.* per quarter for the expense of bringing it from the place of growth to Dantzic, including waste, which is generally very considerable, cost of the boats, which are broken up and sold for a trifle compared with their original cost (amounting, perhaps, to 400 or 500 thalers, whereas they are only sold for about 40), the expense of the peasants and other persons navi-

gating them for a voyage, sometimes of 3 or 4 months, and returning back to Poland on foot, there would be left 33s. per quarter, as the price paid to the proprietor at the place of growth; out of which he had to bear the expense of cultivation, to pay the interest and redeem the capital of any mortgage which might exist, the residue being what would remain for rent and interest of capital embarked in the soil. He added, that this was generally considered as an average estimate of the expenses; but that they would vary a little, dependent upon the distance, either greater or less, from which the corn was brought. A considerable quantity of bones are exported from Dantzic to Great Britain, many of which are collected and sent down from Cracow. Complaint was made to the Consul by the merchant chiefly employed in this trade, that a heavy transit duty of 2s. per cwt. had recently been levied for the nominal purpose of repaving the turnpike road, that it was a heavy tax in proportion to the value, and that a representation from England was alone necessary to obtain its repeal.

"Of the timber and staves shipped at Dantzic, nearly the whole comes from Russian Poland. Prussian timber is becoming scarce; and even that from the Russian territory, that is of good quality, is much reduced, and has of late not been so good as formerly. This is owing, principally, to most of the good timber that could be conveniently got afloat having been felled. There is, it is said, but little of good quality now to be had without going much farther back from the shipping places, which the discouragement given by the present timber duties prevents. It will hence be obvious, that whenever any alteration takes place either in the corn trade or timber duties, Russia will be much more benefited than Prussia, so far as relates to the export of corn and timber from Dantzic."

Timber Trade, Brack. — Fir timber is usually brought down in its natural state, and is squared into logs, or sawn into planks, in winter, when the labourers cannot be otherwise employed. The staves shipped here are carefully assorted, and are reckoned superior to those of America.

The expenses of the water conveyance of squared timber, including duty at Thorn, are —

	Per piece. s. d.	s. d.
From the Bug - - - -	from about 6	0 to 5 9
Wieprez (above Warsaw)	- 4	6 - 4 4
Vistula (above do.)	- 3	0 - 2 4

Being higher when the demand is unusually great, or when hands are scarce.

At Dantzic, as well as at Petersburg (which see), Riga, and several other Baltic ports, sworn inspectors (*brackers*) are appointed by authority to examine certain articles intended for exportation, and to classify them according to their qualities. Staves and timber of all sorts, with the exception of pipe wood, is subjected to the brack. Prime quality is branded *Krohn* or *Crown*: second quality, *Brack*: and the third or lowest quality, *Bracks Brack*. All unmerchantable articles are rejected by the brackers, and are not allowed to be exported.

The gauge for crown pipe staves, which the bracker has always in his hand, is 1¼ inches broad, 1¼ thick, and 64 inches in length, which they must be at least; but they are expected to be larger in every respect.

Pipe staves are from 64 to 68 inches long; 6, 5, and 4½ at least, broad; and from 1¼ to 3 inches thick.

Brandy staves are at least 54 to 58 inches long, as thick and broad as pipe staves.

Hogshead staves are 42 to 45 inches long, as thick and broad as pipe staves, all English measure.

The quality is ascertained by marks, to distinguish each sort, as follows: —

Crown pipe staves, stamped at the end, K.
— brack, in the middle, I.
— bracks brack, II.
Hogshead crown, at the end, O K.
— brack, in the middle, I.
— bracks brack, II.
Brandy hogshead crown, at the end, B K.
— brack, in the middle, ℔.
— bracks brack, ℔℔.

Oak planks are assorted in the same manner. Crown plank is marked in the middle, C. Brack, in the end and middle, B. Bracks brack, B B.

To distinguish ¾ from 2, and 2½ from 3 inches, the 1½ are marked with I, and 2½ ℔.

At the end, in rough strokes, with coloured paint, brack is yellow I; bracks brack, white II; crown, red III.

Ashes are subjected to the brack. The calcined are opened and the crust taken off; others are not examined unless there be any suspicion of their quality, or the staves of the hogshead be supposed to be too thick. Every cask of potashes is opened.

Shipping Charges and Duties.

Charges upon the Shipment of 1000 Quarters of Corn at Dantzic in English Money.

	£	s.	d.
Metage in granary - - - - - - - - -	5	0	0
Delivery - - - - - - - - - -	1	4	6
Porterage down - - - - - - - - -	9	0	0
Meters' fee - - - - - - - - -	2	0	0
Town dues - - - - - - - - -	3	15	0
Lighterage - - - - - - - - -	10	0	0
Expenses to the roads - - - - - - - -	2	10	0
	£33	9	6

Exclusive of commission, 2 per cent.

The above are the charges if bought and shipped from the granary: but if bought and warehoused previously to shipping, the following additional charges are incurred: —

Metage from craft.
Porterage up, meters' fees, and town dues, are the same.

Additional.

Granary rent - -	3d.	per last of 10½ quarters per month.
Labourers - -	6	
Turning - -	7½	
Screening - -	-	

Exclusive of insurance against fire.

Charges on the Shipment of —

	R. s. gr.	
Pearlashes	about 0 10	per shippound of 330 lbs.
Weed ashes	— 0 6	— barrel do.
Fir timber	— 0 10	— load.
On Deck deals, Short deals, Deal ends	R. s. gr. about 0 23½	per load.
Lath wood	— 1 0	— fathom.
Clapboards	— 2 0	— shock of 60 pieces
Oak plank, Oak ends	— 1 10	— load
Staves	— 13 10	— mille pipe.
Black or spruce beer	0 7½	— last of 11 kegs.
Feathers	— 2 0	— 100 lbs.

N. B. — The Prussian pound is about 3½ per cent. heavier than the English pound. The expenses of sending goods down are taken at about an average rate; but if the whole or the greater part of the cargo were loaded in the Fairwater or roads, the expenses would be somewhat more.

Port Charges. — The charges on a ship of 200 lasts, or about 300 tons burden, are —

	R. s. gr.	Rf. g
Harbour money - - - -	88	26 8
Ditto in gold (say in Fred. d'ors, reckoned at 5 r., in which this must be paid) -	- 14	6 8
River money - - - -	- 0	0 0
Commercial contribution - - -	- 3	10 0
Expedition expenses - - -	- 13	10 0
Captain's allowance for expenses on shore	- 16	20 0
Tracking the ship into the harbour (Fairwater) - - -	- 2	0 0
Ballast money, &c. - - -	- 10	24 0
Pilot to the ballast wharf - -	- 4	0 0
Ditto moving the ship in Fairwater -	- 2	15 0
Police passport - - - -	- 3	5 0
Clearing the vessel in and out - -	- 16	20 0
Making 27l. 6s. 6d. sterling, at the exchange of 6 r. 28 s. gr. - - -	- 175	17 4

The charges on the ships of all countries having reciprocity treaties with Prussia (which is generally the case) are the same, only Dantzic captains receive no allowance for shore expenses. River or stream money is only paid by vessels that bring goods to town, or load in the Motlau (above the blockhouse): if a ship remain in the Fairwater or Vistula, the river money is levied on the craft carrying the goods, and falls on the latter.

Dantzic is a favourable place for ships careening and repairing, and for obtaining supplies of all sorts of sea stores at a reasonable rate.

There belonged to the port in 1842, 80 ships, measuring 14,880 lasts. They are employed in foreign trade. The port has no fishery, and no coasting trade worth mentioning. The wages of Dantzic seamen vary from 30s. to 32s. per man per month.

Custom-house Regulations. — The shipmaster must, within 24 hours after arrival in port, make a declaration of the cargo on board, and of the ship's provisions, and he incurs a severe penalty if the declaration do not prove correct. The ship's hatches (if goods are on board) are sealed on arrival, and an additional declaration is accepted before they are opened; but no *later* declaration, supplementary, or explanatory of the first, and not submitting the goods to investigation by the officers, is received or allowed. If the shipmaster be unable to make a complete declaration on arrival, a Custom-house officer is put on board, who remains until the ship is unloaded, at an expense to her of about 2s. per day and night. The cargo can only be discharged in presence of a customs officer.

The shipmaster, and not the receiver of the goods, is made responsible, if the *contents* of the packages do not correspond with his declaration; and he is only exonerated from this by solemnly averring, on making the declaration, that the contents are unknown to him. An evident mistake or oversight is treated as rigorously as an intentional fraud.

On commencing to *load*, the shipmaster receives a blank loading list, in which he must daily note the articles he takes on board, or he is liable to fine; but this regulation is not very rigidly enforced. On clearing out, this list is compared with the goods entered by the vessel, when the sea passport is given.

Ballast can be discharged only at stated places, on pain of the shipmaster being fined.

It is material, however, to observe, that the whole Custom-house business of the shipmaster is conducted by Custom-house brokers, so that he is never at a loss, being informed by the one he selects what he has to do. Alterations are frequently made in the Custom-house regulations.

The shipmaster receives, on arrival, from the pilot commodore, a copy of the harbour regulations, in his own language, with instructions how to act as to ballast.

Warehousing. — Such goods as pay a higher duty than ¼ a dollar per centner (about 1s. 5½d. for about 113 lbs. English) may be placed in the king's stores (nowhere else), and remain there for 2 years without payment of duty. No allowance is made for waste or damage in these stores. Other goods, not capable of being changed, may be placed in private stores, under the king's lock; but not elsewhere, without permission. No rent is charged for goods in the king's stores, during the first 3 months; afterwards about 1½d. monthly rent is charged for the first, and about 3d. monthly for the second year, per centner of about 113 lbs. English.

In private warehouses, the monthly rent for 10 quarters of wheat or other grain is from about 3½d. to 7d., or more, according as warehouse room is abundant or otherwise. Other goods do not usually pay by the piece, but part of a store is hired for them, and the rent generally comes somewhat higher in proportion.

The cost of rent and turning grain is from 1s. 2d. to 1s. 6d. monthly, for 10 quarters, according to the season of the year and other circumstances; but more when granary room is scarce, and wages high.

Banking Establishments. — There is none such here, excepting a branch of the Royal or Government Bank of Berlin. This was founded partly in the view of receiving deposits of money under litigation in the courts of the province; monies the property of minors and charitable institutions, the former until disposable or placed on good security; and monies belonging to individuals not merchants, and at times, also, those of the latter. Interest is paid on such deposits as follows: viz. —

3 per cent. on sums belonging to minors.
2½ do. do. charitable institutions, churches, and sums deposited by the courts of justice, and
2 do. all other deposits.

The principal is demandable at pleasure, unless otherwise stipulated. The bank makes advances on grain and some other kinds of goods at 5 per cent. interest; discounts bills with 3 signatures, not having more than 2 months to run, at 6 per cent., and sometimes, when money is plenty, at a lower rate. It also makes advances at 4 per cent. on deposits of Fred. d'ors and certain foreign monies; and it occasionally buys bills for account of, and sells bills on, the Berlin bank. It does not issue notes. The amount of its capital is not fixed; but government guarantees its transactions. It is relieved from the payment of postage on money, and it is not required to use the stamps fixed by law, on bills for its deposit transactions, but only those of 10 s. gr. (about 11½d.); while individuals must use stamps for such bills of 5 s. gr. for every 400 r., of not longer date than 3 months, and for every 200 r. of longer date.

On negotiable bills, however, the bank must use the stamps fixed by law, say of 5 s. gr. (about 5½d.) for sums of 50 dol. to 400 dol., and at the same rate for every additional sum between 100 dol. and 400 dol.

Bills from and on foreign places, negotiated at Dantzic, are not subject to the stamp duty.

The affairs of the bank are not made public. Being a government concern, there are no dividends. It is not supposed to be very profitable, at least in the present circumscribed state of trade, although enjoying the advantages of exemption from postage of monies, and paying less stamp duty. It is true, however, that the direct advantage of the lower stamp duty is enjoyed by the borrower.

Credit, Brokerage, &c. — Very few goods are consigned from abroad for sale, for such consignments rarely turn to good account. Imports are seldom sold for cash, but generally a 1, 2, and 3 months' credit, or longer. The discount allowed for cash payments, when sold on time, is usually 6 per cent., but it varies according as money is plentiful or otherwise.

Any person, being a burgher of the town (which any one of good character may become), may transact business as a commission merchant or factor; but brokers must be chosen by the elders of the Corporation of Merchants, approved by the regency of the province, and sworn in by the magistracy of the town.

The usual rates of commission are —

3 per cent. on wood articles } exported,
2 do. other goods }
2 do. goods imported,

with from 1 to 2 per cent. on do. for *del credere*, or guarantee of debts.

The corn factor receives r. 1·7 (about 4s. 9d. sterling) per last (of 60 scheffels) of all grain, from the buyer, and 1 per cent. from the seller.

The rates of brokerage are —

12½ s. gr. (nearly 1s. 9½d.) per 100.
7½ — (— 8·7d.) per 100.
3½ — (— 4·3d.) per 100 r.

1 per mille for bills on Berlin, Warsaw, and Paris.
½ per cent. on monies placed at interest, for a period not less than 6 months, from the borrower, and
1 per mille from the lender.
1 per mille usually for short discounts, from both parties.
1 per cent. on the actual or the computed amount of transactions in public funds, from both parties.
½ per cent. usually (sometimes more or less) for merchandise.

On grain for exportation, the brokerage is recently fixed at 1 per cent., to be paid by the seller, the buyer refunding to him 5 s. gr. per last (of 56½ scheffels).

Burghers, being merchants, may act as brokers, without direct authority, in the purchase from, and sale of goods to, Poles, receiving 1 per cent. on goods bought, and 1 to 2 per cent. on goods sold, according to circumstances.

Bankruptcies are not of frequent occurrence here. Their most prevalent sources at present are speculations in grain. Bankrupts cannot obtain a discharge except by private composition, without which they always remain responsible to each individual creditor, who can attach them at any time, if he can show that they possess property, although their affairs have been settled by judicial authority. This, and the tediousness of settlements in court, make both debtor and creditor desirous of settling by composition; and hence few insolvents are made bankrupt by their affairs being brought into court. It is to be observed, that creditors, having claims by bills in force, must by law be paid to the full, before those with only book claims receive any thing; but to avoid the tardiness of the court, bill creditors here generally agree to let book creditors receive half as much in composition as they themselves get. It is, however, difficult to arrange a composition, as each creditor can make his own terms; and those who hold out, generally get more, at least privately, than the ostensible rate of composition offered by the debtor.

If a private composition cannot be effected, and the insolvent is regularly made bankrupt, by his affairs being put into court, the law prescribes that, if a small portion of the creditors will not accept the dividend with which the greater portion are satisfied, the latter can require the former to consent, or become responsible for the estate producing as much finally; but so many objections may be made, that this compulsive measure is very seldom resorted to. A private composition is, however, generally preferred by all parties, more particularly by the debtor, as being the only means by which he can become entirely free, and get a general discharge.

Honest bankrupts, whose affairs are brought into court, may be freed from personal arrest by faithfully delivering up all their property. Dishonest ones, upon conviction, are punished by being sent to the House of Correction; but they often escape punishment, from the too great laxity in enforcing the laws in criminal matters.

The creditors of a bankrupt estate brought into court, rank under 8 different classes, each prior class enjoying a precedency of claim over those following, to the full amount. The two most considerable classes, in general, are the 6th and 7th, the former being that of the bill, the latter that of the book, creditors.

Taxes, &c. — The duties are in general payable on the gross weight; a fixed allowance being made, in many cases, according to the packages; in others, there is no allowance. The tariff specifies the particular regulations on this point. The tare on goods in single sacks is 4 lbs. per centner (about 113 lbs. English), it being left to the option of the receiver to have the nett weight ascertained.

In trade there are fixed rates of tare only on the following goods; viz.

Potashes, 6 per cent., when sold by a merchant.
Dyewood, ground, 8 to 11 per bale.

Currants	14 per cent.	-	- in whole butts.
——	16 —	-	- half do.
——	18 —	-	- ¼ and ⅛th do.
Figs and raisins	10 —	-	- casks.
Olive oil	16 —	-	- whole and half butts.
——	18 to 20 —	-	- ¼ and ⅛th.
——	16 —	-	- pipes.

Seed oil, latterly the tare is ascertained.
Pepper, English, in double bags, 7 lbs.
— Danish, in bags and mats, 11 lbs.
Orange and lemon peel, 6 per cent., or tare ascertained.
Rice from England or Hamburg, the tare as on the casks, less 2 lbs. per cask on that from England, and in proportion to the weight on that from Hamburg. Danish should give 10 per cent. tare, but the buyers are in general not satisfied with this.
Tallow, 10 per cent., or nett tare.
Tea, Danish bohea, 7 lbs. if in linen and mats.
— 24 lbs. in chests above 100 lbs.
— 22 lbs. — of about 80 lbs.

Most frequently the tare is ascertained.
Vitriol, 10 per cent.
Raw sugar, 12 to 16 per cent. according to the size of the chests.
Candied sugar, tare by invoice, adding in that proportion for the difference in the weight usually heavier.
Syrup in whole casks, 10 per cent.
— in ½ ditto, and barrels, 12 per cent.
On the sale of imports, 1 per cent. on the nett weight (called good weight) is allowed in favour of the buyer.

Insurance. — There are no insurance companies nor private insurers here; but there are agents of insurance companies in Hamburg for ships, and of those of London and other places for houses and lives.

Wages of common Labourers in Dantzic vary from 9d. to 11d. a day, and those of carpenters, masons, &c., from 1s. 6d. to 2s. Wages in all the large Prussian towns are higher than in the small towns of the country, from the price of flour, bread, and butchers' meat being higher in them. This is occasioned partly by the latter being subject to *octrois* or excise duties on entering the great towns, from which the country districts and smaller towns are exempted. The king receives ⅓ of these duties, and the towns the other ⅔. This duty is a great obstacle to the free intercourse of the country.

(We have derived these details from different sources, but principally from *Consular Returns*; *Merk's Report*; and information supplied by the Prussian Government.)

DATES (Ger. *Datteln*; Fr. *Dattes*; It. *Datteri*; Sp. *Datiles*), the fruit of the palm tree (*Phœnix dactylifera* Lin.). This tree is abundant in Egypt, Barbary, Arabia, Persia, and the adjacent countries, particularly on the confines of the desert, and wherever there is sufficient moisture. It is a tall majestic tree; and repeated references are made to it in the sacred writings (Ecclus. xiv. 14.), and in the Koran. Mohammed, in one of his sayings, beautifully compares the upright and generous man to the palm tree. "He stands erect before his Lord; in his every action he follows the impulse received from above, and his whole life is devoted to the welfare of his fellow-creatures." But the veneration in which the palm tree is held in the East is to be ascribed more to its utility than to its beauty. Dates form the principal part of the subsistence of the inhabitants of many parts of Arabia and Barbary, and they are held in the highest estimation wherever they are met with. "They are," says Burckhardt,

" by far the most essential article of food for the lower classes of Medina ; their harvest is expected with as much anxiety, and attended with as much general rejoicing, as the vintage in the south of Europe ; and if the crop fails, which often happens, as those trees are seldom known to produce abundantly for 3 or 4 successive years, or is eaten up by the locusts, universal gloom overspreads the population, as if a famine were apprehended." — (*Travels in Arabia*, vol. ii. p. 214.)

There is an endless variety of dates. Generally, however, they may be described as being somewhat in the shape of an acorn, but usually larger, consisting of a thick fleshy substance, including and freely separating from an oblong stone or kernel, having a furrow on the one side. Their taste is agreeably sweet, accompanied with a slight astringency The new fruit is called by the Arabs *rutob*. When the dates are allowed to remain on the tree till they are quite ripe, and have become soft and of a high red colour, they are formed into a hard solid paste or cake called *adjoue*. This is formed by pressing the ripe dates forcibly into large baskets, each containing about 2 cwt. " In this state," says Burckhardt, " the Bedouins export the adjoue : in the market it is cut out of the basket, and sold by the pound. It forms part of the daily food of all classes of people ; in travelling it is dissolved in water, and thus affords a sweet and refreshing drink. During the monsoon, the ships from the Persian Gulph bring adjoue from Bussorah to Djidda for sale in small baskets weighing about 10 lbs. each : this kind is preferred to every other. Ships bound from Arabia for India take with them a considerable quantity of adjoue, which is readily disposed of amongst the Mohammedans of Hindostan." — (*Travels in Arabia*, vol i. p. 57)

The Arabians and Egyptians use the leaves of the tree in the preparation of bags and baskets ; the boughs, the outer and inner bark of the trunk, and the fleshy substance at the root of the leaves, where they spring from the trunk, have all their respective uses ; and besides this, the kernels of the fruit, notwithstanding their hardness, are used as food for cattle ; they are soaked for two days in water, when they become softened, and are given to camels, cows, and sheep, instead of barley : they are said to be much more nutritive than that grain. There are shops at Medina in which nothing else is sold but date kernels ; and the beggars are continually employed in all the main streets in picking up those that are thrown away. — (*Burckhardt*, vol ii. p 212)

All the refinements of Arabian cookery are exhausted in the preparation of dates ; and the Arabs say that a good housewife will daily supply her lord, for a month, with a dish of dates differently dressed.

Palm trees are raised by shoots ; and Dr Shaw mentions that they arrive at their vigour in about 30 years, and continue so 70 years afterwards, bearing yearly 15 or 20 clusters of dates, each of them weighing 15 or 20 lbs. : after this period, they begin to decline. — (*Travels in the Levant*, p. 142. 4to ed)

The best dates imported into Great Britain are said to come from Tunis, but they are most commonly brought from Smyrna and Alexandria They should be chosen large, softish, not much wrinkled, of a reddish yellow colour on the outside, with a whitish membrane betwixt the flesh and the stone. Those that are dry and hard are of little value

DEALS, or DEAL BOARDS (Ger. *Dielen*, Du. *Deelen* ; Da. *Dæler* ; Sw. *Tiljor* ; Fr. *Planches minces* ; It. *Tavole*, *Piane* ; Rus. *Doski* ; Pol. *Turcice*), a thin kind of fir planks, much used in carpentry : they are formed by sawing the trunk of a tree into longitudinal divisions, of greater or less thickness, according to the purposes they are intended to serve. They are imported from Dantzic, Petersburg, Narva, and many other ports in the Baltic, and from North America ; but those from Christiania, the capital of Norway, are the best, and bring the highest price. They are distinguishable from those produced in the contiguous provinces of Norway ; their superiority has been said to depend principally on their being more perfectly sawed ; but it really depends on the greater care with which the sap-wood and other defective portions of the timber are cut away, and on the quality of the timber.

A Russian standard deal is 12 feet long, 11 inches wide, and 1½ inch thick ; 400 feet of 1½ inch plank make a load.

A Christiania standard deal is 11 feet long, 9 inches wide and 1½ inch thick. There is another standard of Norway deals at Dram, 10 feet long, 9 inches wide, and 1½ inch thick — (See CHRISTIANIA.)

DEBENTURE, a term used at the Custom-house to signify the *certificate* subscribed by the customs officers, and given to the exporter of goods on which a bounty or drawback is allowed, bearing that the exporter has complied with the required regulations, and that he is entitled to such bounty or drawback.

It is enacted by 3 & 4 Will. 4. c. 52. § 86., that no drawback or bounty shall be allowed upon the exportation of any goods, unless entered in the name of the real owner thereof, or of the person who had actually purchased and shipped the same, in his own name and at his own risk, on commission.

Such owner or commission merchant shall make and subscribe a declaration on the debenture that the goods have been actually exported, and are not to be relanded in any part of the U. Kingdom, &c. ; and if such owner or commission merchant shall not have purchased the right to such drawback or bounty, he shall declare under his hand in the entry, and in his oath upon the debenture, the person who is entitled thereto ; and the name of such person shall be inserted in the cocket, and in the debenture, and his receipt on the latter shall be the discharge of such drawback or bounty. — § 87.

For these and the other clauses in the act relating to debentures, see IMPORTATION AND EXPORTATION.

All debentures must be on 5*s* stamps.

Debentures or certificates for bounty on the exportation of linens or sailcloth exempted from duty.

DELFT, or DELF (Ger. *Fayence*, *Unachtes Porzellan* ; Du. *Delfs porcelyn* ; Fr. *Faience*), a coarse species of porcelain originally manufactured at Delft, whence its name. It is now rarely used in this country.

DEMURRAGE, in commercial navigation, is an allowance made to the master or owners of a ship by the freighter, for detaining her in port longer than the period agreed upon for her sailing. It is usually stipulated in charterparties and bills of lading, that a certain number of days, called running or working days, shall be allowed for receiving or discharging the cargo, and that the freighter may detain the vessel for a further specified time, or as long as he pleases, on payment of so much *per diem* for such over-time. When the contract of affreightment expressly stipulates that so many

days shall be allowed for discharging or receiving the cargo, and so many more for overtime, such limitation is interpreted as an express stipulation on the part of the freighter, that the vessel shall in no event be detained longer, and that if detained he will be liable for demurrage. This holds even in cases where the delay is not occasioned by any fault on the freighter's part, but is inevitable. If, for example, a ship be detained, owing to the crowded state of the port, for a longer time than is allowed by the contract, demurrage is due; and it is no defence to an action for demurrage, that it arose from port regulations, or even from the unlawful acts of the Custom-house officers. Demurrage is not, however, claimable for a delay occasioned by the hostile detention of the ship, or the hostile occupation of the intended port; nor is it claimable for any delay wilfully occasioned by the master, or owners, or crew of the vessel. The claim for demurrage ceases as soon as the ship is cleared out and ready for sailing, though she should be detained by adverse winds, or tempestuous weather. — (*Chitty's Commercial Law*, vol. iii. pp. 426 — 431.)

DENARIUS, a Roman coin, estimated by Dr. Arbuthnot to have been worth 7¾*d.*; but its value differed at different periods.

DENIER, a small French coin, of which there were 12 to a sol.

DIAMOND (Ger. Du. Da. and Fr. *Diamant*; Sw. *Demant*, *Diamant*; It. Sp. and Port. *Diamante*; Rus. *Almas*; Pol. *Dyamant*; Lat. *Adamas*; Hind. *Hira*), a precious stone which has been known from the remotest ages. Pliny has described it (*Hist. Nat.* lib. 37. § 4.); but his account is, in many respects, inaccurate. It is found in different parts of India, and in Borneo; it is also found in Brazil, on which, indeed, Europe may be said to be at present entirely dependent for supplies of diamonds. Hitherto, however, it has not been met with any where except within the tropics. It is the most beautiful and most valuable of precious stones. Its most common colours are white and grey of various shades. It occurs also red, blue, brown, yellow, and green. The colours are commonly pale. It is always crystallised, but sometimes so imperfectly that it might pass for amorphous. It is the hardest body in nature. External lustre from splendid to glimmering; internal always splendid. It is brittle; its specific gravity is 3·5. When rubbed, it becomes positively electric, even before it has been cut by the lapidary, which is not the case with any other gem. — (*Thomson's Chemistry.*)

According to Mr. Milburn (*Orient. Com.*), the colour should be perfectly crystalline, resembling a drop of clear spring water, in the middle of which you will perceive a strong light playing with a great deal of spirit. If the coat be smooth and bright, with a little tincture of green in it, it is not the worse, and seldom proves bad; but if there be a mixture of yellow with the green, then beware of it — it is a soft, greasy stone, and will prove bad.

Tests of Diamonds. Cutting, &c. — To ascertain whether any specimen is a true diamond or not, a fine file may be used; and if the surface of the stone be the least abraded or scratched by its action, it is not a diamond. The difference will also appear upon close examination without this instrument; the rays of light easily pass through other gems, but in the diamond they are refracted to the surface, which occasions its superior brilliancy. If the specimen under examination be very minute, it may be placed between 2 half-crowns, or other flat metallic surfaces, and pressed with the thumb and finger: if a diamond it will not be injured; but if otherwise, it will break and fall to powder. On account of the extreme hardness of the diamond, the art of cutting and polishing it was for a long time unknown in Europe. But, in 1456, a young man of the name of Louis Berghen, a native of Bruges, is said to have constructed a polishing wheel for the purpose, which was fed with diamond powder instead of *corundum*, which the Chinese and Hindoos had been long accustomed to employ. Berghen was led to this discovery by observing the action produced by rubbing 2 rough diamonds together. Diamonds are cut into brilliants and rose diamonds: the former being, for the most part, made out of the octahedral crystals, and the latter from the spheroidal varieties. — (*Joyce's Practical Mineralogy*; *Rees's Cyclopædia*, *&c.*)

"*Commercial Value of Diamonds.* — In the great or wholesale trade there is but little fluctuation in the price of those diamonds which may be termed *stones in general demand*. I will begin with brilliants from 1 grain to 2½ grains each. — Such brilliants, double cut, and what may be termed fine, are worth from 7*l.* to 8*l.* per carat. Needy sellers may take 10 per cent. less for cash; but this is the general average price for a lot of 10, 20, or 50 carats of well-made stones, if the quality be good.

"Brilliants, from 2 grains to 3, may be bought in lots, at from 7*l.* 7*s.* to 8*l.* per carat. It is to be understood, that diamonds in a lot are never all quite free from faults; hence there may arise a difference of 10 per cent. in the price. Stones of 3 grains, if fine and perfect, are always in demand, at 8*l.* or 9*l.* per carat.

"Brilliants, from 3 grains to 4, if very fine and well proportioned, are worth from 8*l.* to 9*l.* per carat. Those of a carat each, if very fine and well selected, are worth 9*l.* or 10*l.* Three years ago I offered 12*l.* each for 8, and could not obtain them.

"Brilliants, from 5 grains to 6, if pure, are worth from 13*l.* to 14*l.*; if perfectly fine, and of the full weight of 6 grains, they are worth from 17*l.* to 18*l.* each: I have, for such, paid 20*l.*

"Brilliants, of 2 carats each, are worth from 27*l.* to 30*l.* Stones of this weight, if well proportioned, are considered of a fine size, and well calculated for pins, or the centre of clusters; indeed, well proportioned diamonds, from 6 grains to 2 carats each, are always in demand, and are retailed at from 20*l.* to 35*l.* each, according to their degree of perfection, or as the retailer may think fit to charge them.

"For brilliants of 3 carats, if fine and well formed, from 70*l.* to 80*l.* may be obtained. Stones of this size, and larger, are more liable to capricious fluctuations of price than the smaller ones before named, being chiefly required for the centre stones of saleable necklaces.

"Brilliants of 4 carats, if fine, are worth from 100*l.* to 130*l.* I have sold stones, single cut, a little off *colour*, of this weight, at 80 guineas. I possessed one of 17 grains, perfectly white, having a surface as large as that of a 7 carat stone ought to be; it was, consequently, very thin, but being much in request, on account of its great *spread*, or surface, it was sold for 160*l.*

"Brilliants of 5 carats are not frequently met with in general trade, and are valuable in price; as the dealers exact more if they know that such stones are wanted, than they would in the regular course of business. The prices may be said to vary from 180*l.* to 200*l.*

"Brilliants of 6 carats, as before stated, are not common; they are suitable for centre stones of expensive necklaces, and single stone rings; if perfect and well shaped, they sell for 230*l.* to 250*l.* or more.

"For estimating the value of peculiarly fine diamonds, there is no fixed standard. Rough diamonds, selected as fine, and well formed for cutting, may be estimated as follows: — Square the weight of the stone, multiply the product by 2, and the result will be the value in pounds sterling. Brilliants, if fine, may be estimated by squaring the weight in carats, and multiplying the product by 8, which will give the amount in pounds sterling.

"As a very large property, both in this kingdom and in other countries of Europe, is vested in diamonds, it may be interesting to be informed, that not only the price of these gems has for several years been, upon the whole, gradually rising, but that it is likely to continue on the advance. At the present time, indeed, and for the last few years, there has been a dull sale of diamonds in England, nor did the coronation occasion a demand worth notice; but on the Continent the trade has been steady, and rough diamonds have been constantly rising in price. That this advance will be progressive, may be assumed from the fact, that the best diamond ground now known, the Serro do Frio in Brazil, has assuredly passed the zenith of its prosperity. I went over the greater part of what is yet reserved, and still remains to be worked, and I conceive that there would be no difficulty in calculating the length of time in which the present number of workmen may reduce it to a state of exhaustion, like that of the far-famed Golconda. The average annual produce of future years may be estimated by the amount obtained from that portion which has been already worked. Brazil may be said to furnish Europe with 25,000 or 30,000 carats *per annum* of rough diamonds; which, if reduced to brilliants, may make an influx into the market of 8,000 or 9,000 carats annually." — (*Mawe's Treatise on Diamonds*, 2d ed. pp. 9—11. and p. 50.)

The rule stated by Mr. Mawe, and adopted by the jewellers, for estimating the value of diamonds, (multiply the square of the weight in carats by 2, and the product is the value in pounds sterling,) can only hold in the case of those that are of a small size, or do not weigh more than 20 carats. The value of the largest diamonds, which are exceedingly rare, (*non nisi regibus et his admodum paucis cognitus*, Pliny,) can, it is clear, depend upon nothing but the competition of the purchasers. The diamond belonging to the Emperor of Brazil is the largest in the world. It is still uncut, and weighs 1,680 carats; so that, according to the jewellers' rule, it must be worth the enormous sum of 5,644,800*l.*! It may, however, be doubted, whether his Imperial Majesty would have any disinclination to part with it for the odd sum of 641,800*l.* The famous diamond belonging to the Emperor of Russia, which the jewellers tell us is worth 4,800,000*l.*, did not cost 150,000*l.*

Diamonds are not used exclusively as articles of ornament or luxury. They are frequently employed with great advantage in the arts. "Bad, discoloured diamonds," says Mr. Mawe, "are sold to break into powder, and may be said to have a more extensive sale than brilliants, with all their captivating beauty. In many operations of art they are indispensible; the fine cameo and intaglio owe their perfection to the diamond, with which alone they can be engraved. The beauty of the onyx would yet remain dormant, had not the unrivalled power of the diamond been called forth to the artist's assistance. The carnelian, the agate, or carnigorm, cannot be engraved by any other substance; every crest or letter cut upon hard stone is indebted to the diamond. This is not all; for without it, blocks of crystal could not be cut into slices for spectacles, agate for snuff-boxes, &c."

Diamonds may be landed without report, entry, or warrant. — (3 & 4 *Will.* 4. c. 52. § 2.)

The carat grain used in weighing diamonds is different from the Troy grain, 5 diamond grains being only equal to 4 Troy grains.

DIAPER (Ger. *Drell*; Du. *Drel*; Fr. *Linge ouvré*; It. *Tela tessuta a opere*; Sp. *Manteles alemaniscos*; Rus. *Salfetotschnoe*), a sort of fine flowered linen, commonly used for table-cloths, napkins, &c., brought to the highest perfection in the manufactories in the north of Ireland, in Germany, and Scotland.

DICE (Ger. *Würfel*; Du. *Taarlingen*; Fr. *Dés* (*à jouer*); It. *Dadi*; Sp. *Dados*; Rus. *Kosti*), cubical pieces of bone or ivory, marked with dots on each of their sides from 1 to 6, according to the number of the face. The regulations as to the manufacture and sale of dice are the same as those with respect to CARDS (which see). Every pair of dice is to pay a duty of 20*s.* All pieces of ivory, bone, or other matter used in any game, having letters, figures, spots, or other marks denoting any chance, marked thereon, to be adjudged dice; and if more than 6 chances are signified on any one piece, then such piece to be charged with the full duty of a pair of dice. — (9 *Geo.* 4. c. 18.)

DIMITY (Fr. *Basin*; It. *Dobletto*; Sp. *Dimite*), a species of cross-barred stuff entirely composed of cotton, similar in fabric to fustian.

DISCOUNT, an allowance paid on account of the immediate advance of a sum of money not due till some future period. It is usually said to be of two kinds; viz. discount of bills, and discount of goods; but they are essentially the same.

When a bill of exchange is presented at a banker's for discount, it is the practice to calculate the simple interest for the time the bill has to run, including the days of grace, which interest is called the *discount*; and this being deducted from the amount of the bill, the balance is paid over to the presenter of the bill. This is the method followed by the Bank of England, the London and provincial bankers, and by commercial men in general. But it is, notwithstanding, inaccurate. The true discount of any sum for any given time is such a sum as will in that time amount to the interest of the sum to be discounted. Thus, if interest be *five* per cent., the proper discount to be received for the immediate advance of 100*l.* due 12 months hence is not 5*l.*, but 4*l.* 15*s.* 2½*d.*; for this sum will, at the end of the year, amount to 5*l.*, which is what the 100*l.* would have produced. Those, therefore, who employ their money in discounting, make somewhat more than the ordinary rate of interest upon it; for a person discounting 100*l.* due at the end of a year, advances, supposing interest to be 5*l.* per cent., only 95*l.*; so that, as this 95*l.* produces 100*l.* at the period in question, the interest received has really been 5*l.* 5*s.* 3*d.* per cent.

The rule for calculating discount on correct principles is as follows: —

As the amount of 100*l.* for the given rate and time
Is to the given sum or debt;
So is 100*l.* to the present worth, or
So is the interest of 100*l.* for the given time
To the discount of the given sum.

Mr. Smart has calculated, on this principle, a Table of the discount of 1*l.* for any number of days, at 2, 2½, 3, 3½, &c. to 10 per cent., to 8 decimal places. But the simple interest of the sum being the only thing looked to in practice, such Tables are hardly ever referred to.

Bills in the highest credit are discounted on the lowest terms; the discount increasing according to the suspicions entertained of the punctuality or solvency of the parties subscribing the bills. During the war, the rate of interest, or, which is the same thing, of discount, was comparatively high; but since 1818, the rate of discount upon good bills has seldom been above 4, and has often been as low as 3 and even 2½ per cent.

Discount on merchandise takes place when, after making a purchase of goods at a fixed term of credit, the buyer finds means to make his payment before the expiration of that term, receiving from the seller a discount or allowance, which is commonly a good deal above the current rate of interest. The discount on goods varies, of course, according to the interest of money. During the late war, the loans to government were so large, and the facility of investing money was such, that the discount on goods was often as high as 5 per cent. for 6, and 10 per cent. for 12 months. Now, however, the discount on goods has fallen, with the fall in the rate of interest, to 7 or 7½ per cent. for 12 months; being about double the current interest arising from funded property, or the discount of good mercantile bills.

Long credits and discounts upon goods have, for a lengthened period, been usual in England. This arose from a variety of causes, but principally, perhaps, from the magnitude of our exports to the United States, Russia, and other countries where there is a great demand for capital; but in whatever causes it originated, it has latterly been carried to what seems to be an injurious extent.— (See CREDIT.) In France and Germany, the manufacturers, in general bare of capital, are obliged to stipulate with the merchants for short credits. In Holland the *usage* of the exporting merchants has been to pay either in ready money, or at so short a date as to put discounting out of the question, the manufacturer setting at once the lowest price on his goods.

DIVIDEND, the name given to the payment made to creditors out of the estate of a bankrupt, and to the annual interest payable upon the national debt, and other public funds.

DJIDDA, a town of Arabia, on the Red Sea, about 21 miles from Mecca, of which it is the sea-port, in lat. 21° 29′ N., lon. 39° 14′ E. It is well built; the streets are unpaved, but spacious and airy; the houses high, and constructed, for the most part, of madrepores and other marine fossils. The supply of water is scanty, and its quality indifferent. Small vessels approach close to the quays; but large vessels are obliged to anchor in the roads, about 2 miles off, loading and unloading by means of lighters. The entrance to the roads is difficult, and should not be attempted without a pilot. Djidda is a place of considerable commercial importance. It is the *entrepôt* in which is centred the greater part of the commerce between India, Egypt, and Arabia. Many of its merchants possess large capitals; some of them as much as from 150,000*l.* to 200,000*l.* The trade in coffee brought from Mocha, and other ports in Yemen, is the most considerable, but it is said also to be the most hazardous. The returns are principally made in cash. The trade with India and the Gulph of Persia is safer than the coffee trade, and is very considerable. Djidda has also a good deal of intercourse with the ports of Cosseir, Souakin, and Massouah, on the opposite coast of the Red Sea. The imports from the last two principally consist of slaves, gold, tobacco, dhourra or barley, hides, butter (of which immense quantities are made use of in Arabia), mats, &c.; in return for which the Africans receive Indian goods suitable for their markets, dresses and ornaments for their women, dates (which are not produced in any part of Nubia), iron, &c. The principal article of import from Cosseir is wheat; and not only Djidda, but the whole Hedjaz, or Holy Land of Arabia, is almost entirely dependent upon Egypt for corn. Coffee is the principal article sent in return. Business is transacted at Djidda with ease and expedition. The number of ships belonging to the port is estimated at 250. Owing to the scarcity of timber, none of them are built at Djidda; those belonging to it being either purchased at Bombay or Muscat, or at Mocha, Hodeida, or Suez. For a considerable period each year, before and after the feast of Ramadhan, when pilgrims come from all quarters to visit Mecca, the town is thronged with strangers, and a great deal of mercantile business is transacted. Djidda is at present, and has been for a number of years, under the government of Mohammed Ali, pacha of Egypt. The *moneys*, *weights*, and *measures* of the latter country (for which see ALEXANDRIA), are now generally used in Djidda, the commerce of which has been much improved and extended in consequence

of the comparative security and good order enforced by the pacha. — (We have gleaned these details from the different works of Burckhardt, particularly from his *Travels in Arabia*, vol. i. pp. 1—100.)

DOCKS are artificial basins for the reception of ships. The term has been supposed by some to be derived from the Greek δεκομαι, to receive; but it is obviously no other than the Teutonic *dock*, originally perhaps derived from *dekken*, to cover, enclose, or protect.

Docks are of two sorts — *wet* and *dry*. Wet docks are generally constructed with gates to retain the water. Ships are admitted at high water; and the gates being shut, they are kept constantly afloat. A dry dock is intended for the building, repairing, or examination of ships. The ships to be repaired or examined are admitted into it at high water; and the water either ebbs out with the receding sea, or is pumped out after the gates are shut.

Utility of Docks. — The construction of wet docks has done much to facilitate and promote navigation. A large vessel, particularly if loaded, could not be allowed to come to the ground, or to lie on the beach, without sustaining considerable injury, and perhaps being destroyed; and even the smaller class of vessels are apt to be strained, and otherwise hurt, if they are left dry, unless the ground be very soft. Hence, when large vessels have to be loaded or unloaded where there are no docks, and where the water close to the shore or quay is not sufficiently deep, the work can only be carried on during a particular period of each tide; it being necessary, in order to keep the vessel afloat, that she should leave the shore with the ebbing tide. Attempts have sometimes been made to obviate this inconvenience, by running jetties or piers to such a distance into the sea, that there might always be a sufficient depth of water at their heads: but this can only be done in peculiar situations; and it requires that the ship's position should be frequently changed. It is in most cases, too, impossible properly to protect the cargoes of ships loading or unloading at quays, or on the beach, from depredation. Previously to the construction of the wet docks on the Thames, the property annually pillaged from ships was estimated to amount to 500,000*l.* a year, though this is probably much exaggerated.

I. Docks on the Thames.

I. Docks on the Thames.

It is singular that, notwithstanding the obvious utility of wet docks, and the vast trade of the metropolis, there was no establishment of this sort on the Thames till nearly a century after a wet dock had been constructed at Liverpool. The inconvenience arising from the crowded state of the river, at the periods when fleets of merchantmen were accustomed to arrive, the insufficient accommodation afforded by the legal quays and sufferance wharfs, the necessity under which many ships were placed of unloading in the river into lighters, and the insecurity and loss of property thence arising, had been long felt as almost intolerable grievances: but so powerful was the opposition to any change, made by the private wharfingers and others interested in the support of the existing order of things, that it was not till 1793 that a plan was projected for making wet docks for the port of London; and 6 years more elapsed before the act for the construction of the West India Docks was passed.

1. *West India Docks, now conjoined with the East India Docks.*—The West India Docks were the first, and continue to be the most extensive, of the great warehousing establishments formed in the port of London. Their construction commenced in February, 1800, and they were partially opened in August, 1802. They stretch across the isthmus joining the Isle of Dogs to the Middlesex side of the Thames. They originally consisted of an Import and Export Dock, each communicating, by means of locks, with a basin of 5 or 6 acres in extent at the end next Blackwall, and with another of more than 2 acres at the end next Limehouse: both of these basins communicate with the Thames. To these works were added in 1829, the South Dock, formerly the City Canal, which runs parallel to the Export Dock. This canal was intended to facilitate navigation, by enabling ships to avoid the circuitous course round the

Isle of Dogs. It was, however, but little used for that purpose, and is now appropriated to the wood trade, for the greater accommodation of which, a pond of 19 acres has been formed on the south side for the reception of bonded timber. The Export Dock, or that appropriated for ships loading outwards, is about 870 yards in length, by 135 in width; so that its area is near 25 acres; the North or Import Dock, or that appropriated for ships entering to discharge, is of the same length as the Export Dock, and 166 yards wide; so that it contains nearly 30 acres. The South Dock, which is appropriated both to import and export vessels, is 1,183 yards long, with an entrance to the river at each end; both the locks, as well as that into the Blackwall Basin, being 45 feet wide, are large enough to admit ships of 1,200 tons burden. At the highest tides, the depth of water in the docks is 24 feet; and the whole will contain, with ease, 600 vessels of from 250 to 500 tons. The separation of the homeward bound ships, which is of the utmost importance for preventing plunder, and giving additional security to the revenue and the merchant, was, for the first time, adopted in this establishment. The Import and Export Docks are parallel to each other, being divided by a range of warehouses, principally appropriated to the reception of rum, brandy, and other spirituous liquors. There are smaller warehouses and sheds on the quays of the Export and South Docks, for the reception of goods sent down for exportation. The warehouses for imported goods are on the four quays of the Import Dock. They are well contrived, and of great extent, being calculated to contain 160,000 hhds. of sugar, exclusive of coffee and other produce. There have been deposited, at the same time, upon the quays, under the sheds and in the warehouses belonging to these docks, 148,563 hhds. of sugar, 70,875 casks and 433,648 bags of coffee, 35,158 puncheons of rum and pipes of Madeira wine, 14,021 logs of mahogany, 21,350 tons of logwood, &c. The whole area occupied by the docks, warehouses, &c. includes about 295 acres; and the most effectual precautions are adopted for the prevention of fire and pilfering.

This spacious and magnificent establishment was formed by subscription, the property being vested in the West India Dock Company, the affairs of which were managed by 21 directors as a body corporate.

The West India Docks proved a very successful undertaking, and have been highly beneficial to the original shareholders as well as to the trade of the port. All West India ships frequenting the Thames were obliged to use them for a period of 20 years from their completion. The dividend on the Company's stock was limited to 10 per cent.; and after making dividends to the full amount, with the exception of the first half year, they had in 1819 an accumulated fund of near 400,000*l*. But they then diminished their charges, at the suggestion of a committee of the House of Commons; and having been since still more considerably reduced, the surplus has been absorbed. The nearest dock-gate is at Limehouse, and the other about ½ mile farther from town.

The East India Docks, united with those now described in 1838, are situated at Blackwall, about 3¼ miles from the Exchange, and were originally intended for the accommodation of ships employed by the East India Company, or in the East Indian trade; but they are now open to vessels from all parts. There are 2 docks; 1 for ships unloading inwards, and 1 for those loading outwards. The Import Dock contains about 18 acres, and the Export Dock about 9 acres. The entrance basin, which connects the docks with the river, contains about 2¾ acres: the length of the entrance lock is 210 feet, the width of the gates 48 feet clear. The depth of water in the East India Docks is never less than 23 feet; so that they can accommodate ships of greater burden than any other establishment on the river. There is attached to them a splendid quay fronting the river, nearly 700 feet in length, with water sufficient at all times of the tide to float the largest steam ships; and the Export Dock is furnished with a machine for masting and dismasting the largest ships.

Exclusive of the magnificent warehouses attached to the West India Docks, the East and West India Dock Company possess the East India warehouses in Billiter Street, Fenchurch Street, Jewry Street, and Crutched Friars; in which they warehouse and show tea, indigo, silk, drugs, spices, &c.

The capital of both establishments, or of the United Company, amounts to 2,065,668*l*., the dividend on which is at present 5¼ per cent. The management is vested in a board of 32 directors. The consolidation of the establishment was advantageous to the shareholders by reducing the expense of management, and to the public by giving a greater choice of accommodation to vessels frequenting the docks.

The inconvenience of the distance at which these docks are situated from the Exchange has been in a great degree obviated by the opening of the railway to Blackwall, and by the exhibition of samples in the Company's upper warehouses. Still, however, the charge on account of cartage is a little heavier on goods warehoused at the docks of this company than on those warehoused farther up the river. But, on the other hand, ships entering the East India or West India Docks avoid a considerable extent of troublesome, if not dangerous navigation, that must be undertaken by those bound for the London and St. Katherine's Docks.

Rules and Regulations to be observed, and Rates to be paid, by Shipping in the East and West India Docks.

Regulations to be observed by Masters, Pilots, and other Persons having the charge of Ships, Vessels, Lighters, or [illegible], and going out of, the East and [illegible]s, pursuant to Act 2 Will. 4. cap. 52.

The Company's Moorings. — 1. The moorings in the river, within 250 yards of each of the entrances at Blackwall, and that into Limehouse Basin, and within 150 yards of the Limehouse entrance of the South Dock, are reserved for the exclusive use of vessels entering into, or which have recently come out of the Docks.

2. Every master or person in charge of any ship, lighter, barge, boat, or other vessel, of any description whatsoever, ly[illegible]thin the above distance, must *immediately* remove the [illegible]hen required by the dock masters or their assistants; *penalty 5l. for every hour which such vessel may remain.*

3. Pilots must not attempt to place ships inside the buoys, if other ships have previously brought up, but bring them to their berths in due succession on the outside, unless they shall be expressly ordered by the dock master to take a berth inside the tier for the convenience of docking.

All parties creating obstructions will be prosecuted, and the penalties will be rigidly enforced.

Vessels about to enter the Docks. Signals. — 5. The *red* flag on the flag-staff at the entrance, is the signal for ships to prepare. A *blue* flag will be kept flying the whole time proper for docking, when the tide has reached high water mark, that flag will be struck, after which no pilot must shear his vessel in, unless directed so to do by the dock master.

Declaration Book. — 6. When ships have brought up properly the moorings, an officer will deliver the Company's regula[illegible]ery vessel exceeding [illegible] Book her draught of [illegible] Masters must certify in the Declaration Book her draught of water, that she is provided with all necessary articles, viz. warps, ropes, and tackle, to remove and moor her [illegible] that her anchors are [illegible]or shall be before leaving the [illegible] longer the works, the ships therein, or the ve[illegible]self.

Preparing Ships for Sea. — 8. All ships are required to send down top-gallant yards and strike top-gallant masts, and to have their jib and mizen booms rigged close in, bowsprits, martingales, and all outriggers unshipped, if time will permit, and at all [illegible]rpto after entering. Vessels will, however, be answerable for all consequences; but the yards must be topped [illegible] rigging.

Docking Tickets and Orders of Admission. — 9. In fixing the order of admission, and issuing the docking tickets, regard will be had to the state of the tides, and the size and draught of water of each vessel, as well as the time of arrival: the largest ships must necessarily be taken in when the tides are highest, although they may have arrived subsequent to smaller vessels. Loaded vessels must always have the preference over light ships.

10. No ship can be admitted, if neither the master nor pilot is on board.

The doc[illegible] granted.

12. At the proper time for the admission of each ship, notice will be given by hoisting her ticket number at the pier head, provided she has made the signal for being properly [illegible]ed.

13. If any vessel shall attempt to gain [illegible] person in charge, must be responsible for all consequences.

Entering. — 14. When a ship's number is hoisted, she must drop [illegible] ready [illegible] If [illegible] her [illegible] e piers, proper ropes will be sent o[illegible] ask the vessel through the lock: th[illegible] responsible for making these, [illegible] well as the ship's warps; [illegible] be hauled a head by her own warps, and they to be cast off, unless ordered by the dock [illegible] in the basin.

16 [illegible]

17. The owners are answerable for all ships' boats, and none can be admitted into the Import Docks except such as are conveniently stowed on deck.

18. The boats of ships in the South Dock which cannot be securely stowed on deck, must be hauled up on the north bank, or secured afloat in such manner as the dock master may direct, after the ship is moored. Ships, however, which are not lying at a jetty, will be allowed to employ one boat during the [illegible] hours of business, which boat must be obtained [illegible] company's [illegible] has expired.

19. Any boats found afloat [illegible]ny of the docks or ba[illegible] master, and will be detained until the charges occasioned by such removal shall be paid.

20. The hatches of all loaded ships are to be locked down, and the keys delivered to the officer appointed to receive the same.

Western Import Dock. — 21. No person whatever can be allowed to remain in this dock after the established hours of business, except as hereafter mentioned; nor can any person be permitted to have access to vessels therein, excepting the owner, master, or chief officer, without a pass.

22. Passes will be given by the principal of the police, on the application of the captain or chief mate, to admit the ship's apprentices, or other persons, to prepare the ship for discharging, or to do any other work which may be unavoidably necessary. Ships which retain their crews on board, must be removed to the basin after the hour of business, to remain during the night. The Directors have fitted up the ship Waterloo, in the South Dock, for the accommodation of junior officers and apprentices, while their ships are discharging their cargoes in the Import Dock.

Ships discharging in either Docks. — 23. Preparatory to ships being discharged by the Company, the decks must be cleared of articles which would impede the working out of the cargo.

24. Two true copies of the manifest of the cargo must be [illegible] Square, [illegible] every vessel shall enter the docks, or after the cargo shall have been reported at the Custom-house, which shall first happen. Penalty for refusal or neglect, any sum not exceeding 5*l.* — 2 Will. 4. c. 52. s. 84.

25. No manifests will be required for ships discharging by their own crews.

26. No ships can receive their rotation, or be allowed to break bulk, until their cargoes are duly entered; and such cargoes will be landed in due succession, according to the strict order in which the manifests are delivered and entries completed.

27. If such manifest, or bill of lading, or copy, shall be false, or if any bill of lading be uttered by any master, and the goods expressed therein shall not have been *bond fide* shipped on board such ship, or if any bill of lading uttered or produced by any master, shall not have been signed by him, or any such copy shall not have been received or made by him previously to his leaving the place where the goods expressed in such bill of lading, or copy, were shipped, penalty 100*l.* 4 Will. 4. c [illegible] s. 11.

28. It is desirable that all baggage or presents should be sent as promptly as possible to the baggage warehouse, where an answer from the master for the delivery thereof must be lodged. Masters are particularly cautioned against signing such authorities in blank, or allowing themselves t[illegible] enced by importunity of brokers; and it is most desirable that one agent only should be appointed for each ship.

29. Packages of bullio[illegible] specie (whether cargo or priv[illegible] sponsibility, unless, from their being liable to examination or other circumstances, he may be desirous of placing the same in the Company's charge; in which case, such packages, or any other of considerable value, should be particularly specified, and, if bills of lading have been granted for them, inserted in the regular manifest of the ship. The delivery of goods overside will also rest with the master, and he must take such steps as he may think necessary, to protect his owners in respect to [illegible] fre[illegible]

[illegible] e expressly the [illegible]

Rules observed by Ships taking in Cargoes from the Quays. — 31. The taking the ship in and out to and from the quay, to be performed by the crew, as directed by the dock masters.

[illegible] goods to be taken from the slings, and to be by the crew, under the orders of the maste[illegible] nd [illegible] ler and his officers.

31. — 4. The [illegible] o be hauled in [illegible] the basin or Export Dock [illegible] d t[illegible]

35. Goods sent by land carriage will be shipped in either of the docks, on payment of the usual charges.

36. To prevent delay in loading export vessels, the shippers should pay up the rent and charges upon the goods; or where [illegible] ed w[illegible] weighing, &c., make [illegible]

Eastern and Western Import and Export Docks, the Basins, and South Dock. — 37. All vessels entering or lying in these [illegible] [illegible] vided for by the table [illegible] to or from the river, [illegible]ny part of the docks or basins, as directed by [illegible] ver must be provided [illegible] ort them, and should be moved by the dock master, and the owners charged with the expense.

39. Ships having cargoes will be moored at the quays in due rotation. Light ships not taking in goods shall be moored in either of the docks or basins, as the dock masters may judge convenient.

40. While ships are lying at, or moving to or from the quay, all out riggers should be got in and made snug; and sails are by no means to be loose while so moving, or after daylight.

41. No ship must be removed from her berth without notice being given to the dock master, and his assent as to the time of removal being obtained.

42. Craft must be [illegible] internel to the ships from which they are receiving, or to which they may be delivering goods: the charge upon craft which shall not be *bond fide* so engaged, will be the same as the rent upon ships and craft coastwise, and, as usual, not less than one week's rent will be charged. To obviate any doubt as to the time for which they may be fairly entitled to exemption, twenty-four hours will be allowed from the time of entering the dock, for receiving goods; and twenty four hours after being loaded or discharged, for going out of the docks.

43. Convenient receptacles on the quays and craft are provided, wherein all dust, ashes, &c. are to be deposited, and which shall be cleared by the persons appointed by the Company, and by no one else.

44. No vessel can be permitted to take in ballast after daylight, or before day-break.

45. Ships' provisions or stores cannot be permitted to pass the gates without an order signed by the captain or owner.

46. No caulking or plumbers' work can be allowed without special permission, to be obtained from the principal of police.

South Dock Jetties. — 47. Ships landing cargoes in the South

Dock, or taking in goods by land, shall have the preferable use of the jetties.

48. Ships which are fitting out, but have not commenced loading, shall be accommodated as far as possible; but such ships must be removed to make room for vessels about to discharge or take in cargo by land.

49. In other respects, preference will be given to ships intended for sale, over those which are merely laying up; and as between ships which are similarly circumstanced, the priority of their entering the dock shall determine the preference.

50. The captains or commanding officers of ships are cautioned to be attentive and careful to boom off when the ship is fast loading down in the water, or on the approach of neap tides.

Fire and Candle.—51. To vessels lying in the Eastern Import Dock, the Eastern and Western Export Docks, the South Dock, or either of the basins, special licences will be granted, on application to the principal of the police.

52. Every such licence will express the place in which fire may be kept, and the precautions under which it may be used; upon the slightest infringement of the conditions, the penalty prescribed by law will be rigidly enforced.

53. Every application for a licence must be made by the master or owner, specifying the names and capacity of the persons in charge of the ship, and engaging to be responsible for their attention to the regulations.

Opening and shutting the Gates.—54. The gates of the Export and South Docks will be opened at six o'clock in the morning and shut at eight o'clock in the evening, from the 1st of March to the 10th of November; and from the 11th of November to the last day of February, opened at eight in the morning and shut at seven in the evening.

55. Captains and mates may be furnished with tickets, upon applying at the police office, at the Eastern or Western Import Dock, which will entitle them to admission till nine o'clock, p.m., but no person whatever can be allowed to go out after the hour for closing the gates.

Vessels about to leave the Docks.—56. Export vessels should be hauled out in sufficient time to be at the river locks, at Blackwall, at low water; to prevent the inconvenience of hauling down during the time that other vessels are requiring admission, which must have the preference.

57. Vessels can only be let out after high water, upon the special request of the officers in charge of them.

58. Ships going into the river must use their own ropes, as they are out of the dock master's charge when clear of the outer gates.

59. The hours of attendance are from 10th May to 9th November inclusive, eight in the morning to four in the afternoon; from 10th November to 9th May, inclusive, nine in the morning to four in the afternoon; and there is to be no intermission of business during these hours.

60. No holidays are to be kept, except Sundays, Christmas Day, Good Friday, fast days appointed by royal proclamation, and the King's or Queen's birth days.

The foregoing regulations approved and confirmed by the Court of Directors of the East and West India Dock Company.

GEORGE COLLIN,
SECRETARY.

TONNAGE RATES.

Sailing Vessels inwards discharged by the Company.

For docking, mooring, and removing within the docks and basins, unloading the cargo, and the use of the docks, for four weeks from the final discharge*; viz.—

	₸ ton reg. s. d.
Laden with sugar, otherwise than after-mentioned, or other goods packed in bales, bags, baskets, screws, casks, cases, chests, or similar packages, (except oil direct from the fisheries, (class, or ashes), metal in pigs, bars, rods, plates, or similar pieces, wood in planks or billets, such as dyewood, and staves	1 6
And in addition, for every load or ton of blue gum wood or oil in iron tanks	0 6
Laden with chests of sugar, 5 cwt. and upwards, including ship's conperage	2 0
Laden entirely in bulk, with hogsheads and tierces of sugar or molasses from the West Indies, including ship's conperage	2 6
Laden with mahogany, cedar, or other large furniture wood in logs	2 6
Laden entirely with hemp or goods in bulk, or oil direct from the fisheries	1 9
Laden entirely with tallow	1 3
Laden with mixed cargoes, tallow, ashes, or goods in bulk,—	
For every ton of hemp	2 0
For every ton of tallow or ashes	1 3
For every ton in bulk	1 9
The total number of tons charged not to exceed the register tonnage.	
Laden with wood, the growth of the North of Europe, or the North American colonies, viz.—	
Entirely with deals, staves, lath or fire wood	1 9
Entirely, or in part, with timber	1 9
And, in addition, for every load of hardwood or masts	0 6
For every load of pine or fir timber	0 3
Laden with timber from Africa, or like cargoes	3 0
And, in addition, for every load discharged over side	1 0

Sailing Vessels inwards, discharged by their own Crews.

For the use of the docks† for any period from the date of entrance, not exceeding the under-mentioned—

If from Hambro', Bremen, Emden, and the Mediterranean	6 weeks
If from any other port or place	4 weeks

	s. d.
Arriving from any port or place not otherwise specified	0 9
Arriving from any port in the United Kingdom, or European port outside the Baltic, between the North Cape and Ushant	0 6
Delivering part of a cargo, and not remaining beyond one week per ton delivered	0 6

Exceptions.

Sloops and craft coastwise, with bricks, and vessels with broken granite, or paving stones, not remaining beyond one week	0 3
Colliers entering to await the sale of their cargoes, not remaining beyond two weeks	0 3

Other vessels than colliers, coastwise, on landing goods in the docks equal to one third of their register tonnage to be exempted from payment of the tonnage rate, but rent to commence after one clear day from the final landing of the goods.

Vessels entirely corn laden, discharged in the docks, in lieu of tonnage rate, not remaining beyond two weeks,

100 tons register and upwards	each 21 0
Under 100 tons register	each 10 6

If corn vessels quit without unloading, rent to commence after one clear day from the date of entrance.

Vessels two-thirds laden with corn will be charged the usual tonnage rates on the other part of their cargoes, in proportion to their register tonnage.

If vessels to which the above exceptions apply load outwards, they will be charged the usual rate of 6*d.* per ton register.

Sailing Vessels outwards, or light Vessels, other than Steam Vessels.

Entering to load or lay up, not having discharged their import cargoes in the docks,—	
The use of the docks for any period not exceeding four weeks from the date of entering*	0 6

Vessels entering to load from the Import Warehouses only.

	₸ ton on the gross weight shipped.
For the use of the dock for one week (see conditions, p. 470.)	0 6

The number of tons charged not to exceed the register tonnage.

Exceptions.

Vessels under 100 tons register loading corn or deals, fir timber, and like wood goods, and ships, from the Export or South Docks, which will be allowed to load without any addition to the rate to which they may be liable for the use of the docks.

Steam Vessels.

	₸ ton register.
Entering to lay up, or to repair or fit their machinery,—	
For the use of the docks for any period not exceeding four weeks from the date of entering	0 9
Charge for getting out, landing, lifting, or shipping boilers and heavy machinery:—	
Under two tons per ton	5 0
Two tons and not exceeding ten tons	7 6
Exceeding ten tons	10 0
Rent, per week, for boilers, funnels, cylinders, and the like	0 3
Do. for plates, shafts, and other gearing	0 1

Dock Rent.

For remaining over the periods specified,—	
Sailing vessels per week	0 1
Steam vessels laying up, repairing, or fitting machinery	0 1½

All vessels which re-enter after having been out for repair, will be allowed their privilege without reckoning the time they remained out.

For the more expeditious discharge of vessels, every assistance may be obtained in clearing the decks, or stiffening them; coopering water casks and shipping them, when filled. Should the Company's moveable machinery be desired, it will be lent upon application to the superintendent. The following charges will be made for such services.

For Labourers hired to work under the directions of the commanding officer of the ship, each man per day, of the regulated hours of attendance	3 6

And not less than ¼ day to be charged. Overtime will be charged in proportion.

Articles loaded, shipped, or struck down by the dock cranes or jiggers, under 2 tons per ton	1 0
Two tons, and under 5 tons	1 8
And not less than one ton to be charged.	
The use of the floating engine for washing ships, including the attendance of the man in charge, per day	20 0

And not less than one day to be charged.

Whenever assistance is required for removing within the docks, it will be furnished by the dock master on the following terms, viz.:—

A boat with warp and two hands	10 6
A boat with warp and four hands	15 0

And for every additional hand employed, either on board or in the boats, 6*d.* per hour.

The warps are only lent in aid of the ship's warps.

Water, from the East London Water Works.

Supplied from the tank per ton	1 0
Filtered	2 0

* The use of the docks is allowed for six weeks from the date of entrance, for vessels from Hambro', Bremen, Emden, or the Mediterranean; and when the discharge by the Company of any vessel is postponed by desire of the owners, six weeks only are allowed free of rent.

† The expense of mooring, unmooring, and removing, is *not included*.

Table of Charges, for masting or dismasting at the Mast Building.

For Ships of	Main Mast.		Fore Mast.		Mizen Mast.		Bowsprit.	
	£	s. d.	£	s. d.	£	s. d.	£	s. d.
1,000 to 1,500 tons	9	0 0	8	2 0	3	12 0	4	10 0
800 — 1,000 —	6	15 0	6	6 0	3	3 0	3	12 0
650 — 800 —	4	0 0	3	12 0	2	0 0	2	0 0
500 — 650 —	3	4 0	2	16 0	1	12 0	1	12 0
300 — 500 —	2	12 0	2	5 0	1	6 3	1	6 3
under 300 —	1	17 6	1	13 9	1	2 6	1	2 6

For putting on or taking off Tops.

For Ships of	Main Mast.	Fore Mast.	Mizen Mast.
	£ s. d.		£ s. d.
1,000 to 1,500 tons	0 15 0		0 10 0
800 — 1,000 —	0 10 0	0 10 0	0 5 0
500 — 800 —	0 7 6	7 6	0 5 0
under 500 —	in proportion		

The prices of the above table are for each operation, which includes the use of masting-falls and slings.

Freight Books. — Abstract of cargoes, for the purpose of making up freight accounts, are supplied, on application at the Dock-house, Billiter Square, at the following charges: —

	s. d.
Each abstract, containing the weights, measurement or quantities, of ten marks or parcels, or under	2 0
of eleven to twenty, ditto	3 6

Upwards of twenty, each mark or parcel, 2*d.*; but not to exceed 10*s.* 6*d.*, including an abstract of the certificates of damage.

Rates and Charges must be paid before the vessels leave the docks, either at the docks or at the Dock-house in London.

Schedule of Rates on Goods inwards.

The Landing Rate is charged upon the gross weight, and includes landing, wharfage, weighing or gauging, and housing, or piling on the quays, or loading therefrom, original warrants, accounts of landing weights or gauges, and strengths of spirits, surveying and furnishing certificates of damage. Goods not intended to be warehoused will be allowed four clear days from the final weighing of the parcel for removal, in default of which they will be housed or piled. If intended for immediate transhipment, they may remain on the quay, subject to the same regulations as goods prepared for shipment, paying rent as if housed at landing.

The prime or consolidated Rate includes all expenses for landing, wharfage, weighing or gauging at landing; coopering or mending for housing; marking, sampling, housing, weighing for actual delivery and delivering; furnishing landing and delivery weights, or gauges and strengths; surveying and furnishing certificates of damage, and rent for twelve weeks from the date of the ship's commencement of discharge, excepting where it is otherwise stated. It is charged upon the nett weight, and on all goods to which it is affixed, unless notice be given by the importers, of their desire to have them placed under the landing rate.

Re-weighing, when not otherwise specified,	one third of landing-rate.
Rehousing,	do.
Unpiling,	do.
Repiling,	do.
Unhousing or unpiling and loading,	do.
Wharfage and shipping,	two-thirds of landing-rate.
Unloading and housing piling,	do.
Unhousing or unpiling, wharfage, and shipping	the same as the landing-rate.

The Warehouse Rent is chargeable on the gross weight, from the date of the ship's breaking bulk, or from first landing from craft; when goods sold from the landing scale are housed, the rent will be charged from the final weighing of the parcel.

A week's rent will be charged for any fraction of a week.

Before transfer by the Company, or delivery of any goods can take place, the charges on the quantity to be transferred or delivered must be paid.

Table of Rates and Charges on Goods imported into the East and West India Docks.

N. B. — The rates in these Tables will be charged on all goods imported or received into the Docks, on and after the 1st of December, 1839; and from that date, on all goods which may remain in the warehouses or on the quays, as far as regards rent and future operations, but they are not to be retrospective.

Goods Imported.	Prime Rate Nett.	Landing Rate Gross.	Rent. Per Week.	Rent. Quantities, &c.
	Per	s. d.	s. d.	*Per*

Schedule of Rates and Charges on Wines and Spirits.

Schedule of Rates and Charges on Wines and Spirits other than Rum.

Landing and Delivery Rate includes landing, wharfage, laying-up to gauge, coopers' attendance at landing and until delivered, original warrants, accounts of landing gauges, and strengths, and first samples; also the privilege of remaining on the quay fourteen days, from commencing the discharge of the ship or craft. If the goods continue on the quay after the fourteen days, quay-rent will be charged until the expiration of one month, from commencement of discharge from ship or craft, when the landing and housing rate will attach.

Landing and Housing Rate includes landing, wharfage, laying-up to gauge, coopers' attendance at landing until housed, accounts of gauges and strengths, first samples, and sampling at delivery, coopering, housing, and coopers' superintendence for eighteen months.

Rent.—When these wines and spirits are housed, the rent commences, in all cases, from the date of the ship commencing discharge, or first landing from craft.

Coopering, when requisite, at landing, examination, or delivery, for the protection of the property, will be executed without awaiting the proprietor's order, unless he shall give directions to the contrary, and at the rates specified in this table. When racking is necessary, forty-eight hours' notice will be given to the proprietor, with the option of sending his own casks. When the casks are racked for preservation in the vault, within six months from the landing and housing rate attaching, no charge will be made.

Tasting can be permitted only under the proprietor's written order. Tasting by the proprietor, or his clerk, is exempt from charge; the latter, however, must be authorised to sign orders, and be unaccompanied by any other person.

Deficiencies.—When wines and spirits are imported in casks made of proper oak, the Company engages to be responsible for deficiencies in measure, which shall exceed one gallon per cask for each year, or fraction of a year, the goods remain in charge; but the Company will not be answerable for deficiencies arising from the casks being made of other and inefficient materials.

Payment of Charges.—The landing and housing rate on the whole mark or parcel housed, must be paid previous to the issue of warrants, or the transfer, or delivery of any portion. Payment of rent, and other charges, will be required only on the quantity to be delivered or transferred.

Vatting Charges.

	s. d.
For unhousing, racking, the use of the vat (remaining one night), refilling and bunging up, — per 100 gallons drawn from the vat	2 8
For remaining in the vat a second night - - - - - - - per 100 gallons ditto	0 6
For each additional night - - - - - - - - - -	0 9
Water for reducing the strength - - - - - - - per puncheon	1 0
Spirits brought in for vatting, by water, for receiving and delivering - - - 100 gallons	2 4
Ditto ditto by land, for receiving and delivering - - - 100 gallons	1 2

Note. — When casks are returned to the vault after refilling from the vat, the Company does not engage to be responsible for any deficiency in measure that does not exceed two gallons per cask for the first year, and one gallon per cask for each succeeding year, or fraction of a year.

Rates and Charges on Rum.

Landing Rate includes landing, wharfage, gauging, housing, loading from the quay, original warrants and accounts of gauges and strengths, surveying and furnishing certificate of damage. Rum not intended to be warehoused, will be allowed four clear days from the final gauging of the parcel for removal. If intended for immediate transhipment, it may remain on the quay seven clear days from that period, and when the export vessel loads in the docks, until the date of her departure, paying rent as if housed at landing.

The prime or consolidated Rate includes all expenses for landing, wharfage, gauging, coopering for housing, marking, sampling, housing and delivery, furnishing gauges and strengths, surveying and furnishing certificate of damage, and rent for twelve weeks from the ship's commencement of discharge. It is charged in all cases, unless notice be given by the importers to place the goods under the landing rate.

Unhousing and loading - one third of landing-rate.
Wharfage and shipping - two-thirds of landing-rate.
Unloading and housing - - do.
Unhousing, wharfage, and shipping } the same as the landing-rate.

Rent is chargeable from the date of the ship breaking bulk, or from the first landing from craft.

Before transfer by the Company, or delivery, the charges on the quantity to be transferred or delivered must be paid.

2. *London Docks.* — These were the next undertaking of this sort set on foot in the Thames. They are situated in Wapping, and were principally intended for the reception of ships laden with wine, brandy, tobacco, and rice. The western dock covers a space of above 20 acres; and the new or eastern dock covers about 7 acres. The tobacco dock lies between the above, and exceeds 1 acre in extent, being destined solely for the reception of tobacco ships. The entire space included within the outer dock wall is 71 acres and 3 roods. The warehouses are capacious and magnificent. The great tobacco warehouse, on the north side of the tobacco dock, is the largest, finest, and most convenient building of its sort in the world. It is fitted to contain 24,000 hhds. of tobacco, and covers the immense space of near *five* acres! This warehouse is wholly under the management of the officers of customs. The vaults, under the tobacco and other warehouses, include an area of the vast extent of about 18¼ acres, and, after allowing for gangways, &c., have stowage for 66,000 pipes of wine and spirits! These docks were opened in 1805. All ships bound for the Thames, laden with wine, brandy, tobacco, and rice (except ships from the East and West Indies), were obliged to unload in them for the space of 21 years: but this monopoly expired in January, 1826; and the use of the docks is now optional.

The entrances to the London Docks were formerly by the basins at Hermitage and Wapping. But a few years ago another entrance was completed from old Shadwell Dock, through what was formerly Milkyard, to the eastern dock. This new entrance is ¼ of a mile lower down than Wapping entrance, and is a most material improvement.

The stock of the Company amounts to 3,238,310*l.* 5*s.* 10*d.* A considerable portion of this vast sum, and of a farther sum of 700,000*l.* borrowed, was required for the purchase of the houses, about 1,300 in number, that occupied the site of the docks. The present dividend is 4 per cent., and a 100*l.* share of the Company's stock is at present (October 1843) worth about 96*l.* 10*s.* The Board of directors consists of 25 members, of whom the Lord Mayor, as conservator of the river Thames, is one.

TONNAGE RATES ON VESSELS USING THE LONDON DOCKS.

Vessels are not permitted to leave the dock until the tonnage dues and other expenses have been paid; for which purpose the register must be produced at the superintendent's office, if British, or a certificate of admeasurement by the proper officer of the customs, if foreign; when a pass will be granted, which must be lodged with the dock master on leaving the dock.

First Class. — Vessels *arriving* from any port in the U. Kingdom, Isle of Man, Jersey, Guernsey, Alderney, Sark, or other European ports outside the Baltic, between the North Cape and Ushant (Hamburg excepted, see *Second Class*), with liberty to reload for any port, for every register ton of the vessel, 6*d.*; and rent, after 4 weeks from date of entrance, if cargo discharged by own crew; from the date of final discharge, if cargo discharged by the Dock Company, 1*d.* per register ton per week. If with part of their cargoes, for every ton of goods landed, 6*d.*; and rent, after 1 week from date of entrance, 1*d.* per register ton per week.

Vessels *loading* for any of those places, not having previously discharged their cargoes in the docks, for every register ton of the vessel, 6*d.*; and rent, after 4 weeks from date of entrance, 1*d.* per register ton per week.

Second Class. — Vessels *arriving* from Hamburg, with liberty to reload, for every register ton of the vessel, 6*d.*; and rent after 6 weeks from date of entrance, 1*d.* per register ton per week.

Vessels *loading* for Hamburg, not having previously discharged their cargoes in the docks, for every register ton of the vessel, 6*d.*; and rent, after 4 weeks from date of entrance, 1*d.* per register ton per week.

Third Class. — Vessels *arriving* from any port in the Mediterranean, with liberty to reload for any port, for every register ton of the vessel, 9*d.*; and rent, after 6 weeks from date of entrance, 1*d.* per register ton per week.

Vessels *loading* for any port in the Mediterranean, not having previously discharged their cargoes in the docks, for every register ton of the vessel, 9*d*.; and rent, after 4 weeks from date of entrance, 1*d*. per register ton per week.

Fourth Class. — Vessels *arriving* from any other port or place whatsoever (with the exception of those hereafter enumerated), with liberty to reload, for every register ton of the vessel, 9*d*.; and rent, after 4 weeks from date of entrance, if cargo discharged by own crew; from date of final discharge, if cargo discharged by Dock Company, 1*d*. per register ton per week.

Vessels *loading* for any other port or place whatsoever (with the exception of those hereafter enumerated), not having previously discharged their cargoes in the dock, for every register ton of the vessel, 9*d*.; and rent after 4 weeks from date of entrance, 1*d*. per register ton per week.

Exceptions. — Vessels from Spain, laden with cork or wool, for every register ton of the vessel, 6*d*.; and rent, after the expiration of 3 weeks, 1*d*. per register ton per week.

Vessels to or from the whale fisheries, for every register ton of the vessel, 1*s*.; and rent, after the expiration of 6 weeks, 1*d*. per register ton per week; for every tun of oil delivered into craft, 6*d*.

Vessels (excepting coasters, for which see *First Class*) landing part of their cargoes, for every ton of goods landed, 9*d*.; and rent, after 1 week from date of entrance, 1*d*. per register ton per week.

Vessels loading part of their cargoes, for every ton of goods taken on board from the quays or by craft, 9*d*.; and rent, after 1 week from date of entrance, 1*d*. per register ton per week.

Vessels two thirds laden with corn will be charged dock dues on the proportion which the other part of the cargo bears to the register tonnage.

No tonnage rates will be charged on vessels wholly corn-laden, but they will be charged for docking and undocking as under: —

Vessels of 100 tons and upwards, 1*l*. 1*s*.
Do. under 100 tons, 10*s*. 6*d*.

with liberty to remain in the dock, without further charge, for 24 hours after final discharge. Rent, after the expiration of that period, 1*d*. per register ton per week. Should the vessel load outwards, the usual tonnage rates, according to the port of destination, will be charged, instead of the rate for docking and undocking.

Vessels coal-laden, for docking and undocking, 21*s*. each; for every ton of coals landed, 6*d*.; for every ton of coals transhipped, 6*d*.; and rent, after 1 week, 1*d*. per register ton per week.

Vessels which enter the docks light, and load out, pay dues according to their ports of destination, instead of those on light vessels.

Light vessels entering the dock to lie up, for every register ton of the vessel, 6*d*.; and rent, after 4 weeks from date of entrance, 1*d*. per register ton per week.

Whenever required, the Company will discharge the cargo of a vessel upon the following terms; viz.

Cargoes consisting, either in the whole or in part, of hogsheads or tierces of sugar (including ship cooperage), 1*s*. 9*d*. per register ton.

Cargoes consisting of sugar in chests, 5 cwt. and upwards (including ship cooperage), 1*s*. 3*d*. per register ton.

Cargoes consisting of sugar in bags or chests, under 5 cwt., or other goods (not being oil direct from the fisheries, tallow, hemp, ashes, corn, wood goods, pitch, tar, hay, or straw), contained in casks, bales, serons, chests, cases, bags, baskets, mats, bundles, or similar packages; also, spelter or metal in pigs, bars, rods, plates, &c., 9*d*. per register ton.

Cargoes consisting of mahogany timber, or other wood, in logs, 1*s*. 9*d*. per register ton.

Blue gum wood, or large timber, additional for every load delivered, 6*d*.

Cargoes consisting of hemp only, or merchandise, in bulk, 1*s*. per register ton.

Cargoes consisting of tallow only, 6*d*. per register ton.

Mixed cargoes; hemp, 1*s*. 3*d*. per ton of goods; tallow, 6*d*. per ditto; ashes, 6*d*. per ditto.

Mixed cargoes, part being in bulk, on the latter, 1*s*. per ton of goods.

(No charge made for excess beyond the register tonnage.)

Vessels which leave the docks for repairs are not charged rent while absent.

Memoranda. — Registers of ships inwards and outwards are kept in the superintendent's office.

The wicket gates at the north-west principal entrance, at Wapping, and on the east side of the eastern dock, are opened and closed as under: —

From 22d Sept. to 20th Oct. both inclusive, opened at 6 o'clock, closed at 6 o'clock.
21st Oct. 20th March — 7 — 6

Visiters are not admitted on Sundays.

No person is permitted to quit a vessel after the wicket gate is closed.

The hours for the commencement of business, and opening and closing the barrier gate, are,

From 1st March to 31st Oct., both inclusive, opened at 8 o'clock, closed at 4 o'clock.
1st Nov. 28th Feb. — 9 — 4

Lodgment of Manifest. — Masters of ships are required to deliver at the superintendent's office, within 12 hours after the arrival of the vessel in the dock, or reporting at the Custom-house, (which shall first happen,) a true copy of the manifest or report of the cargo, signed by themselves.

Discharge of Vessels. — Vessels are not to break bulk, without the permission of the superintendent, until the whole of the cargo has been entered at the Custom-house.

Upon application of the master, the Company will pass a warehousing entry for such goods as the owners or consignees may have neglected or refused to enter within 48 hours; and will also land goods not entered within 7 days; both periods to be computed from the date of the report.

Labourers or lumpers are not allowed to work on board vessels, on the quays, or in the warehouses, unless engaged by the Company; but may be hired of the Company, to work under the direction and responsibility of the master, the charge being 3*s*. 6*d*. per day for each man: and should not a sufficient number be employed for the timely discharge of the cargo, additional hands will be provided by the Company, at the expense of the vessel.

The decks are to be speedily cleared of such articles as may impede the discharge; and the master, mate, or some person duly authorised by the owners, is to remain on board during the unloading.

Stops for Freight. — Goods landed will be detained for the freight, on due notice in writing, by the owner, master, or other person interested therein; and will not be delivered, nor warrants granted for them, until orders shall have been given for the release of the goods, or the freight deposited with the Company; nor can a stop be received after the goods have been transferred in the Company's books, or a warrant has been granted for them.

Goods delivered into craft to be landed elsewhere, cannot be detained for freight.

Vessels leaving the dock for repairs are not charged rent whilst absent; nor is any charge made for ballast, chalk, or flints, received from or delivered into craft.

Water is supplied from the reservoir, and delivered into the ships' boats, at 1*s*. per tun, on application to the dock master.

Abstracts of cargoes, for the purpose of making up freight accounts, will be supplied on application at the comptroller's office, at the following charge: —

	s.	*d*.
If the goods have 10 marks or under	2	0
11 to 20 marks	3	6
21 and upwards, 2*d*. each mark or parcel.		

•Steam boats are furnished by the Company, in certain cases, to vessels (not laden with corn or timber)

proceeding to these docks, arriving from N. and S. America, the West India Islands, the Cape of Good Hope, and all ports to the eastward thereof, upon application to the secretary, the superintendent, or the agent of the Company.

Regulations regarding Goods and the Rates and Charges thereon.

Rent is charged on goods from the day on which the importing vessel breaks bulk. If goods be landed by a duty paid, a sight, or a warehousing entry, and taken away within 3 days, no rent is payable; but if they remain on the quay after that time, quay rent or watching is charged for such longer period.

Goods landed by Dock Order. — Before goods which have been landed by the Company for want of entry, can be delivered or transferred, the bill of lading must be lodged at the warehouse, and the goods entered at the Custom-house: and such goods are subject to an additional charge for porterage.

Orders for transfer or delivery (the forms of which may be obtained at the comptroller's office), unless the goods are to be delivered from the landing scale, cannot be accepted until the goods have been landed.

Neither can orders for transfer be received, until the charges due on the goods composing the whole of the entry have been paid; goods landed under the consolidated rate, and wines and spirits, excepted.

Orders for delivery cannot be acted upon, unless signed by the party in whose name the goods stand in the Company's books, or by a person duly authorised to sign them: and should any interlineation, erasure, or alteration have been made in an order, it can only be accepted with the initials of the party set against such alteration.

Payment of Charges and Deposit Accounts. — The only persons authorised to receive money are, the collectors at the superintendent's office, and wine and spirit department; the deputy warehouse-keeper at the tobacco warehouse; the dock master (for water furnished to vessels in the dock); and the warehouse-keeper at the eastern dock; except for consolidated rates, which may be paid at the London Dock House, in New Bank Buildings.

Deposit accounts may be opened at the superintendent's office.

If the order does not specify the party by whom the charges due at the date of the order or transfer are to be paid, the amount thereof will be placed to the deposit account of the party transferring.

Warrants and Transfers. — Warrants for goods in general, are granted on written application at the dock, in favour of such person as the party in whose name they stand in the Company's books may direct. The first are issued free of charge; on all subsequent warrants and transfers, the charges are as follow: —

For each warrant or transfer containing	s.	d.	For each warrant or transfer containing	s.	d.
1 or 2 packages	0	1	26 to 30 packages	0	8
3 4	0	2	31 35	0	9
5 to 7	0	3	36 40	0	10
8 10	0	4	41 45	0	11
11 15	0	5	46 and upwards	1	0
16 20	0	6	and for goods in bulk, per ton	0	2
21 25	0	7			

The contents of one warrant may be divided into warrants for smaller quantities, at the will of the holder.

Whenever housing, taring, weighing, dipping, rehousing, or counting of goods is required, the operation must be performed before a warrant can be issued; and if reweighing, &c. be required, a new one must be obtained.

Applications for duplicate warrants, in consequence of the originals being lost or mislaid, must be addressed to the secretary, at the London Dock House, who will make known the conditions on which the Company will issue them.

Weights and Goods. — Duplicates are furnished, upon reasonable cause for requiring them being assigned.

Second Samples of Goods. — Orders for second samples, if the goods are for "exportation only," are issued at the comptroller's office, the proprietor paying the customs duty thereon.

Empty Casks and Packages, if not removed from the dock within 7 days, are sold by the Company, and the proceeds paid to the owners, after deducting the sale charges and other expenses.

RATES AND CHARGES ON CIGARS AND TOBACCO.

Cigars.	Chests containing from 500 to 600 lbs.	Boxes containing: Above 300 and not exceeding 400 lbs.	Above 200 and not exceeding 300 lbs.	Above 100 and not exceeding 200 lbs.

RATES AND CHARGES ON WINES AND SPIRITS.

The Landing and Delivery Rate includes landing, wharfage, laying up to gauge, watching, cooper's attendance at landing, delivery, and while on the quay; the privilege of lying on the quay 14 days from the vessel breaking bulk, or the first landing from craft; original warrants, gauges, strengths of spirits, and first samples.

The Landing and Housing Rate includes landing, wharfage, laying up to gauge, cooperage, cooper's attendance at landing and housing, superintendence in the vaults for the first 18 months; original

warrants, gauges, strengths of spirits, and first samples. This rate attaches after the expiration of one calendar month from the ship breaking bulk, or the first landing from craft.

Note. — Merchants requiring wines or spirits to be housed within the time allowed (one calendar month), are particularly requested to leave a written order to that effect, when this rate will become immediately chargeable.

The Consolidated Rate on Rum includes landing, wharfage, housing, cooper's attendance, coopering, furnishing original warrants, gauges, strengths, first samples, and 12 weeks' rent from the ship breaking bulk, or the first landing from the craft.

Rent attaches to Wines and Spirits, charged with the landing and delivery rate, after 14 days; charged with the landing and housing rate, from the ship breaking bulk, or the first landing from craft; on rum charged with the consolidated rate, after 12 weeks from the ship breaking bulk.

Note. — Rent is in all cases calculated from the date of the ship breaking bulk, or the first landing from craft, such day being included in the term.

Racking. — Forty-eight hours' notice will be given when racking is necessary, to enable the proprietor to send his own casks, or they will be supplied by the Company, at the prices stated herein. The proceeds of the racked casks, when sold, will be paid to the proprietors, upon application, after deducting the expenses of sale, &c.

No charge is made on wines and spirits racked in the vaults within 6 months from the period of the landing and housing rate attaching, those for exportation or to be sent coastwise excepted.

Tasting is not permitted without a written order, the usual charge for which is not made when the tasting is by the proprietor or his clerk, (authorised to sign delivery and all other orders,) provided he is not accompanied by any other person.

Coopering and Repairs, &c., when required for the preservation of the property on landing, examination, or delivery, will be performed, unless directions are received from the proprietor to the contrary, and charged at the rates specified herein; and any work required to be performed, not particularly described, will be charged at a proportionate rate.

Unsizeable casks, at the rate of 210 gallons per tun, for 2 pipes or 4 hogsheads.

Deficiencies. — The company make good the following deficiencies from whatever cause arising, if the casks are of oak timber, but not otherwise: also, provided the claim be made with 6 months from delivery, viz.:—

Exceeding one gallon each cask, for any period not exceeding one year.

Two gallons, if more than one and not exceeding two years, and in like proportion for each succeeding year.

Payment of Charges. — Previous to warrants being issued, or the transfer or delivery of any wines or spirits taking place, the landing and housing rate on the whole of the mark or parcel *housed*, must be paid; the rent and other charges on the quantity delivered or transferred.

3. *St. Katharine's Docks.* — The Company for the construction of these docks was incorporated by the act 6 Geo. 4. c. 105. (local), and they were partially opened on the 25th of October, 1828. They are situated immediately below the Tower, and are consequently the most contiguous of any to the city, the Custom-house, and other places where business is transacted. The capital raised by shares amounts to 1,352,752*l.*; but an additional sum of 700,000*l.* has been borrowed, on the security of the rates, for the completion of the works, and the purchase of a freehold property possessing river frontage from the Tower to the corner of Lower East Smithfield, of the value of upwards of 100,000*l.* but not required for the immediate purpose of the act. A portion of this property has been appropriated as a steam packet wharf, where passengers embark and land without the aid or risk of boat conveyance. The purchase of the numerous houses that stood upon the ground occupied by the docks proved, as in the case of the London Docks, a heavy item of expense. The space included within the outer wall is about 24 acres, nearly 11 of which are water. There are 2 docks communicating by a basin. The lock leading from the river, is 180 feet long, and 45 broad; it is so constructed, that ships of upwards of 600 tons burden may pass in and out 3 hours before high water, so that outward-bound ships have the opportunity of reaching Blackwall before the tide begins to recede. Ships of upwards of 800 tons register are docked and undocked without difficulty, and the depth of water at the entrance exceeds that of any other wet dock in the port of London. Vessels are also docked and undocked by night as well as by day, — an advantage peculiar to this establishment. A clear channel of not less than 300 feet in width is at all times to be kept in the pool; and vessels drawing 18 feet water may lie afloat at low water at the principal buoy off the dock entrance. The warehouses and vaults are upon a very large scale; far more so than one might be disposed to infer from the extent of water. The warehouses are exceedingly well contrived and commodious;

and, owing to their being built partly on pillars (within which what is called the quay work of the other docks is transacted), close to the water's edge, goods are hoisted direct from the hold of the vessel, without its being necessary, as in the West India and London Docks, to land them on quays; so that there is in this way a great saving both of room, time, and labour. The whole establishment is exceedingly complete, and reflects the greatest credit on the public spirit, enterprise, and skill, of those by whom it was projected and executed. The dividend on the company's stock is at present (1843) 5 per cent.

The regulations to be observed by vessels using the St. Katharine's Docks are similar to those enforced in the East and West India Docks; to which, as in the case of the London Docks, we beg to refer.

Table of Tonnage Rates chargeable on Vessels entering the St. Katharine Docks, and also of the Rates for discharging Cargoes landed by the Company, subject to such Revision, from Time to Time, as shall be found expedient.

Vessels Inwards.

On Vessels laden, arriving from	Per Ton Register. s.	d.	Privilege.
First Class. — Any port of the United Kingdom, Isle of Man, Jersey, Guernsey, Alderney, Sark, or other European port outside the Baltic, between the North Cape and Ushant	0	6	*Vessels whose cargoes are discharged by the Dock Company.* Use of the Docks to vessels arriving from Hambro', or from any port in the Mediterranean, for 6 weeks from the date of entrance; if arriving from any other port, 4 weeks from the date of final discharge, with liberty to load outwards for any port or place, and to quit the docks for repairs, and re-enter; the period of absence from dock for such purposes not to affect the privilege.
Second Class. — Any other port	0	9	*Vessels whose cargoes are discharged by their crews.* The like privilege, but to commence from the date of entrance.

	Per Ton Register. s.	d.
Rent, in each case, after the expiration of the privilege, per week	0	1
For partial remissions and exemptions on vessels partly laden, or arriving from Spain or Portugal, wool or cork laden, or vessels with corn, see annexed Table.		
Rates for discharging Cargoes by the Company. Cargoes, consisting, in the whole or in part, of sugar in hogsheads or tierces, including ship cooperage	1	9
Cargoes, consisting of sugar in chests of 5 cwt. and upwards, including ship cooperage	1	3
Cargoes, consisting of sugar in bags, mats, or chests under 5 cwt., or other goods (not being hemp, tallow, ashes, wood goods, corn, pitch, tar, hay, or straw), contained in casks, bales, serons, chests, cases, bags, baskets, or similar packages; also spelter, or metal in pigs, bars, rods, plates, &c.	0	9
Cargoes, consisting of hemp only, or merchandise in bulk, wholly or in part tallow only	1	0
	0	6

Mixed cargoes of	s.	d.
hemp	1	3
tallow	0	6
ashes	0	6

Blue gum wood, or large timber, additional for every load delivered 0 6

No charge upon excess landed beyond a ship's register tonnage.

Oil, additional for every tun delivered into craft 0 6

Per ton of goods, charge in no case to exceed the register tonnage of the vessel.

Vessels Outwards, entering the Docks without Cargoes.

	Per Ton Register. s.	d.	Privilege.
Loading for any port enumerated in the Import Table in first class	0	6	Use of dock to load 4 weeks from date of entrance
Do. do. 2d do.	0	9	
Vessels loading in part, or quantity taken on board according to their port of destination, as above classified	as above		Use of dock to load 1 week from entrance

Rent after expiration of the privilege, 1d. per ton register per week.

TABLE *of special Regulations, Remissions, and Exemptions, and Miscellaneous Charges applicable to Vessels inwards, not being fully laden, or laden with the Articles enumerated, or entering the Docks light, &c.*

No tonnage rate will be charged on vessels wholly corn laden, whose cargoes shall be landed in the docks; but a charge will in such case be made for docking and undocking, as under:

	£	s.	d.
Vessels of 100 tons and upwards	1	1	0
Vessels under 100 tons	0	10	6

with liberty to remain in dock without further charge for 24 hours after final landing. Rent, after expiration of that period, 1d. per ton register per week. Should the vessel load outwards, the usual tonnage rates, according to the port of destination, will be charged, instead of the rate for docking and undocking. The Dock Company reserve the power of refusing the admission of ships laden entirely with corn.

Other vessels, not being fully laden at the time of entering the docks, will be charged tonnage rate only on the proportion of cargo brought in; the amount of rate to be determined by the port from whence the vessel has arrived; and if discharged by the Company, rates for unloading in addition, according to the description of the cargo and quantity so discharged. Rent, after 1 week, 1d. per ton register per week.

Vessels laden with cork or wool from Spain or Portugal will be charged only 6d. per ton register. Rent, after 3 weeks from date of entrance, 1d. per ton register per week.

	£	s.	d.
Light vessels entering the dock to lie up, will be charged, for any period not exceeding 4 weeks, per ton register	0	0	6
Rent per week, after the expiration of the 4 weeks, on the register tonnage, per ton	0	0	1

Vessels two thirds laden with corn will be charged tonnage rate only on the proportion which the other part of the cargo bears to the register tonnage.

Vessels chiefly laden with wood goods, pitch, tar, hay, straw, or intending to discharge the whole of their cargoes into lighters, will only be permitted to enter or depart the docks, subject to such terms as shall be first mutually agreed upon between the owners and the Dock Company.

Miscellaneous Charges.

	s.	d.
For labourers hired of the Company, to work on board, and who shall be under the directions and responsibility of captains or owners of vessels, both or either (which rule applies to all over-board deliveries), a charge will be made for each man per day, of	3	6
Thames water supplied to vessels by the Company per tun	1	0

For an abstract of a ship's cargo inwards, and weights thereof, for the purpose of making up freight accounts, the following charge will be made:—

	s.	d.	
If the goods have 10 marks, or under	2	0	each mark or parcel.
11 marks to 20 marks	3	6	
21 marks and upwards	0	4	

N. B. — The dock-dues, rent, &c. of most articles landed, warehoused, or shipped at the different docks, being, in general, nearly identical, the reader is referred for an account of the same to the Table under the head *E. and W. India Docks.*

4. *Commercial Docks.* — Exclusive of the previously mentioned docks, which are all on the north side of the river, there are on the south side the *Commercial Docks*, opposite to the west end of the West India Docks. These docks are of large extent; the space included within the outer wall being about 49 acres, of which nearly 38 acres are water. They are principally intended for the reception of vessels with timber, corn, and other

bulky commodities. They have but little accommodation for warehousing; and their establishments are not constructed so as to entitle them to bond all goods. The Surrey Canal Company also admits vessels to be docked in the basin of their canal.

5. London Port Dues; Charges on account of Lights, Pilotage, &c. in the Thames; Shipping, &c. of London.

It is highly desirable that expert pilots, brilliant lights, and every other means that it is possible to devise, should be afforded to render navigation safe and expeditious. But to secure these advantages, it is indispensable that the charges on their account should be moderate. If they be otherwise, navigators are not unfrequently tempted to resort to what are less expensive, though less secure, channels. This principle has not, however obvious, been always kept sufficiently in view either in this or in other countries. During the latter years of the war, and down to 1825, the charges on account of docks, lights, pilotage, &c. on ships in the Thames, and most other British ports, were exceedingly heavy; and would, no doubt, had they been maintained, have materially injured our commerce. Instead, also, of encouraging the resort of foreign ships to our ports, a contrary policy was adopted; the charges laid on them being usually about double those laid on British ships. This regulation was intended to promote the employment of the latter; but, as it led to reprisals in other countries, its real influence is believed to have been quite different; while, by driving away foreigners, it injured the trade of the country, and prevented our ports from becoming, what they are so well fitted to be, the emporiums of the world. We are glad, however, to have to state, that the circumstances now alluded to have been materially, or rather wholly, changed within the last 20 years. In 1825, the various dock monopolies expired; and a very great reduction has since been made in the charges on account of the docks, which, as already seen, are now very moderate indeed.

Exclusive of the dock duties, certain *port* or *tonnage duties* were imposed on ships frequenting the port of London, by the acts 39 Geo. 3. c. 69., 43 Geo. 3. c. 124., &c., partly to pay the harbour masters, provide mooring chains, &c., and partly to create a fund for the improvement of the port, and in particular for defraying the cost of making a navigable canal across the Isle of Dogs. But this canal having been sold (*ante*, p. 468.) for 120,000*l.* to the West India Dock Company, under the 10 Geo. 4. c. 130., and the sums advanced by the public for the improvement of the port having been repaid, it was judiciously resolved to reduce the port duties to the lowest rates capable of defraying the necessary expenses. This was effected by the 4 & 5 Will. 4. c. 32., which imposes the following tonnage duties on vessels in the port: —

	Per Ton. *d.*
1st Class. — For every ship or other vessel trading coastwise between the port of London and any port or place in Great Britain, Ireland, the Orkneys, Shetland, or the Western Islands of Scotland, there shall be paid for every voyage in and out of the said port	¼
2d Class. — For every ship, &c., entering inwards or clearing outwards from or to Denmark, Norway, or Lapland (on this side of the North Cape), or from Holstein, Hamburg, Bremen, or any other part of Germany bordering on or near the Germanic Ocean, or from or to Holland, or any other of the United Provinces, or Brabant, Antwerp, Flanders, or any other part of the Netherlands, or from or to France (within Ushant), Guernsey, Jersey, Alderney, Sark, or the Isle of Man, there shall be paid for every, &c., as above	¼
3d Class. — For every ship, &c. entering inwards or clearing outwards from or to Lapland (beyond the North Cape), Finland, Russia (without or within the Baltic Sea), Livonia, Courland, Poland, Prussia, Sweden, or any other country or place within the Baltic Sea, there shall be paid for every, &c., as above	¼
4th Class. — For every ship, &c. entering inwards or clearing outwards from or to France (between Ushant and Spain), Portugal, Spain (without the Mediterranean), or any of the Azores, Madeira, or Canary Islands, or any of the United States of America, or of the British colonies or provinces in North America or Florida, there shall be paid for every, &c., as above	½
5th Class. — For every ship, &c. entering inwards or clearing outwards from or to Greenland, Gibraltar, France, or Spain (within the Mediterranean), or any country, island, port or place within or bordering on or near the Mediterranean or Adriatic Sea, or from the West Indies, Louisiana, Mexico, South America, Africa, East India, China, or any other country, island, port, or place within or bordering on or near the Pacific Ocean, or from any other country, island, port, or place whatsoever to the southward of 25 degrees of north latitude, there shall be paid, &c., as above	¾

Exemptions. — Ships of war, and ships the property of her Majesty or any of the royal family. — Any vessel coming to or going coastwise from the port of London, or to any part of Great Britain, unless such vessel shall exceed 45 tons. — Any vessel bringing corn coastwise, the principal part of whose cargo shall consist of corn. — Any fishing smacks, lobster and oyster boats, or vessels for passengers. — Any vessel or craft navigating the Thames above and below London Bridge, as far as Gravesend only. — Any vessel entering inwards or outwards in ballast.

Owing to the distance of London from the sea, and the rather intricate navigation at the mouth of the river, the charges on account of lights and pilotage must necessarily be pretty heavy. They have, however, been very materially reduced of late years. The charges on account of the lights under the management of the Trinity House have been diminished, in almost every instance, at least one third; and in many instances as much as a half, and sometimes even more, since 1823. — (See LIGHT-HOUSES.) The practice of imposing discriminating light and pilotage dues on foreign vessels is still kept up; but owing to the general establishment of reciprocity treaties with foreign powers, the grievance thence arising has become rather nominal than real, and at present affects very few of the foreign vessels coming to our ports.

The act 6 Geo 4. c. 125. made a reduction of 8 per cent. in the charges authorised to be demanded by the pilots licensed by the Trinity House for the port of London; and

foreign vessels, privileged as British vessels, have been relieved from the additional or surplus rate of 25 per cent. payable to the Trinity pilots, as well as to those licensed by the Lord Warden of the Cinque Ports.—(See PILOTAGE.)

The oppressive and troublesome charges in the port of London, imposed on alien goods under the names of package, scavage, &c. — (see PACKAGE) — were put an end to in 1833. At present, therefore, we believe we are warranted in affirming that, considering its distance from the sea, the public charges on shipping in the port of London are quite as reasonable as in any other port of the empire, or of the world. But we are inclined to think that further reductions may still be effected, particularly in the article pilotage.

The following accounts show the nature and amount of the various charges that are at present incurred by vessels in the port of London: —

Account of Charges on a Ship of about 480 Tons entering and departing the Port of London laden both ways, supposing every thing to be conducted with strict Economy, and excluding any Charge on account of extraordinary Despatch or superior Accommodation.

	From and to Calcutta or New York. £ s.	s. d.
Reporting ship and appointment		3 3 0

Amount of Shipping, &c. belonging to the Port of London. — According to the official accounts, there belonged to this port, on the 31st of December, 1842, 2,883 sailing vessels: of these 2,254, of the aggregate burden of 577,493 tons, were respectively above 50 tons register, while 629, of the aggregate burden of 20,607 tons, were respectively under 50 tons register. There then also belonged to the port 239 steam vessels of the burden of

47,265 tons. The crews of these ships, including steamers, amounted to above 35,000 men and boys! In 1819, the gross customs duty collected in the port of London amounted to 7,749,463*l.*; in 1832, it amounted to 9,434,854*l.*; and in 1841, it had increased to 11,757,262*l.* 7*s.* 9*d.*! So vast an amount of shipping and commerce was never previously concentrated in any single port. London may be truly said to be *universi orbis terrarum emporium.* May her prosperity be as lasting as it is great!

For an account of the rates of pilotage in the Thames, see PILOTAGE.

II. LIVERPOOL DOCKS, SHIPPING, &c.

The rapid rise of the port of Liverpool to its present consequence, though no doubt principally owing, like that of the town itself, to the astonishing increase of manufactures and population, in the extensive district of which it is the grand emporium, is also, in part, owing to the facilities that have been given to navigation and commerce by the construction of wet and dry docks. The entrance to the æstuary of the Mersey is a good deal encumbered with sand banks, and is crossed by a bar, which, however, has at low water spring tides, where deepest, 11 feet water; and as the tide rises 21 feet at neap, and 31 feet at spring tides, there is water for the largest ships; the channels too being indicated by light-vessels, and well marked with buoys, there is no difficulty in making the port. In fact, since the opening of the Victoria Channel (by dredging) in October 1839, vessels of the largest size cross the bar at first quarter flood; 14,000 vessels passed through this channel in 12 months from its opening.

But the land around being low, ships in the river are exposed to risk from gales of wind; and to obviate this inconvenience, and to facilitate their loading and unloading, the docks have been constructed, which constitute the great glory of the town. The first wet dock in the British empire (now filled up) was opened here in 1708, a second about half a century after, and since that period many more have been constructed on a very magnificent scale, and furnished with all sorts of conveniences, so that the aggregate area of those now in use amounts to about 100 acres, and the quay-space is nearly 7¼ miles in length. The following table shows the water area and length of quay space, with the date of construction of the different docks. (See opposite page.)

Among these the King's Dock, being contiguous to the King's tobacco warehouse, receives the vessels from Virginia and other parts laden with tobacco; the Queen's and Brunswick docks are occupied by ships laden with timber from Honduras, Canada, and the Baltic; the Canning Dock receives coasting vessels which exchange corn and provisions for colonial produce. Salthouse Dock accommodates ships from the Levant, Irish traders, and English coasting vessels; the Trafalgar Dock is appropriated partly to the use of coasting vessels and partly of steamers; and the Coburg and Clarence

Docks are used exclusively for the accommodation of steamers, the latter being appropriated to those from America and the Mediterranean. All these works are defended on the side next the river by a strong sea-wall upwards of 2¼ miles in length. Every precaution is taken to prevent the accumulation of mud in the docks by the use of steam-dredging machines; and strict rules, enforced by a vigilant police force, are established to maintain good order, and prevent both fire and depredations.

The docks are all constructed on the estate of the corporation, and are managed by commissioners appointed by act of parliament. The bonding and other warehouses do not, however, belong to the dock estate, but are private property. Most of them are in the immediate vicinity of the docks, but some are at a considerable distance; and there is not, in this respect, the same accommodation, or the same security against fire and depredations, in the Liverpool as in the London docks, where, the warehouses being built along the dock-quays, goods are loaded and unloaded with the greatest possible facility, and are subsequently under efficient protection. It is probable, however, that the numerous and destructive fires that have lately taken place amongst warehouses in Liverpool, and the consequent rise in the premium of insurance, will lead to some material changes in the present system. And, in fact, the Albert Dock, a new and extensive dock now (1843) in the course of being formed, is to have warehouses round the quays, and is to be conducted by the dock trust, on the same plan as the London docks.

The difference in the situation of the warehouses here and in the metropolis, leads to a difference in the mode of discharging and loading ships in each: in London this is done by the servants of the different dock companies; whereas in Liverpool it is effected by undertakers, called *lumpers*. Individuals who follow this business engage to discharge a ship for a specific or *lump* sum, from 2 guineas, perhaps, up to 20, according to the size and description of cargo, having the requisite number of common labourers (chiefly Irishmen) to do the work; the lumper being master and superintendant: these labourers are generally paid day wages, but sometimes the job is a joint concern among the whole.

A West India ship of 500 tons would be discharged by lumpers for from 10*l.* to 15*l.*: a cotton ship of the same burden for 4*l.* to 6*l.* By discharging is merely meant putting out the cargo on the quay; the proprietors of the goods employ their own porters to weigh, load, and warehouse the property; they likewise employ their own coopers, where cooperage is required.

The expense of loading a West India ship of 500 tons *outwards* would not be half as much as that of discharging inwards, because they very seldom take a full cargo *outwards*. The average does not, perhaps, exceed a *third*. Hence the total expense of a West India ship of 500 tons, coming into and going out of the port of Liverpool, may be estimated as follows: —

	£	s.	d.		£	s.	d.
Pilotage inwards, 17 feet @ 9*s.*	7	13	0	Pilotage outwards, 15 feet @ 4*s.*	3	0	0
Boat hire, warping, &c.	10	6		Boat hire assisting out	0	10	6
Lumpers' discharging	15	0	0				

Besides these, there is the charge for the various light-houses in St. George's Channel, which, however, cannot be called an expense peculiar to Liverpool.

Goods cost generally 6*d.* a ton every time they are moved. The hire of labourers for loading does not properly belong to the ship, being paid by the owner of the goods. Landing and putting into warehouse costs about 6*d.* a ton, exclusive of cartage. The owner of the vessel merely puts the goods on the quay.

Commerce. — Though now of such paramount importance, little more than two centuries have elapsed since this great emporium was correctly described as "the little creek of Liverpool," being then merely a dependency of Chester! And so late as 1709, it had only about 8,000 inhab., and 84 ships, of the burden of 5,789 tons! The progress of the town in the interval, in commerce, and in the accumulation of wealth and

population, has been quite unprecedented in the history of industry. It is not, however, difficult to discover the causes of the all but apparently miraculous progress of Liverpool. A good deal must be ascribed to the enterprise, sagacity, and persevering industry of her merchants; but she is, no doubt, mainly indebted for her rise and the vast magnitude of her commerce, to her fortunate position, and, above all, to the increase of manufactures in Manchester and the surrounding district. The situation of Liverpool necessarily renders her a principal seat of the trade between Ireland and Great Britain; and as the population and trade of the former increased, it could not fail proportionally to increase the trade of this port. The gradual filling up of the Dee, and the consequent decline of Chester as a harbour, has also proved of no little advantage to Liverpool, by rendering her the great mart for the salt of Nantwich, and other places in Cheshire, the exportation of which to foreign parts employs a great amount of shipping. Unquestionably, however, Liverpool would never have attained to half her present size or importance, but for the cotton manufacture. But being the port through which Manchester, Oldham, Bury, Bolton, Ashton, and other great seats of that manufacture, could most conveniently obtain supplies of the raw material, and export their manufactured products, she has increased with every increase in this great department of industry; and it is no exaggeration to affirm, that the creative influence of the wonderful inventions and discoveries of Hargreaves, Arkwright, Crompton, Cartwright, and the other founders and improvers of the cotton manufacture, has been, though not so direct, quite as powerful, in the docks and warehouses of Liverpool as in the mills of Manchester.

The congenerous businesses of the slave trade and privateering appear to be the only departments of an exotic character, and not bottomed on any natural facility, that have ever been carried on to any great extent from Liverpool. The slave trade began in 1723; and was prosecuted vigorously and successfully down to the abolition of the trade in 1806, when it employed 111 ships, of the burden of 25,949 tons. It was apprehended by many that the abolition of this nefarious, though lucrative, traffic, would be a severe blow to the prosperity of the port. But so rapid was the increase of the legitimate and more natural branches of her trade, that it was but little felt at the time, and was very soon forgotten.

It is probable that the acquaintance with the slave trade may have given a stimulus to privateering; but, at all events, it was carried on to a great extent from Liverpool, both in the American and last French wars, especially in the former. In 1779, no fewer than 120 privateers belonged to the port, carrying each from 10 to 20 guns.

The following tables give a complete view of the progress of the trade of Liverpool.

Account of the Entries of Vessels, and of the Amount of Dock Dues, in each Year, from 1757, with the Tonnage of the Ships in the Liverpool Docks, since 1800.

Year.	No. of Vessels.	Dock Dues. £ s. d.	Year.	No. of Vessels.	Tonnage.	Dock Dues. £ s. d.

			1843	16,606	2,145,278	188,286 2 1

In September, 1836, a great reduction was made in the dock dues; and they were then entirely taken off all goods arriving coastwise, or from Ireland.

It is extremely difficult, or rather, we should say, quite impossible, to form any correct estimate of the total amount of the trade of Liverpool. Probably, however, the aggregate annual value of the imports and exports does not fall much short of the amazing sum of 40,000,000*l.*, if it do not exceed that amount! In 1834, it was estimated as follows by Mr. Myers, an extensive and intelligent merchant of the town.

Exports.	£	Imports.	
Woollens - - -	4,000,000	Irish trade	5,000,000
Cotton stuffs and yarn	12,000,000	Raw cotton	5,000,000
Linens - - -	1,000,000	Other articles	5,000,000
Hardware - - -	1,200,000		
Earthenware - -	350,000		£ 15,000,000
Silk - - - -	150,000		
Salt and other articles	1,000,000		
	£ 19,700,000		

We subjoin a statement, compiled by the best authorities, exhibiting a view of the quantities and values of the leading articles of Irish produce imported into Liverpool.

Account of the Quantities, Prices, and Values of the following Articles of Irish produce imported into Liverpool during each of the Five Years ending December, 1842.

Annual Values of the Total Irish Produce imported into Liverpool during Five Years, as follows:—

1838.	1839.	1840.	1841.	1842.
£ 5,559,047	£ 5,073,830	£ 4,334,864	£ 4,499,188	£ 3,649,428

N.B.—About 500,000*l.* may be added to each of the above annual values, on account of the imports of hides, linen, eggs, poultry, feathers, &c., of which it is difficult to get any account. A good deal of the wool that was formerly exported from Ireland to Liverpool, and thence to the Continent, is now shipped direct for the latter.

Four-fifths of the trade between the United Kingdom and the United States now centres in Liverpool; and she has a large share of the trade with South America and the West Indies. She also carries on a considerable trade with the East Indies and China, though in this department she is far surpassed by London. Indeed, the ships and products of Liverpool are to be found in every port in every part of the world accessible to merchantmen.

An Account of the principal Articles of East and West Indian and other Produce imported into Liverpool during each of the 5 Years ending the 31st December, 1843; with the Stocks on hand on the 31st December, each Year. — (From the *Brokers' Returns*.)

The mercantile marine of Liverpool is inferior only to that of London; there having belonged to the port on the 31st of December, 1842, 1,256 sailing vessels of the aggregate burden of 338,458 tons, manned by about 15,000 seamen: of these 125 vessels of the burden of 4,042 tons were under 50 tons each. There then also belonged to Liverpool, 46 steamers of the aggregate burden of 5,005 tons.

The gross customs revenue of Liverpool, in 1843, amounted to 4,121,648*l.* 9*s.* 3*d.*, and in 1841, to 4,140,593*l.* 6*s.* 11*d.*; while that of London, in the latter year, amounted to 11,757,262*l.* 7*s.* 9*d.* But it would be an error to suppose that the trade of the metropolis exceeded that of Liverpool in this proportion. Cotton, wool, and other raw materials for manufactures, on which low duties are paid, form the principal part of the foreign

imports of Liverpool, whereas London imports comparatively few of these articles, her trade being principally in articles of direct consumption, as sugar, tea, coffee, wines, corn, &c., on which high duiies are paid. This circumstance accounts, in part at least, for the comparatively large amount of the customs revenue received in the latter; and, allowing for it, we doubt whether the foreign trade of London very materially exceeds that of Liverpool.

The following table gives a view of the distribution of the foreign and domestic trade of Liverpool in 1842.

An Account of the Number and Tonnage of Vessels which entered inwards and cleared outwards at the Port of Liverpool, in 1842, specifying the Countries from which they came and for which they sailed.

Lines of Packets. — Few things have conduced more to the progress of the trade of Liverpool, and, we may add, of the empire, than the establishment of a regular communication, by means of packet ships, between this great emporium and other British and foreign ports. The intercourse with the former is principally carried on by means of steamers, which are daily leaving for and returning from Dublin, Glasgow, Belfast, Bristol, and other ports. But the regular intercourse between Liverpool and foreign ports is principally carried on by sailing vessels, which in point of security, expedition, and accommodation for passengers, are not surpassed by any ships to be elsewhere met with. New York being more intimately and extensively connected with Liverpool than any other foreign port, no fewer than 24 packet ships, distributed into *5 lines*, are engaged in the trade with that city; and there are also packet ships which sail regularly for other ports in the United States, and for Rio, the Havannah, &c.

The packet ships for *New York* sail from Liverpool on the 1st, 7th, 13th, 19th, and 25th of each month throughout the year. And they sail on the same days in each month *from* New York for Liverpool.

Cabin passage *to* New York, 25 guineas; from New York, 75 dollars, which includes provisions, beds, &c., but neither wines nor liquors.

The ships, which vary in size from 700 to 1,000 tons burden each, are all American property, and built chiefly in New York, of beautiful workmanship, and fitted up with every convenience for passengers, and in a most expensive and splendid style. Each ship has a separate cabin for ladies; each state room, in the respective cabins, will accommodate *two* passengers; but a *whole* state room may be secured for one individual by paying at the rate of 1½ passage, that is, 37½ guineas.

The Great Western steamer sails from Liverpool to New York about once every six weeks. Fare, 30 guineas *to*, and 100 dollars *from* New York.

Packets for *Philadelphia* sail from Liverpool on the 8th of every month throughout the year; *from* Philadelphia for Liverpool on the 20th of each month. Cabin passage to Philadelphia, 25*l*., from ditto, 100 dollars.

The Philadelphia packets are also American built and owned, being from 500 to 800 tons burden; some of them are as splendid as the New York packets, and are fitted up with every regard to comfort.

There are no regular packets to Boston, but plenty of casual ships. The mail steamers to Boston and Halifax sail on the 4th and 19th of each month, except the months of December, January, February, and March, when there is only one mail on the 3d. Fare, 38 guineas; with the exception of the Hibernia, which starts in opposition to the Great Western, her fare being 30 guineas.

The rate of *steerage* passage varies considerably in the course of the year; depending on the number of ships and the number of passengers going at the time. By the packet ships, it is at present (1843) 3*l*., by casual ships it varies from 2*l*. to 3*l*., current rate 50*s*: it rarely now exceeds 4*l*. For these rates, the ship provides nothing but berths, fire, and water; the passengers provide their own provisions, bedding, &c. The expense of provisions for a poor person, who might wish to be as economical as possible, for the voyage out to the United States, would not be more than from 40*s*. to 50*s*.

The *cabin* passage by the common traders (many of which are little inferior to the packets in equipment and safety) varies from 12*l*. to 20*l*.; no wines being provided at these rates, but provisions, bedding, malt liquor, and spirits.

The rates of *freight* to New York, are —

	By Packets.	By other Ships.

From South America, south of Rio Plata, the Pacific Ocean, Africa, and Asia, eastward of the Cape of Good Hope, the ton - - - - - -	2	5
Note. — Vessels remaining longer than six months in dock, to pay an addition to the above rates, per month - - - - -	0	2

All vessels arriving at or clearing from the said port are to pay the said rates from or for the most distant port or place from or for which they shall trade; but vessels arriving from any parts in ballast do not pay dockage on entering inwards; and should such vessels proceed to sea again in ballast, then only one half of the dock rates are due, with the whole of the lights; but taking a cargo outwards subjects such vessels to full dock dues.

N. B. — New vessels built in Liverpool are subject only to half the above rates on the first outward clearance.

Floating Light, at the Entrance of the River Mersey. — Towards this light, the following rates are payable:—

All vessels sailing to or from Liverpool, to any port or place between Duncan's Bay Head and the Land's End, on the west side of Great Britain, and between Malling Head and Cape Clear on the east side of Ireland, ½d. per ton.

All vessels sailing to or from Liverpool, to any port or place between Duncan's Bay Head and the Land's End, on the east and southern coast of Great Britain, and between Malling Head and Cape Clear on the west coast of Ireland, ¼d. per ton.

All vessels sailing to or from Liverpool, to any port or place not being within the United Kingdom of Great Britain and Ireland, or the adjacent islands to the northward of the Cape of Good Hope, and the northward of Cape Horn, ½d. per ton.

All vessels sailing to and from Liverpool, to any port or place to the eastward of the Cape of Good Hope, and the westward of Cape Horn, 1d. per ton.

☞ In the day time, from sunrise to sunset, a blue flag, with the letters N. W. in white will be hoisted at the main-mast head, and in thick and foggy weather, either by night or day, a bell will be kept constantly ringing, to prevent vessels from running foul of the light-vessel.

Dock Regulations. Extracts from Acts of Parliament.— Any owner or master, or any person having the command, agency, or consignment of any vessel chargeable with dock duties, refusing to pay the same, is liable to have such vessel or goods seized.

Any person throwing any ballast or rubbish from out of any vessel upon any of the quays, &c., shall immediately cart or carry away the same: penalty 40*s.*

Every ship shall, before she comes within any of the piers, take down all her sails: penalty 5*l.*

Any person having the charge of any vessel in any of the docks, refusing to remove the same, after 24 hours' notice in writing, shall forfeit 20*l.*, and pay the expenses of removal by the water bailiff.

Any person having the command of any vessel moored in the river, refusing to remove the same, when ordered by the water bailiff, shall forfeit 20*l.*

The master or other person having the command of any vessel from which any cannon or gun shall be fired whilst in the port, shall forfeit 10*l.*

Any person making payment of dock duties, who refuses to answer such questions as shall be put to him by the collector, or give a false or untrue answer, shall forfeit 10*l.*

Any master, &c. evading payment of the duties, shall forfeit and pay double the duties evaded; and by 53 Geo. 3. a sum of 20*l.* in addition thereto.

Whenever it shall be necessary, for the purpose of cleaning or repairing the docks, to remove the vessels lying therein, the master, mate, or other person taking the command of such vessel, shall, within 3 days after notice given, remove such ship from such dock, on pain of forfeiting 10*l.*

Any master, &c. refusing to moor and remove the same in docks, according to the direction of the dock master, will forfeit 5*l.*, together with the costs of removal by the dock master.

Any master, &c. acting contrary to the direction of the dock master, will forfeit 20*l.*

Any master, &c. entering and giving false information of the draught of water of any ship to any of the dock masters, shall forfeit 20*l.*

Any master, &c. bringing the same into the entrance basins, when a signal is hoisted on the pier, at the entrance of such basin, signifying that such dock is full of vessels will forfeit 20*l.*

Any master, &c. bringing his vessel into any of the docks, contrary to the directions of the dock master, will forfeit 20*l.*

Every master, or other person, damaging any of the dock gates, bridges, piers, quays, &c. is liable to have the ship seized, and sold to compensate for damage done.

Any person opening or shutting any of the dock gates sluices, or cocks, is liable to forfeit 100*l.*; or opening or shutting any drawbridge, 20*l.*

Any owner, &c. leaving gunpowder, pitch, tar, &c., or combustible matter of any kind, on the quays of the docks, &c., or upon the deck of any vessel lying in any of the docks, for above 48 hours after passing the Custom-house officers, is liable to a penalty of 5*s.* an hour; on neglecting to watch such goods in the night time, to a penalty of 5*l.*

Any master, or other person, having the command of any ship, suffering any fire, candles, or lamp to be lighted and burning on board: penalty 10*l.*

Any owner &c. landing, or causing to be landed and laid, any pumps, boats, anchors, cables, limestones, &c., or other things whatsoever, upon any of the dock quays, shall within 48 hours wholly remove the same from off such quay, or shall forfeit 5*s.* per hour above the 48.

Any person wilfully cutting, damaging, or destroying any cables, &c. by which any vessel in the river or in any of the docks shall be fastened: penalty, 50*l.*

Any person damaging or breaking any lamp, &c. set up near the docks: penalty for each lamp, 5*l.*

Any master, or other person, having the command of any vessel about which any offence shall have been committed, in relation to any of the docks, &c., is liable to the penalty imposed for such offence.

Any owner or master of any ship or vessel giving or offering a bribe to any officer employed in pursuance of the dock acts: penalty 20*l.*

Any owner, consignee, or master of any vessel arriving and departing in ballast without payment of dock duties, is liable to a sum equal to double the amount of dock duty which should have been paid, and the master liable to the penalty of 20*l.* in addition.

Every master, &c. wilfully throwing, casting, or putting any earth, stones, rubbish, &c. out of any ship, &c. into any part of the port: penalty 50*l.*

Any owner, &c. of any vessel laid up for sale, or which shall not be actually employed for two months, not removing the same within 24 hours' notice in writing from the harbour master, or left on board: penalty 5*l.*, and costs of removal.

Any person discharging timber in any dock without having obtained the consent in writing of the chairman or deputy chairman of the dock committee, or of some justice of the peace: penalty 10*l.*

Any person having consent, not removing the same therefrom within 24 hours, liable to a fine of 5*s.* an hour

Any person damaging any ship, &c. in any of the docks, &c. or in the river, and refusing to make compensation, liable to have his goods, or the tackle of the ship, &c. doing the damage, seized.

Any justice of the peace for the county of Chester or borough of Liverpool, upon complaint made to them, may summon persons to appear before him, and may fix the amount to be paid to boatmen, and persons finding and taking possession of anchors, &c. in any part of the port of Liverpool.

Any person throwing, casting, or emptying any ballast, ashes, &c. out of any ship, &c. into the river Mersey, the Rock or Horse Channel, or Formby Channel, to the eastward of the Floating Light, or from any of the piers into the docks or basins, or into the river Mersey: penalty 10*l.*

That every vessel laden with a cargo consisting solely of limestones, paving stones, flintstones, gravel, and chalk, shall be charged tonnage rates as if coming in ballast.

Every owner or master, &c. of any vessel arriving at or departing from the said port, shall produce to the collector, upon demand, at the time of making entry, all books, accounts, &c. in relation to such vessel, or which show the weights and quantities of the goods, &c. In case of dispute, such owner, &c. shall produce a statement in writing, to be verified by oath, and showing the actual weights and quantities of such goods, &c., or the accuracy of the said books, &c.

In case the master, &c. of any vessel from which rubbish, ballast, dirt, or other refuse of any kind shall be landed, shall permit or suffer the same to be so landed, or laid within 3 yards from the margin of any such dock or basin, or of the river Mersey, and shall not cause such rubbish, &c. to be wholly removed from off such quays, &c. within 24 hours after the same shall be so landed or laid: penalty 5*l.*

Any owner, &c. of any boat or vessel, permitting gunpowder, exceeding 10 pounds in weight, to be brought into any of the docks or basins, or any vessel or boat lying therein, without the previous consent in writing of a justice of the peace of the borough of Liverpool: penalty 100*l.*

That upon due proof, on oath, to the satisfaction of any justice of the peace of the borough of Liverpool, or county of Lancaster, that any dealer in marine stores, within the said borough, or Toxteth Park, shall have been guilty of receiving stolen goods, or purchasing or receiving, &c., every such person shall forfeit 20*l.* for the first offence, 30*l.* for the second offence; and after conviction for such second offence, shall not carry on business as such dealer in marine stores within 200 yards from the margin or side of any dock or bash. (exclusive of 40 yards prohibited by a former act) on pain of forfeiting the sum of 10*l.* for every day he, she, or they shall carry on such trade or business.

In case any person or persons giving or accepting any bribe to or from any water bailiff, harbour master, &c. give information thereof, he or they shall be excused from the penalty of 20*l.* imposed by the 51 Geo. 3. for such offence, provided such information be given before any proceeding for punishing the said offence shall have commenced, or any information laid before any justice of the peace against such person in respect of the same.

Justices of the peace may, upon complaint made, summon parties and ascertain and award the amount of recompence for any services rendered by boatmen, &c. to vessels in the said docks or basins, and in case of non-payment, may levy the sum so awarded by distress.

Bye-laws.—1. That the master, &c. who shall permit or suffer any pitch or tar, or any other combustible matter, to be boiled

or heated for the use of such ship or vessel, either on board of such vessel, or within 5 yards of the same, shall forfeit 40*s.* for every offence.

2. That the master, &c. discharging or loading any cotton or other combustible goods on or from any of the quays, who shall permit or suffer any person or persons to smoke or burn tobacco, shall for each offence forfeit 20*s.*; and any other person or persons who shall burn or smoke tobacco or any other thing, amongst cotton or any other combustible goods, lying and being on the quays, shall for each offence forfeit the like penalty of 20*s.*

3. That if the master, &c. shall bring the same into any of the docks, basins, or entrances, with loaded cannon or guns, with gunpowder on board, or, when driven in by stress of weather, shall neglect immediately to discharge the same, or who shall take gunpowder on board, until clear of the docks and pier-heads, shall forfeit 5*l.*

4. That the master, &c. of any vessel, or any other person or persons whomsoever, who shall permit or suffer any rope from such vessel to be made fast to any chain-post or quay-fender, or any rope, chain, or tackle of any description, to be made fast to any of the pillars of any iron or other shed on any of the quays, or to the roof or any other part of such shed, shall for every offence forfeit 40*s.*

5. That the master, &c. of any vessel lying within or up to any of the docks, basins, &c., who shall suffer any ballast, &c. to be taken aboard [illegible] vessel, or thrown, discharged, carried out of the [illegible] without having a canvas nailed to the [illegible] docks or basins, shall for every offence forfeit the sum of 40*s.*

6. That the master &c. of any ship or vessel lying in any of the said docks or basins, or the entrances to the same, who shall suffer any repairs to be done to the outsides of such vessels, without having a canvass of some other safeguard secured from the side of such vessel, and placed or fixed so as to prevent any chips or pieces of wood from falling into the said docks or basins during the whole of such work or repairs, shall for every offence forfeit 40*s.*

7. That the master, &c. of any vessel lying or being within any of the docks, &c. who shall not cause all ballast, &c. discharged from or to be laden on board of any vessel or thrown at least 5 feet from the edge of the quay, or on the outsides of the cart or chain-posts of the said quay, and taken away immediately, shall for every offence forfeit 40*s.*

8. That the master, &c. or other person having the charge or command of every vessel lying within any of the docks or basins, shall have a ship-keeper on deck to attend the vessel every tide, at least 2 hours before the time of high water, and 1 hour after high water, under the penalty of 10*s.*

9. That the master, &c. of any vessel, when hauling into or out of the docks or basins, &c., shall (except when any such vessel be driven by stress of weather) have the yards a-peak, and the sprit-sail yard fore and aft, and the jib-boom run in, within 3 feet from the cap, if practicable; and, after any such vessel shall be brought into any dock or basin, shall have the anchors got in on the forecastle or deck, and shall have the steering-sail booms and irons taken off from the yards, and shall have the main or mizen booms, and the stern or quarter davits rigged in, within 24 hours, under the penalty of 40*s.*

10. That the master or other person having the command of any vessel, who shall, by negligence or otherwise, leave an anchor in the entrance to any of the docks, or upon the strand of the river, without a buoy, for a longer period than one tide, shall for every offence forfeit 5*l.*

1. That the owner, &c. of any vessel who shall refuse to [illegible] top-gallant masts and yards of every such vessel entering any of the repairing or graving docks, shall [illegible]

12. That the owner or driver of any cart, &c., or any other person or persons who shall draw, or cause, or permit, or suffer to be drawn upon or over any of the dock bridges, any anchors, balks, &c., shall for every offence forfeit 40*s.*

Every day, 2 hours before high water, a bell will be rung for 1 minute at each dock, when every ship-keeper is to make his appearance on the deck of his vessel, or incur the penalty of 40*s.*

All merchants and other owners or agents of ships and vessels trading to the port of Liverpool, will be required to enter the names of such vessels, their draught of water, and the date of their arrival at the [illegible] of Liverpool, together with the name of the dock into [illegible]h they are intended to [illegible] brought, in a book kept for that purpose, in the office of the harbour master in Revenue Buildings. And all vessels will thereafter be admitted into the said docks or basins in the order only in which they shall be so entered.

Liverpool Dock Rates.—The following is a Table of the dock duties charged on goods imported into and exported from the port of Liverpool:—

Dock Rates on Goods to be paid on all Goods, Wares, and Merchandise, imported into the Port of Liverpool, from Foreign Countries, or British Colonies, Plantations, or Settlements; or brought Coastwise from Ports or Places in the United Kingdom, including the Islands of Jersey, Guernsey, Alderney, Sark, and Man; or exported from the said Port of Liverpool to Foreign Countries and British Colonies, Plantations, or Settlements.

☞ These rates are subject to a reduction of one-third, and the rates "coastwise" are not now chargeable.

Eightpence per ton on hams refers only to British or foreign, shipped in bulk: when packed, to pay on the packages only.

Pilots' Act.

At a meeting of the commissioners, held within the Town-hall, on Tuesday, the 21st of November, 1826, under the authority of an act passed in the fifth year of the reign of George IV. intitled, "An tAct for the better Regulation and Encouragement of Pilots for the conducting of Ships and Vessels into and out of the Port of Liverpool," the following rates of pilotage were fixed upon: —

For British Vessels trading to Foreign Parts.

INWARD.

	Per foot. s. d.
From the length of the west end of Great Ormshead, bearing S. by W., or before Penman Bachan be shut in with Great Ormshead, at the rate of	9 0
From the eastward of Great Ormshead, as above	8 0
From the only house now on Great Hilbra Island, bearing S.S.W. by the compass, or shall be piloted from the road of Hoylake only, or from the buoy of the Fair Way in Formby Channel	4 0

OUTWARD.

Whether through the Rock or Formby Channel - 4 0

No British vessel, trading to foreign parts, inward or outward-bound, is to refuse a pilot; but if such vessel have passed the Brazil Buoy in the Rock Channel or the Middle Patch Buoy in Formby Channel, or if a pilot boat fall in with a vessel in the Narrows of the Channels in stormy weather, that she cannot board her without imminent danger, the pilot shall then lead the way, and in either case, be entitled to such pilotage as shall be awarded by the committee at their next meeting.

For Alien Ships and Vessels.

	Per foot. s. d.
From the length of Great Ormshead, as above, at the rate of	12 0
From the eastward of Great Ormshead, as above	11 0
From the only house now on Great Hilbra Island, bearing S.S.W. by the compass, or shall be piloted from the road of Hoylake only, or from the buoy of the Fair Way in Formby Channel	5 6

OUTWARD.

Whether through the Rock or Formby Channel - 7 0

An alien vessel inward or outward-bound, is not to refuse a pilot as circumstances are described for English foreign vessels as above.

For Coasting Vessels, and those trading to and from Ireland, the Islands of Faro or Ferro, Jersey, Guernsey, Alderney, Sark, and Man.

INWARD.

	s. d.
From the length of Great Ormshead, as above, at the rate of	4 6
From the eastward of Great Ormshead, as above	4 0
From the only house now on Great Hilbra Island, bearing S.S.W. by the compass, or shall be piloted from the road of Hoylake only, or from the buoy of the Fair Way in Formby Channel	2 0

OUTWARD.

Whether through the Rock or Formby Channel - 2 0

No coasting vessel to pay for less than eight feet of water, nor any vessel to pay for odd inches, under half a foot. No coasting vessel, inward or outward-bound, of the burden of 100 tons or upwards, (unless she be in ballast,) is to refuse a pilot, as the master or owner, &c. must pay the full pilotage if one be offered. No vessel to be deemed a coaster unless she has been six months in that trade.

EXTRA PAY.

	Per day. £ s. d.
In the river, exclusive of the day coming from sea, the day of docking, and the day of going to sea, for the pilot's attendance, if required by the master, owner, &c.	0 5 0
And if the attendance of a pilot boat be requested, as above	2 2 0

The pilotage from sea into Hoylake is one-half inward, and from Hoylake out to sea one-half outwards.

Notwithstanding the pilot or the boat be not employed a whole day, to be paid for a day.

So far includes all the rates and prices for pilotage and extra pay.

The pilots' committee beg leave to recommend to the merchants of Liverpool, &c. that when a pilot conducts a ship or vessel into port to their satisfaction, to employ the same pilot to take the vessel out again; and if he should be absent on duty, that one belonging to the same boat be employed.

PILOTS' RULES AND REGULATIONS.

Any person acting as a pilot in the port of Liverpool, without a licence, to forfeit 20*l.*

Pilots refusing to conduct ships, or assist ships in distress, to forfeit 10*l.*, and lose their licence.

Masters in coasting trade, in ballast, or under the burden of 100 tons, may pilot their own vessels.

Masters of vessels forcibly taking pilots beyond the limits of the port, shall forfeit not exceeding 20*l.*, nor less than 5*l.*

Pilots misbehaving, to have their licences recalled; and if they act afterwards, to be liable to the same penalties as if they were not pilots.

Vessels liable to pay pilotage coming into port, to display a signal for a pilot, under a penalty of 5*l.*

Reward for pilots assisting ships in distress, to be settled by the committee.

Compensation to be made to pilots for taking vessels out of the port, which have been forced back, to be fixed by the committee.

Ships forced back after parting with the pilot, and piloted out again from Hoylake, to pay one-half the prices.

Every master to give the pilot a true account of the draught of water of his ship, and pilot authorised to admeasure.

Pilots to obey the orders of the harbour and dock masters.

No vessel to be brought round the Rock, or into the docks, in the night-time.

The first pilot boat on turn at the westward, to carry a green and white light horizontally, and the second, third, fourth, and fifth, a green light only.

At a meeting of the pilot committee held on the 3d of September, 1835, it was ordered—

That henceforth no pilot be allowed to lay a vessel aground without a written order from either the master or owner: penalty 5*l.*

At a meeting of the pilot committee held 3d November, 1836, it was ordered—

That in future every master of the pilot boats sending a pilot branched only for 12 or 14½ feet to take charge of vessels drawing more than 12 or 14½ feet, to be fined in a sum not exceeding 5*l.*

III. BRISTOL DOCKS, SHIPPING, ETC.

The great rise of tides in the Bristol Channel, and in the river Avon, on which Bristol is situated, in lat. 51° 27′ 6″ N. long. 2° 35′ 28″ W., enables the largest ships to come up to the town; but to obviate the risks and damage to which they were formerly exposed by grounding at ebb tide, a floating harbour equivalent to a dock, was commenced in 1804, by changing the channel of the river. It extends about 3 miles, from the entrance at Rownham, to the dam above Bristol Bridge, occupying the old bed of the Avon, and the bed of that branch of the Frome that lies between St. Augustine and St. Stephen's quays. The present extent of quay frontage is 6000 feet, but the limits admit of any further extension that an increased trade might require. The act authorising the formation of the harbour (43 Geo. 3. c. 140.) enacts that there shall be 21 feet water in a sufficient number of berths, but the mud being suffered to accumulate so as considerably to reduce this depth occasioned much complaint. This defect has now, however, been in a great degree obviated. A new channel was formed for the river, and the harbour finished in 1809, at an expense of 594,000*l.* There are two basins for the temporary accommodation of vessels entering or leaving; one at Rownham for large ships, the other below the iron bridge at Bedminster, for coasters. There are also a floating and a dry dock, founded by the Merchant Venturers in 1769: to the former of these timber ships are compelled to resort, if they do not discharge at some private wharf. Further down the river are several private docks, where ship building to some extent is carried on. Vessels frequently load and discharge cargoes in Kingroad, at the mouth of the river, by means of lighters; the Great Western steam ship is obliged to do this, the entrance to the floating harbour not being wide enough to admit her, but the harbour dues are payable whether ships enter it or not. The tide in the Avon sets with great rapidity, especially between the high precipitous rocks of Clifton and Leigh, which seem rent asunder to admit its passage: in Kingroad its rise at springs is between 48 and 49 feet, at neaps above 23 feet: at the gates of the floating harbour its rise is from 4 to 5 feet less than at the tide gauge in Kingroad.

Bristol early possessed, and continues to enjoy, a large share of the trade with the West Indies; and among her foreign imports the most important are those of sugar, molasses, rum, coffee, tea, and cocoa; the next most important are those of tobacco, timber, wine, brandy, tallow, fruits, wool, hemp, dye stuffs, oil, saltpetre, hides, &c. The exports consist principally of the produce of the various manufactures of the city, with salt, coals, and culm, in part the produce of the neighbourhood; and cotton, linen, and woollen goods. In 1842 the declared value of exports amounted to 259,531*l.* 17*s.* 6*d.* (see Table), 244 ships, of 37,183 tons burden; having in the same year entered inwards from foreign parts, and 122 ships, of 24,022 tons burden, having cleared outwards for ditto; the customs duties being then also 965,255*l.* Bristol carries on an extensive and growing trade with Ireland, from which she imports corn, butter, bacon, potatoes, cattle, horses, sheep, pigs, salmon, &c. She sends in return, tea, raw and refined sugar, cheese, wrought iron, tin plates, copper, glass, woollen, and leather. In 1842, there arrived from Ireland, 452 vessels, of 79,060 tons, and cleared for it, 308 vessels of 68,871 tons. The imports, coastwise, consist mostly of iron, tin, coal, salt, agricultural produce, and foreign produce, brought from other ports under bond. The exports are chiefly foreign and colonial produce (especially groceries, spirits, and wines), and the various manufactures of the city. There belonged to the port in 1842, 277 sailing vessels, of the burden of 40,325 tons, but of these 94 were small vessels of about 30 tons each. During the same year there belonged to the port 27 steamers, of the aggregate burden of 3,174 tons. A steam communication for the conveyance of goods and passengers to Ireland was established in 1826, and has led to a great increase of the trade with that part of the empire. Bristol has also had the honour of being the first port in the empire to establish a regular communication by steam with the United States. The first voyage by the Great Western steam-ship was performed in 1838. The Great Britain, now (1843) building, is the largest steam-ship in the world. Her hull is of iron, her burden upwards of 3000 tons, and her engines of 1000 horse power.

The decline in the comparative importance of Bristol, as a trading emporium, has been chiefly manifested by contrasting its progress with that of Liverpool. The average customs duties of Bristol for the seven years ending with 1757, amounted to 155,189*l.*; those of Liverpool for the same period, to 51,136*l.* In 1784, the customs of Bristol had risen to 334,909*l.*, a great increase: but those of Liverpool had advanced, in the same year, to 648,684*l.* One of the chief causes that have been commonly assigned for this comparative slowness of progress is the excess of local taxation; the town and harbour dues having been much heavier than those of any other of the larger ports. The municipal report of 1835 gives the proportion of local taxation charged on 23 principal articles, imported in 1831, in Bristol and three other ports; as—Bristol, 1*l.*; London, 10*s.* 4*d.*; Liverpool, 11*s.* 5*d.*; Hull, 7*s.* 3*d.*; Gloucester, 6*s.* 2*d.* Since 1835, however, the rates have been considerably reduced, and the mayor's dues wholly abolished. In 1834, the

entire local taxation (including the dock rates, 23,800*l.*) was estimated at 91,000*l.* It is now probably about 80,000*l.*

But, notwithstanding this greater weight of local taxation must have operated seriously to the injury of Bristol, too much stress has been laid upon it in accounting for the slower progress of the trade of the port. The real causes of the rapid rise of Liverpool, Glasgow, and some other sea-port towns is to be found, not in the lowness of their port charges, or in any peculiar advantages they individually enjoy, but in their having become the ports of the great manufacturing districts. The extraordinary growth of Liverpool is a consequence of the still more extraordinary growth of the cotton manufacture. Her rise has been dependent upon, and consequent to, the rise of Manchester, Bolton, Blackburn, &c.

The charges on ships entering Bristol are as follow: —

For every vessel on entering into the port of Bristol, except barges or other vessels passing or going to or from the Bath River Navigation, or Kennet and Avon Canal, or re-shipping or discharging their cargoes to be again laden, and pass or go up the said navigation or canal, but not discharging any part of their cargoes at the quays of Bristol for sale, the several rates or duties, according to the register tonnage of such vessels, following, viz.: —

	℔ ton. £	s.	d.
First Class. — For every vessel trading from Africa, Honduras, Surinam and other ports in South America, the United States of America, the East and West Indies, all the ports within the Straits of Gibraltar, and the Southern Whale Fishery -	0	3	0
Second Class. — For every vessel trading from the British Colonies, Portugal, Prussia, Russia, Spain without the Straits, and Sweden - - -	0	2	0
Third Class. — For every vessel trading from Flanders, France without the Straits, Germany, Guernsey, Holland, Jersey, Norway, Poland, and Zealand -	0	1	0
Fourth Class. — For every vessel trading from Ireland, the Isle of Man, and Scotland - - -	0	0	8
Fifth Class. — For every vessel employed as a coaster, except as aforesaid, not including vessels from Cardiff, Newport, and other ports to the eastward of the Holmes, at each entering into the said port -	0	0	6
For vessels from Cardiff, Newport, and other ports to the eastward of the Holmes (except as aforesaid), being market boats or vessels, having one third part at least of the lading consisting of coal, scruff, tin, iron, tin plates, grain, copper, bricks, stones, coal, tar, slate, bark, timber, or wood, and not exceeding 75 tons burden, each voyage - - -	0	5	0
——— if exceeding 75 tons burden, each voyage -	0	7	6
For all other vessels from Cardiff, Newport, and other ports to the eastward of the Holmes (except as aforesaid), if under 40 tons burden, each voyage -	0	7	6
——— if of 40 tons and under 75 tons burden, each voyage - - -	0	12	6
——— if 75 tons and under 100 tons burden, each -	0	16	
——— if 100 tons burden or upwards, each voyage	1	1	

The following is an estimate of the various expenses incurred by a West India ship of 500 tons, entering and discharging at Bristol: —

Inwards. — Anchorage, moorage, and lights about 6*d.* ℔ ton. — Dock dues 3*s.* ℔ do. — Pilotage 15*l.* to 25*l.* — Warner, 1*l.* 1*s.* — Mayor and quay wardens' fees, 2*l.* 5*s.* — Cranage, about 30*l.* — Labour discharging, 30*l.* to 40*l.* — Coopers' charges, from 50*l.* to 100*l.* The two last items depend greatly on the *condition* the cargo is in.

Outwards. — Lights, about 4*d.* ℔ ton. — Pilotage, 15*l.* to 20*l.*

Produce of the Dock Duties on Tonnage and Goods at Bristol, since 1835.

	1,088,680	915,655	786,180	727,560

Some of these must be considered as merely approximate values, but in most cases it is believed the amounts are rather *under* than *over* stated.

Previously to the year 1752 there was no pilotage in the Bristol Channel, the only charge of the kind being from Kingroad (at the mouth of the River Avon) to the quay; but in August, 1752, the Society of Merchant Venturers resolved that, owing to the unskilfulness of the Combe pilots, and the accidents frequently occurring to vessels bound to Bristol, a gratuity ought to be given, to encourage pilots of this port to meet vessels coming from sea, as far to the westward as possible. Several merchants signed an agreement, authorising the payment of the charges settled by the society; but the taking a pilot on board in the channel, remained perfectly optional with the masters of vessels until 1807, when the municipal corporation saw fit to include in the wharfage act certain compulsory provisions, which made it imperative on all vessels sailing in the Bristol Channel (except coasters and Irish traders) to take the first pilot on board who came alongside; and the master was to surrender the charge of the vessel into the hands of the pilot so offering himself. By the same act the regulation and licensing of pilots is confided solely to the corporation, who also assumed the power of regulating the sums which pilots shall charge for their services; but these powers the corporation has delegated to the merchant venturers, who now exercise them.

IV. Hull Docks, Shipping, etc.

There are three considerable docks in Hull; occupying, inclusive of their wharfs, quays, &c., an area of above 28 acres. The first of these docks was constructed in 1775, and the last in 1829. An act was passed last session of parliament (1843) for constructing a new dock to the east of the town. The old harbour, in the bed of the river Hull, which passes through the centre of the town, affords considerable accommodation for shipping; it is in contemplation to throw gates across its mouth, which will make it equivalent to another dock. Hull is the next port in the empire, after Bristol, or perhaps

Liverpool; for, although the customs duty collected in Hull be inferior to that of Bristol, it having amounted, in 1841, to only 667,241*l.* nett, she has a larger amount of shipping. In 1842, there belonged to the port 305 ships of 50 tons and upwards, having an aggregate burden of 65,637 tons, with 155 vessels of less than 50 tons; making a total of 460 ships and 71,637 tons, exclusive of 22 steamers, of the burden of 2,914 tons.

The commerce of Hull depends principally on her advantageous situation. She is the principal emporium of the extensive and fertile counties on the æstuary of the Humber, and of those traversed by the numerous and important rivers, including the Trent, Don, Ouse, &c., that have their embouchure in it. The natural facilities for internal communication thus enjoyed by Hull, have been greatly extended by artificial means. She is now united, partly by rivers and partly by canals, with Sheffield, Leeds, Manchester, Liverpool, &c.; so that she has become not merely the principal port for the W. Riding of Yorkshire, but also for a considerable portion of the trade carried on between Lancashire and the northern parts of the Continent. The great articles of export are cotton stuffs and twist, woollen goods, hardware, and earthenware, &c. The principal articles of import are wool, bones, timber, hemp and flax, corn, and seeds, madder, bark, turpentine, skins, &c. The rise of Goole has not been nearly so injurious to the trade of Hull as might have been supposed: and though she may, perhaps, sustain some injury from the privilege of bonding having been conferred on Gainsborough, her superior facilities for trade and navigation will always ensure for her a decided superiority over the other ports on the Humber and its affluents. Hull used to be very largely engaged in the N. whale fishery; but here, as every where else, that branch of industry has dwindled to almost nothing, only 2 vessels having left the port for the fishery in 1842. It is said, however, by those best acquainted with the town, that it has gained rather than lost by this decline. The risk and uncertainty of the whale-fishery made it little better than a gambling speculation, and tended to diffuse habits among the ship-owners and others connected with the port, that were not very consistent with the sober and steady exercise of industry. A regular intercourse is kept up, by steam packets, between Hull and London, and Hull and several of the Continental ports.

Harbour and Dock Dues.

	s.	d.
Vessels coming to or going between the port of Kingston upon Hull and any port to the N. of Yarmouth, in Norfolk, or any port to the southward of Holy Island, per ton	0	2
Vessels coming to or going between the port of Kingston-upon-Hull and any port between the N. Foreland and Shetland, on the east side of England, except as above	0	3
Vessels trading between the port of Kingston-upon-Hull and any other port in Great Britain, not before described	0	6
Vessels trading between the port of Kingston-upon-Hull and any port in the Baltic Seas, and all other ports above the Sound	1	3
Vessels trading between the port of Kingston upon-Hull and any port in Denmark, Sweden, or Norway below Elsinore, or any port in Germany, Holland, Flanders, France to the eastward of Ushant, Ireland, the Islands of Guernsey and Jersey	0	10
Vessels trading between the port of Kingston-upon-Hull and any island or port of Europe to the westward of Ushant, without the Straits of Gibraltar	1	3
Vessels trading between the port of Kingston-upon-Hull and every port in the W. Indies, N. or S. America, Africa, Greenland, or any place to the E. of the North Cape of Norway, all places within the Straits of Gibraltar, and all islands and places in the ocean to the S. of Cape St. Vincent, not herein-before mentioned	1	9
Vessels coming to or going (with merchandise) from any of the above-named ports, pay double the rates, tonnage, or duties, above mentioned, unless the said vessels belong to British owners.		
Vessels sailing coastwise or otherwise, and coming into the said haven in ballast to be laid up (coasting duty included)	0	6

The same rate of charges is made on vessels using the old harbour or roads.

The above rates are vested in the Dock Company, and are paid at the time of such vessel's entry inwards, or clearance or discharge outwards; or, in case any vessel shall not enter as aforesaid, then at any time before such vessel shall proceed from the port, at the Custom-house; so as no vessel shall be subject or liable to the payment of the rates or duties more than once for the same voyage, both out and home, notwithstanding such vessel may go out and return with a cargo.

Vessels forced into the port by the enemy, or by receiving damage at sea, or otherwise, and shall discharge in order to repair such damage, and reload the goods so discharged, are exempted from the above rates and duties, unless they make use of the dock or basin.

Vessels which come and go coastwise from any port in Great Britain, to or from any place up the rivers Trent or Ouse, within the limits of the port of Hull, to or from any other place up the said rivers Trent or Ouse, or from any other river which falls into the said rivers, or which shall trade between any such port in Great Britain and any such place as aforesaid within or up the said rivers, are also exempted from the above rates and duties, and may come into or go out of the said basin or dock, or any part of the harbour called Hull haven; or shall use the basin or dock, or quays within the harbour; or shall unload or put on shore, or load or take on board, any goods, wares, or merchandise, or any part of the cargo of any vessel, within any part of the river Humber.

N.B.—All ships coming to the port have to pay dock dues whether they make use of the docks or not. Goods inwards pay no dock dues unless landed upon quays or wharfs belonging to the Company. Goods outwards pay no dock dues.

Dues payable to the Corporation of Hull.

On Vessels entering inwards and outwards.

Anchorage. — Alien vessels under 100 tons burden, 1*s.* 6*d.*; 100 and under 200 tons, 2*s.*; 200 and upwards, 3*s.*

Jettage. — Under 100 tons, 13*s.* 6*d.*; if loads out more, 3*s.* 6*d.*; 100 and under 200 tons, 17*s.*; if loads out more, 5*s.*; 200 tons and upwards, 1*l.*; if loads out more, 7*s.*

Boulage. — For each pound sterling of the freight inwards, 2*d.*; and among the officers, per ship, 3*s.*

Ballast. — For each ton taken outwards, 2*d.*

			Anchorage.		Jettage. In.		Jettage. Out.	
			s.	d.	s.	d.	s.	d.
British vessels under	45	tons burden	1		1	6	1	0
—	40 and not	45	—		2	0	1	0
		50	1	6	2	0	1	6
—	50	— 100	1	6	2	6	2	6
—	100	— 150	2	0	3	6	3	6
—	150	— 200	2	0	4	6	4	0
—	200	— 250	2	6	5	0	5	0
—	250	— 300	2	6	6	0	6	0
—	300 and upwards		2	6	6	0	6	6

Freemen are exempt from anchorage, but freemen, as well as non-freemen, pay jettage. The charge for jettage is not made unless with goods landed at or taken in at Hull, or within the harbour.

British ships pay no hostage, and nothing for ballast.

Buoyage. — British vessels under 20 tons, 2*s.*; 20 tons and under 30, 2*s.* 6*d.*; and 6*d.* additional for every 10 tons. Foreign vessels under 65 tons, 11*s.*; 65 tons and under 135, 14*s.*; 135 tons and under 170, 17*s.*; 170 tons and under 180, 1*l.*; and 1*s.* additional for every 10 tons.

Ballast. — Sand, 1*s.* 4*d.* per ton; but vessels, by going a mile or two up the river, may get chalk for rather less, which is more valuable when discharged.

Depth of Water. — The access to the docks are either from the river Humber, or from the river Hull. The lock from the Humber into the Humber dock is capable of admitting, at spring tides, vessels drawing 26½ feet; and at neap tides, from 18 to 20 feet. The lock from the old harbour into the old dock is always 6 feet short of the water at the other lock: these depths depend much on the state of the winds and other natural causes.

Rates of Pilotage at Hull.

		Per Foot.
The distance at sea where the North Ness of Dimlington bears westsouth-west, to the northward of Kilnsea North Cliff.	Hawke Roads or Grimsby Roads Whitebooth Roads The port of Kingston-upon-Hull

Imperial Measure.

* Including the ship beset in the ice the previous year.

V. Dundee Docks, Shipping, &c.

Dundee, on the N side of the Frith of Tay, lat. 56° 28′ N., long. 2° 57′ 30″ W., 9 miles W. from Buttanness Point (on which there are two first-class light-houses, with *fixed* lights), has increased with extraordinary rapidity since the termination of the late war, and is now become the principal seat of the British linen manufacture, and has a very extensive trade. Down to 1815, the harbour was on a humble scale, and adapted only to a very limited commerce. Only one small pier existed. But in the year referred to, an act was obtained for separating the harbour from the other branches of the burgh revenue, for constructing an entirely new harbour, on a scale commensurate with the growing importance of the place, and for investing the management in a board of commissioners. Additional acts were obtained in 1830 and 1836; and the result of the measures thus set on foot has been, that Dundee can already boast of the completion of two wet docks, King William's, of 6¼, Earl Grey's, of 5¼, and of a tide harbour, of 4¾ acres, connected with them. The breadth of the lock of the former, to which is attached a splendid graving dock, is 40 feet; and that of the latter, which is fitted to admit steamers, 55 feet. A crane, reaching 28 feet from the face of the quay wall on which it is placed, and capable of raising 30 tons, is erected at this dock, so that every facility is afforded for taking out and putting in the boilers, &c. of the largest steam vessels. There is also a Morton slip attached to the tide harbour, on which three vessels may be placed at once. The vessels are hauled up by a steam-engine of 16 horse power: a ship of 800 tons may be placed on the slip; one of the Dundee steamers, the Perth, weighing, without her boilers, 596 tons, was lately repaired on it.

A wet dock of 14½ acres is now being constructed, the lock of which will be 60 feet. The harbour plan also embraces another wet dock of 9¼ acres, and the tide harbour between these docks will be of the extent of 11 acres. The quays are wide and spacious, affording berthage for above 65 vessels; and there are extensive and convenient carpenters' and other yards for ship building. The accommodation for the building and repairing of vessels is not surpassed in any port of the kingdom.

These splendid works had cost, in May, 1839, no less than 447,248*l.* 1*s.* 6½*d.*, of which 365,150*l.* 18*s.* 0½*d.* had been expended on the works, and 82,097*l.* 3*s.* 6*d.* paid as interest of money borrowed. The amount of shore dues and rents collected up to May, 1839, was 233,675*l.* 13*s.* 6*d.*, and the sum borrowed 213,572*l.* 8*s.* The sum allowed to be borrowed on the credit of the harbour is 230,000*l.* The revenue of the harbour from Martinmas, 1764, to 15th of July, 1815, when it was put under a parliamentary commission, was only 38,696*l.* 3*s.* 4½*d.*, and during this period the sum expended in maintaining it was 9,468*l.* 10*s.* 9*d.* The shore dues in 1765 yielded 126*l.*,

1775, 140*l.* 5*s.*; 1785, 490*l.*; 1795, 965*l.*; 1805, 1,272*l.* 10*s.*; 1814, 1701*l.* 10*s.* 3*d.* Their amount in the following years is seen in the Table below.

It is essential also to bear in mind, that while the income has rapidly increased, the rates of charge have been very considerably reduced. The customs revenue in the undermentioned years has been —

Years.	Revenue.	Years.	Revenue.
1792	£6,341 17 4	1839	£92,557 18 10
1833	48,647 12 1	1840	63,346 8 9
1837	76,150 1 3	1841	48,138 1 9
1838	78,026 15 4		

N.B. — This falling off in the customs duties was occasioned by the commercial difficulties in which the town was then involved, but which, happily, have now all but disappeared.

The number and tonnage of vessels belonging to the port at different periods has been —

Years.	No. of Vessels.	Tonnage.
1832	274	32,867
1837	318	41,501
1839	325	44,882

And on the 31st day of December, 1842, there belonged to the port 340 sailing vessels, of the aggregate burden of 51,448 tons: of these 279 were of the average burden of about 173 tons, while 61 were under 50 tons. There then also belonged to the port 9 steam-packets, 3 of which, engaged in the trade with London, are very fine vessels, and are splendidly fitted up for the accommodation of passengers.

Table showing the Size and Berthage of the Docks finished and projected at Dundee.

Name of Dock.	Acres.	Berthage in Feet.	Depth of Water. Springs.	Depth of Water. Neaps.	Remarks.
			ft. in.	ft. in.	
Earl Grey's dock	5½	2,645	18 8	13 6	These tides are an average of 8 years.
King William's dock	6¼	2,555	16 2	11 0	
Victoria dock	14½	3,550	18 8	13 6	The south wall of this dock is finished, the rest partly so.
Projected dock (east)	9½	2,645	18 8	13 6	
West tide harbour	4¾	1,580	18 8	13 6	
East tide harbour	11	2,010	18 8	13 6	Considerably advanced, and when it is finished it will contain 2190 ft. berthage.
Graving dock *	270 feet in length, 70 feet wide at top of walls, 35 feet at bottom				
Patent slip *	600 feet in length, capable of taking up a ship of 800 tons, worked by an engine of 16 horse power.				
Width of entrance — K. W. D.	40 feet length of lock, 160 feet betwixt the gates.				
Ditto E. G. D.	55 do. 215 do.				
Ditto Vic. D.	60 feet, — not finished.				

* The Graving dock and Patent slip are capable of taking 3 vessels on each at one time, each vessel being 350 tons.

The docks are accommodated with three sheds, having 15,400 sq. of floor, and seven cranes.

Imports. — The staple articles are flax and hemp, from foreign countries, and coals and lime, coastwise.

Exports. — Linens and linen yarn.

There was a progressive increase of trade at this port from 1815, being the commencement of the harbour improvements, down to the depression in 1839, from which it is now (1843) recovering.

An Account of the Dundee Harbour Revenue, from the Commencement of the Act for improving the Harbour, July 4th, 1815, to May 31st, 1843.

Periods.		Shore Dues. Scale by which levied.	Collected by the Trustees.	Received under Lease.	Total Share Dues.	Miscellaneous. Rental.	Graving Dock Dues.	Patent Slip Dues.	Shed Dues.	Crane Dues.	Sundries.	Total Miscellaneous.	Total Revenue.

Exports.				
Linens	pieces	144,398	717,070	572,672
Yarns	tons	none.	4,811	4,811

The export of yarn continues to increase, the quantity shipped during the year ending May, 1843, being 7,817 tons.

The number of vessels which entered the port of Dundee in 1839 was 4,305; registered tonnage, 281,992.

Statement of Tonnage Dues on Vessels entering the Harbour of Dundee.

	s.	d.
1. For all vessels navigating to the southward of the Tropic of Capricorn, per register ton	1	6
2. Between the Equator and the Tropic of Capricorn	1	3
3. Between the Tropic of Cancer and the Equator	1	0
4. To or from any port in North America, Greenland, Davis's Straits fisheries, and all within the Straits of Gibraltar	0	8
5. To or from any port to the north of Drontheim, in Norway, or from Azores, Madeira, or Teneriffe Islands	0	7
6. To or from any port between Gibraltar and Dunkirk, including Dunkirk, and from any port in the Baltic	0	5
7. To or from any port in Great Britain or Ireland, including the islands of Guernsey, Jersey, Alderney, Sark, Man, the Shetland Islands, and Orkneys	0	3
8. All vessels loaded with coals or lime only, from any port in Great Britain, &c., excepting Scotland	0	2
9. All vessels loaded with coals or lime only, from any port in Scotland	0	1½
10. All vessels employed in the River Tay, carrying goods and entering the precincts of the port or harbour of Dundee, per register ton	0	1½
11. All steam-vessels from any port in Great Britain, or places enumerated in No. 7., carrying passengers and their luggage exclusively	0	2
12. All steam vessels employed in the River Tay, carrying passengers and their luggage exclusively, and vessels trading from the harbour, or carrying passengers to any part within the precincts	0	1
13. All steam vessels carrying goods and passengers, to pay the same rates as sailing vessels.		

VI. Goole Docks, Shipping, etc.

The port of Goole, on the Ouse, a little above its junction with the Humber, about 22 miles more inland than Hull, has a considerable trade. Previously to 1820, Goole was but an insignificant hamlet. It communicates by means of canals with Liverpool, Manchester, Leeds, Wakefield, &c. Though so remote from the sea, vessels drawing 15 or 16 feet water, may, by taking advantage of the flood, reach Goole in safety. It has 2 wet docks and a basin. The first, or *ship dock*, is 800 feet long by 200 in breadth. The second, or *barge dock*, is 900 feet long by 150 in width, and is intended for the accommodation of the small craft which ply upon the canals and rivers. The warehouses at Goole are extensive and convenient; and it has been admitted to the privileges of a bonding port. There belonged to it, in 1842, 381 registered ships, of the burden of 24,281 tons, the majority of them being under 50 tons. The net customs revenue received at Goole in 1841 amounted to 59,810*l.*

VII. Leith Docks, Shipping, etc.

Leith, which may be called the port of Edinburgh, has 2 wet docks, containing more than 10 acres of water room, and capable of accommodating 150 such ships as frequent the port. There are also 3 dry docks contiguous to the wet docks.

These docks appear to have cost in all about 285,000*l.*, of which 265,000*l.* was borrowed from government. Very large sums have also been expended in the extension of the pier, now 3,000 feet in length, and in other works for the improvement of the port. The grand object of these works has been the deepening of the water in the harbour or channel leading to the docks; but after all that has been effected, the harbour is all but dry at low water, and there are only 19 feet water at the extremity of the pier at high-water spring tides, and 12 feet at neap tides. In fact, no vessel of above 700 tons burden can approach the harbour at the highest tides; and as the docks do not admit vessels of more than 400 tons, if vessels of larger burden enter the port they must ground at ebb tide. A late act provides that 125,000*l.* may be conditionally expended in further improving the harbour; but it is all but certain that the physical disadvantages under which it labours can never be successfully overcome; that Leith can never be anything better than a very indifferent tide harbour; and that the expenditure of further sums upon it would be a very questionable proceeding.

The harbour of Edinburgh should, in fact, have been constructed more to the W., at Trinity or Granton. Indeed, after much opposition on the part of Leith and Edinburgh, a bill was carried through parliament in 1837, for the construction of a low water pier at Trinity, ½ m. W. of the harbour of Leith; but various circumstances, which it is unnecessary to notice, make it pretty certain that no effort will be made to carry that measure into effect. Luckily, however, the Duke of Buccleuch has been for some years engaged in the construction of a low water pier on his estate of Granton, 1 m. W. of Leith; an undertaking of great national importance, and worthy of an individual of great wealth and public spirit. This splendid work, by far the greatest of its kind that has been attempted in Scotland, will, when completed, secure for Edinburgh all the advantages of a deep water harbour, accessible at all times. The pier, which is constructed in the most approved manner, is to project into the sea about 1700 feet, shaped like a T, with its head to the N., having harbours and landing-places on both sides. It has been partially open for about 5 years, but its business has hitherto been principally confined to the accommodation of steamers. The duke has erected, contiguous to the pier, a large edifice for a hotel, with warehouses and other buildings; and there can be little doubt that, in no very lengthened period, the principal part of the shipping business carried on at Leith will be transferred to Granton. The latter communicates, by an excellent road, with the New Town of Edinburgh.

But notwithstanding these unfavourable circumstances, the commerce of Leith, from its being the port of Edinburgh, is very considerable, and has been slowly but steadily improving. It carries on a limited trade with Australia, the E. and W. Indies, China, the Mediterranean, Canada, and the United States; but its chief foreign trade is with Holland and the N. of Europe. With regard to its domestic trade, there are three companies, who have altogether 18 vessels trading with London; and there are other companies which have vessels trading with Hull, Newcastle, Liverpool, Greenock, Glasgow, Aberdeen, Montrose, Wick, Helmsdale, Orkney, Shetland, Dundee, Stirling, &c. The communication by steam with London is twice a week during the entire year, but more vessels sail in summer than in winter. There is also a communication by steam with Newcastle and Hull twice a week; with Stirling twice a day; the opposite coast of Fife 3 times a day; and a regular communication with every important place on the E. of Scotland, from Lerwick in Shetland, and Kirkwall in Orkney, to Berwick-upon-Tweed. The steamers sail from Leith, Newhaven, the chain pier at Trinity, or Granton, but now mostly from the latter. Leith formerly sent 8 or 10 vessels to the Greenland whale fishery, but such has been the decline of the business that she no longer sends a single ship.

Account of the Vessels, with their Tonnage, that entered the Port of Leith from Foreign and Colonial Ports in the undermentioned Years.

Years.	British Vessels.	Tons.	Foreign Vessels.	Tons.	Years.	British Vessels.	Tons.	Foreign Vessels.	Tons.
1811	125	17,645	311	45,723	1839	224	39,433	253	21,426
1817	209	28,698	47	7,212	1840	294	48,524	416	38,330
1832	283	43,216	170	17,156	1841	337	51,348	588	49,892
1835	204	35,365	168	17,937	1842	269	44,541	281	23,654
1838	263	42,609	202	17,324					

Gross Amount of Customs' Dues collected at Leith during the following Years.

Years.	£	s.	d.	Years.	£	s.	d.
1836	514,974	3	5	1840	602,999	6	3
1837	525,402	19	3	1841	604,098	16	5
1838	511,970	6	8	1842	569,684	1	4
1839	573,685	13	7				

There belonged to Leith, in 1842, 140 vessels of 50 tons and upwards, and 105 of less than 50 tons, the aggregate burden of the former being 21,839, and of the latter 3,123 tons, exclusive of 6 large and 7 small steamers. The entries coastwise (exclusive of steamers) in the same year were 2,747 ships of the burden of 147,518 tons.

The *Dock Rates* at Leith are as follow: —

	₰ ton. s.	d.
For every ship or vessel, from any port between Buchanness and Eyemouth, including the great canal and the river Clyde, as far down as Greenock, coming by the canal	0	4
—— from any other port in Great Britain and Ireland	0	8
—— from Norway, Sweden, Denmark, Holstein, Hamburg, Bremen, Holland, and Flanders, that is, without the Baltic, and no further south than Dunkirk	0	10½
—— from the Baltic, all above the Sound, Onega, Archangel, Jersey or Guernsey, Portugal, France, and Spain, without the Straits of Gibraltar, Newfoundland, Madeira, or Western Islands	1	1½
—— from within the Straits of Gibraltar, or from America	1	4
—— from the West Indies, Asia, Africa, or the Cape de Verd Islands	1	8
—— from Greenland, or Davis's Straits	2	0
But if such ship or vessel shall make a second voyage, she shall be credited in the charge for such second voyage	0	4
For all ships and vessels (excepting those from Greenland or Davis's Straits) remaining in the dock above 3 calendar months, for each after-month, or any part thereof	0	2¼

	₰ ton. s.	d.
For all foreign vessels from any of the before-mentioned ports or places, the aforesaid respective rates and one half more.		
For all loaded vessels not breaking bulk, and for all vessels in ballast which do not take in goods, coming into the present harbour, provided they do not make use of any of the docks, nor remain in the harbour above 4 weeks, one half of the aforesaid rates or duties.		
For every ship or vessel going from the port of Leith to any other port in the Frith of Forth, to take in a part of a cargo, and return to Leith, upon her return	0	2
No ship or vessel shall be subjected in payment of the aforesaid rates and duties for more than 8 voyages in any 1 year.		
Flag, or Light Dues. — Every vessel, of whatever burden, from foreign ports	2	6
Every vessel of 40 tons burden and upwards, to pay for each coasting voyage	2	6
Beacon and anchorage, per ton	0	1½
This duty is only charged upon four fifths of the register		

DOG (Fr. *Chien*; Ger. *Hund*; It. *Cane*; Lat. *Canis familiaris*). Of this quadruped, emphatically styled "the friend and companion of man," there is a vast variety of species. But to attempt to give any description of an animal so well known, would be quite out of place in a work of this kind; and we mention it for the purpose principally of laying the following account before our readers, with a remark or two with respect to Asiatic dogs.

An Account of the Number of Dogs entered, and for which duty was paid in Great Britain, in the Year 1841; distinguishing the Number of Packs of Hounds, and the Number of each Description of Dog, the Rate of Duty on each, and the aggregate Amount paid.

Description of Dogs.	Rates of Duty.	Total Number.	Amount of Duty.
Greyhounds			
Pointers, hounds, setting dogs, spaniels, terriers, lurchers, & other dogs, where persons keep two or more dogs	0 14 0	108,470	
Other dogs; persons keeping one only	0 8 0	185,180	
Total, exclusive of packs of hounds			
Packs of hounds			

Cuvier, the great French naturalist, says, "The dog is the most complete, the most remarkable, and the most useful conquest ever made by man: every species has become our property; each individual is altogether devoted to his master, assumes his manners, knows and defends his goods, and remains attached to him until death; and all this proceeds neither from want nor constraint, but solely from true gratitude and real friendship. The swiftness, the strength, and the scent of the dog have created for man a powerful ally against other animals, and were, perhaps, necessary to the establishment of society. He is the only animal which has followed man through every region of the earth."

It is singular, however, that neither Cuvier, nor any one of those by whom his statements have been copied, should have mentioned that this account is applicable only to Europe. All Mohammedan nations regard the dog as impure, and will not touch it without an ablution. The same is also the case with the Hindoos. From the Hellespont to the confines of Cochin-China, dogs are unappropriated, and have no master. They prowl about the towns and villages; and though they are naturally more familiar, they are in no respect more domesticated, than the carrion crows, kites, vultures, &c. which assist them in performing the functions of scavengers. In China and Cochin-China, the dog is eaten as food; its flesh being, with the exception of that of the hog, the most common in their markets.

The unnecessary multiplication of dogs, particularly in large cities, is a very great nuisance: coming, as they often do, into the possession of those who are without the means of providing for them, they are frequently left to wander about in the streets; and from ill usage, want of food and of proper attention, are apt, during hot weather, to become rabid. In several districts of the metropolis the nuisance has attained to a formidable height; and it is singular, considering the numerous fatal occurrences that

have taken place, that no efforts should have been made to have it abated. It has grown to its present excess, partly from too many exemptions being granted from the duty, and partly from a want of care in its collection: but besides lessening the number of the former, and more rigidly enforcing the latter, it would be proper to enact that all dogs found wandering in the streets without masters should be destroyed.

DOWN (Ger. *Dunen, Flaumfedern;* Du. *Dons;* Fr. *Duvet;* It. *Penna matta, Piumini;* Sp. *Flujel, Plumazo;* Rus. *Puch;* Lat. *Plumæ*), the fine feathers from the breasts of several birds, particularly those of the duck kind. That of the eider duck is the most valuable. These birds pluck it from their breasts and line their nests with it. Mr. Pennant says that it is so very elastic, that a quantity of it weighing only ¾ of an ounce, more than fills the crown of the largest hat. That found in the nest is most valued, and termed *live down;* it is much more elastic than that plucked from the dead bird, which is comparatively little esteemed. The eider duck is found on the western islands of Scotland, but the down is principally imported from Norway and Iceland.

DRAGON'S BLOOD. See BALSAM.

DRAWBACK, a term used in commerce to signify the remitting or paying back of the duties previously paid on a commodity on its being exported.

A drawback is a device resorted to for enabling a commodity affected by taxes to be exported and sold in the foreign market on the same terms as if it had not been taxed at all. It differs in this from a bounty,—that the latter enables a commodity to be sold abroad for *less* than its natural cost, whereas a drawback enables it to be sold exactly at its natural cost. Drawbacks, as Dr. Smith has observed, "do not occasion the exportation of a greater quantity of goods than would have been exported had no duty been imposed. They do not tend to turn towards any particular employment a greater share of the capital of the country than would go to that employment of its own accord, but only to hinder the duty from driving away any part of that share to other employments. They tend not to overturn that balance which naturally establishes itself among all the various employments of the society; but to hinder it from being overturned by the duty. They tend not to destroy, but to preserve, what it is in most cases advantageous to preserve—the natural division and distribution of labour in the society."—(p. 221.)

Were it not for the system of drawbacks, it would be impossible, unless when a country enjoyed some very peculiar facilities of production, to export any commodity that was more heavily taxed at home than abroad. But the drawback obviates this difficulty, and enables merchants to export commodities loaded at home with heavy duties, and to sell them in the foreign market on the same terms as those fetched from countries where they are not taxed.

Most foreign articles imported into this country may be warehoused for subsequent exportation. In this case they pay no duties on being imported: and, of course, get no drawback on their subsequent exportation.

Sometimes a drawback exceeds the duty or duties laid on the article; and in such cases the *excess* forms a real bounty of that amount, and should be so considered.

It is enacted by the act 3 & 4 Will. 4. c. 52., that no drawback or bounty shall be allowed upon the exportation from the U. Kingdom of any goods, unless such goods shall have been entered in the name of the person who was the real owner thereof at the time of entry and shipping, or of the person who had actually purchased and shipped the same, in his own name and at his own liability and risk, on commission, according to the practice of merchants, and who was and shall have continued to be entitled in his own right to such drawback or bounty, except in the cases herein-after provided for.—§ 86.

No drawback shall be allowed upon the exportation of any goods, unless such goods be shipped within 3 years after the payment of the duties inwards thereon. And no debenture for any drawback or bounty upon the exportation of any goods, shall be paid after the expiration of 2 years from the shipment of such goods; and no drawback shall be allowed upon any goods which, by reason of damage or decay, shall have become of less value for home use than the amount of such drawback; and all goods so damaged which shall be cleared for drawback shall be forfeited; and the person who caused such goods to be so cleared shall forfeit 200*l.*, or treble the amount of the drawback, at the option of the commissioners of customs.—§ 90.

No drawback or bounty shall be allowed upon goods exported and cleared as being press-packed, unless the quantities and qualities of the same be verified by oath of the master packer thereof, or, in case of his unavoidable absence, by oath of his foreman.—§ 93.

No goods cleared for drawback or bounty, or from any warehouse, shall be carried to be put on board ship for exportation, except by a person authorised for that purpose by licence of the commissioners of customs.—§ 94.—(See IMPORTATION AND EXPORTATION.)

DUBBER, a leathern vessel, bottle, or jar, used in India to hold oil, ghee, &c. Barrels, as already observed—(see BARRELS),—are entirely a European invention. Liquids, in Eastern countries, are for the most part packed for exportation in leathern vessels. Dubbers are made of thin untanned goat skins; and are of all sizes, from a quart up to nearly a barrel.

DUNNAGE, in commercial navigation, loose wood, consisting of pieces of timber, boughs of trees, faggots, &c., laid in the bottom and against the sides of the ship's hold. either, 1st, by raising the cargo when she is loaded with heavy goods, to prevent her from becoming too stiff—(see BALLAST); or, 2d, to prevent the cargo, should it be

susceptible of damage by water, from being injured in the event of her becoming leaky. A ship is not reckoned seaworthy unless she be provided with proper and sufficient dunnage.—(*Falconer's Marine Dictionary; Abbott (Lord Tenterden) on the Law of Shipping*, part iii. c. 3.)

E.

EARNEST, in commercial law, is the sum advanced by the buyer of goods in order to bind the seller to the terms of the agreement. It is enacted by the 17th section of the famous Statute of Frauds, 29 Cha. II. c. 3., that "no contract for the sale of any goods, wares, and merchandises, for the prices of 10*l.* sterling or upwards, shall be allowed to be good, except the buyer shall accept part of the goods so sold, and actually receive the same, or give something in *earnest* to bind the bargain, or in part payment, or that some note or memorandum in writing of the said bargain be made and signed by the parties to be charged by such contract, or their agents thereunto lawfully authorised."

As to what amounts to sufficient earnest, Blackstone lays it down, that "if any part of the price is paid down, if it is but a penny, or any portion of the goods is delivered by way of earnest, it is binding." To constitute earnest, the thing must be given as a token of ratification of the contract, and it should be expressly stated so by the giver.—(*Chitty's Commercial Law*, vol. iii. p. 289.)

EARTHENWARE (Ger. *Irdene Waaren*; Du. *Aardegoed*; Fr. *Vaisselle de terre Poterie*; It. *Stoviglie, Terraglie*; Sp. *Loza de barro*; Rus. *Gorschetschniie possodü*; Pol. *Glinianœ naczynia*), or crockery, as it is sometimes termed, comprises every sort of household utensil made of clay hardened in the fire. Its manufacture is, in England, of very considerable importance; and the improvements that have been made in it since the middle of last century have contributed powerfully to its extension, and have added greatly to the comfort and convenience of all classes.

"There is scarcely," it has been well observed, "any manufacture which is so interesting to contemplate in its gradual improvement and extension as that of earthenware, presenting, as it does, so beautiful a union of science and art, in furnishing us with the comforts and ornaments of civilised life. Chemistry administers her part, by investigating the several species of earths, and ascertaining as well their most appropriate combinations as the respective degrees of heat which the several compositions require. Art has studied the designs of antiquity, and produced from them vessels even more exquisite in form than the models by which they have been suggested. The ware has been provided in such gradations of quality as to suit every station from the highest to the lowest. It is to be seen in every country, and almost in every house, through the whole extent of America, in many parts of Asia, and in most of the countries of Europe. At home it has superseded the less cleanly vessels of pewter and of wood, and, by its cheapness, has been brought within the means of our poorest housekeepers. Formed from substances originally of no value, the fabrication has induced labour of such various classes, and created skill of such various degrees, that nearly the whole value of the annual produce may be considered as an addition made to the mass of national wealth. The abundance of the ware exhibited in every dwelling-house is sufficient evidence of the vast augmentation of the manufacture, which is also demonstrated by the rapid increase of the population in the districts where the potteries have been established."—(*Quarterly Review.*)

For the great and rapid extension of the manufacture we are chiefly indebted to the late Mr. Josiah Wedgwood, whose original and inventive genius enabled him to make many most important discoveries in the art; and who was equally successful in bringing his inventions into use. The principal seat of the manufacture is in Staffordshire, where there is a district denominated the Potteries, comprising a number of villages, and a population which is supposed to amount, at this moment, to above 80,000, by far the greater proportion of which is engaged in the manufacture. There are no authentic accounts of the population of this district in 1760, when Mr. Wedgwood began his discoveries; but the general opinion is, that it did not at that time exceed 20,000. The village of Etruria, in the Potteries, was built by Mr. Wedgwood The manufacture has been carried on at Burslem, in the same district, for several centuries.

The canals by which Staffordshire is intersected have done much to accelerate the progress of the manufacture. Pipe-clay from Dorsetshire and Devonshire, and flints from Kent, are conveyed by water carriage to the places where the clay and coal abound; and the finished goods are conveyed by the same means to the great shipping ports, whence they are distributed over most parts of the globe.

It is estimated that the value of the various sorts of earthenware produced at the Potteries may amount to about 1,700,000*l.* a year; and that the earthenware produced at Worcester, Derby, and other parts of the country, may amount to about 750,000*l.*

more; making the whole value of the manufacture 2,450,000*l.* a year. The consumption of gold at the Potteries is about 700*l.* a week, and of coal about 9,000 tons a week.

The earthenware manufacture has increased considerably since 1814, but it is not possible to state the exact ratio. The prices of the different sorts of earthenware are said to have fallen 25 per cent. during the last 20 years. Wages have not fallen in the same proportion; but we are assured that a workman can, at the present day, produce about *four* times the quantity he did in 1790.

We subjoin an

Account of the Quantities and Declared Values of the Earthenware exported from the United Kingdom during each of the Five Years ending with 1841, specifying the Countries to which it was shipped, and the Quantity and Value of that shipped for each.

The above account sets the preponderance of the U. States as a market for earthenware in a very striking point of view. We have been assured that it is necessary to add ¼ to the declared value of the exports, to get their true value.

EAST INDIA COMPANY, a famous association, originally established for prosecuting the trade between England and India, which they acquired a right to carry on exclusively. Since the middle of last century, however, the Company's political have become of more importance than their commercial concerns.

East Indies, a popular geographical term not very well defined, but generally understood to signify the continents and islands to the east and south of the river Indus, as far as the borders of China, including Timor and the Moluccas, but excluding the Philippine Islands, New Guinea, and New Holland. China and the Philippine Islands were, however, included within the limits of the East India Company's peculiar privileges.

IV. East Indies (Extent, Population, Military Force, Revenue, etc. of British).

I. East India Company (Historical Sketch of).

The persevering efforts of the Portuguese to discover a route to India, by sailing round Africa, were crowned with success in 1497. And it may appear singular, that, notwithstanding the exaggerated accounts that had been prevalent in Europe, from the remotest antiquity, with respect to the wealth of India, and the importance to which the commerce with it had raised the Phœnicians and Egyptians in antiquity, the Venetians in the middle ages, and which it was then seen to confer on the Portuguese, the latter should have been allowed to monopolise it for nearly a century after it had been turned into a channel accessible to every nation. But the prejudices by which the people of most European states were actuated in the sixteenth century, and the peculiar circumstances under which they were placed, hindered them from embarking with that alacrity and ardour that might have been expected in this new commercial career.

Soon after the Portuguese began to prosecute their discoveries along the coast of Africa, they applied to the pope for a bull, securing to them the exclusive right to and possession of all countries occupied by infidels, they either had discovered, or might discover, to the south of Cape Non, on the west coast of Africa, in 27° 54′ north latitude: and the pontiff, desirous to display, and at the same time to extend, his power, immediately issued a bull to this effect. Nor, preposterous as a proceeding of this sort would now appear, did any one then doubt that the pope had a right to issue such a bull, and that all states and empires were bound to obey it. In consequence, the Portuguese were, for a lengthened period, allowed to prosecute their conquests in India without the interference of any other European power. And it was not till a considerable period after the beginning of the war, which the blind and brutal bigotry of Philip II. kindled in the Low Countries, that the Dutch navigators began to display their flag on the Eastern Ocean, and laid the foundations of their Indian empire.

The desire to comply with the injunctions in the pope's bull, and to avoid coming into collision, first with the Portuguese, and subsequently with the Spaniards, who had conquered Portugal in 1580, seems to have been the principal cause that led the English to make repeated attempts, in the reigns of Henry VIII. and Edward VI., and the early part of the reign of Elizabeth, to discover a route to India by a north-west or north-east passage; channels from which the Portuguese would have had no pretence for excluding them. But these attempts having proved unsuccessful, and the pope's bull having ceased to be of any effect in this country, the English merchants and navigators resolved to be no longer deterred by the imaginary rights of the Portuguese from directly entering upon what was then reckoned by far the most lucrative and advantageous branch of commerce. Captain Stephens, who performed the voyage in 1582, was the first Englishman who sailed to India by the Cape of Good Hope. The voyage of the famous Sir Francis Drake contributed greatly to diffuse a spirit of naval enterprise, and to render the English better acquainted with the newly opened route to India. But the voyage of the celebrated Mr. Thomas Cavendish was, in the latter respect, the most important. Cavendish sailed from England in a little squadron, fitted out at his own expense, in July, 1586; and having explored the greater part of the Indian Ocean, as far as the Philippine Islands, and carefully observed the most important and characteristic features of the people and countries which he visited, returned to England, after a prosperous navigation, in September, 1588. Perhaps, however, nothing contributed so much to inspire the English with a desire to embark in the Indian trade, as the captures that were made, about this period, from the Spaniards. A Portuguese East India ship, or carrack, captured by Sir Francis Drake, during his expedition to the coast of Spain, inflamed the cupidity of the merchants by the richness of her cargo, at the same time that the papers found on board gave specific information respecting the traffic in which she had been engaged. A still more important capture, of the same sort, was made in 1593. An armament, fitted out for the East Indies by Sir Walter Raleigh, and commanded by Sir John Borroughs, fell in, near the Azores, with the largest of all the Portuguese carracks, a ship of 1,600 tons burden, carrying 700 men and 36 brass cannon; and, after an obstinate conflict, carried her into Dartmouth. She was the largest vessel that had been seen in England; and her cargo, consisting of gold, spices, calicoes, silks, pearls, drugs, porcelain, ivory, &c., excited the ardour of the English to engage in so opulent a commerce.

In consequence of these and other concurring causes, an association was formed in London, in 1599, for prosecuting the trade to India. The adventurers applied to the queen for a charter of incorporation, and also for power to exclude all other English subjects, who had not obtained a licence from them, from carrying on any species of traffic beyond the Cape of Good Hope or the Straits of Magellan. As exclusive companies were then very generally looked upon as the best instruments for prosecuting most branches of commerce and industry, the adventurers seem to have had little difficulty in obtaining their charter, which was dated the 31st of December, 1660. The corporation was entitled "The Governor and Company of Merchants of London trading into the East Indies:" the first governor (Thomas Smythe, Esq.) and 24 directors were nominated in the charter; but power was given to the Company to elect a deputy governor, and, in future, to elect their governor and directors, and such other office-bearers as they might think fit to appoint. They were empowered to make by-laws; to inflict punishments, either corporal or pecuniary, provided such punishments were in accordance with the laws of England; to export all sorts of goods free of duty for 4 years; and to export foreign coin, or bullion, to the amount of 30,000*l.* a year, 6,000*l.* of the same being previously coined at the mint; but they were obliged to import, within 6 months after the completion of every voyage, except the first, the same quantity of silver, gold, and foreign coin that they had exported. The duration of the charter was limited to a period of 15 years; but with and under the condition that, if it were not found for the public advantage, it might be cancelled at any time upon 2

years' notice being given. Such was the origin of the British East India Company,—the most celebrated commercial association of ancient or modern times, and which has now extended its sway over the whole of the Mogul empire.

It might have been expected that, after the charter was obtained, considerable eagerness would have been manifested to engage in the trade. But such was not the case. Notwithstanding the earnest calls and threats of the directors, many of the adventurers could not be induced to come forward to pay their proportion of the charges incident to the fitting out of the first expedition. And as the directors seem either to have wanted power to enforce their resolutions, or thought it better not to exercise it, they formed a subordinate association, consisting of such members of the Company as were really willing to defray the cost of the voyage, and to bear all the risks and losses attending it, on condition of their having the exclusive right to whatever profits might arise from it. And it was by such subordinate associations that the trade was conducted during the first 13 years of the Company's existence.

The first expedition to India, the cost of which amounted, ships and cargoes included, to 69,091*l.*, consisted of 5 ships, the largest being 600 and the smaller 130 tons burden. The goods put on board were principally bullion, iron, tin, broad cloths, cutlery, glass, &c. The chief command was intrusted to Captain James Lancaster, who had already been in India. They set sail from Torbay on the 13th of February, 1601. Being very imperfectly acquainted with the seas and countries they were to visit, they did not arrive at their destination, Acheen in Sumatra, till the 5th of June, 1602. But though tedious, the voyage was, on the whole, uncommonly prosperous. Lancaster entered into commercial treaties with the kings of Acheen and Bantam; and having taken on board a valuable cargo of pepper and other produce, he was fortunate enough, in his way home, to fall in with and capture, in concert with a Dutch vessel, a Portuguese carrack of 900 tons burden, richly laden. Lancaster returned to the Downs on the 11th of September, 1603.—(*Modern Universal History*, vol. x. p. 16.; *Macpherson's Commerce of the European Powers with India*, p. 81.)

But notwithstanding the favourable result of this voyage, the expeditions fitted out in the years immediately following, though sometimes consisting of larger ships, were not, at an average, materially increased. In 1612, Captain Best obtained from the court at Delhi several considerable privileges; and, amongst others, that of establishing a factory at Surat; which city was, henceforth, looked upon as the principal British station in the west of India, till the acquisition of Bombay.

In establishing factories in India, the English only followed the example of the Portuguese and Dutch. It was contended, that they were necessary to serve as *depôts* for the goods collected in the country for exportation to Europe, as well as for those imported into India, in the event of their not meeting with a ready market on the arrival of the ships. Such establishments, it was admitted, are not required in civilised countries; but the peculiar and unsettled state of India was said to render them indispensable there. Whatever weight may be attached to this statement, it is obvious that factories formed for such purposes could hardly fail of speedily degenerating into a species of forts. The security of the valuable property deposited in them furnished a specious pretext for putting them in a condition to withstand an attack; while the agents, clerks, warehousemen, &c. formed a sort of garrison. Possessing such strong holds, the Europeans were early emboldened to act in a manner quite inconsistent with their character as merchants; and but a very short time elapsed before they began to form schemes for monopolising the commerce of particular districts, and acquiring territorial dominion.

Though the Company met with several heavy losses during the earlier part of their traffic with India, from shipwrecks and other unforeseen accidents, and still more from the hostility of the Dutch, yet, on the whole, the trade was decidedly profitable. There can, however, be little doubt, that their gains, at this early period, have been very much exaggerated. During the first 13 years, they are said to have amounted to 132 per cent. But then it should be borne in mind, as Mr. Grant has justly stated, that the voyages were seldom accomplished in less than 30 months, and sometimes extended to 3 or 4 years: and it should further be remarked, that, on the arrival of the ships at home, the cargoes were disposed of at long credits of 18 months or 2 years; and that it was frequently even 6 or 7 years before the concerns of a single voyage were finally adjusted.—(*Sketch of the History of the Company*, p. 13.) When these circumstances are taken into view, it will immediately be seen that the Company's profits were not, really, by any means so great as has been represented. It may not, however, be uninstructive to remark, that the principal complaint that was then made against the Company did not proceed so much on the circumstance of its charter excluding the public from any share in an advantageous traffic, as in its authorising the Company to export gold and silver of the value of 30,000*l.* a year. It is true that the charter stipulated that the Company should import an equal quantity of gold and silver within 6 months of the termination of every voyage: but the enemies of the Company contended that this condition was not complied

with; and that it was, besides, highly injurious to the public interest, and *contrary to all principle*, to allow gold and silver to be sent out of the kingdom. The merchants and others interested in the support of the Company could not controvert the reasoning of their opponents, without openly impugning the ancient policy of absolutely preventing the exportation of the precious metals. They did not, however, venture to contend, if the idea really occurred to them, that the exportation of bullion to the East was advantageous, on the broad ground of the commodities purchased by it being of greater value in England. But they contended that the exportation of bullion to India was advantageous, because the commodities thence imported were chiefly re-exported to other countries from which a much greater quantity of bullion was obtained than had been required to pay for them in India. Mr. Thomas Mun, a director of the East India Company, and the ablest of its early advocates, ingeniously compares the operations of the merchant in conducting a trade carried on by the exportation of gold and silver to the seed time and harvest of agriculture. "If we only behold," says he, "the actions of the husbandman in the seed time, when he casteth away much good corn into the ground, we shall account him rather a madman than a husbandman. But when we consider his labours in the harvest, which is the end of his endeavours, we find the worth and plentiful increase of his actions." — (*Treasure by Foreign Trade*, p. 50. ed. 1664.)

We may here remark, that what has been called the *mercantile system* of political economy, or that system which measures the progress of a country in the career of wealth by the supposed balance of payments in its favour, or by the estimated excess of the value of its exports over that of its imports, appears to have originated in the excuses now set up for the exportation of bullion. Previously to this epoch, the policy of prohibiting the exportation of bullion had been universally admitted; but it now began to be pretty generally allowed, that its exportation might be productive of advantage, provided it occasioned the subsequent exportation of a greater amount of raw or manufactured products to countries whence bullion was obtained for them. This, when compared with the previously existing prejudice — for it hardly deserves the name of system — which wholly interdicted the exportation of gold and silver, must be allowed to be a considerable step in the progress to sounder opinions. The maxim, *ce n'est que le premier pas qui coute*, was strikingly verified on this occasion. The advocates of the East India Company began gradually to assume a higher tone, and, at length, boldly contended that bullion was nothing but a commodity, and that its exportation should be rendered as free as that of any thing else. Nor were these opinions confined to the partners of the East India Company. They were gradually communicated to others; and many eminent merchants were taught to look with suspicion on several of the previously received dogmas with respect to commerce, and were, in consequence, led to acquire more correct and comprehensive views. The new ideas ultimately made their way into the House of Commons; and, in 1663, the statutes prohibiting the exportation of foreign coin and bullion were repealed, and full liberty given to the East India Company and to private traders to export them in unlimited quantities.

But the objection to the East India Company, or rather the East India trade, on the ground of its causing the exportation of gold and silver, admitted of a more direct and conclusive, if not a more ingenious reply. How compendious soever the ancient intercourse with India by the Red Sea and the Mediterranean, it was unavoidably attended with a good deal of expense. The productions of the remote parts of Asia, brought to Ceylon, or the ports on the Malabar coast, by the natives, were there put on board the ships which arrived from the Arabic gulph. At Berenice they were landed, and carried by camels 250 miles to the banks of the Nile. They were there again embarked, and conveyed down the river to Alexandria, whence they were despatched to different markets. The addition to the price of goods by such a multiplicity of operations must have been considerable; more especially as the price charged on each operation was fixed by monopolists, subject to no competition or control. Pliny says, that the cost of the Arabian and Indian products brought to Rome when he flourished (A. D. 70), was increased a hundred fold by the expenses of transit — (*Hist. Nat.* lib. vi. c. 23.); but there can be little or no doubt that this is to be regarded as a rhetorical exaggeration. — (See *antè*, p. 18.) There are good grounds for thinking that the less bulky sorts of Eastern products, such as silk, spices, balsams, precious stones, &c., which were those principally made use of at Rome, might, supposing there were no political obstacles in the way, be conveyed from most parts of India to the ports on the Mediterranean by way of Egypt, at a decidedly cheaper rate than they could be conveyed to them by the Cape of Good Hope.

But at the period when the latter route to India began to be frequented, Syria, Egypt, &c. were occupied by Turks and Mamelukes; barbarians who despised commerce and navigation, and were, at the same time, extremely jealous of strangers, especially of Christians or infidels. The price of the commodities obtained through the intervention of such persons was necessarily very much enhanced; and the discovery of

the route by the Cape of Good Hope was, consequently, of the utmost importance; for, by putting an end to the monopoly enjoyed by the Turks and Mamelukes, it introduced, for the first time, something like competition into the Indian trade, and enabled the western parts of Europe to obtain supplies of Indian products for about a third part of what they had previously cost. Mr. Mun, in a tract published in 1621, estimates the quantity of Indian commodities imported into Europe, and their cost when bought in Aleppo and in India, as follows: —

Cost of Indian commodities consumed in Europe when bought in Aleppo (or Alexandria).

	£	s.	d.
6,000,000 lbs. pepper cost, with charges, &c. at Aleppo 2*s.* per lb.	600,000	0	0
450,000 lbs. cloves, at 4*s.* 9*d.*	106,[illegible]	10	0
150,000 lbs. mace, at 4*s.* 9*d.*	35,[illegible]	0	0
400,000 lbs. nutmegs, at 2*s.* 4*d.*	46,666	2	4
350,000 lbs. indigo, at 4*s.* 4*d.*	75,833	6	8
1,000,000 lbs. Persian raw silk, at 12*s.*	600,000	0	0
	£1,465,000	19	0

But the same quantities of the same commodities cost, when bought in the East Indies, according to Mr. Mun, as follows: —

	£	s.	d.
6,000,000 lbs. pepper, at 2¼*d.* per lb.	62,500	0	0
450,000 lbs. cloves, at 9*d.*	16,875	0	0
150,000 lbs. mace, at 8*d.*	5,000	0	0
400,000 lbs. nutmegs, at 4*d.*	6,666	13	4
350,000 lbs. indigo, at 1*s.* 2*d.*	20,416	12	4
1,000,000 lbs. raw silk, at 8*s.*	400,000	0	0
	£511,458	5	8

Which being deducted from the former, leaves a balance of 953,542*l.* 13*s.* 4*d.* And supposing that the statements made by Mr. Mun are correct, and that allowance is made for the difference between the freight from Aleppo and India, the result would indicate the saving which the discovery of the route by the Cape of Good Hope occasioned in the purchase of the above-mentioned articles. — (*A Discourse of Trade from England to the East Indies*, by T. M., original ed. p. 10. This tract, which is very scarce, is reprinted in Purchas's Pilgrims.)

In the same publication (p. 37.), Mr. Mun informs us that, from the beginning of the Company's trade to July, 1620, they had sent 79 ships to India; of which 34 had come home safely and richly laden, 4 had been worn out by long service in India, 2 had been lost in careening, 6 had been lost by the perils of the sea, and 12 had been captured by the Dutch. Mr. Mun further states, that the exports to India, since the formation of the Company, had amounted to 840,376*l.*; that the produce brought from India had cost 356,288*l.*, and had produced here the enormous sum of 1,914,600*l.*; that the quarrels with the Dutch had occasioned a loss of 84,088*l.*; and that the stock of the Company, in ships, goods in India, &c., amounted to 400,000*l.*

The hostility of the Dutch, to which Mr. Mun has here alluded, was long a very formidable obstacle to the Company's success. The Dutch early endeavoured to obtain the exclusive possession of the spice trade, and were not at all scrupulous about the means by which they attempted to bring about this their favourite object. The English, on their part, naturally exerted themselves to obtain a share of so valuable a commerce; and as neither party was disposed to abandon its views and pretensions, the most violent animosities grew up between them. In this state of things, it would be ridiculous to suppose that unjustifiable acts were not committed by the one party as well as the other; though the worst act of the English appears venial, when compared with the conduct of the Dutch in the massacre at Amboyna, in 1622. While, however, the Dutch Company was vigorously supported by the government at home, the English Company met with no efficient assistance from the feeble and vacillating policy of James and Charles. The Dutch either despised their remonstrances, or defeated them by an apparent compliance; so that no real reparation was obtained for the outrages they had committed. During the civil war, Indian affairs were necessarily lost sight of: and the Dutch continued, until the ascendancy of the republican party had been established, to reign triumphant in the East, where the English commerce was nearly annihilated.

But notwithstanding their depressed condition, the Company's servants in India laid the foundation, during the period in question, of the settlements at Madras and in Bengal. Permission to build Fort St. George was obtained from the native authorities in 1640. In 1658, Madras was raised to the station of a presidency. In 1645, the Company beg[illegible]o establish factories in Bengal; the principal of which was at Hooghly. These were, for a lengthened period, subordinate to the presidency at Madras.

No sooner, however, had the civil wars terminated, than the arms and councils of Cromwell retrieved the situation of our affairs in India. The war which broke out between the long parliament and the Dutch, in 1652, was eminently injurious to the latter In the treaty of peace, concluded in 1654, it was stipulated that indemnification

should be made by the Dutch for the losses and injuries sustained by the English merchants and factors in India. The 27th article bears, "that the Lords, the states-general of the United Provinces, shall take care that justice be done upon those who were partakers or accomplices in the massacre of the English at Amboyna, as the republic of England is pleased to term that fact, provided any of them be living." A commission was at the same time appointed, conformably to another article of the treaty, to inquire into the reciprocal claims which the subjects of the contracting parties had upon each other for losses sustained in India, Brazil, &c.; and, upon their decision, the Dutch paid the sum of 85,000*l.* to the East India Company, and 3,615*l.* to the heirs or executors of the sufferers at Amboyna. — (*Bruce's Annals*, vol. i. p. 489.)

The charter under which the East India Company prosecuted their exclusive trade to India, being merely a grant from the Crown, and not ratified by any act of parliament, was understood by the merchants to be at an end when Charles I. was deposed. They were confirmed in this view of the matter, from the circumstance of Charles having himself granted, in 1635, a charter to Sir William Courten and others, authorising them to trade with those parts of India with which the Company had not established any regular intercourse. The reasons alleged in justification of this measure, by the Crown, were, that "the East India Company had neglected to establish fortified factories, or seats of trade, to which the king's subjects could resort with safety; that they had consulted their own interests only, without any regard to the king's revenue; and in general, that they had broken the condition on which their charter and exclusive privileges had been granted to them."—(*Rym. Fœdera*, vol. xx. p. 146.)

Courten's association, for the foundation of which such satisfactory reasons had been assigned, continued to trade with India during the remainder of Charles's reign; and no sooner had the arms of the Commonwealth forced the Dutch to desist from their depredations, and to make reparation for the injuries they had inflicted on the English in India, than private adventurers engaged in great numbers in the Indian trade, and carried it on with a zeal, economy, and success, that monopoly can never expect to rival. It is stated in a little work, entitled *Britannia Languens*, published in 1680, the author of which has evidently been a well-informed and intelligent person, that during the years 1653, 1654, 1655, and 1656, when the trade to India was open, the private traders imported East India commodities in such large quantities, and sold them at such reduced prices, that they not only fully supplied the British markets, but had even come into successful competition with the Dutch in the market of Amsterdam, "and very much sunk the actions (shares) of the Dutch East India Company."— (p. 132.) This circumstance naturally excited the greatest apprehensions on the part of the Dutch Company; for, besides the danger that they now ran of being deprived, by the active competition of the English merchants, of a considerable part of the trade which they had previously enjoyed, they could hardly expect that, if the trade were thrown open in England, the monopoly would be allowed to continue in Holland. A striking proof of what is now stated is to be found in a letter in the third volume of *Thurlow's State Papers*, dated at the Hague, the 15th of January, 1654, where it is said, that "the merchants of Amsterdam have advice that the Lord Protector intends to dissolve the East India Company at London, and to declare the navigation and commerce of the East Indies free and open: which doth cause great jealously at Amsterdam, *as a thing that will very much prejudice the East India Company in Holland.*"

Feeling that it was impossible to contend with the private adventurers under a system of fair competition, the moment the treaty with the Dutch had been concluded, the Company began to solicit a renewal of their charter; but in this they were not only opposed by the free traders, but by a part of themselves. To understand how this happened, it may be proper to mention that Courten's association, the origin of which has been already noticed, had begun, in 1648, to found a colony in Assuda, an island near Madagascar. The Company, alarmed at this project, applied to the council of state to prevent its being carried into effect; and the council, without entering on the question of either party's rights, recommended them to form a union; which was accordingly effected in 1649. But the union was, for a considerable time, rather nominal than real; and when the Dutch war had been put an end to, most of those holders of the Company's stock who had belonged to Courten's association joined in petitioning the council of state that the trade might in future be carried on, not by a joint stock, but by a *regulated* company; so that each individual engaging in it might be allowed to employ his own stock, servants, and shipping, in whatever way he might conceive most for his own advantage. — (*Petition of Adventurers*, 17th of Nov. 1656; *Bruce's Annals*, vol. i. p. 518.)

This proposal was obviously most reasonable. The Company had always founded their claim to a monopoly of the trade on the alleged ground of its being necessary to maintain forts, factories, and ships of war in India; and that as this was not done by government, it could only be done by a Company. But, by forming the traders with India into a regulated company, they might have been subjected to whatever rules were

considered most advisable; and such special duties might have been laid on the commodities they exported and imported, as would have sufficed to defray the public expenses required for carrying on the trade, at the same time that the inestimable advantages of free competition would have been secured; each individual trader being left at liberty to conduct his enterprises, subject only to a few general regulations, in his own way and for his own advantage. — (See COMPANIES.)

But notwithstanding the efforts of the petitioners, and the success that was clearly proved to have attended the operations of the private traders, the Company succeeded in obtaining a renewal of their charter from Cromwell in 1657. Charles II. confirmed this charter in 1661; and at the same time conferred on them the power of making peace or war with any power or people *not of the Christian religion*; of establishing fortifications, garrisons, and colonies; of exporting ammunition and stores to their settlements duty free; of seizing and sending to England such British subjects as should be found trading to India without their leave; and of exercising civil and criminal jurisdiction in their settlements, according to the laws of England. Still, however, as this charter was not fully confirmed by any act of parliament, it did not prevent traders, or interlopers as they were termed, from appearing within the limits of the Company's territories. The energy of private commerce, which, to use the words of Mr. Orme, "sees its drift with eagles' eyes," formed associations at the risk of trying the consequence at law, being safe at the outset, and during the voyage, since the Company were not authorised to stop or seize the ships of those who thus attempted to come into competition with them. Hence their monopoly was by no means complete; and it was not till after the Revolution, and when a free system of government had been established at home, that, by a singular contradiction, the authority of parliament was interposed to enable the Company wholly to engross the trade with the East.

In addition to the losses arising from this source, the Company's trade suffered severely, during the reign of Charles II., from the hostilities that were then waged with the Dutch, and from the confusion and disorders caused by contests among the native princes; but in 1668 the Company obtained a very valuable acquisition in the island of Bombay. Charles II. acquired this island as a part of the marriage portion of his wife, Catharine of Portugal; and it was now made over to the Company, on condition of their not selling or alienating it to any persons whatever, except such as were subjects of the British crown. They were allowed to legislate for their new possession; but it was enjoined that their laws should be consonant to reason, and "as near as might be" agreeable to the practice of England. They were authorised to maintain their dominion by force of arms; and the natives of Bombay were declared to have the same liberties as natural-born subjects. The Company's western presidency was soon after transferred from Surat to Bombay.

In 1664, the French East India Company was formed; and 10 years afterwards they laid the foundation of their settlement at Pondicherry.

But the reign of Charles II. is chiefly memorable in the Company's annals, from its being the æra of the commencement of the tea trade. The first notice of tea in the Company's records is found in a despatch, addressed to their agent at Bantam, dated 24th of January, 1667-8, in which he is desired to send home 100 lbs. of tea, "the best he can get."— (*Bruce's Annals*, vol. ii. p. 210.) Such was the late and feeble beginning of the tea trade; a branch of commerce that has long been of vast importance to the British nation; and without which, it is more than probable that the East India Company would long since have ceased to exist, at least as a mercantile body.

In 1677, the Company obtained a fresh renewal of their charter; receiving at the same time an indemnity for all past misuse of their privileges, and authority to establish a mint at Bombay.

During the greater part of the reigns of Charles II. and James II. the Company's affairs at home were principally managed by the celebrated Sir Josiah Child, the ablest commercial writer of the time; and in India, by his brother Sir John Child. In 1681, Sir Josiah published an apology for the Company, under the signature of Φιλοπατρις — "A Treatise wherein is demonstrated that the East India Trade is the most National of all Foreign Trades:" in which, besides endeavouring to vindicate the Company from the objections that had been made against it, he gives an account of its state at the time. From this account it appears that the Company consisted of 556 partners; that they had from 35 to 36 ships, of from 775 to 100 tons, employed in the trade between England and India, and from port to port in India — (p. 23.); that the customs duties upon the trade amounted to about 60,000*l.* a year; and that the value of the exports, "in lead, tin, cloth, and stuffs, and other commodities of the production and manufacture of England," amounted to about 60,000*l.* or 70,000*l.* a year. Sir Josiah seems to have been struck, as he well might, by the inconsiderable amount of the trade; and he therefore dwells on the advantages of which it was indirectly productive, in enabling us to obtain supplies of raw silk, pepper, &c. at a much lower price than they would otherwise have fetched.

But this, though true, proved nothing in favour of the Company; it being an admitted fact, that those articles were furnished at a still lower price by the interlopers or private traders.

Sir Josiah Child was one of the first who projected the formation of a territorial empire in India. But the expedition fitted out in 1686, in the view of accomplishing this purpose, proved unsuccessful; and the Company were glad to accept peace on the terms offered by the Mogul. Sir John Child, having died during the course of these transactions, was succeeded in the principal management of the Company's affairs in India by Mr. Vaux. On the appointment of the latter, Sir Josiah Child, to whom he owed his advancement, exhorted him to act with vigour, and to carry whatever instructions he might receive from home into immediate effect. Mr. Vaux returned for answer, that he should endeavour to acquit himself with integrity and justice, and that he would make the laws of his country the rule of his conduct. Sir Josiah Child's answer to this letter is curious: — "He told Mr. Vaux roundly that he expected his orders were to be his rules, and not the laws of England, which were a heap of nonsense, compiled by a few ignorant country gentlemen, who hardly knew how to make laws for the good government of their own private families, much less for the regulating of companies and foreign commerce." — (*Hamilton's New Account of the East Indies*, vol. i. p. 282.)

During the latter part of the reign of Charles II. and that of his successor, the number of private adventurers, or interlopers, in the Indian trade, increased in an unusual degree. The Company vigorously exerted themselves in defence of what they conceived to be their rights; and the question with respect to the validity of the powers conferred on them by their charter was at length brought to issue, by a prosecution carried on at their instance against Mr. Thomas Sandys, for trading to the East Indies without their licence. Judgment was given in favour of the Company in 1685. But this decision was ascribed to corrupt influence; and instead of allaying, only served to increase the clamour against them. The meeting of the Convention Parliament gave the Company's opponents hopes of a successful issue to their efforts; and had they been united, they might probably have succeeded. Their opinions were, however, divided — part being for throwing the trade open, and part for the formation of a new company on a more liberal footing. The latter being formed into a body, and acting in unison, the struggle against the Company was chiefly carried on by them. The proceedings that took place on this occasion are amongst the most disgraceful in the history of the country. The most open and unblushing corruption was practised by all parties. — "*It was, in fact, a trial which side should bribe the highest; public authority inclining to one or other as the irresistible force of gold directed.*" — (*Modern Universal History*, vol. x. p. 127.) Government appears, on the whole, to have been favourable to the Company; and they obtained a fresh charter from the Crown in 1693. But in the following year the trade was virtually laid open by a vote of the House of Commons, "that all the subjects of England had an equal right to trade to the East Indies, unless prohibited by act of parliament." Matters continued on this footing till 1698. The pecuniary difficulties in which government was then involved, induced them to apply to the Company for a loan of 2,000,000*l.*, for which they offered 8 per cent. interest. The Company offered to advance 700,000*l.* at 4 per cent.; but the credit of government was at the time so low, that they preferred accepting an offer from the associated merchants, who had previously opposed the Company, of the 2,000,000*l.* at 8 per cent., on condition of their being formed into a new and exclusive company. While this project was in agitation, the advocates of free trade were not idle, but exerted themselves to show that, instead of establishing a new Company, the old one ought to be abolished. But, however conclusive, their arguments, having no adventitious recommendations in their favour, failed of making any impression. The new Company was established by authority of the legislature; and as the charter of the old Company was not yet expired, the novel spectacle was exhibited of two legally constituted bodies, each claiming an exclusive right to the trade of the same possessions!

Notwithstanding all the pretensions set up by those who had obtained the new charter during their struggle with the old Company, it was immediately seen that they were as anxious as the latter to suppress every thing like free trade. They had not, it was obvious, been actuated by any enlarged views, but merely by a wish to grasp at the monopoly, which they believed would redound to their own individual interest. The public, in consequence, became equally disgusted with both parties; or, if there were any difference, it is probable that the new Company was looked upon with the greatest aversion, inasmuch as we are naturally more exasperated by what we conceive to be duplicity and bad faith, than by fair undisguised hostility.

At first the mutual hatred of the rival associations knew no bounds. But they were not long in perceiving that such conduct would infallibly end in their ruin; and that while one was labouring to destroy the other, the friends of free trade might step in and

procure the dissolution of both. In consequence, they became gradually reconciled; and in 1702, having adjusted their differences, they resolved to form themselves into one company, entitled *The United Company of Merchants of England trading to the East Indies.*

The authority of parliament was soon after interposed to give effect to this agreement. The United Company engaged to advance 1,200,000*l.* to government without interest, which, as a previous advance had been made of 2,000,000*l.* at 8 per cent., made the total sum due to them by the public 3,200,000*l.*, bearing interest at 5 per cent.; and government agreed to ratify the terms of their agreement, and to extend the charter to the 25th of March, 1726, with 3 years' notice.

While those important matters were transacting at home, the Company had acquired some additional possessions in India. In 1692, the Bengal agency was transferred from Hooghly to Calcutta. In 1698, the Company acquired a grant from one of the grandsons of Aurengzebe, of Calcutta and 2 adjoining villages; with leave to exercise judiciary powers over the inhabitants, and to erect fortifications. These were soon after constructed, and received, in compliment to William III., then king of England, the name of Fort William. The agency at Bengal, which had hitherto been subsidiary only, was now raised to the rank of a presidency.

The vigorous competition that had been carried on for some years before the coalition of the old and new Companies, between them and the private traders, had occasioned a great additional importation of Indian silks, piece goods, and other products, and a great reduction of their price. These circumstances occasioned the most vehement complaints amongst the home manufacturers, who resorted to the arguments invariably made use of on such occasions by those who wish to exclude foreign competition; affirming that manufactured India goods had been largely substituted for those of England; that the English manufacturers had been reduced to the cruel necessity either of selling nothing, or of selling their commodities at such a price as left them no profit; that great numbers of their workmen had been thrown out of employment; and, last of all, that Indian goods were not bought by British goods, but by gold and silver, the exportation of which had caused the general impoverishment of the kingdom! The merchants and others interested in the India trade could not, as had previously happened to them in the controversy with respect to the exportation of bullion, meet these statements without attacking the principles on which they rested, and maintaining, in opposition to them, that it was for the advantage of every people to buy the products they wanted in the cheapest market. This just and sound principle was, in consequence, enforced in several petitions presented to parliament by the importers of Indian goods; and it was also enforced in several able publications that appeared at the time. But these arguments, how unanswerable soever they may now appear, had then but little influence; and in 1701, an act was passed, prohibiting the importation of Indian manufactured goods for home consumption.

For some years after the re-establishment of the Company, it continued to prosecute its efforts to consolidate and extend its commerce. But the unsettled state of the Mogul empire, coupled with the determination of the Company to establish factories in every convenient situation, exposed their affairs to perpetual vicissitudes. In 1715, it was resolved to send an embassy to Delhi, to solicit from Furucksur, an unworthy descendant of Aurengzebe, an extension and confirmation of the Company's territory and privileges. Address, accident, and the proper application of *presents*, conspired to ensure the success of the embassy. The grants or patents solicited by the Company were issued in 1717. They were in all 34. The substance of the privileges they conferred was, that English vessels wrecked on the coasts of the empire should be exempt from plunder; that the annual payment of a stipulated sum to the government of Surat should free the English trade at that port from all duties and exactions; that those villages contiguous to Madras formerly granted and afterwards refused by the government of Arcot, should be restored to the Company; that the island of Diu, near the port of Masulipatam, should belong to the Company, paying for it a fixed rent; that in Bengal, all persons, whether European or native, indebted or accountable to the Company, should be delivered up to the presidency on demand; that goods of export or import, belonging to the English, might, under a *dustuck* or passport from the president of Calcutta, be conveyed duty free through the Bengal provinces; and that the English should be at liberty to purchase the lordship of 37 towns contiguous to Calcutta, and in fact commanding both banks of the river for 10 miles south of that city. — (*Grant's Sketch of the History of the East India Company*, p. 128.)

The important privileges thus granted were long regarded as constituting the great charter of the English in India. Some of them, however, were not fully conceded; but were withheld or modified by the influence of the emperor's lieutenants, or soubahdars.

In 1717, the Company found themselves in danger from a new competitor. In the course of that year some ships appeared in India, fitted out by private adventurers from

Ostend. Their success encouraged others to engage in the same line; and in 1722, the adventurers were formed into a company under a charter from his Imperial Majesty. The Dutch and English Companies, who had so long been hostile to each other, at once laid aside their animosities, and joined heartily in an attempt to crush their new competitors. Remonstrances being found ineffectual, force was resorted to; and the vessels of the Ostend Company were captured, under the most frivolous pretences, in the open seas and on the coasts of Brazil. The British and Dutch governments abetted the selfish spirit of hostility displayed by their respective Companies. And the emperor was, in the end, glad to purchase the support of Great Britain and Holland to the pragmatic sanction, by the sacrifice of the Company at Ostend.

Though the Company's trade had increased, it was still inconsiderable, and it is very difficult, indeed, when one examines the accounts that have from time to time been published of the Company's mercantile affairs, to imagine how the idea ever came to be entertained that their commerce was of any considerable, much less paramount, importance. At an average of the 10 years ending with 1724, the total value of the British manufactures and other products annually exported to India amounted to only 92,410*l.* 12*s.* 6*d.* The average value of the bullion annually exported, during the same period, amounted to 518,102*l.* 11*s.* 0*d.*; making the total annual average exports 617,513*l.* 3*s.* 10*d.*; — a truly pitiful sum, when we consider the wealth, population, and industry of the countries between which the Company's commerce was carried on; and affording, by its smallness, a strong presumptive proof of the effect of the monopoly in preventing the growth of the trade.

In 1730, though there were 3 years still unexpired of the Company's charter, a vigorous effort was made by the merchants of London, Bristol, and Liverpool, to prevent its renewal. It has been said that the gains of the Company, had they been exactly known, would not have excited any very envious feelings on the part of the merchants; but, being concealed, they were exaggerated; and the boasts of the Company as to the importance of their trade contributed to spread the belief that their profits were enormous, and consequently stimulated the exertions of their opponents. Supposing, however, that the real state of the case had been known, there was still enough to justify the utmost exertions on the part of the merchants; for the limited profits made by the Company, notwithstanding their monopoly, were entirely owing to the misconduct of their agents, which they had vainly endeavoured to restrain; and to the waste inseparable from such unwieldy establishments.

The merchants, on this occasion, followed the example that had been set by the petitioners for free trade in 1656. They offered, in the first place, to advance the 3,200,000*l.* lent by the Company to the public, on more favourable terms; and, in the second place, they proposed that the subscribers to this loan should be formed into a *regulated* company, for opening the trade, under the most favourable circumstances, to all classes of their countrymen.

It was not intended that the Company should trade upon a joint stock, and in their corporate capacity, but that every individual who pleased should trade in the way of private adventure. The Company were to have the charge of erecting and maintaining the forts and establishments abroad; and for this, and for other expenses attending what was called the enlargement and preservation of the trade, it was proposed that they should receive a duty of 1 per cent. upon all exports to India, and of 5 per cent. upon all imports from it. For ensuring obedience to this and other regulations, it was to be enacted, that no one should trade to India without licence from the Company; and it was proposed that 31 years, with 3 years' notice, should be granted as the duration of their peculiar privilege.

"It appears from this," says Mr. Mill, "that the end which was proposed to be answered, by incorporating such a company, was the preservation and erection of the forts, buildings, and other fixed establishments, required for the trade of India. This company promised to supply that demand which has always been held forth as peculiar to the India trade, as the grand exigency which, distinguishing the traffic with India from all other branches of trade, rendered monopoly advantageous in that peculiar case, how much soever it might be injurious in others. While it provided for this real or pretended want, it left the trade open to all the advantages of private enterprise, private vigilance, private skill, and private economy, — the virtues by which individuals thrive and nations prosper. And it gave the proposed company an interest in the careful discharge of its duty by making its profits increase in exact proportion with the increase of the trade, and, of course, with the facilities and accommodation by which the trade was promoted.

"Three petitions were presented to the House of Commons in behalf of the proposed company, by the merchants of London, Bristol, and Liverpool. It was urged that the proposed company would, through the competition of which it would be productive, cause a great extension of the trade; that it would produce a larger exportation

of our own produce and manufactures in India, and reduce the price of all Indian commodities to the people at home; that new channels of traffic would be opened in Asia and America, as well as in Europe; that the duties of customs and excise would be increased; and that the waste and extravagance caused by the monopoly would be entirely avoided."— (*Mill's India*, vol. iii. p. 37.)

But these arguments did not prevail. The Company magnified the importance of their trade; and contended that it would be unwise to risk advantages already realised, for the sake of those that were prospective and contingent. They alleged that, if the trade to India were thrown open, the price of goods in India would be so much enhanced by the competition of different traders, and their price in England so much diminished, that the freedom of the trade would certainly end in the ruin of all who had been foolish enough to adventure in it. To enlarge on the fallacy of these statements would be worse than superfluous. It is obvious that nothing whatever could have been risked, and that a great deal would have been gained, by opening the trade in the way that was proposed. And if it were really true that the trade to India ought to be subjected to a monopoly, lest the traders, by their competition should ruin each other, it would follow that the trade to America — and not that only, but every branch both of the foreign and home trade of the empire — should be surrendered to exclusive companies. But such as the Company's arguments were, they seemed satisfactory to parliament. They, however, consented to reduce the interest on the debt due to them by the public from 5 to 4 per cent., and contributed a sum of 200,000*l.* for the public service. On these conditions it was agreed to extend their exclusive privileges to Lady-day, 1766, with the customary addition of 3 years' notice.

For about 15 years from this period, the Company's affairs went on without any very prominent changes. But notwithstanding the increased importation of tea, the consumption of which now began rapidly to extend, their trade continued to be comparatively insignificant. At an average of the 8 years ending with 1741, the value of the British goods and products of all sorts, exported by the Company to India and China, amounted to only 157,944*l.* 4*s.* 7*d.* a year! And during the 7 years ending with 1748, they amounted to only 188,176*l.* 16*s.* 4*d.* And when it is borne in mind that these exports included the military stores of all sorts forwarded to the Company's settlements in India and at St. Helena, the amount of which was, at all times, very considerable, it does appear exceedingly doubtful whether the Company really exported, during the entire period from 1730 to 1748, 150,000*l.* worth of British produce as a legitimate mercantile adventure! Their trade, such as it was, was entirely carried on by shipments of bullion; and even its annual average export, during the 7 years ending with 1748, only amounted to 548,711*l.* 19*s.* 2*d.* It would seem, indeed, that the Company had derived no perceptible advantage from the important concessions obtained from the Mogul emperor in 1717. But the true conclusion is, not that these concessions were of little value, but that the deadening influence of monopoly had so paralysed the Company, that they were unable to turn them to account; and that, though without competitors, and with opulent kingdoms for their customers, their commerce was hardly greater than that carried on by some single merchants.

In 1732, the Company were obliged to reduce their dividend from 8 to 7 per cent., at which rate it continued till 1744.

The opposition the Company had experienced from the merchants, when the question as to the renewal of their charter was agitated, in 1730, made them very desirous to obtain the next renewal in as quiet a manner as possible. They therefore proposed, in 1743, when 23 years of their charter were yet unexpired, to lend 1,000,000*l.* to government, at 3 per cent., provided their exclusive privileges were extended to 1780, with the usual notice. And, as none were expecting such an application, or prepared to oppose it, the consent of government was obtained without difficulty.

But the period was now come, when the mercantile character of the East India Company — if, indeed, it could with propriety be, at any time, said to belong to them — was to be eclipsed by their achievements as a military power, and the magnitude of their conquests. For about two centuries after the European powers began their intercourse with India, the Mogul princes were regarded as amongst the most opulent and powerful of monarchs. Though of a foreign lineage — being descended from the famous Tamerlane, or Timur Bec, who overran India in 1400 — and of a different religion from the great body of their subjects, their dominion was firmly established in every part of their extensive empire. The administration of the different provinces was committed to officers, denominated soubahdars, or nabobs, intrusted with powers, in their respective governments, similar to those enjoyed by the Roman prætors. So long as the emperors retained any considerable portion of the vigour and bravery of their hardy ancestors, the different parts of the government were held in due subordination, and the soubahdars yielded a ready obedience to the orders from Delhi. But the emperors were gradually debauched by the apparently prosperous condition of their affairs.

Instead of being educated in the council or the camp, the heirs of almost unbounded power were brought up in the slothful luxury of the seraglio; ignorant of public affairs; benumbed by indolence; depraved by the flattery of women, of eunuchs, and of slaves; their minds contracted with their enjoyments; their inclinations were vilified by their habits; and their government grew as vicious, as corrupt, and as worthless as themselves. When the famous Kouli Khan, the usurper of the Persian throne, invaded India, the effeminate successor of Tamerlane and Aurengzebe was too unprepared to oppose, and too dastardly to think of avenging the attack. This was the signal for the dismemberment of the monarchy. No sooner had the invader withdrawn, than the soubahdars either openly threw off their allegiance to the emperor, or paid only a species of nominal or mock deference to his orders. The independence of the soubahdars was very soon followed by wars amongst themselves; and, being well aware of the superiority of European troops and tactics, they anxiously courted the alliance and support of the French and English East India Companies. These bodies, having espoused different sides, according as their interests or prejudices dictated, began very soon to turn the quarrels of the soubahdars to their own account. Instead of being contented, as hitherto, with the possession of factories and trading towns, they aspired to the dominion of provinces; and the struggle soon came to be, not which of the native princes should prevail, but whether the English or the French should become the umpires of India.

But these transactions are altogether foreign to the subject of this work; nor could any intelligible account of them be given without entering into lengthened statements. We shall only, therefore, observe that the affairs of the French were ably conducted by La Bourdonnais, Dupleix, and Lally, officers of distinguished merit, and not less celebrated for their great actions than for the base ingratitude of which they were the victims. But though victory seemed at first to incline to the French and their allies, the English affairs were effectually retrieved by the extraordinary talents and address of a single individual. Colonel (afterwards Lord) Clive was equally brave, cautious, and enterprising; not scrupulous in the use of means; fertile in expedients; endowed with wonderful sagacity and resolution; and capable of turning even the most apparently adverse circumstances to advantage. Having succeeded in humbling the French power in the vicinity of Madras, Clive landed at Calcutta in 1757, in order to chastise the soubahdar, Surajah ul Dowlah, who had a short while before attacked the English factory at that place, and inhumanly shut up 146 Englishmen in a prison, where, owing to the excessive heat and want of water, 123 perished in a single night. Clive had only 700 European troops and 1,400 Sepoys with him when he landed; but with these, and 570 sailors furnished by the fleet, he did not hesitate to attack the immense army commanded by the soubahdar, and totally defeated him in the famous battle of Plassey. This victory threw the whole provinces of Bengal, Bahar, and Orissa into our hands; and they were finally confirmed to us by the treaty negotiated in 1765.

Opinion has been long divided as to the policy of our military operations in India; and it has been strenuously contended, that we should never have extended our conquests beyond the limits of Bengal. The legislature seems to have taken this view of the matter; the House of Commons having resolved, in 1782, "that to pursue schemes of conquest and extent of dominion in India are measures repugnant to the wish, the honour, and the policy of this nation." But others have argued, and apparently on pretty good grounds, that, having gone thus far, we were compelled to advance. The native powers, trembling at the increase of British dominion, endeavoured, when too late, to make head against the growing evil. In this view they entered into combinations and wars against the English; and the latter having been uniformly victorious, their empire necessarily went on increasing, till all the native powers have been swallowed up in its vast extent.

The magnitude of the acquisitions made by Lord Clive powerfully excited the attention of the British public. Their value was prodigiously exaggerated; and it was generally admitted that the Company had no legal claim to enjoy, during the whole period of their charter, all the advantages resulting from conquests, to which the fleets and armies of the state had largely contributed. In 1767, the subject was taken up by the House of Commons; and a committee was appointed to investigate the whole circumstances of the case, and to calculate the entire expenditure incurred by the public on the Company's account. During the agitation of this matter, the right of the Company to the new conquests was totally denied by several members. In the end, however, the question was compromised by the Company agreeing to pay 400,000*l.* a year for 2 years; and in 1769, this agreement, including the yearly payment, was further extended for 5 years more. The Company, at the same time, increased their dividend, which had been fixed by the former agreement at 10, to 12½ per cent.

But the Company's anticipations of increased revenue proved entirely visionary. The rapidity of their conquests in India, the distance of the controlling authority at home,

and the abuses in the government of the native princes, to whom the Company had succeeded, conspired to foster a strong spirit of peculation among their servants. Abuses of every sort were multiplied to a frightful extent. The English, having obtained, or rather enforced, an exemption from those heavy transit duties to which the native traders were subject, engrossed the whole internal trade of the country. They even went so far as to decide what quantity of goods each manufacturer should deliver, and what he should receive for them. It is due to the directors to say, that they exerted themselves to repress these abuses. But their resolutions were neither carried into effect by their servants in India, nor sanctioned by the proprietors at home; so that the abuses, instead of being repressed, went on acquiring fresh strength and virulence. The resources of the country were rapidly impaired; and while many of the Company's servants returned to Europe with immense fortunes, the Company itself was involved in debt and difficulties; and, so far from being able to pay the stipulated sum of 400,000*l.* a year to government, was compelled to apply, in 1772, to the Treasury for a loan!

In this crisis of their affairs, government interposed, and a considerable change was made in the constitution of the Company. The dividend was restricted to 6 per cent., till the sum of 1,400,000*l.*, advanced to them by the public, should be paid. It was further enacted, that the court of directors should be elected for 4 years, 6 members annually, but none to hold their seats for more than 4 years at a time; that no person was to vote at the courts of proprietors who had not possessed his stock for 12 months; and that the amount of stock required to qualify for a vote should be increased from 500*l.* to 1,000*l.* The jurisdiction of the Mayor's Court at Calcutta was in future confined to small mercantile cases; and, in lieu of it, a new court was appointed, consisting of a chief justice and 3 principal judges appointed by the Crown. A superiority was also given to Bengal over the other presidencies, Mr. Warren Hastings being named in the act as governor-general of India. The governor-general, councillors, and judges were prohibited from having any concern whatever in trade; and no person residing in the Company's settlements was allowed to take more than 12 per cent. per annum for money. Though strenuously opposed, these measures were carried by a large majority.

At this period (1773) the total number of proprietors of East India stock, with their qualifications as they stood in the Company's book, were as follows: —

	Proprietors.	Stock. £	s.	d.
Englishmen, possessing 1,000*l.* stock and upwards	487	1,018,398	19	11
Foreigners, possessing 1,000*l.* stock and upwards	325	890,940	17	0
Englishmen, possessing 500*l.* stock and upwards	1,246	634,464	1	8
Foreigners, possessing 500*l.* stock and upwards	95	50,226	0	0
Total	2,153	£2,594,029	18	7

Notwithstanding the vast extension of the Company's territories, their trade continued to be apparently insignificant. During the 3 years ending with 1773, the value of the entire exports of British produce and manufactures, including military stores, exported by the Company to India and China, amounted to 1,469,411*l.*, being at the rate of 489,803*l.* a year; the annual exports of bullion during the same period being only 84,933*l.*! During the same 3 years, 23 ships sailed annually for India. The truth, indeed, seems to be, that, but for the increased consumption of tea in Great Britain, the Company would have entirely ceased to carry on any branch of trade with the East; and that the monopoly would have excluded us as effectually from the markets of India and China as if the trade had reverted to its ancient channels, and the route by the Cape of Good Hope been relinquished.

In 1781, the exclusive privileges of the Company were extended to 1791, with 3 years' notice; the dividend on the Company's stock was fixed at 8 per cent.; three fourths of their surplus revenues, after paying the dividend, and the sum of 400,000*l.* payable to government, was to be applied to the public service, and the remaining fourth to the Company's own use.

In 1780, the value of British produce and manufactures exported by the Company to India and China amounted to only 386,152*l.*; the bullion exported during the same year was 15,014*l.* The total value of the exports during the same year was 12,648,616*l.*; showing that the East India trade formed only *one thirty-second* part of the entire foreign trade of the empire!

The administration of Mr. Hastings was one continued scene of war, negotiation, and intrigue. The state of the country, instead of being improved, became worse; so much so, that in a council minute by Marquis Cornwallis, dated the 18th of September, 1789, it is distinctly stated, "*that one third part of the Company's territory is now a jungle for wild beasts.*" Some abuses in the conduct of their servants were, indeed, rectified; but, notwithstanding, the nett revenue of Bengal, Bahar, and Orissa, which, in 1772, had amounted to 2,126,766*l.*, declined, in 1785, to 2,072,963*l.* This exhaustion of the country, and the expenses incurred in the war with Hyder Ally and France, involved

the Company in fresh difficulties; and being unable to meet them, they were obliged, in 1783, to present a petition to parliament, setting forth their inability to pay the stipulated sum of 400,000*l.* a year to the public, and praying to be excused from that payment and to be supported by a loan of 900,000*l.*

All parties seemed now to be convinced that some further changes in the constitution of the Company had become indispensable. In this crisis, Mr. Fox brought forward his famous India Bill; the grand object of which was to abolish the courts of directors and proprietors, and to vest the government of India in the hands of 7 commissioners appointed by parliament. The coalition between Lord North and Mr. Fox having rendered the ministry exceedingly unpopular, advantage was taken of the circumstance to raise an extraordinary clamour against the bill. The East India Company stigmatised it as an invasion of their chartered rights; though it is obvious that, from their inability to carry into effect the stipulations under which those rights were conceded to them, they necessarily reverted to the public; and it was as open to parliament to legislate upon them as upon any other question. The political opponents of the government represented the proposal for vesting the nomination of commissioners in the legislature, as a daring invasion of the prerogative of the Crown, and an insidious attempt of the minister to render himself all-powerful, by adding the patronage of India to that already in his possession. The bill was, however, carried through the House of Commons; but, in consequence of the ferment it had excited, and the avowed opposition of his Majesty, it was thrown out in the House of Lords. This event proved fatal to the coalition ministry. A new one was formed, with Mr. Pitt at its head; and parliament being soon after dissolved, the new minister acquired a decisive majority in both Houses. When thus secure of parliamentary support, Mr. Pitt brought forward his India Bill, which was successfully carried through all its stages. By this bill a Board of Control was erected, consisting of 6 members of the privy council, who were "to check, superintend, and control all acts, operations, and concerns, which in anywise relate to the civil or military government, or revenues, of the territories and possessions of the East India Company." All communications to or from India, touching any of the above matters, were to be submitted to this Board; the directors being ordered to yield obedience to its commands, and to alter or amend all instructions sent to India as directed by it. A secret committee of 3 directors was formed, with which the Board of Control might transact any business it did not choose to submit to the court of directors. Persons returning from India were to be obliged, under very severe penalties, to declare the amount of their fortunes; and a tribunal was appointed for the trial of all individuals accused of misconduct in India, consisting of a judge from each of the Courts of King's Bench, Common Pleas, and Exchequer; 5 members of the House of Lords, and 7 members of the House of Commons; the last being chosen by lot at the commencement of each session. The superintendence of all commercial matters continued, as formerly, in the hands of the directors.

During the administration of Marquis Cornwallis, who succeeded Mr. Hastings, Tippoo Saib, the son of Hyder Ally, was stripped of nearly half his dominions; the Company's territorial revenue was, in consequence, greatly increased; at the same time that the permanent settlement was carried into effect in Bengal, and other important changes accomplished. Opinion has been long divided as to the influence of these changes. On the whole, however, we are inclined to think that they have been decidedly advantageous. Lord Cornwallis was, beyond all question, a sincere friend to the people of India; and laboured earnestly, if not always successfully, to promote their interests, which he well knew were identified with those of the British nation.

During the 3 years ending with 1793, the value of the Company's exports of British produce and manufactures fluctuated from 928,783*l.* to 1,031,262*l.* But this increase is wholly to be ascribed to the reduction of the duty on tea in 1784, and the vast increase that, consequently, took place in its consumption. —(See article Tea.) Had the consumption of tea continued stationary, there appear no grounds for thinking that the Company's exports in 1793 would have been greater than in 1780, unless an increase had taken place in the quantity of military stores exported.

In 1793, the Company's charter was prolonged till the 1st of March, 1814. In the act for this purpose, a species of provision was made for opening the trade to India to private individuals. All his Majesty's subjects, residing in any part of his European dominions, were allowed to export to India any article of the produce or manufacture of the British dominions, except military stores, ammunition, masts, spars, cordage, pitch, tar, and copper; and the Company's civil servants in India, and the free merchants resident there, were allowed to ship, on their own account and risk, all kinds of Indian good, except calicoes, dimities, muslins, and other piece goods. But neither the merchants in England, nor the Company's servants or merchants in India, were allowed to export or import except in Company's ships. And in order to insure such conveyance, it was enacted, that the Company should annually appropriate 3,000 tons of shipping for

the use of private traders; it being stipulated that they were to pay, in time of peace, *5l.* outwards, and *15l.* homewards, for every ton occupied by them in the Company's ships; and that this freight might be raised in time of war, with the approbation of the Board of Control.

It might have been, and, indeed, most probably was, foreseen that very few British merchants or manufacturers would be inclined to avail themselves of the privilege of sending out goods in Company's ships; or of engaging in a trade fettered on all sides by the jealousy of powerful monopolists, and where, consequently, their superior judgment and economy would have availed almost nothing. As far, therefore, as they were concerned, the relaxation was more apparent than real, and did not produce any useful results.* It was, however, made use of to a considerable extent by private merchants in India; and also by the Company's servants returning from India, many of whom invested a part, and some the whole, of their fortune, in produce fit for the European markets.

The financial difficulties of the East India Company led to the revolution which took place in its government in 1784. But, notwithstanding the superintendence of the Board of Control, its finances have continued nearly in the same unprosperous state as before. We have been favoured, from time to time, with the most dazzling accounts of revenue that was to be immediately derived from India; and numberless acts of parliament have been passed for the appropriation of surpluses that never had any existence except in the imagination of their framers. The proceedings that took place at the renewal of the charter, in 1793, afford a striking example of this. Lord Cornwallis had then concluded the war with Tippoo Saib, which had stripped him of half his dominions: the perpetual settlement, from which so many benefits were expected to be derived, had been adopted in Bengal; and the Company's receipts had been increased, in consequence of accessions to their territory, and subsidies from native princes, &c., to upwards of *eight* millions sterling a year, which, it was calculated, would afford a future annual surplus, after every description of charge had been deducted, of 1,240,000*l.* Mr. Dundas (afterwards Lord Melville), then president of the Board of Control, availed himself of these favourable appearances, to give the most flattering representation of the Company's affairs. There could, he said, be no question as to the permanent and regular increase of the Company's surplus revenue; he assured the House that the estimates had been framed with the greatest care; that the Company's possessions were in a state of prosperity till then unknown in India; that the abuses, which had formerly insinuated themselves into some departments of the government, had been rooted out; and that the period was at length arrived, when India was to pour her golden treasures into the lap of England! Parliament participated in these brilliant anticipations, and in the act prolonging the charter it was enacted, 1st, That 500,000*l.* a year of the surplus revenue should be set aside for reducing the Company's debt in India to 2,000,000*l.*; 2dly, That 500,000*l.* a year should be paid into the exchequer, to be appropriated for the public service as parliament should think fit to order; 3dly, When the India debt was reduced to 2,000,000*l.*, and the bond debt to 1,500,000., *one sixth* part of the surplus was to be applied to augment the dividends, and the other *five sixths* were to be paid into the Bank, in the name of the commissioners of the national debt, to be accumulated as a *guarantee fund*, until it amounted to 12,000,000*l.*; and when it reached that sum, the dividends upon it were to be applied to make up the dividends on the capital stock of the Company to 10 per cent., if at any time the funds appropriated to that purpose should prove deficient, &c.

Not one of these anticipations was realised! Instead of being diminished, the Company's debts began immediately to increase. In 1795, they were authorised to add to the amount of their floating debt. In 1796, a new device to obtain money was fallen upon. Mr. Dundas represented that as all competition had been destroyed in consequence of the war, the Company's commerce had been greatly increased, and that their mercantile capital had become insufficient for the extent of their transactions. In consequence of this representation, leave was given to the Company to add *two millions* to their capital stock by creating 20,000 new shares; but as these shares sold at the rate of 173*l.* each, they produced 3,460,000*l.* In 1797, the Company issued additional bonds to the extent of 1,417,000*l.*; and notwithstanding all this, Mr. Dundas stated in the House of Commons, on the 13th of March, 1799, that there had been a deficit in the previous year of 1,319,000*l.*

During the administration of the Marquis Wellesley, which began in 1797–8 and terminated in 1805–6, the British empire in India was augmented by the conquest of Seringapatam and the whole territories of Tippoo Saib, the cession of large tracts by

* In his letter to the East India Company, dated the 21st of March, 1812, Lord Melville says: "It will not be denied that the facilities granted by that act (the act of 1793) have not been satisfactory, at least to the merchants either of this country or of India. They have been the source of constant dispute, and they have even entailed a heavy expense upon the Company, without affording to the public any adequate benefit from such a sacrifice."— (*Papers published by E. I. Comp.* 1813, p. 84.)

the Mahratta chiefs, the capture of Delhi, the ancient seat of the Mogul empire, and various other important acquisitions; so that the revenue, which had amounted to 8,059,000*l.* in 1797, was increased to 15,403,000*l.* in 1805. But the expenses of government, and the interest of the debt, increased in a still greater proportion than the revenue, having amounted, in 1805, to 17,672,000*l.*, leaving a deficit of 2,269,000*l.* In the following year the revenue fell off nearly 1,000,000*l.*, while the expenses continued nearly the same. And there was, at an average, a continued excess of expenditure, including commercial charges, and a contraction of fresh debt, down to 1811–12.

Notwithstanding the vast additions made to their territories, the Company's commerce with them continued to be very inconsiderable. During the 5 years ending with 1811, the exports to India by the Company, exclusive of those made on account of individuals in their ships, were as under: —

1807	£952,416	1810	£1,010,815
1808	919,544	1811	1,033,816
1809	866,153		

The exports by the private trade, and the *privilege* trade, that is, the commanders and officers of the Company's ships, during the above-mentioned years, were about as large. During the 5 years ending with 1807-8, the annual average imports into India by British private traders, only, amounted to 305,496*l.* — (*Papers published by the East India Company in* 1813, 4to. p. 56.)

The Company's exports include the value of the military stores sent from Great Britain to India. The ships employed in the trade to *India and China*, during the same 5 years, varied from 44 to 53, and their burden from 36,671 to 45,342 tons.

For some years previously to the termination of the Company's charter in 1813, the conviction had been gaining ground among all classes, that the trade to the East was capable of being very greatly extended; and that it was solely owing to the want of enterprise and competition, occasioned by its being subjected to a monopoly, that it was confined within such narrow limits. Very great efforts were, consequently, made by the manufacturing and commercial interests to have the monopoly set aside, and the trade to the East thrown open. The Company vigorously resisted these pretensions; and had interest enough to procure a prolongation of the privilege of carrying on an exclusive trade to China to the 10th of April, 1831, with 3 years' notice; the government of India being continued in their hands for the same period. Fortunately, however, the trade to India was opened, under certain conditions, to the public. The principal of these conditions were, that private individuals should trade, directly only, with the presidencies of Calcutta, Madras, and Bombay, and the port of Penang; that the vessels fitted out by them should not be under 350 tons burden; and that they should abstain, unless permitted by the Company, or the Board of Control, from engaging in the carrying trade of India, or in the trade between India and China. And yet, despite these disadvantages, such is the energy of individual enterprise as compared with monopoly, that the private traders gained an almost immediate ascendancy over the East India Company, and in a very short time more than *trebled* our trade with India!

In the Report of the committee of the House of Lords on the foreign trade of the country, printed in May, 1821, it is stated, that "the greatly increased consumption of British goods in the East, since the commencement of the free trade, cannot be accounted for by the demand of European residents, the number of whom does not materially vary; and it appears to have been much the greatest in articles calculated for the general use of the natives. That of the cotton manufactures of this country alone is stated, since the first opening of the trade, to have been augmented from *four* to *five* fold (it is now (1843) augmented many hundreds of times). The value of the merchandise exported from Great Britain to India, which amounted, in 1814, to 870,177*l.*, amounted *, in 1819, to 3,052,741*l.*; and although the market appears then to have been so far overstocked as to occasion a diminution of nearly one half in the exports of the following year, that diminution appears to have taken place more in the articles intended for the consumption of Europeans than of natives; and the trade is now stated to the committee, by the best informed persons, to be reviving. When the amount of population, and the extent of the country over which the consumption of these articles is spread, are considered, it is obvious that any facility which can, consistently with the political interests and security of the Company's dominions, be given to the private trader, for the distribution of his exports, by increasing the number of ports at which he may have the option of touching in pursuit of a market, cannot fail to promote a more ready and extensive demand."

Besides the restraints imposed by the act of 1813 on the proceedings of the free traders†,

* This is the amount of the Company's exports only, and the sum is not quite accurate: see *post.*

† These restraints were a good deal modified by the 3 Geo. 4. c. 80., passed in pursuance of the recommendation of the committee quoted above.

they frequently experienced very great loss and inconvenience from the commercial speculations of the East India Company. The latter had commercial residents, with large establishments of servants, some of them intended for coercive purposes, stationed in all the considerable towns; and the Marquis Wellesley has stated, "that the intimation of a wish from the Company's resident is always received as a command by the native manufacturers and producers." It was obviously impossible for a private trader to come fairly into competition with persons possessing such authority, and who were often instructed to make their purchases on any terms. Mr. Tucker, since chairman of the Company, states, in his useful work on Indian finance (published in 1825), that the Company's investments (purchases) in India, during the previous 10 years, might in some instances be said to have been forced; meaning by this, that the goods exported by them from India were sometimes compulsorily obtained from the natives, and sometimes bought at a higher price than they would have brought in a market frequented only by regular merchants. But the truth is, that it was not in the nature of things that the Company's purchases could be fairly made; the natives could not deal with their servants as they would have dealt with private individuals; and it would be absurd to suppose that agents authorised to buy on account of government, and to draw on the public treasury for the means of payment, should generally evince the prudence and discretion of individuals directly responsible in their own private fortunes for their transactions. The interference of such persons would, under any circumstances, have rendered the East India trade peculiarly hazardous. But their influence in this respect was materially aggravated by the irregularity of their appearances. No individual, not belonging to the court of directors, could foresee whether the Company's agents would be in the market at all; or, if there, to what extent they would either purchase or sell. So capricious were their proceedings, that in some years they have laid out 700,000*l.* on indigo, while in others they have not laid out a single shilling: and so with other things. A fluctuating demand of this sort necessarily occasioned great and sudden variations of price, and was injurious alike to the producers and the private merchants. Mr. Mackenzie, late secretary to the government of Bengal, set the mischievous influence of the circumstances now alluded to in the clearest point of view, in his masterly evidence before the select committee of 1832 on the affairs of India; and he further showed, that it was not possible, by any sort of contrivance, to obviate the inconveniences complained of, and that they would unavoidably continue till the Company ceased to have any thing to do with commerce.

But besides being injurious to the private trader, and to the public generally, both in India and England, this trade was of no advantage to the East India Company. How, indeed, could it be otherwise? A company that maintained armies and retailed tea, that carried a sword in the one hand and a ledger in the other, was a contradiction; and, had she traded with success, would have been a prodigy. It was impossible for her to pay that attention to details that is indispensable to the carrying on of commerce with advantage. She may have gained something by the monopoly of the tea trade, though even that is questionable; but it is admitted on all hands, that she lost heavily by her trade to India.* When, therefore, the question as to the renewal of the charter came to be discussed in 1832 and 1833, the Company had no reasonable objection to urge against their being deprived of the privilege of trading. And the act 3 & 4 Will. 4. c. 85.; for continuing the charter till 1854, *terminated the Company's commercial character;* by enacting, that the Company's trade to China was to cease on the 22d of April, 1834 †, and that the Company was, as soon as possible after that date, to dispose of their stocks on hand, and close their commercial business. And the wonderful increase that has since taken place in the trade with the East is the best proof of the sagacity and soundness of the opinions of those by whose efforts the incubus of monopoly was removed.

II. East India Company (Constitution of).

Under the present act, the functions of the East India Company are wholly political. She is to continue to govern India, with the concurrence and under the supervision of the Board of Control, nearly on the plan laid down in Mr. Pitt's act, till the 30th of April, 1854. All the real and personal property belonging to the Company on the 22d of April, 1834, was vested in the Crown, and is held or managed by the Company in trust for the same, subject of course to all claims, debts, contracts, &c. already in

* It is needless now to enter upon the controversy as to the origin of the Company's debt. — (See first edition of this work, p. 507.) It is probable that those who contend that this debt is *wholly attributable* to the Company's commercial operations, have exaggerated their injurious influence. But we do not think that there is any room for doubting, notwithstanding the enormous prices charged on tea, that, for many years previously to the abolition of the monopoly, the Company's trade was, on the whole, productive of nothing but loss.

† For the new regulations as to the China trade, see Canton.

existence, or that may hereafter be brought into existence by competent authority. The Company's debts and liabilities are all charged on India. The dividend, which is 10½ per cent., is paid in England out of the revenues of India; and provision is made for the establishment of a *security fund* for its discharge, The dividend may be redeemed by parliament, on payment of 200*l.* for 100*l.* stock, any time after April, 1874; but it is provided, in the event of the Company being deprived of the government of India in 1854, that they may claim redemption of the dividend any time thereafter upon 3 years' notice. — (3 & 4 *Will.* 4. c. 85.)

Company's Stock— forms a capital of 6,000,000*l.*, into which all persons, natives or foreigners, males or females, bodies politic or corporate (the Governor and Company of the Bank of England only excepted), are at liberty to purchase, without limitation of amount. Since 1793, the dividends have been 10½ per cent., to which they are limited by the late act.

General Courts. — The proprietors in general court assembled are empowered to enact by-laws, and in other respects are competent to the complete investigation, regulation, and control of every branch of the Company's concerns; but, for the more prompt despatch of business, the executive detail is vested in a court of directors. A general court is required to be held once in the months of March, June, September, and December, in each year. No one can be present at a general court unless possessed of 500*l.* stock; nor can any person vote upon the determination of any question, who has not been in possession of 1,000*l.* stock for the preceding 12 months, unless such stock have been obtained by bequest or marriage. Persons possessed of 1,000*l.* stock are empowered to give a single vote; 3,000*l.* are a qualification for two votes; 6,000*l.* for three votes; and 10,000*l.* and upwards for four votes. There were 2,003 proprietors on the Company's books in 1825; of these, 1,494 were qualified to give single votes; 392, two votes; 69, three votes; and 48, four votes. Upon any special occasion, 9 proprietors, duly qualified by the possession of 1,000*l.* stock, may, by a requisition in writing to the court of directors, call a general court; which the directors are required to summon within 10 days, or, in default, the proprietors may call such court by notice affixed upon the Royal Exchange. In all such courts the questions are decided by a majority of voices; in case of an equality, the determination must be by the treasurer drawing a lot. Nine proprietors may, by a requisition in writing, demand a ballot upon any question, which shall not be taken within 24 hours after the breaking up of the general court.

Court of Directors. — The court of directors is composed of 24 members, chosen from among the proprietors, each of whom must be possessed of 2,000*l.* stock; nor can any director, after being chosen, act longer than while he continues to hold stock. Of these, 6 are chosen on the second Wednesday in April in each year, to serve for 4 years, in the room of 6 who have completed such service. After an interval of 12 months, those who had gone out by rotation are eligible to be re-elected for the ensuing 4 years. Formerly, no person who had been in the Company's civil or military service in India was eligible to be elected a director until he had been a resident in England 2 years after quitting the service: but this condition no longer exists; and all civil or military servants of the Company in India, supposing they are otherwise eligible, may be chosen directors immediately on their return to England, provided they have no unsettled accounts with the Company; if so, they are ineligible for 2 years after their return, unless their accounts be sooner settled. — (3 & 4 *Will.* 4. c. 85. § 28.) The directors choose annually, from amongst themselves, a chairman and a deputy chairman. They are required by by-laws to meet once in every week at least; but they frequently meet oftener, as occasion requires. Not less than 13 can form a court. Their determinations are guided by a majority: in case of an equality, the question must be decided by the drawing of a lot by the treasurer; upon all questions of importance, the sense of the court is taken by ballot. The Company's officers, both at home and abroad, receive their appointments immediately from the court; to whom they are responsible for the due and faithful discharge of the trust reposed in them. The patronage is, nevertheless, so arranged, as that each member of the court separately participates therein.

Secret Committee. — The principal powers of the court of directors are vested in a secret committee, forming a sort of cabinet or privy council. All communications of a confidential or delicate nature between the Board of Control and the Company are submitted, in the first instance at least, to the consideration of this committee; and the directions of the Board, as to political affairs, may be transmitted direct to India, through the committee, without being seen by the other directors. The secret committee is appointed by the court of directors, and its members are sworn to secresy.

III. EAST INDIES (STATE OF SOCIETY IN, GROWING DEMAND FOR ENGLISH GOODS, TRADE, COLONISATION, ETC.)

1. *Distinction of Castes in India. Inaccuracy of the Representations as to the Inhabitants being unalterably attached to ancient Customs and Practices.*—We have taken occasion, in the preceding sketch of the history of the East India Company, repeatedly to notice the small extent of the trade carried on by its agency. It was contended, however, that this was to be ascribed, not to the deadening influence of monopoly, but to the peculiar state of the people of India. A notion has long been prevalent in this quarter of the world, that the Hindoos are a race unsusceptible of change or improvement of any sort; that every man is brought up to the profession of his father, and can engage in none else; and that, owing to the simplicity and unalterableness of their habits, they never can be consumers, at least to any considerable extent, of foreign commodities. "What is now in India, has always been there, and is likely still to continue." — (*Robertson's Disquisition*, p. 202.) The Hindoos of this day are said to be the same as the Hindoos of the age of Alexander the Great. The description of them given by Arrian has been quoted as applying to their actual situation. It is affirmed that they have neither improved nor retrograded; and we are referred to India as to a country in which the institutions and manners that prevailed 3,000 years ago may still be found in their pristine purity! The President de Goguet lays it down distinctly, in his learned and invaluable work on the origin of laws, arts, and sciences, that in India "every trade is confined to a particular caste, and can be exercised only by those whose parents professed it."— (*Origin of Laws, &c.* Eng. trans. vol. iii. p. 24.) Dr. Robertson says, that *the station of every Hindoo is unalterably fixed; his destiny is irrevocable*;

and the walk of life is marked out, from which he must never deviate."—(*Disquisition on India*, p. 199.) The same opinions are maintained by later authorities. Dr. Tennant says, that "the whole Indian community is divided into 4 great classes; and each class is stationed between certain walls of separation, which are impassable by the purest virtue, and most conspicuous merit."—(Quoted by *Mr. Rickards*, p. 6.) This unalterable destiny of individuals has been repeatedly assumed in the despatches and official papers put forth by the East India Company; and has been referred to on all occasions by them and their servants, as a proof that the depressed and miserable condition of the natives is not owing to misgovernment, or to the weight of the burdens laid upon them; and that it is in vain to think of materially improving their condition, or of making them acquainted with new arts, or giving them new habits, so long as the institution of castes, and the prejudices to which it has given rise, preserve their ascendancy unimpaired.

But notwithstanding the universal currency which the opinions now referred to have obtained, and the high authority by which they are supported, they are, in all the most essential respects, entirely without foundation! The books and codes of the Hindoos themselves, and the minute and careful observations that have recently been made on Indian society, have shown that the influence ascribed to the institution of castes by the ancients, and by the more early modern travellers, has been prodigiously exaggerated. In the first part of his work on India, Mr. Rickards has established, partly by references to the authoritative books of the Hindoos, and partly by his own observations, and those of Mr. Colebrook, Dr. Heber, and other high authorities, that the vast majority of the Hindoo population may, and, in fact, does engage in all sorts of employments. It has been further shown, that there is nothing in the structure of Indian society to oppose any serious obstacle to the introduction of new arts, or the spread of improvement; and that the causes of the poverty and misery of the people must be sought for in other circumstances than the institution of castes, and the nature of Hindoo superstition.

The early division of the population into the 4 great classes of priests (Brahmins), soldiers (Gshatryas), husbandmen and artificers (Vaisyas), and slaves (Sudras), was maintained only for a very short period. The Hindoo traditions record that a partial intermixture of these classes took place at a very remote epoch; and the mixed brood thence arising were divided into a vast variety of new tribes, or castes, to whom, speaking generally, no employments are forbidden.

"The employments," says Mr. Rickards, "allowed to these mixed and impure castes, may be said to be every description of handicraft and occupation for which the wants of human society have created a demand. Though many seem to take their names from their ordinary trade or profession, and some have duties assigned them too low and disgusting for any others to perform, but from the direst necessity; yet no employment, generally speaking, is forbidden to the mixed and impure tribes, excepting three of the prescribed duties of the sacerdotal class; viz. teaching the *Vedas*, officiating at a sacrifice, and receiving presents from a pure-handed giver; which three are exclusively *Brahminical*."

Mr. Colebrook, who is acknowledged on all hands to be one of the very highest authorities as to all that respects Indian affairs, has a paper in the fifth volume of the *Asiatic Researches*, on the subject of castes. In this paper, Mr. Colebrook states that the *Jatimala*, a Hindoo work, enumerates *forty-two* mixed classes springing from the intercourse of a man of inferior class with a woman of a superior class, or in the *inverse* order of the classes. Now, if we add to these the number that must have sprung from intermixture in the *direct* order of the classes, and the hosts further arising from the continued intermixture of the mixed tribes amongst themselves, we shall not certainly be disposed to dissent from Mr. Colebrook's conclusion, "that the subdivisions of these classes have further multiplied distinctions to an *endless variety*."

Mr. Colebrook has given the following distinct and accurate account of the professions and employments of the several classes at the present day. It forms a curious commentary on the "irrevocable destiny" of Dr. Robertson, and the "impassable walls" of Dr. Tennant.

"A *Brahman*, unable to subsist by his duties, may live by the duty of a soldier; if he cannot get a subsistence by either of these employments, he may apply to tillage and attendance on cattle, or gain a competence by traffic, avoiding certain commodities. A *Cshatrya* in distress may subsist by all these means; but he must not have recourse to the highest functions. In seasons of distress, a further latitude is given. The practice of medicine, and other learned professions, painting, and other arts, work for wages, menial service, alms, and usury, are among the modes of subsistence allowed both to the *Brahman* and *Cshatrya*. A *Vaisya*, unable to subsist by his own duties, may descend to the servile acts of a *Sudra*; and a *Sudra*, not finding employment by waiting on men of the higher classes, may subsist by handicrafts; principally following those mechanical operations, as joinery and masonry, and practical arts, as painting and writing, by which he may serve men of superior classes; and although a man of a lower class is in general restricted from the acts of a higher class, the *Sudra* is expressly permitted to become a trader, or a husbandman.

"Besides the particular occupation assigned to each of the mixed classes, they have the alternative of following that profession, which regularly belongs to the class from which they derive their origin on the mother's side; those at least have such an option who are born in the direct order of the classes. *The mixed classes are also permitted to subsist by any of the duties of a Sudra, that is, by menial service, by handicrafts, by commerce, and agriculture.* Hence it appears, THAT ALMOST EVERY OCCUPATION,

THOUGH REGULARLY IT BE THE PROFESSION OF A PARTICULAR CLASS, IS OPEN TO MOST OTHER CLASSES; and that the limitations, far from being rigorous, do in fact reserve only the peculiar profession of the *Brahman*, which consists in teaching the *Veda*, and officiating at religious ceremonies."

"We have thus," says Mr. Rickards, by whom this passage has been quoted, "the highest existing authority for rejecting the doctrine of the whole Hindoo community 'being divided into four castes,' and of their peculiar prerogatives being guarded inviolate by 'impassable walls of separation.' It is also clear that the intermixture of castes had taken place, to an indefinite extent, at the time when the *Dherma Sastra* was composed, which Sir William Jones computes to be about 880 years B. C.; for the mixed classes are specified in this work, and it also refers, in many places, to past times, and to events which a course of time only could have brought about. The origin of the intermixture is therefore lost in the remotest and obscurest antiquity; and having been carried on through a long course of ages, a heterogeneous mass is every where presented to us, in these latter times, without a single example, in any particular state, or kingdom, or separate portion of the Hindoo community, of that quadruple division of castes, which has been so confidently insisted upon.

"I have myself seen carpenters of five or six different castes, and as many different bricklayers, employed on the same building. The same diversity of castes may be observed among the craftsmen in dockyards, and all other great works; and those who have resided for any time in the principal commercial cities of India must be sensible that every increasing demand for labour, in all its different branches and varieties of old and new arts, has been speedily and effectually supplied, in spite of the tremendous institution of castes, which we are taught to believe forms so impassable an obstruction to the advancement of Indian industry."

2. *Growing Demand for English Goods.* — It is difficult to suppose that the directors of the East India Company should not have been early aware of the fallacy of the opinions as to the fixedness of Indian habits. So far, however, as we know, they did not, in this instance, evince any acquaintance with the discoveries of their servants. On the contrary, in all the discussions that took place with respect to the opening of the trade in 1814, the Company invariably contended that no increase of trade to India could be expected. In a letter of the chairman and deputy chairman to the Right Honourable Robert Dundas, dated 13th of January, 1809, it is stated, that the small demand for foreign commodities in India "results from the nature of the Indian people, their climate and their usages. The articles of first necessity their own country furnishes more abundantly and more cheaply than it is possible for Europe to supply them. The labour of the great body of the common people only enables them to subsist on rice, and to wear a slight covering of cotton cloth; they, therefore, *can purchase none of the superfluities we offer them.* The comparatively few in better circumstances, restricted, like the rest, by numerous religious and civil customs, of which all are remarkably tenacious, find few of our commodities to their taste; and their climate, so dissimilar to ours, renders many of them unsuitable to their use; so that a commerce between them and us cannot proceed far upon the principle of supplying mutual wants. Hence, except woollens, in a very limited degree, for mantles in the cold season, and metals, on a scale also very limited, to be worked up by their own artisans for the few utensils they need, hardly any of our staple commodities find a vent among the Indians; the other exports which Europe sends to India being chiefly consumed by the European population there, and some of the descendants of the early Portuguese settlers; all of whom, taken collectively, form but a small body, in view to any question of national commerce."— (*Papers published by authority of the East India Company*, 1813, p. 21.)

The volume from which we have made this extract contains a variety of passages to the same effect. So confident, indeed, were the Company that they had carried the trade to India to the utmost extent of which it was capable, that it was expressly stated, in resolutions passed in a general court held at the India House, on the 26th of January 1813, "that no large or sudden addition can be made to the amount of British exports to India or China;" that the Company had suffered a loss in attempting to extend this branch of their trade; that the warehouses at home were glutted with Indian commodities for which there was no demand; and that to open the outports to the trade would be no other than "a ruinous transfer of it into new channels, to the destruction of immense and costly establishments, and the beggary of many thousands of industrious individuals."

Luckily, however, these representations were unable to prevent the opening of the trade, and the result has sufficiently demonstrated their fallacy. The enterprise and exertion of individuals has vastly increased our exports to India — to that very country which the Company had so confidently pronounced was, and would necessarily continue to be, incapable of affording any additional outlet for our peculiar products!

The commercial accounts for 1812 and 1813 were unfortunately destroyed by the fire at the Custom-house. The trade to India was opened on the 10th of April, 1814; and in that year the declared or real value of the products exported from Great Britain to the countries eastward of the Cape of Good Hope, excepting China, by the East India Company, was 826,558*l.*, and by the private traders, 1,048,132*l.* In 1817, the Company's exports had declined to 638,382*l.*, while those of the private traders had increased to 2,750,338*l.*; and in 1828, the former had sunk to only 488,601*l.*, while the latter had increased to 3,979,072*l.*, being more than double the total exports to India, as well by the Company as by private traders in 1814! Since then the market has continued progressively to increase. In 1840 the declared value of the exports of British goods

amounted to no less than 6,023,192 : and, notwithstanding the commercial embarrassments in 1841 and 1842, it amounted, in the latter, to *5,169,888* !

The Company stated, and no doubt truly, that they lost a very large sum in attempting to extend the demand for British woollens in India and China, which, notwithstanding, continues very limited. But in their efforts to force the sale of woollens, they seem to have entirely forgotten that we had attained to great excellency in the manufacture of cotton stuffs, the article principally made use of as clothing in Hindostan; and that, notwithstanding the cheapness of labour in India, the advantage we derived from our superior machinery might enable us to offer cotton stuffs to the natives at a lower price than they could afford to manufacture them for. No sooner, however, had the trade been open to private adventurers, than this channel of enterprise was explored; and the result has been, that, instead of bringing cottons from India to England, the former has become *one of the best and most extensive markets for the cottons of the latter*. We question, indeed, whether, in the whole history of commerce, another equally striking example can be produced of the powerful influence of competition in opening new and almost boundless fields for the successful prosecution of commercial enterprise.

In 1814, the first year of the free trade to India, the exports of cotton amounted to 817,000 yards, of which only about 170,000 yards, valued at 17,778*l.*, were exported by the Company! The progress of the trade has since been such that we now export about 150,000,000 yards of cotton stuffs to India, and about 15,000,000 lbs. of twist and yarn!

The demand for several other articles of British manufacture has recently increased, though not in the same unprecedented manner as cotton, with considerable rapidity. Notwithstanding all that has been said as to the immutability of Hindoo habits, the fact is not to be denied, that a taste for European products and customs is rapidly spreading itself over India. And the fair presumption is, that it will continue to gain ground according as education is more diffused, and as the natives become better acquainted with our language, arts, and habits. The authenticity of Dr. Heber's statements cannot be called in question; and there are many passages in different parts of his Journal that might be quoted in corroboration of what has now been stated. Our limits, however, will only permit of our making a very few extracts.

"Nor have the religious prejudices, and the unchangeableness of the Hindoo habits, been less exaggerated. Some of the best informed of their nation, with whom I have conversed, assure me, that half their most remarkable customs of civil and domestic life are borrowed from their Mohammedan conquerors; and *at present there is an obvious and increasing disposition to imitate the English in every thing*, which has already led to very remarkable changes, and will, probably, to still more important. The wealthy natives now all affect to have their houses decorated with Corinthian pillars, and filled with English furniture; they drive the best horses and the most dashing carriages in Calcutta; many of them speak English fluently, and are tolerably read in English literature; and the children of one of our friends I saw one day dressed in jackets and trowsers, with round hats, shoes, and stockings. In the Bengalee newspapers, of which there are two or three, politics are canvassed with a bias, as I am told, inclined to Whiggism; and one of their leading men gave a great dinner, not long since, in honour of the Spanish revolution: among the lower orders the same feeling shows itself more beneficially in a growing neglect of caste."—(Vol. ii. p. 306.)

"To say that the Hindoos or Mussulmans are deficient in any essential feature of a civilised people, is an assertion which I can scarcely suppose to be made by any who have lived with them: their manners are at least as pleasing and courteous as those in the corresponding stations of life among ourselves; their houses are larger, and, according to their wants and climate, to the full as convenient as ours; their architecture is at least as elegant; nor is it true that in the mechanic arts they are inferior to the general run of European nations. Where they fall short of us, (which is chiefly in agricultural implements, and the mechanics of common life,) they are not, so far as I have understood of Italy and the south of France, surpassed in any degree by the people of those countries. Their goldsmiths and weavers produce as beautiful fabrics as our own; and it is so far from true that they are obstinately wedded to their old patterns, that they show an anxiety to imitate our models, and do imitate them very successfully. The ships built by native artists at Bombay are notoriously as good as any which sail from London or Liverpool. The carriages and gigs which they supply at Calcutta are as handsome, though not as durable, as those of Long Acre. In the little town of Monghyr, 300 miles from Calcutta, I had pistols, double-barrelled guns, and different pieces of cabinet work, brought down to my boat for sale, which in outward form (for I know no further) nobody but perhaps Mr. ———— could detect to be of Hindoo origin; and at Delhi, in the shop of a wealthy native jeweller, I found brooches, ear-rings, snuff-boxes, &c. of the latest models (so far as I am a judge), and ornamented with French devices and mottoes."—(Vol. ii. p. 382.)

As Bishop Heber penetrated into the interior of India, he found the same taste as in Calcutta, for European articles and for luxuries, to prevail every where among the natives. Of Benares, he writes as follows:—

"But what surprised me still more, as I penetrated further into it, were the large, lofty, and handsome dwelling-houses, the beauty and apparent richness of the goods exposed in the bazaars, and the evident hum of business. Benares is in fact a very industrious and wealthy, as well as a very holy city. It is the great mart where the shawls of the north, the diamonds of the south, and the muslins of Dacca and the eastern provinces centre; and it has very considerable silk, cotton, and fine woollen manufactories of its own; while English hardware, swords, shields, and spears, from Lucknow and Monghyr, and *those European luxuries and elegancies which are daily becoming more popular in India*, circulate from hence through Bundlecund, Gorruckpoor, Nepaul, and other tracts which are removed from the main artery of the Ganges."—(Vol. i. p. 289.)

Proceeding still further into the interior of the country, and when at Nusseerabad,

distant above 1,000 miles from Calcutta, the bishop continues his Journal in the same strain; viz.: —

"European articles are, at Nusseerabad *, as might be expected, very dear; the shops are kept by a Greek and two Parsees from Bombay: they had in their list all the usual items of a Calcutta warehouse. English cotton cloths, both white and printed, are to be met with commonly in wear among the people of the country, and may, I learned to my surprise, be bought best and cheapest, as well as all kinds of hardware, crockery, writing-desks, &c., at Pallee, a large town and celebrated mart in Marwar, on the edge of the desert, several days' journey west of Joudpoor, where, till very lately, no European was known to have penetrated."—(Vol. ii. p. 36.)

As to the character of the Hindoos, their capacity, and even anxious desire, for improvement, the bishop's testimony is equally clear and decided; and as this is a point of pre-eminent importance, the reader's attention is requested to the following statements.

"In the schools which have been lately established in this part of the empire, of which there are at present 9 established by the Church Missionary, and 11 by the Christian Knowledge Societies, some very unexpected facts have occurred. As all direct attempts to convert the children are disclaimed, the parents send them without scruple. But it is no less strange than true, that there is no objection made to the use of the Old and New Testament as a class-book; that so long as the teachers do not urge them to eat what will make them lose their caste, or to be baptized, or to curse their country's gods, they readily consent to every thing else; and not only Mussulmans, but Brahmins, stand by with perfect coolness, and listen sometimes with apparent interest and pleasure, while the scholars, by the road side, are reading the stories of the creation and of Jesus Christ."—(Vol. ii. p. 290.)

"Hearing all I had heard of the prejudices of the Hindoos and Mussulmans, I certainly did not at all expect to find that the common people would, not only without objection, but with the greatest thankfulness, send their children to schools on Bell's system; and they seem to be fully sensible of the advantages conferred by writing, arithmetic, and, above all, by a knowledge of English. There are now in Calcutta, and the surrounding villages, 20 boys' schools, containing 60 to 120 each; and 23 girls', each of 25 or 30."—(Vol. ii. p. 300.)

"In the same holy city (Benares) I visited another college, founded lately by a wealthy Hindoo banker, and intrusted by him to the management of the Church Missionary Society, in which, besides a grammatical knowledge of the Hindoostanee language, as well as Persian and Arabic, the senior boys could pass a good examination in English grammar, in Hume's History of England, Joyce's Scientific Dialogues, the use of the globes, and the principal facts and moral precepts of the Gospel; most of them writing beautifully in the Persian, and very tolerably in the English character, and excelling most boys I have met with in the accuracy and readiness of their arithmetic."—(Vol. ii. p. 388.)

"The different nations which I have seen in India (for it is a great mistake to suppose that all India is peopled by a single race, or that there is not as great a disparity between the inhabitants of Guzerat, Bengal, the Dooab, and the Deccan, both in language, manners, and physiognomy, as between any four nations in Europe,) have, of course, in a greater or less degree, the vices which must be expected to attend on arbitrary government, a demoralising and absurd religion, and (in all the independent states, and in some of the districts which are partially subject to the British) a laxity of law, and an almost universal prevalence of intestine feuds and habits of plunder. The general character, however, has much which is extremely pleasing to me: they are brave, courteous, intelligent, and most eager after knowledge and improvement, with a remarkable talent for the sciences of geometry, astronomy, &c., as well as for the arts of painting and sculpture. In all these points they have had great difficulties to struggle with, both from the want of models, instruments, and elementary instruction; the indisposition, or rather the horror, entertained, till lately, by many among their European masters, for giving them instruction of any kind; and now from the real difficulty which exists of translating works of science into languages which have no corresponding terms."—(Vol. ii. p. 409.)

Even if our space permitted, it would be unnecessary to add to these extracts. The facts and circumstances now mentioned, must, we think, satisfy every one that there is nothing in the nature of Indian society, in the institution of castes as at present existing, or in the habits and customs of the natives, to hinder them from advancing in the career of civilisation, commerce, and wealth. "It may safely be asserted," says Mr. Hamilton, "that with so vast an extent of fertile soil, peopled by so many millions of tractable and industrious inhabitants, Hindostan is capable of supplying the whole world with any species of tropical merchandise; the production, in fact, being only limited by the demand."

3. *Trade with India.*— We had occasion to animadvert, in the former edition of this work, on the difficulties under which the trade with India then laboured, in consequence of the duties on sugar, rum, and other Indian products, being very much higher than those laid on the same articles when imported from the colonies in the West Indies. It is needless, however, to enlarge on the manifest inexpediency of such policy, or to enter into any lengthened arguments to prove that governments are bound to treat all who are subject to their authority with the same equal and impartial justice. The discriminating duties now referred to have been happily all, or nearly all, abolished, and the products of India and of our other dependencies come into the home market on the same equal terms. The beneficial influence of this wise and liberal policy has been strikingly evinced in the increased imports of sugar and coffee from India. Indeed the only obstacle to the all but indefinite increase in the demand for our manufactures in that extensive dependency consists in the difficulty of obtaining return cargoes suitable for our markets; and the truth is, that the late rapid extension of the demand for British cottons and other goods in India, is principally ascribable to the increased imports of sugar, coffee, and other Indian articles. Commerce, it must never be forgotten, is nothing but an exchange of equivalents; and it is idle to attempt increasing exportation without at the same time increasing importation.

* Nusseerabad, near Ajmere, in the heart of the Rajepoot country.

4. *Colonisation of India.*—Considerable obstacles were long thrown in the way of Europeans establishing themselves in India, and particularly of their acquiring or holding land. This policy was dictated by various considerations; partly by a wish to prevent the extrusion of the natives from the soil, which it was supposed would be eagerly bought up by Europeans, and partly by the fear lest the latter, when scattered over the country, and released from any effectual control, should offend the prejudices of the natives, and get embroiled with them. Now, however, it seems to be the general opinion of those best acquainted with India, that but little danger is to be apprehended from these circumstances; that the few Europeans established in it as Indigo planters, &c. have contributed very materially to its improvement; and that the increase and diffusion of the English population, and their permanent settlement in the country, are at once the most likely means of spreading a knowledge of our arts and sciences, and of widening and strengthening the foundations of our ascendancy. It is obvious, indeed, that the duration of our power in India must depend on a very uncertain tenure, unless we take root, as it were, in the soil, and a considerable portion of the population be attached to us by the ties of kindred, and of common interests and sympathies. In this respect we should imitate the Roman in preference to the Lacedæmonian or Athenian policy. *Quid aliud exitio Lacedæmoniis Atheniensibus fuit, quanquam armis pollerent, nisi quod victis pro alienigenis arcebant?* When, however, the former edition of this work was published, we observed that, looking at the density of population in India, the low rate of wages, the nature of the climate, and other similar circumstances, it seemed very doubtful whether it would ever become the resort of any considerable number of English settlers, at least of such a number as would be sufficient, within any reasonable period, to form any thing like a powerful native English interest. And we have now to state, that these anticipations have been more than realised; and that though the restraints on the settlement of Englishmen in India have been practically at an end since 1834, very few have availed themselves of the privilege. Indeed, as already seen (*antè*, p. 201.), the total number of English-born subjects (exclusive of military) in Calcutta, where they are most numerous, in 1837, amounted to only 3,138! There may, no doubt, though we see little reason to anticipate such a result, be a greater emigration to India in time to come; and to whatever extent it may be carried, it promises to be highly advantageous. "We need not, I imagine," said Lord William Bentinck, "use any laboured argument to prove that it would be infinitely advantageous for India to borrow largely in arts and knowledge from England. The legislature has expressly declared the truth; its acknowledgment has been implied in the daily acts and professions of government, and in all the efforts of humane individuals and societies for the education of the people. Nor will it, I conceive, be doubted, that the diffusion of useful knowledge, and its application to the arts and business of life, must be comparatively tardy, unless we add to precept the example of Europeans, mingling familiarly with the natives in the course of their profession, and practically demonstrating, by daily recurring evidence, the nature and the value of the principles we desire to inculcate, and of the plans we seek to have adopted. It seems to be almost equally plain, that, independently of their influencing the native community in this way, various and important national advantages will result from there being a considerable body of

our countrymen, and their descendants, settled in the country. To question it, is to deny the superiority which has gained us the dominion of India: it is to doubt whether national character has any effect on national wealth, strength, and good government: it is to shut our eyes to all the perils and difficulties of our situation: it is to hold as nothing community of language, sentiment and interest, between the government and the governed: it is to disregard the evidence afforded by every corner of the globe in which the British flag is hoisted: it is to tell our merchants and our manufacturers, that the habits of a people go for nothing in creating a market; and that enterprise, skill, and capital, and the credit which creates capital, are of no avail in the production of commodities."

The existing regulations as to the residence of Englishmen in India are embodied in the act 3 & 4 Will. 4. c. 85., and are as follows: —

Authority for his Majesty's Subjects to reside in certain Parts of India. — It shall be lawful for any natural-born subjects of his Majesty to proceed by sea to any port or place having a Custom-house establishment within the same, and to reside thereat, or to proceed to, reside in, or pass through, any part of such of the said territories as were under the government of the said Company on the 1st day of January, 1800, and in any part of the countries ceded by the nabob of the Carnatic, of the province of Cuttack, and of the settlements of Singapore and Malacca, without any licence whatever; provided that all subjects of his Majesty not natives of the said territories shall, on their arrival in any part of the same from any port or place not within the said territories, make known in writing their names, places of destination, and objects of pursuit in India, to the chief officer of the customs or other officer authorised for that purpose at such place as aforesaid. — § 81.

Subjects of his Majesty not to reside in certain Parts of India without Licence. — It shall not be lawful for any subject of his Majesty, except the servants of the said Company and others now lawfully authorised to reside in the said territories, to enter the same by land, or to proceed to or reside in such parts of the said territories as are not herein-before in that behalf mentioned, without licence first obtained from the commissioners of the board of control, or the court of directors, or the governor-general, or a governor of any of the said presidencies: provided, that no licence given to any natural-born subject of his Majesty to reside in parts of the territories not open to all such subjects shall be determined or revoked unless in accordance with the terms of some express clause of revocation or determination in such licence contained. — § 82.

The Governor-General, with previous Consent of Directors, may declare other Places open. — It shall be lawful for the governor-general in council, with the previous consent and approbation of the said court of directors, to declare any place or places whatever within the said territories open to all his Majesty's natural-born subjects, and it shall be thenceforth lawful for any of his Majesty's natural-born subjects to proceed to or reside in or pass through any place or places declared open, without any licence whatever. — § 83.

Laws against illicit Residence to be made. — The governor-general shall and is required to make laws or regulations providing for the prevention or punishment of the illicit entrance into or residence in the said territories of persons not authorised to enter or reside therein. — § 84.

Laws and Regulations to be made for Protection of Natives. — And whereas the removal of restrictions on the intercourse of Europeans with the said territories will render it necessary to provide against any mischiefs or dangers that may arise therefrom, it is enacted, that the governor-general shall and is required, by laws or regulations, to provide with all convenient speed for the protection of the natives of the said territories from insult and outrage in their persons, religions, or opinions. — § 85.

Lands within the Indian Territories may be purchased. — It shall be lawful for any natural-born subject of his Majesty authorised to reside in the said territories to acquire and hold lands, or any right, interest, or profit in or out of lands, for any term of years, in such part or parts of the said territories as he shall be so authorised to reside in: provided always, that nothing herein contained shall be taken to prevent the governor-general in council from enabling, by any laws or regulations, or otherwise, any subjects of his Majesty to acquire or hold any lands, or rights, interests, or profits in or out of lands, in any part of the said territories, and for any estates or terms whatever. — § 86.

No Disabilities in respect of Religion, Colour, or Place of Birth. — No native of the said territories, nor any natural-born subject of his Majesty resident therein, shall, by reason only of his religion, place of birth, descent, colour, or any of them, be disabled from holding any place, office, or employment under the said company. — § 87.

IV. EAST INDIES, EXTENT, POPULATION, MILITARY FORCE, REVENUE, ETC. (OF BRITISH).

1. *Extent, Population, &c. of British Dominions in Hindostan, and of the Tributary and Independent States.* — The following Table has been framed, though with some very considerable modifications, on the basis of that given in the second edition of Mr. Hamilton's *Gazeteer*. It can, however, be regarded as an approximation only, inasmuch as no means exist of coming at correct conclusions; but we incline to think that it is nearly as accurate as it can be made with the present imperfect means of information.

Table of the Area and Population of the Modern States of Hindostan.

	British Square Miles.	Population.
Presidency of Bengal, including Agra	306,000	69,710,000
Madras Presidency	131,000	15,000,000
Bombay Presidency, including territories in the Deccan, Sattarah, &c. acquired since 1815	76,000	8,500,000
Territory acquired from the Ameers of Scinde in 1842	50,000	1,000,000
Total under the British government	563,000	94,210,000
British Allies and Tributaries.		
The Nizam	96,000	10,000,000
The Nagpoor Raja	64,000	3,000,000
The King of Oude	20,000	3,000,000
The Guicowar	18,000	2,000,000
Kotah, 6,500; Boondee, 2,500; Bopaul, 5,000	14,000	1,500,000
The Mysore Raja	27,000	3,000,000

Table of the Area and Population, &c. — *continued.*

	British Square Miles.	Population.
Travancore, 5,000; Cochin, 2,000	7,000	1,400,000
Under the Rajas of Joudpoor, Jeypoor, Odeypoor, Bicancere, Jesselmere, and other Rajpoot chiefs, Holcar, Ameer Khan, the Row of Cutch, Bhurtpoor, Macherry, and numerous other petty chiefs, Seiks, Gonds, Bheels, Coolies, and Catties, all under British protection	280,000	15,000,000
Total under the British government and its allies	1,089,000	133,110,000
Independent States.		
The Nepaul Raja	53,000	2,000,000
The Lahore Raja	60,000	4,000,000
The dominions of Sindia	40,000	4,000,000
Grand total of Hindostan	1,242,000	143,110,000

India beyond the Ganges.— British Acquisitions in 1824 and 1825.

	British Square Miles.	Population.
Countries south of Rangoon, consisting of half the province of Martaban, and the provinces of Tavoy, Ye, Tenasserim, and the Mergui Isles	12,000	51,000
The province of Arracan	16,250	250,000
Countries from which the Burmese have been expelled, consisting of Assam and the adjacent petty states, occupying a space of about	34,000	500,000
Total	62,250	801,000

In 1805, according to the official returns, the total number of British-born subjects in Hindostan was 31,000. Of these, 22,000 were in the army as officers and privates; the civil officers of government of all descriptions were about 2,000; the free merchants and mariners who resided in India under covenant, about 5,000; the officers and practitioners in the courts of justice, 300; the remaining 1,700 consisting of adventurers who had smuggled themselves out in various capacities. Since the date above mentioned, no detailed reports have been published: but there is reason to believe that even now the total number of British subjects in Hindostan does not exceed 45,000, if so many; the removal of the restrictions on their settlement having, as already seen, added very few to the previous number.

The army required for the protection of these extensive provinces, and for the retaining them under due subordination, is, with the exception of that of Russia, probably the largest standing army in the world. In 1796, it amounted to 55,000. In 1837, it consisted of the following effective force, in British, native, and contingent native troops: —

British.			Native.			Contingent Native.	
Staff		205	Staff (British)		312	Scindia	15,000
Horse artillery		1,927	Co's. officers of British birth		3,116	Oude	10,000
Foot do.		4,354	Officers of Hindoo birth		3,416	Nizam — cavalry, 10,000; infantry, 12,000	22,000
Engineers		77	Engineer corps		3,498		
Cavalry		2,585	Horse artillery		1,022	Baroda — cavalry, 3,000; infantry, 4,000	7,000
Infantry		13,879	Foot do.		5,822		
Officers		755	Artillery train		1,392	Nagpore	1,000
			Cavalry		14,529	Holkar	3,000
			Infantry		124,281	Travancore, 3 battalions	3,000
		26,582			157,758	Cochin, 1 do.	1,000
						Mysore	4,000
						Cutch and Joudpoor	6,000
						Rajpoot States — cavalry, 7,500; infantry, 27,000	34,500
						Sattarah	5,000
Total — British		26,582					111,500
Total — Native		157,758					
Total — Native subsidiary		111,500					
		295,840					

The expense of the Anglo-Indian army, according to reports laid before parliament in 1830, was as follows: —

	£		£
Engineer corps	83,874	Medical staff	132,490
Artillery	606,463	Pioneers	74,511
Cavalry	1,070,834	Commissariat	614,327
Infantry	4,124,079	Sundries	2,178,887
Staff	481,490	Total	9,373,955

It may be observed by the way, that this sum of 9,374,000*l.* is more than double the sum annually expended on the Prussian army! It is necessary, however, to observe, that very large additions have been made within the last half dozen years to the military force in India.

Each presidency has its separate army, commander-in-chief, staff, &c.; but the commander-in-chief of the supreme government has a general authority over the armies of all the presidencies. Among the native troops, called *Sepoys* (esquires), there is a complete intermixture of tribes, casts, and creeds; but the infantry consists chiefly of

Hindoos, and the cavalry of Mohammedans. The Hindoo soldiers of the Bengal army are mostly of high caste, more than 20,000 being Brahmins. The soldiers of the Madras army are principally Rajpoots, and are reckoned the most persevering hardy warriors; but they observe their religious customs so strictly, that the least deviation from them might have a dangerous effect on their discipline. The Bombay soldiers are the most easily disciplined, being generally of the lower castes. The troops are not raised by any forced levy or conscription; military service in India is quite voluntary, and is so popular that each regiment has a number of supernumeraries ready to take the place of such soldiers as die or leave. The men are well paid, clothed, and fed. The corporal punishment of Hindoos is not allowed; imprisonment being, in the Indian as in the French army, the principal engine by which discipline is kept up. In the former, however, the disgrace attending dismissal from the service, which is acutely felt by the native soldiers, tends powerfully to preserve discipline and obedience. Each company has an English captain, lieutenant, and ensign, as well as a native captain, lieutenant, and ensign. The latter, however, are under the command of the British officers; so that, with the title and uniform of officers, they are, properly speaking, only subalterns or non-commissioned officers. The Indian army, when not in the field, is in camp the whole year through, — a system which has contributed, in no small degree, to bring it to its present state of efficiency.

A good deal of conflicting evidence was given before the parliamentary committees, in 1832 and 1833, as to the real state of the Indian army, and the degree of dependence to be placed on it. On the whole, it would seem to be superior, in respect of discipline and organisation, to any native army ever previously embodied in India; and so long as its discipline and efficiency are maintained unimpaired, it is no doubt fully adequate to provide for the tranquillity of India, and its defence against Asiatic invaders. But the Sepoys are decidedly inferior both in physical strength and mental energy to Europeans: and such being the case, we cannot help, how reluctantly soever, agreeing in opinion with those who think that the Indian army could not make any effectual opposition to any thing like a corresponding force of French, Russian, or other European troops.

In direct and authoritative control, the dominion of the British government extends much further than that possessed by any prior dynasty, whether Patan or Mogul; yet the latter, so long as they abstained from persecution, had nothing to apprehend from the religion of the Hindoos; and history proves that the commotions which agitated the Mohammedan monarchies chiefly arose from their internal dissensions and national disputes. Neither does it appear that any prior conquerors ever employed disciplined corps of their own countrymen in defence of their own sovereignty, although they had to contend with one very numerous tribe — the Hindoo; while the British, more advantageously situated, have two to put in motion against each other, and in process of time may raise up a third. Each foreign invader certainly favoured his own countrymen: but it was by bestowing on them places and high appointments, which excited envy, without essentially strengthening his domination. Besides, therefore, total abstinence from persecution, the British government, in a powerful corps entirely European, and totally distinguished from the natives by colour, language, and manners, possesses a solidity and consistence much beyond any of the prior Mohammedan dynasties. — (*Hamilton's East India Gazetteer*, 2d ed. vol. i. pp. 656—659.)

We incline to think that the greatest danger to our Indian dominions is likely to arise from the disposition, which seems but too prevalent, to extend our conquests into Affghanistan and the central regions of Asia. Such conquests never can be productive of any advantage of any kind whatever; and it is to be hoped that the experience afforded by the disastrous termination of our late expedition to Cabul may suffice to hinder our re-engaging in such attempts. It is impossible, indeed, to vindicate either the justice or the policy of that expedition. The Affghans had done us no harm. Probably it is true that Russian agents were intriguing amongst them: but what had we to fear from them? Supposing these agents had succeeded in the all but impossible task of reconciling the conflicting views and objects of the proud and jealous chieftains of the country, what injury could this have done to us? No one is so absurd as to suppose that the Affghans would have attempted to attack our territories; and it would have been all but impossible for Russia, had she been so disposed, to have sent any considerable force to Cabul. The difficulty and expense of such a march would have been enormous; and even had these been surmounted, we might have occupied the passes leading from Affghanistan to India, and crushed, without difficulty, any army that might have attempted to force them. The truth is, that if Russia entertained the designs attributed to her, we did precisely what she would have most desired. We advanced 1,200 miles from our own frontier, and from our resources, on the road to Russia; and had we remained there, we should have saved the Russians, in the event of their attacking us, the trouble of a lengthened and difficult march; and met them in a lukewarm or unfriendly country, with a severe climate, under circumstances most

favourable to them, and most unfavourable to ourselves. It is not, in fact, easy to say whether our folly or contempt for the rights of others was most conspicuous on this occasion. And the destruction of our army, though principally owing to the gross incapacity of those by whom it was commanded, by making us abandon so perilous and untenable a position, was, on the whole, perhaps, advantageous rather than otherwise. We believe that true policy would have led to our never advancing beyond the desert to the south of the Indus. But it is, at all events, abundantly certain that it would be a good deal worse than foolish to attempt to push our conquests beyond the boundary formed by that river.

2. *Revenue and expenditure of the East India Company.* — The far greater part of the revenue of India is at present, and has always been, derived from the soil. The land has been held by its immediate cultivators generally in small portions, with a perpetual and transferable title; but they have been under the obligation of making an annual payment to government of a certain portion of the produce of their farms, which might be increased or diminished at the pleasure of the sovereign; and which has, in almost all cases, been so large, as seldom to leave the cultivators more than a bare subsistence. Under the Mohammedan government, the *gross* produce of the soil was divided into equal or nearly equal shares, between the ryots, or cultivators, and the government. We regret we are not able to say that the British government has made any material deductions from this enormous assessment. Its oppressiveness, more than any thing else, has prevented our ascendancy in India; and the comparative tranquillity and good order we have introduced, from having the beneficial effects that might have been anticipated. The cultivators throughout Hindostan are proverbially poor; and till the amount of the assessment they are at present subject to be effectually reduced, they cannot be otherwise than wretched. They are commonly obliged to borrow money, to buy their seed and carry on their operations, at a high interest, on a species of mortgage over the ensuing crop. Their only object is to get subsistence — to be able to exist in the same obscure poverty as their forefathers. If they succeed in this, they are satisfied. Mr. Colebrooke, whose authority on all that relates to India is so deservedly high, mentions that the quantity of land occupied by each ryot, or cultivator, in Bengal, is commonly about 6 acres, and rarely amounts to 24; and it is obvious that the abstraction of half the produce raised on such patches can leave their occupiers nothing more than the barest subsistence for themselves and their families. Indeed, Mr. Colebrooke tells us that the condition of ryots subject to this tax is generally inferior to that of a hired labourer, who receives the miserable pittance of 2 annas, or about 3 pence, a day of wages.

Besides the land revenue*, a considerable revenue is derived in India from the monopolies of salt and opium, the sale of spirituous liquors, land and sea customs, post-office, &c. Of these monopolies, the first is, in all respects, decidedly the most objectionable. Few things, indeed, would do more to promote the improvement of India, than the total abolition of this monopoly. An open trade in salt, with moderate duties, would, there can be no doubt, be productive of the greatest advantage to the public, and of a large increase of revenue to government. The opium monopoly, though less objectionable than the last, is, notwithstanding, very oppressive. It interferes with the industry of the inhabitants; those who are engaged in the cultivation of opium being obliged to sell their produce at prices abitrarily fixed by the Company's agents. It would be worse than useless to waste the reader's time, by pointing out in detail the mischievous effects of such a system; they are too obvious not to arrest the attention of every one.

Abstract View of the Revenues (exclusive of commercial Assets realised in England†) and Charges of India, for the Years 1838-39, 1839-40, 1840-41, 1841-42, including the Charges disbursed in Great Britain. — (*Parl. Paper* No. 367. Sess. 1843.)

It is seen from these statements that the territorial revenues at the disposal of the East India Company equal those of the most powerful monarchies. At present they are greater than those of either Russia or Austria, being inferior only to those of Great Britain and France. Still, however, the Company's financial situation is not very prosperous. Vast as their revenue has been, their expenditure appears, in most instances, to have been still larger; and at this moment their debts in India, exclusive of their bond debts at home, amount to about 32,000,000*l.*

The following account shows the balance between the revenue and expenditure of our Indian dominions, from 1814-15 to 1839-40.

Account exhibiting the Total Revenues and Charges of the British Possessions in India, in each Year from 1814-15 to 1839-40, both included, exclusive of the Expense of the Expedition into Affghanistan. —(Compiled from the *Parl. Paper* No. 574. Sess. 1842.)

N.B.—The charges defrayed in England on account of India, include dividends on Company's stock, about 630,000*l.* a year; interest on home bond debt; invoice value of stores consigned to India; half pay, and other retired allowances, &c.

However much this account of the financial concerns of our Eastern empire may be at variance with the exaggerated ideas entertained respecting it, as well by a large proportion of the people of England as by foreigners, it will excite no surprise in the mind of any one who has ever reflected on the subject. It is due, indeed, to the directors, to state, that though they have occasionally acted on erroneous principles, they have always exerted themselves to enforce economy in every branch of their expenditure, and to impose and collect their revenues in the best and cheapest manner. But though they have succeeded in repressing many abuses, it would be idle to suppose that they should ever entirely succeed in rooting them out. How can it be imagined, that strangers sent to India, conscious that they are armed with all the strength of government, placed under no real responsibility, exempted from the salutary influence of public opinion, fearing no effectual exposure through the medium of the press, and anxious only to accumulate a fortune, should not occasionally abuse their authority? or that they should manage the complicated and difficult affairs of a vast empire, inhabited by a race of people of whose language, manners, and habits they are almost wholly ignorant, with that prudence, economy, and vigilance, without which it were idle to expect that any great surplus revenue should ever be realised?

EBONY (Ger. *Ebenholz*; Du. *Ebbenout*; Fr. *Ebène*; It. *Ebano*; Rus. *Ebenowoederewo*; Lat. *Ebenus*), a species of wood brought principally from the East. It is exceedingly hard and heavy, of great durability, susceptible of a very fine polish, and on that account used in mosaic and other inlaid work. There are many species of ebony. The best is that which is jet black, free from veins and rind, very compact, astringent,

and of an acrid pungent taste. This species (denominated by botanists *Diospyrus Ebenus*) is found principally in Madagascar, the Mauritius, and Ceylon. The centre only of the tree is said to be valuable. In 1837, 2,160 cwt. of ebony, of the estimated value of 1,275*l.* were exported from the Mauritius. Besides the black, there are red, green, and yellow ebonies; but the latter are not so much esteemed as the former. Cabinet makers are in the habit of substituting pear-tree and other woods dyed black, in the place of genuine ebony; these, however, want its polish and lustre, though they hold glue better. The price of ebony varies, in the London market, from 5*l.* to 20*l.* a ton. The quantities imported are but inconsiderable.

EEL (*Anguilla muræna* of Linnæus), a fish, the appearance of which is too well known to require any description. It is a native of almost all the waters of Europe, frequenting not only rivers but stagnant pools. Eels are, in many places, extremely abundant, particularly in Holland and Jutland. Several ponds are appropriated in England to the raising of eels; and considerable numbers are taken in the Thames and other rivers. But a large portion of the eels used in England are furnished by Holland. Indeed, very few except Dutch eels are ever seen in London; and even Hampton and Richmond are principally supplied by them. The trade is carried on by two Dutch companies, who employ in it several small vessels, by means of which the market is regularly and amply provided for. A cargo of eels is supposed to average from 15,000 to 20,000 lbs. weight, and is charged with a duty on importation of 13*l.* In 1840, this duty produced 920*l.*, showing that 72 cargoes had been imported that year. — (*Report on Channel Fisheries*, p. 93, &c.)

EGGS (Fr. *Œufs*; Lat. *Ova*) are too well known to require to be described. They differ in size, colour, taste, &c. according to the different species of birds that lay them. The eggs of hens are those most commonly used as food; and form an article of very considerable importance in a commercial point of view. Vast quantities are brought from the country to London and other great towns. Since the peace they have also been very largely imported from the Continent. At this moment, indeed, the trade in eggs forms a considerable branch of our commerce with France, and affords constant employment for a number of small vessels. We subjoin

An Account of the Quantity of foreign Eggs entered for Consumption during each of the Three Years ending with 1842, and of the Produce of the Duties on the same.

Quantities.			Duties.		
1840.	1841.	1842.	1840.	1841.	
Number.	*Number.*	*Number.*	£ s. d.	£ s. d.	
96,410,108	91,944,327	89,317,823	34,450 8 0	33,524 8 9	32,577 9 7

The duty is at the rate of 1*d.* per dozen, or 10*d.* per 120.

France supplies, at an average, about 80,000,000 of this immense importation, the rest being principally brought from Belgium. Now, supposing the eggs supplied by the former to cost at an average 4*d.* per dozen, it follows that the people of the metropolis and Brighton (for it is into them that they are almost all imported) pay the French about 111,111*l.* a year for eggs: and supposing that the freight, importers' and retailers' profit, duty, &c. raise their price to the consumer to 10*d.* a dozen, their total cost will be 277,777*l.*

EJOO. See Gomuti.

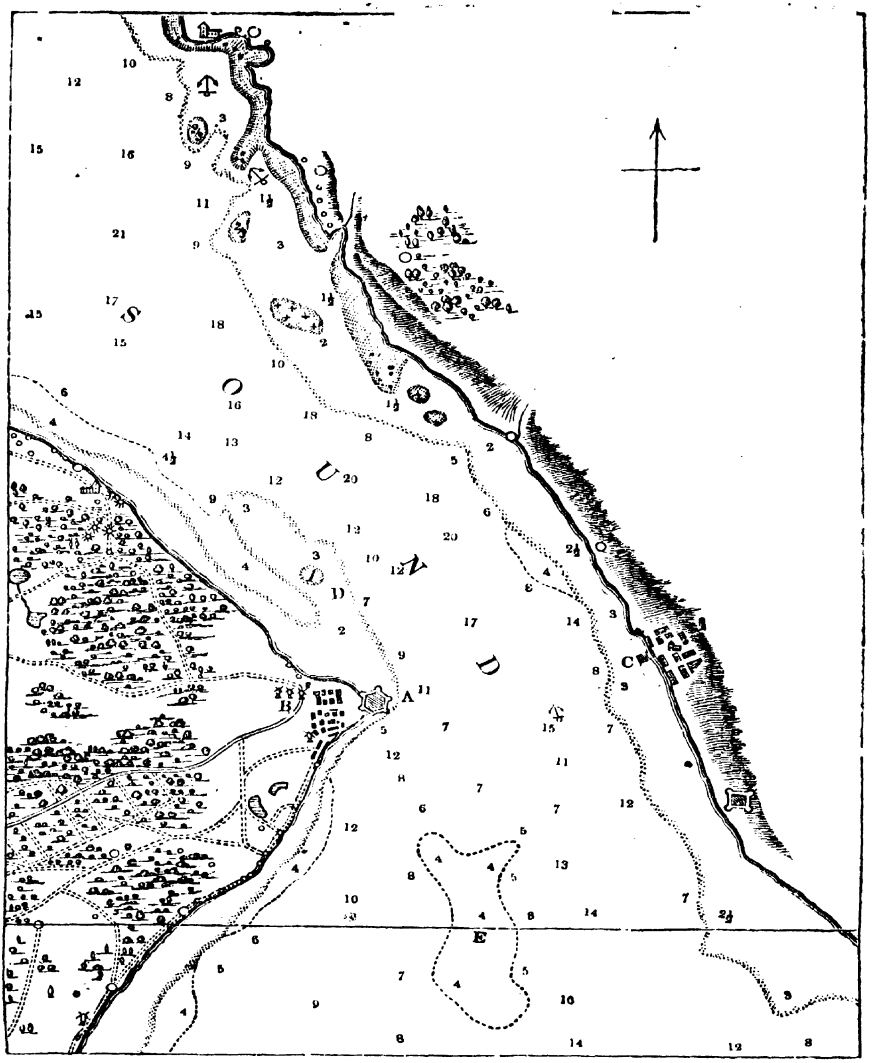
ELEMI, a resin obtained from the *Amyris elemifera*, a tree growing in different parts of America, Turkey, &c. It is obtained by wounding the bark in dry weather, the juice being left to thicken in the sun. It is of a pale yellow colour, semi-transparent; at first softish, but it hardens by keeping. Its taste is slightly bitter and warm. Its smell, which is, at first, strong and fragrant, gradually diminishes. It used to be imported in long roundish cakes, wrapped in flag leaves, but it is now usually imported in mats and chests. — (*Thomson's Chemistry.*)

ELEPHANTS' TEETH. See Ivory.

ELM (*Ulmus*), a forest tree common in Great Britain, of which there are several varieties. It attains to a great size, and lives to a great age: its trunk is often rugged and crooked, and it is of slow growth. The colour of the heart-wood of elm is generally darker than that of oak, and of a redder brown. The sap-wood is of a yellowish or brownish white, with pores inclined to red. It is in general porous, and cross-grained, sometimes coarse-grained, and has no larger septa. It has a peculiar odour. It twists and warps much in drying, and shrinks very much both in length and breadth. It is difficult to work, but is not liable to split, and bears the driving of bolts and nails better than any other timber. In Scotland, chairs and other articles of household furniture are frequently made of elm wood; but in England, where the wood is inferior, it is chiefly used in the manufacture of coffins, casks, pumps, pipes, &c. It is appropriated to these purposes because of its great durability in water, which also occasions its ex-

tenacity use as piles and planking for wet foundations. The naves of wheels are frequently made of elm; those of the heavy wagons and drays of London are made of oak, which supports a heavier weight, but does not hold the spokes so firmly. Elm is said to bear transplanting better than any other large tree. — (*Tredgold's Principles of Carpentry*, pp. 201—203, &c.)

ELSINEUR, OR HELSINGOR, a town of Zealand, on the Sound, about 22 miles north of Copenhagen, lat. 56° 2′ 17″ N., lon. 12° 38′ 2″ E. Population, in 1834, 7,122. Adjacent to Elsineur is the castle of Cronborg, which commands the entrance to the Baltic by the Sound. All merchant ships passing to and from the Baltic are obliged, under the reservations mentioned below, to salute Cronborg Castle by hoisting their colours when abreast of the same; and no merchant ship is allowed to pass the Sound without clearing out at Elsineur, and paying toll, according to the provisions in the treaties to that effect negotiated with Denmark by the different European powers. The first treaty with England having reference to this subject is dated in 1450. The Sound duties had their origin in an agreement between the King of Denmark on the one part, and the Hanse Towns on the other, by which the former undertook to construct light-houses, landmarks, &c. along the Cattegat, and the latter to pay duty for the same. The duties have since been varied at different periods. Ships of war are exempted from the payment of duties. Most maritime nations have consuls resident at Elsineur. The following plan of the Sound is taken from the Admiralty Chart, compiled from Danish authorities. — (See opposite page.)



Navigation of the Baltic. — This is exhibited in the following Account of the Number of Ships that have passed (going and returning) the Sound at different Periods, from the Year 1777 to the present Time, specifying the Countries to which they belonged.

The statements in this Table for the years 1777 and 1780 are taken from the valuable work entitled *Voyage de Deux François au Nord de l'Europe* (1. 360.); the other years are taken from the returns sent by the British consul at Elsineur, printed in various parliamentary papers. We have seen no two returns of the shipping that pass the Sound that quite agree, though the differences are not very material. The British consul first began to send returns of the tonnage in 1831.

A General Summary of the British Shipping employed in the Baltic Trade through the Sound during the Year 1842, stating the Number of Vessels and the Amount of their Tonnage, and distinguishing British and Foreign Ports.

Pilotage, &c. — When ships come into Elsineur roads, or lie wind-bound near the Lappen, watermen come on board to inquire if the master will be carried ashore to clear; and in rough weather it is always best to make use of their services, their boats being generally very safe. The Danish authorities have published a Table of rates, being the highest charge that can be made by the boatmen upon such occasions;

but captains may bargain with them for as much less as they please. Most ships passing the Sound take on board pilots, the signal for one being a flag at the fore-topmast-head. Those bound for the Baltic take a pilot at Elsineur, who either carries the ship to Copenhagen, or Dragoe, a small town on the south-east extremity of the island of Amack, where she is clear of the grounds. Those leaving the Baltic take a pilot from Dragoe, who carries the ship to Elsineur. Sometimes, when the wind is fresh from the E. and S.E., it is impossible for a ship bound for Copenhagen or the Baltic to double the point of Cronborg; and in that case an Elsineur pilot is sometimes employed to n oor the ship in the channel towards Kull Point on the Swedish shore, in lat. 56° 18′ 3″ N., lon. 12° 26′ E. But this does not often happen, as the Danish government employ steam tugs for the special purpose of bringing ships, in adverse weather, round Cronborg Point. The pilots are regularly licensed, so that, by employing them, the captain's responsibility is at an end. Their charges are fixed by authority, and depend on the ship's draught of water. We subjoin a copy of the tariff applicable to pilots taken on board at Elsineur to carry ships to Dragoe, Copenhagen, or Kull Point, with the sums both in silver and in Rigsbank paper dollars.

Pilotage from the 1st of April to the 30th of September.

N.B. —When a pilot is taken on board at Dragoe to carry a ship to Elsineur, the charge is the same as that given under the first head of the above column. — (*Archives du Commerce*, tome iii. p. 145.)

The *Monies*, *Weights*, and *Measures* of Elsineur are the same as those of Copenhagen (which see), except that the rixdollar is divided into 4 *orts* instead of 6 marcs: thus, 24 skillings make 1 ort; and 4 orts 1 rixdollar.

The Sound duties are, however, levied and paid in specie rixdollars of 48 stivers, 9½ such specie rixdollars constituting 1 marc fine silver, Cologne weight. Taking silver at 5*s.* 2*d.* an ounce, the value of the specie rixdollar is 4*s.* 6½*d.*, and taking it at 5*s.* an ounce, it is worth 52·7*d.*, or 4*s.* 4½*d.* nearly. In either case the value of the stiver may be taken at 1·1*d.*

The following tariff of the Sound duties, subscribed on the 28th December, 1841, was drawn up by Danish, British, and Swedish-Norwegian commissioners, in strict accordance with the tariff of Christianople of the 13th of August, 1645, and with the conventions and schedules concluded and agreed upon in London, on the 13th of May, and at Elsineur on the 13th and 23d of August, 1841.

Introductory Remarks to the Tariff of Sound Duties.

I. — *Of the Sound Toll in general.*

The impost levied at Elsinore, known for ages by the appellation of the Sound-toll, involves two distinct branches; namely, the duty payable upon the ship, and that upon the cargo.

The duty payable upon the ship is confined to the light and beacon money, stipulated by a separate act in 1647; but in order to defray the expense of several new lights necessary for the better navigation of the Sound and the Cattegat, and which are in progress of erection, the above rate has been augmented 12½ per cent. by § 31. of the Convention on the Sound-toll with Great Britain of the 13th August, 1841, to the effect that merchant vessels of 20 lasts, or 40 tons and upwards, when in ballast, are henceforth to contribute two and a quarter specie dollars, and when with cargo four and a half specie dollars, each time they are passing, either through the Sound or the two Belts. Vessels of a smaller burden, however, pay on a reduced scale, viz.: —

Tons.	Sp. d.	sti.		Sp. d.	sti.
from 10 to 20: —With cargo	1	0	In ballast	0	24
20 to 30 —	1	24	—	1	0
30 to 40 —	2	0	—	1	24

Vessels under 10 tons are entirely exempt from light dues.

Remark. — Vessels laden with bricks, tiles, or a quantity of goods under six lasts or twelve tons, are considered in ballast, and charged light money accordingly. As to liquids, one last is held equal to eight hogsheads. Of dry goods by the weight, one last (of 2 tons) is reckoned at twelve shippounds, and by barrel measure at so many barrels as constitute a last of each of the respective articles, according to the Tariff. A ship laden with 8 horses or black cattle, however, is considered as carrying a full cargo.

Besides the light and beacon money, several other expenses fall to the charge of the ship, such as customs fees and poor-money, of which an account will be rendered hereafter.

The duty payable upon goods, or the Sound duty, properly speaking, is levied according to the Tariff of the Oresound Custom-house of the 23d December, 1841, (an official translation of which will be found annexed,) and which has been made to include —

1. The articles enumerated and rated in the Tariff of Christianople of the 13th August, 1645.

2. Articles the rates of which were agreed upon in London, on the 13th May, 1841.

3. Articles the rates of which were sanctioned by § 3. and 4. of the Convention of the 13th August, 1841.

All goods and wares not specified in the above-mentioned Tariff pay duty ad valorem, in conformity with the stipulation in § 3. of the treaty between Denmark and the United Netherlands of the 15th June, 1701. — (*Conf.* § 23. *and* 24. *of the present regulations.*)

A toll, upon the same principles as at the Sound, and denominated "stream toll," is levied upon all vessels and goods which pass through the larger and little Belt. In the former case it is collected at Nyborg, in the island of Funen, and in the latter, at Frederica, in Jutland.

The following objects, viz. bullion and coin of gold and silver; chalk and gypsum in lumps; clay of various kinds, with the exception of pipe-clay; coals and cinders; cordage and other ships' materials proceeding from a wreck; fresh fish, with the exception of oysters and lobsters; small grindstones, used household furniture and wearing apparel; paving stones; quicklime and limestone; small stones for fishing-nets; and wood for fuel, are exempt from duty at the Sound and Belts by ancient usage. The vessels laden with such objects, however, are liable to the light dues, stipulated for vessels with a cargo.—(*Conv.* 13th Aug. 1841, § 11.)

The duty, light, and beacon money, fees, and other dues at the Sound and Belts, are levied and paid in specie rixdollars of 48 stivers, of which 9½ rixdollars specie constitute one mark fine silver, Cologne weight. The notes issued by the Danish National Bank, however, are received in payment at the current exchange.—(*Conv.* 13th Aug. 1841, § 32.)

N.B. — Taking silver at *5s. 2d.* an oz., the value of the specie doll. is *4s. 6½d.*; and taking it at *5s.* an oz., it is worth *52·7d.*, or *4s. 4¾d.* nearly: in either case the value of the stiver may be taken at *1·1d.*

II. *Of the Oresound Custom House, and its Rules and Regulations, chiefly founded upon Treaties with foreign Nations; and of the Privileges enjoyed by such Nations at the Sound and the two Belts.*

The following are the rules and regulations, chiefly founded upon the existing treaties, and acted upon by the Customs, as respects the shipping and trade at the Sound and the two Belts.

In order to secure prompt despatch to the vessels clearing the dues, the officers are instructed to be in daily attendance at the Custom-house at the following periods, viz.: —

a. For the reception of papers,

from the 1st April to the 31st Oct.	- from 4 o'clock, A.M. to 10 o'clock, P.M.
in the month of March -	- from 6 o'clock, A.M. to 9 o'clock, P.M.
and during the rest of the year	- from 6 o'clock, A.M. to 8 o'clock, P.M.

b. For the delivery of Sound-passes,

from the 1st April to the 31st Oct.	- from 6 o'clock, A.M. to 9 o'clock, P.M.
in the month of March -	- from 7 o'clock, A.M. to 9 o'clock, P.M.
and during the rest of the year	- from 8 o'clock, A.M. to 6 o'clock, P.M.

(*Conv.* 13th Aug. 1841, § 26.)

The fees to be levied by the customs officers, in conformity with the conventions of the 13-25th August, 1841, between Denmark on the one part, and Great Britain, Sweden, and Norway on the other, have been determined and fixed as follows: —

a. Fees payable upon each Clearance.

To the director, commissioners, and officers of the Customs, to be charged in one sum under the head of "Customs Fees," 3 specie dollars (sp. d.).

Vessels proving to be under 20 lasts or 40 tons, are charged according to the following reduced scale, viz.: —

From 10 to 20 tons burden,	Sp. d.	0	12	stivers
20 to 30	—	1	24	—
30 to 40	—	2	0	—

Those under 10 tons are exempt from customs fees.

Remark. — Where the credit alluded to in section 2. of § 29. is made use of, 12 stivers are charged in addition for the stamped paper on which the bond is written.

b. Fees payable in special Cases.

1. To the inspector or searcher, where the vessel does not bring a Custom-house clearance or other official document, proving her national character and stating the nature of her cargo, sp. d. 1 6 st.

Vessels under 20 tons are not liable to the inspector's charge.

Remarks. — Where the clearances from foreign ports, and namely, the English "Victualling bills" of privileged ships in ballast, are defective, owing to their not stating either the ship's national character or the circumstance of her sailing in ballast, such defect may be amended by the master's declaration before the consul of his nation, in which case no inspector's fee is charged.—(*Conv.* 13th Aug. 1841, § 21.)

As unprivileged vessels are liable to be searched, they are charged the inspector's fee each time they clear.

2. To the interpreter, for reporting the cargoes for entry at the Custom-house, and for rendering a detailed statement of the duty, showing the proportion to be contributed and paid by each of the shippers or consignees in particular; namely, for any number of bills of lading, not exceeding four - - - - - - 32 stivers.
And in addition for each bill of lading above four 4 —
For reporting a ship in ballast, or laden with coals 12 —

Remark. — Where no bills of lading are on board, the interpreter is entitled for any number not exceeding six cockets - - - - - - 32 stivers.
And for each cocket over and above that number 4 —

Vessels proceeding from the countries under-mentioned, are exempt from the interpreter's charge, and pay only eight stivers for their pass, where the master requires to have the same returned; viz. from Denmark, Norway, Sweden, Prussia, Finland (with the exception of Wyburg and Frederickshamn); from the Baltic provinces of Russia (with the exception of St. Petersburg and Narva); and from Mecklenburg (with the exception of Rostock). — (*Conv.* 13th Aug. 1841, § 22.)

Remark. — Vessels from these countries proving to measure under 20 tons are not even subject to the charge for the copy of their pass.

Besides the fees above enumerated, another expense is entailed upon the shipping, which is the *extra poor-money*, stipulated for the benefit of the poor by § 5. of the Convention of the 15th June, 1701, and amounting to one specie dollar, payable where the clearance of a vessel is demanded and granted on Sundays, and on the holidays lawfully appointed, as well as out of the office hours, mentioned in § 9.—(*Conv.* 13th Aug. 1841, § 26.)

Remark. — Vessels proving to measure under 30 tons pay only 32 stivers poor-money.

British vessels of small size are, moreover, charged the British poor-money of one specie dollar, or *5s.* sterling, being a voluntary contribution on the part of the ship-owners in consideration of certain advantages and relief, granted by the clearing-houses at Elsinore, in the event of shipwreck, to the masters and crews of such vessels as have contributed to the same.

Regular acquittances for the duty, light, and beacon-money, as well as for the customs fees and other dues at the Sound and Belts, are given by the Customs on the respective passes.

Remark. — The above acquittance on the pass for the amount of duty should, strictly speaking, not be given in the gross, but in detail, and for each description of goods in particular; however, in order not to delay the despatch of vessels longer than is absolutely necessary, a detailed statement is only delivered to shipmasters upon their express demand, when previously made to that effect. — (*Conv.* 15th June, 1701, § 6.; and 13th Aug. 1841, § 25.)

Each merchant vessel calling at Elsinore is to hoist her colours; that is to say, when coming from the northward: previously to passing Cronborg Castle; and when coming from the southward, previously to passing the Danish guardship stationed in the roads.—(*Conv.* 13th Aug. 1841, § 13.)

Every merchant vessel is liable to the payment of duty, when on her voyage she passes the Custom-house line; by which is understood, in the Sound, an imaginary line drawn across the Sound between the flag-battery of Cronborg Castle and the northern point of Helsingborg; in the large Belt, the line between Halskow, in Zealand, and Knudshoved, in Funen; and in the little Belt, the line between Strib, in Funen, and the old Ferry-bridge at Frederica, in Jutland. — (*Conv.* 13th [illegible] 1841, § 14.)

[illegible] general rule established by the preceding article is subject to the following modifications: —

a. Vessels which, by stress of weather, seek the roads for shelter, or come in to wait for convoy, but return again, are entirely exempt from all clearance and charges.

b. Vessels, which call for orders and return again, without either loading or unloading, are not subject to the payment of any duty, except light-money and customs fees inwards.

c. Vessels carrying a pendant, and reporting to have goods on board, although liable to duty upon the rated articles of their cargo as heretofore, are exempt from light-money and all customs fees.—(*Conv.* 13th Aug. 1841, § 15.)

For the preservation of public order, shipmasters or other persons who come on shore at Elsinore for the purpose of clearing the Sound dues, are to proceed im[illegible] landing-place to the Custom-house, the [illegible] papers and to make the declarations required of them, in order that no delay may occur in the prompt despatch of their vessels.—(*Conv.* 13th Aug. 1841, § 16.)

Goods and wares on which the Sound and stream duty has once been paid, and which are necessarily returned either through the Sound or the Belts in consequence of shipwreck, or by some other reason, are not liable to duty a second time; the parties, however, will have to afford the necessary explanation on the subject, to the satisfaction of the Customs.

The same is observed with regard to vessels which, after having cleared the dues from tempestuous weather or contrary winds, are obliged to return to the roads. — (*Conv.* 15th June, 1701, § 8.)

The duty on goods is invariably computed according to the weights and measures of the country or place where the cargo has been shipped; to the effect that, inasmuch as a ton in England is 20 cwt., or 2240 lbs., the duty in like manner is calculated upon 2240 lbs.; and a kilogramme in France, and a Netherlands pound in Holland, being equal to 2 French and 2 Dutch pounds respectively, they are likewise taken at 2 pounds at the Sound and Belts; and so in similar cases.—(*Conv.* 15th June, 1701, § 2.; and 13th Aug. 1841, § 12.)

Where the ship's papers, therefore, state goods and measures other than those customary at the place where the goods have been laden, a reduction of the same to the weights and measures of the place of shipment is made previously to the duty being charged.

The nations trading through the Sound and Belts are considered by the Customs in the light either of privileged or of unprivileged nations. The former class includes all those whose governments are connected with Denmark by means of commercial treaties, containing stipulations about the Sound toll.

In consequence thereof, the ships (including the goods laden therein) of the following states are treated upon the footing of the most favoured nations, among which are Great Britain and most other powers.

Privileged nations pay duty according to the customs tariff of the 23d of December 1841; but on all articles not rated therein, they are charged 1 per cent. ad valorem according to the value of such articles at their respective places of shipment.

Unprivileged nations, although equally paying the rated duty according to the tariff, are charged 1½ per cent. upon all articles subject to the ad valorem duty.

Remark. — Unprivileged ships, when bound to the port of Rostock, laden with 6 tons of goods and upwards, are liable, besides, to a movable duty upon the scale of 4½ specie dollars, from which the most favoured nations have been exempted by § 10. of the Convention of 13th August, 1841. With regard to the discriminating duties which are levied upon certain wines, as well as upon various descriptions of corn from certain ports of the Baltic, when laden in unprivileged ships, see § 29. sections 4, 5, 6., and to Table III. at the end of the tariff.

The duty ad valorem, above alluded to, is charged upon the value or according to the prices, stated in the ship's papers; but where they do not afford the information required, or where the statements made prove to be incorrect, the customs officers are instructed to make, the valuation according to prices current, which quote the actual prices at the places of shipment; where these, however, are not obtainable, it is left to the officers to act according to the best of their judgment and upon principles of equity. Where the value of the goods actually shipped is not stated in the endorsement of the paper called "cocket," and no regular invoice accompanies the same, the value stated in front of such cocket is adopted by the Customs in the first instance for calculating the duty payable.—(*Conv.* 13th Aug. 1841, § 17, 18.)

Where, from a deficient state of the ship's papers or some other cause, the duty on any parcel of merchandise has been overcharged by the Sound Customs, the difference will be refunded to the claimants on their affording sufficient proofs to that effect within the term of one year, to commence from the time that such dues were paid.—(*Conv.* 13th Aug. 1841, § 19.)

In the event of any disagreement arising between the parties about the amount of Sound duty actually charged and paid upon any parcel of merchandise, the Sound Customs will deliver, gratuitously, to the persons applying for the same, a detailed statement, under their hand and seal, of the duty so charged and paid.—(*Conv.* 13th Aug. 1841, § 20.)

As soon as a shipmaster has delivered at the Custom-house the papers referring to his cargo, and has made the declarations required of him, he shall, at his request, and on giving good and sufficient security to the Customs for the payment of the dues, be furnished with a blank pass, in order that he may be enabled to proceed forthwith on his voyage, if the wind be favourable, without being obliged to wait for a regular Custom-house clearance.—(*Conv.* 13th Aug. 1841, § 27.)

Besides the privilege mentioned in § 23. of paying 1 per cent. only on articles not rated in the tariff, the following other privileges are enjoyed by the most favoured nations, viz.:—

1. Their ships and goods are free from being searched by the Customs, and full credence is given to their certificates and papers when in due order; with the understanding, however, that in case of any fraud upon the revenue at the Sound and the Belts, the government concerned, when called upon, adopt prompt and efficacious measures to procure redress.—(*Conv.* 15th June, 1701, § 11.)

2. Although goods, not rated in the tariff and belonging to them, be laden in unprivileged vessels, still such goods are not charged with a higher duty than 1 per cent. ad valorem, on being accompanied by the necessary certificates of property from the port of shipment.

3. They have a pre-eminent claim to their ships being despatched at the Custom house, without experiencing delay.—(*Treaty with England of* 1670, § 14.; *with Holland of* 1701, § 11.)

4. Spanish and Portuguese wines, when laden in their vessels, pay sp. d. 1½ per pipe only, while in unprivileged ships such wines are subject to a duty of sp. d. 2 per pipe.

5. In like manner wine in bottles laden in their vessels is charged 24 stivers per 100 bottles only, while in unprivileged ships the same wine is liable to 30 stivers duty per 100 bottles.

6. When their ships carry certain descriptions of corn from various enumerated ports in the Baltic, the duty payable thereon is not raised, as when laden in ships belonging to unprivileged nations.

7. They are exempt from the Rosenoble duty, mentioned in the remark to § 24.

8. On good and full security being given to the Customs, the ships of Great Britain, France, and Spain, when upwards bound, enjoy the privilege of paying the dues at their return from the Baltic; or if they do not return, then within three months, if they have not paid the same on their first passage. (*Treaty with England of* 1670, § 12.; *with France of* 1742, § 10.)

The pleasure yachts belonging to the members of the royal yacht squadrons in England are entirely exempt from light-money and customs at the Sound and the two Belts, on the necessary proofs being afforded by them to the satisfaction of the Customs.—(*Conv.* 13 Aug. 1841, § 30.)

Towards indemnifying shipmasters for the expenses necessarily attendant upon their coming on shore to clear the Sound dues, an allowance of 4 per cent. on the amount of duty payable upon their cargoes is granted by the Customs to every shipmaster who shall have made a true report and manifest of his cargo.—(*Conv.* 13 Aug. 1841, § 31.)

Masters and seamen of merchant vessels, who, having suffered shipwreck, arrive at Elsinore in distress, and apply to the Sound Custom-house, either in person or through the consul of their nation, receive the customary donation out of the extra poor-money mentioned in § 13.—(*Conv.* 13 Aug. 1841, § 34.)

The infraction of, or deviation from, the established rules and regulations of the Customs, is visited with the following penalties, viz.:—

1. For making a false entry of the quantity or quality of the cargo, and for running the ship past the Custom-house (except in case of distress), with a manifest intention of defrauding the revenue, a penalty is imposed adequate to the degree of culpability of the offending party; that is to say, over and above the lawful duty on the goods, in the worst case, a sum not exceeding double the amount of which the revenue was intended to be so defrauded.

2. Where shipmasters are bound to Copenhagen, and sail thither without having previously cleared the Sound duty, although they send their papers down to Elsinore for clearance, they are liable to a penalty of two specie dollars and a half.

3. Fines of one specie dollar are inflicted—

a. Where the ships' papers are forwarded to Elsinore for despatch previously to the ship's arrival from the southward.

b. Where the ships' papers are brought on shore by any other person than the master, mate or supercargo.

In conclusion, it must be remarked, that in order to secure prompt despatch to the vessels clearing at the Sound and the Belts, and to protect the owners of the goods therein laden, as much as possible, against involuntary overcharges in the dues, it is of the most vital importance that the papers relating to ship and cargo (which the shipmasters are held to deliver at the Custom-house each time they present themselves for clearance) should always be made out in such order, so as to enable the officers to calculate the duty without difficulty. The parties, therefore, will have to impute it to themselves, in so far as any delay in the clearance, or any overcharge in the dues, is occasioned by the deficient state of the papers produced. For these reasons it is strongly recommended to the shipmasters, as well as to the shippers of goods, to be careful that the papers which relate to the cargo, independently of a clear and exact report of the contents of the several packages, moreover distinctly mention—

1. As regards goods that are specified and rated in the tariff, either the weight or measure at the port of shipment, as the case may require.

2. As regards goods which pay duty ad valorem, the value of such goods at the port of shipment.

It is only under the guidance of an accurate and full statement of these details that the customs officers, on charging the duty, are enabled to do full justice to the commercial public in the sense of the existing treaties, and it is only by these means that a frequent recurrence of claims for overcharges (attended with great inconvenience to all parties) can be most effectually checked for the future.

Tariff of Duties levied at the Sound and Belts.

	Stivers.
Almonds, the 100 lbs.	9
Alum, the ship lb.	12
Amber, wrought, the 5 lbs.	6
raw, in fragments, or filings, the ship lb.	9
Anchor stocks, the shock of 60	48
Angora goat's hair is charged as camel's hair.	
Aniseed, the 100 lbs.	9
Annatto or roucou, the 100 lbs.	9
Antimony, the ship lb.	12
Apparel of a ship stranded, duty free.	
wearing, used, duty free.	
new, is charged duty ad valorem.	
Apples, the last (12 barrels to the last)	6
Argol or tartar, the 100 lb.	2
Armagnac. See *Brandy*.	
Arrack. See *Brandy*.	
Arsenic, the 300 lbs.	8
red. See *Orpiment*.	
Ashes, viz.:—	
pot and straw ash, the last or the 12 ship lb.	48
The weight not being stated, the barrel is reckoned at 1 ship lb. nett.	
kelp, the ship lb.	4
The weight not being stated, the barrel is reckoned at ½ ship lb. nett.	
soda. See *Barilla*.	
weed ash, the last (12 barrels to the last)	12
The barrel is reckoned at 1 ship lb. nett.	
A cask of weed ash from Riga is considered as a barrel.	
Atlas, the two pieces (25 ells being reckoned to the piece)	9
Bacon, the ship lb.	6
Weight unknown, the barrel is reckoned at 1 ship lb. nett.	
Bagging. See *Linen*.	
Baize, the piece, reckoned at 25 ells	3
Balk planks, of oak, the shock of 60	48
of fir and pine, the shock of 60	36
Balks of oak, ash, and beech, each	3
of fir, pine, and lime, the pair or two	3
round, are charged according to dimensions as round timber.	
denominated "balks hewed square or with eight edges," are charged as yards from 7 to under 15 palms.	
Barattes of silk, the two pieces (25 ells being reckoned to the piece)	9
Barley, the last (20 barrels to the last)	24
meal and groats. See *Flour* and *Groats*.	
Barilla, the 100 lbs.	1
Bars of gold and silver, duty free.	
Bay berries, the 200 lbs.	9
Beans, the last (12 barrels to the last)	12
The number of barrels unknown, 200 lbs. nett weight is reckoned to the barrel.	
Beaver skins. See *Skins*.	
Beaver wool or hair, the 25 lbs.	24
Bed ticking, fine, the 4 pieces (25 ells being reckoned to the piece)	15
coarse, the 5 pieces (50 ells being reckoned to the piece) without indication of quality, is charged as fine bed ticking.	3
Beef, salted and smoked, and all other kinds of meat salted and smoked, the last (12 barrels to the last)	36
The number of barrels unknown, 200 lbs. nett weight is reckoned to the barrel.	
Beer, Lubeck, Rostock, Stralsund, and Wismar, the last of 6 casks (12 barrels to the last)	18
mum, black or spruce beer, and all other kinds of beer not otherwise enumerated and described, the last of 6 casks (12 barrels to the last)	36
in hogsheads from England, Holland, and other places, the 2 hogsheads	9
8 hogsheads or 12 barrels are reckoned to the last in bottles, is charged duty ad valorem.	
Blankets, horse, the 2 dozen	15
for beds, the 2 dozen	15
Where the quantity is not otherwise reported than by the ell, 4 ells are reckoned to each blanket.	
Boat-hook shafts are charged as common spars.	
Bombazeen, the 4 pieces (25 ells being reckoned to the piece)	5
Bombazett, the 4 pieces (25 ells being reckoned to the piece)	5
Boxes, the last	18
Brandy, French, including Armagnac, Charente, and Cognac, the hogshead of 30 veltes	24
Spanish, the hogshead of 30 veltes	24
arrack, rum, and taffia, the hogshead of 30 veltes	24
Rhenish, the hogshead of 30 veltes	36
From Sweden, 60 kannor are reckoned to the hogshead.	
corn and potato, the barrel of 12 to the last	4
From Sweden 60 kannor are reckoned to the barrel in bottles } Dutch gin } are charged duty ad valorem.	
Brass, the ship lb.	24
guns, the ship lb.	24
wire. See *Wire*.	
Brazier's work, the crate weighing 1 ship lb.	24
Bread and biscuits of wheat, the last (12 barrels to the last)	18
of rye, the last (12 barrels to the last)	12
The number of barrels not being reported, 100 lbs. nett weight is reckoned to the barrel.	
Brimstone, the last or 12 ship lbs.	48
Broadswords, the 25	12
Brocade of gold and silver, the piece (25 ells to the piece)	18

	Stivers.
Brussen are balks.	
Buckram of all sorts, the 4 pieces (50 ells being reckoned to the piece) - - - - -	3
Buckskins. See *Skins*.	
Buckwheat, the last (12 barrels to the last) - -	12
Buff leather. See *Leather*.	
Buldan canvass is charged as boldavet. See *Linen*.	
Bullion, gold and silver, duty free.	
Bullocks, each - - - - - -	18
Buntine, the 4 pieces (25 ells being reckoned to the piece)	5
Butter, the last (12 barrels to the last) - -	60
The number of barrels being unknown, 200 lbs. nett weight is reckoned to the barrel.	
Calfa (figured plush), the 2 pieces (25 ells being reckoned to the piece) - - - - -	9
Calamine, the ship lb. - - - - -	6
Calamus, the 100 lb. - - - - -	6
Calemink or drillings from Russia, the 100 arshines -	6
Calf skins, raw, salted, and dried, the 10 dickers or 100 skins - - - - -	12
of the weight of 9 lbs. nett and upwards, each, pay as kips. See *Hides*.	
Calico, printed or dyed, is charged ad valorem.	
Calves, each - - - - - -	8
Camblets, the 2 pieces (25 ells being reckoned to the piece)	5
Cambrics of cotton, are charged ad valorem.	
of linen, the 4 pieces (25 ells reckoned to the piece) -	15
Camel's hair, the 25 lbs. - - - - -	6
Canary seed, the last of 6 casks (12 barrels to the last) -	36
Candles of tallow and wax. See *Tallow* and *Wax*.	
of spermaceti are charged ad valorem.	
Canella alba, the 100 lbs. - - - - -	6
Capers in pipes and hog-heads, the pipe or 2 hogsheads -	18
in smaller casks, or in boxes and cases or similar packages, are charged ad valorem.	
Cardamoms, the 100 lbs. - - - - -	18
Cassia fistula, the 100 lbs. - - - - -	12
Cassia lignea, the 100 lbs. - - - - -	9
Cattle bones, the ship lb. - - - - -	1
Cement, the last (12 barrels to the last) - - -	12
By weight the last is reckoned at 12 ship lb. nett.	
Chalk, white, raw, and in lumps, duty free. (12 barrels to the last.)	
ground or crushed } are charged ad valorem.	
red and black }	
Cheese, the ship lb. - - - - - -	4
Chesnuts, the boisseau - - - - -	1
The number of boisseaux not being mentioned, 100 lbs. nett weight is reckoned to the boisseau.	
Cider and similar fruit wines, including must, the hogshead of 30 veltes - - - -	12
Cinders, duty free.	
Cinnabar, the 100 lbs. - - - - -	24
Cinnamon, the 100 lbs. - - - - -	36
Clapwood. See *Wood*.	
Clay of all sorts, duty free, except pipe-clay, which pays ad valorem.	
Cloth, woollen, English, Dutch, and fine, the 8 pieces -	36
coarse, Scotch, Amsterdam, Flemish, and French, the 16 pieces - - - - - -	30
Cloth, woollen, virlot or coarse Dutch, if not particularly described, and all other coarse cloth, the 16 pieces -	36
25 ells of all sorts of woollen cloth are reckoned to the piece.	
Clothes, old and new. See *Apparel*, *Wearing*.	
Cloves, the 100 lbs. - - - - -	36
Club sticks, the long hundred of 48 shocks - -	48
Coals of all sorts, including cokes and cinders, duty free.	
Coal pitch, the last (12 barrels to the last) - -	18
Coal tar, the last (12 barrels to the last) - -	18
Cobalt or cobalt ore, the 100 lbs. - - -	3
Cochineal, the 100 lbs. - - - - -	36
Cocoa, the 100 lbs. - - - - -	6
Cod fish. See *Fish*.	
Codilla of flax and hemp, the 10 ship lbs. - -	36
Coffee, the 100 lbs. - - - - -	6
Coin of gold and silver, duty free.	
Coney wool, the 5 lbs. - - - -	3
Copper, wrought and unwrought, the ship lb. - -	24
wire. See *Wire*.	
Copperas (vitriol), the ship lb. - - -	6
blue, the ship lb. - - - - -	6
Cordage, namely—cables, cable yarn, rigging and hawser laid ropes, the ship lb. - - - -	6
old, used, the 5 ship lbs. - - - -	18
proceeding from a wreck, duty free.	
Cordovan. See *Leather*.	
Coriander seed, the 200 lbs. - - - -	3
Corkwood in bundles, the 5 bundles - - -	6
In other packages, pay ad valorem.	
Corks, cut, pay ad valorem.	
Cotton wool, the 100 lbs. - - - -	18
Cotton cloth, white, common, the 8 pieces - -	15
25 ells being reckoned to the piece.	
manufactures of, in so far as they are not particularly enumerated, or included in the descriptions mentioned in the present tariff, pay ad valorem.	
Coulters are charged according to dimensions, as Swedish and Norway spars.	
Cows, each - - - - - -	18
Crape, the 2 lbs. - - - - -	5
Cubebs, the 100 lbs. - - - - -	8
Cultrases, the 5 - - - - -	8
Cummin seed, the 100 lbs. - - - -	9
Currants, the 200 lbs. - - - -	9
Cypress boxes, the package or 12 pieces - -	9
Damask of silk, the 2 pieces - - -	9
of linen, the 2 pieces - - - -	5
of wool, the 4 pieces - - - -	5
25 ells of damask are reckoned to the piece.	
Dates, the 100 lbs. - - - - -	9
Deals and deal ends of ash, beech, lime, maple, and oak. See *Planks*.	
of fir and pine, viz.: —	
Prussian, the shock of 60 - - - -	36
from other places, of the length of 21 feet and upwards, the shock of 60 - - - - -	36
Deals, from 18 to under 21 feet, the shock of 60 - -	24
under 18 feet in length, the 1,000 - -	36
Diaper. See *Drillings*.	
towels, the 5 dozen - - -	18
Dodder, the last (24 barrels to the last) - -	18
Down, the ship lb. - - - - -	36
Dozens, the 4 pieces - - - - -	9
25 ells being reckoned to the piece.	
Drillings from Russia, the 100 arshines - -	6
from other places, the 2 pieces - - -	3
25 ells being reckoned to the piece.	
Drugget (a woollen stuff), pays as single says.	
Dyewoods. See the different species under *Wood*.	
Elephants' teeth, the 100 lbs. - - - -	9
Feathers, the ship lb. - - - -	6
Felt, pays as single says.	
Hats, when in casks - - - -	12
In other packages, and per dozen, or by the piece, they pay ad valorem.	
Figs, the 400 lbs. - - - - -	9
in baskets or frails, the weight being unknown, the frail or basket - - - - -	1
Firewood, duty free (2 fathoms to the last).	
Fish, salted, viz.: —	
eel, the last of 6 casks (12 barrels to the last) - -	30
mackerel, salmon, and sturgeon, the last of 6 casks (12 barrels to the last) - - - -	60
The number of barrels being unknown, 200 lbs. nett weight is reckoned to the barrel.	
herrings the last (12 barrels to the last) - -	24
Aberdeen fish, cod or torsk, and all other sorts of salted fish not particularly enumerated, the last (12 barrels to the last) - - - - -	12
The number of barrels being unknown, 200 lbs. nett weight is reckoned to the barrel.	
Do. dry or hard, viz.: —	
flounders and whitings, the last of 20,000 - -	12
cod, lub-fish, ling, skate, split stockfish, sponders or spuren, torsk, and all other sorts of dried fish not particularly enumerated, the last - - -	30
or by the piece, without weight or measure, the 1,000 pieces - - - - - -	30
12 ship lbs. 120 wogs 100 wahl are reckoned to the last.	
raw and reckling (cut out of the back of the holibut), the last of 8 hogsheads or 12 barrels - -	36
Do. smoked: — herrings, red, the last of 12 barrels, or 20 straw - - - - - -	3
salmon is charged ad valorem.	
pickled: — river lampreys, the barrel (12 barrels to the last) - - - - -	5
fresh, duty free, with the exception of oysters and lobsters, which are charged ad valorem.	
Flagstaffs under 7 palms, the 5 - - - -	6
of other dimensions, are charged as masts.	
Flannel, the 4 pieces (25 ells being reckoned to the piece)	5
Flax, rough, viz.: —	
Class 1., denominated — clean flax; Druana; Esthonian, if not further described; fine; Flanders; Helligh; Hollands; Knocken; Livonian, where the sort is not stated; Marienburg; matted; Narva, where the sort is not stated; Notabene, with the exception of Prussian Notabene flax; Paternoster; Podolian; Polish; Rakitzer; St. Petersburg, where the sort is not stated; 2 head, 1 and 1st and 2d sort; the ship lb. -	12
Class 2., denominated — Badstuben; common; Courland; cut, of all sorts; Farken; Notabene flax from Prussia; Oberlands; ordinary; Pernau; Prussian, if not particularly described; Rapen; Riston; Rositschey although reported 2d sort in the pass; 2, 3, and 4 band; 6 head, and 3d sort; the ship lb. - - -	8
dressed, the ship lb. - - -	
Flour and meal of all sorts, viz.: — of wheat, rye, barley, oats, &c., the last (12 barrels to the last) - -	24
Whenever the weight is reported, 200 lbs. nett weight is reckoned to the barrel.	
Frankincense, the 100 lbs. - - - -	9
Frescoyes, used for bedding, is charged, ad valorem.	
Fringes of silk, the 2 lbs. - - - -	5
of wool or flock fringes, the 8 lbs. - - -	15
Gallipot, the 100 lbs. - - - -	2
Galls, the 200 lbs. - - - - -	9
Gauze is charged as crape.	
Ginger, dry, the 100 lbs. - - - -	12
preserved, the 100 lbs. - - - -	24
Glassware, viz.: —	
bottles, empty, the shock of 60 - - -	1
the vat or 2 pipes - - - -	12
The preceding are common green bottles of the capacity of 2 quarts and under; the larger and superior sorts are charged ad valorem.	
window glass, the 4 boxes or crates - - -	15
drinking glasses from Venice, in boxes, the box -	9
Drinking glasses from other places than Venice, or reported by the dozen, are charged ad valorem.	
Gloves, Russian, the 1,000 pair - -	36

which, proceeding from places not in France, pass the Sound and the Belts, the hogshead of 30 veltes	24
denominated Moselle, Neckar, and all kinds of Rhenish wines, or Hock, the 5 aums	192
Hungary or Tokay and all other Hungary wines, the 5 aums	192
In bottles, when laden in privileged ships, the 100 bottles	24
Wire of copper and brass, the ship lb.	24
of steel and iron, the 100 lbs.	4
of steel when in casks or crates, the cask or crate	24
Woad, the ship lb.	6
Wood, viz.: —	
for dyeing, Pernambuco and Brazil wood of all sorts, the 1,000 lbs.	30
do. Barwood, Caliatour, Campeachy, Camwood, Ficet, Fustick of all sorts, Galicia, Honduras, Japan or Sapan, Logwood, Province and Sandal-wood, the 1,000 lbs.	8
do. Nicaragua or blood-wood, Rio de la Hacha, St. Martin's or Sta. Marta, and Stockfish wood, the 1,000 lbs.	12
or timber for house and shipbuilding, boat stems and wood for boatbuilding, the 25 pieces	6
do. bohl wood of oak and fir. See *Balks*.	
cross beams (Riegelholt). See *Balks*.	
do. cross wood, the shock of 60	24
do. lath-wood, the 100 pieces	2
N B. Where lathwood is reported in fathoms with the number of pieces, the duty is charged on the number of pieces; but where the latter is not stated, the fathom is reckoned at 150 pieces.	
do. logs of birch and ash, the 10	9
do. do. oak, the 25	36
do. quarters of 9 inches and upwards pay as Balks.	
do. quarters under 9 in. in thickness, the 60	24
do. quoins and wedges pay the same duty as quarters.	
do. paling boards, square, pay as balks of oak and fir.	
do. paling boards, round, pay as round timber.	
do. round, pays according to dimensions as masts.	
do. stems perforated for pumps and gutters, the 25	36
do. denominated building and ship's timber, crooked timber, half wood, keel wood, knees and long-wood, the 25 pieces	36
do. from Riga, called "Rundhölzer," pays according to dimensions as masts.	
do. denominated "Quadrat-hölzer" of oak and fir, pays as balks of oak and fir.	
do. denominated "Hölzer," pays as do.	
do. wales of ships (Barkholter), the shock of 60	84
used for staves, denominated clap-wood, Dutch, and French wood, heading-boards, pipe and vat wood, the long hundred of 48 shocks	48
used for staves, called cooper's wood and stave wood, the 4 shocks	3
See more under the particular heads.	
for fuel, duty free, 2 fathoms to the last.	
wares, viz. troughs, trays, milk-basons, porringers, and bowls, the 5 shocks, or 500	9
trenchers and platters, the 5 shocks	2
shovels and scoops, the 10 shocks	9
nails or trunnels. See *Nails*.	
Wool, viz.: —	
flock-wool and shearings, the 2 ship lbs.	9
noile and refuse, common wool, skinners' and carrion wool, Turkey wool, and all other sorts of coarse wool, the ship lb.	5
Spanish, and all other sorts of fine wool, English, Scotch, Prussian, and all other lamb and sheep wool, the quality of which is not particularly described, the ship lb.	9
Wool-cards (hand-cards), the cask of 30 dozen pair (The number of pairs not being stated, 12 lbs. nett is reckoned to the dozen pair.)	18
Cards used in cloth manufactories (*cardes fabriques*), and fullers' thistles or teazels (*chardons à carder*), are charged ad valorem.	
Wool, manufactures of, in so far as they are not particularly enumerated, or included in the various descriptions rated in the present tariff, are charged duty ad valorem.	
Woollen and worsted yarn. See *Yarn*.	
Yards, sail, from 7 to under 15 palms, each	8
Yarn, viz.: —	
cable-yarn, spun twine, tarred twine, and rope-yarn, the ship lb.	6
tow-yarn, the ship lb.	9
sail-twine, the ship lb.	36
hemp-yarn, fine, the ship lb.	36
flax and linen yarn, and Ebersfelda yarn, the ship lb.	36
Koningsberg, Pillau, and Dantzic yarn, when not further described, is charged as flax yarn.	
N. B. — Yarn from the ports of Prussia, being reported "in shocks," the shock is reckoned at 20 lbs. nett, or 15 shocks to the ship lb. nett.	
cotton or twist, the 100 lbs.	16
cotton embroidering yarn, knitting and sewing yarn, the 50 lbs.	15
Turkey red yarn, the 50 lbs.	15
mohair, the 50 lbs.	18
woollen and worsted, or sayette, the 5 lbs.	3
linen-thread and sewing-silk. See *Thread*.	
Zinc or spelter, the 100 lbs.	2
Finally, all goods and wares not enumerated in the preceding tariff (including those articles liable to the ad valorem duty, which have merely been quoted by way of illustration to distinguish them from rated goods of the same or a similar denomination), when laden in vessels belonging to a privileged nation, are charged one per cent. ad valorem upon the value of such goods at the port of shipment, without regard to the places whence they may arrive, or whither they may be destined.	

The following statements are subjoined to the Tariff of Tolls: —

1. Where the Sound tariff, on rating any specific article, distinguishes between fine and ordinary quality, and the ship's papers do not report to which of the two the article belongs, the duty is always charged according to the rate imposed upon

the superior article, unless it may be inferred from the value stated in the ship's papers that the goods are really of an inferior kind.

Is
and S
lbs.; and from all other places, of 300 lbs.

3. With regard to timber, the duty on round timber is computed according to its dimensions, and on planks, deals, and boards (in so far as the duty is imposed upon a certain length), according to foot measure, without considering the denominations by which the several descriptions of timber may be reported in the ship's papers, in such manner that the foot and inch measure of the country where the cargo has been shipped is invariably made the basis for calculating the duty, and where the ship's papers report a foreign measure other than that actually in use at the place of shipment, it is reduced by the stoms to the latter measure, previously to the duty being charged.

4. Where the number of pieces is not specified in the ship's papers for such manufactured goods as ---ted in the tariff by the piece, stuffs so reported are presum
of 50 or 25 ells per piece, according to qual
the tariff under the head of each particular article. Where, however, both the number of pieces and of ells are stated, duty is preferably charged upon the former, it being only charged upon the latter where the number of pieces is unknown. In accordance with these principles,

100 Danish ells are reckoned respectively at 2 and 4 pieces.

— Swedish ells	do.	do.	2	— 4 —
— Norway ells	do.	do.	2	— 4 —
— Russian arshins	do.	do.	2	— 4 —
— Prussian ells	do.	do.	2	— 4 —
— Netherland ells	do.	do.	3	— 6 —
— English yards	do.	do.	3	— 6 —
— French aunes	do.	do.	4	— 8 —

5. The duty upon liquids is always charged upon the quantitive contents of the casks without regard to the denominations by which these latter may have been reported: to the effect that the measure in velts, gallons, litres, or as the case may be, is adopted for computing the duty.

6. The duty is charged upon the nett weight of the articles liable to the same. Where, therefore, the ship's papers only state the gross weight, the following tares are allowed: viz., 5 per cent. upon goods in bags, packages, bundles, serons, bales, &c., and 10 per cent. upon goods in boxes, cases, crates, casks, &c.; with the exception, however, of hemp, rape, and linseed oil in casks, — which 15 per cent. is allowed.

7. As stipulated by § 12. of the Conventions of the 13th and 23d August 1841, the duty is chargeable upon the weights and measures of the places where the cargoes or goods liable to the same, have been shipped.

EMBARGO, an order issued by the government of a country to prevent the sailing of ships.

EMERALD (Fr. *Emêraude*; Ger. *Smaragd*; It. *Smeraldo*; Lat. *Smaragdus*; Sp. *Esmeralda*), a precious stone in high estimation. It is distinguished from all other gems by its peculiar *emerald green* lustre, varying in intensity from the palest possible tinge to a full and deep colour, than which, as Pliny has truly stated, nothing can be more beautiful and pleasing; *nullius coloris aspectus jucundior est.* It emulates, he continues, if it do not surpass, the verdure of the spring; and the eye, satiated by the dazzling glare of the more brilliant gems, or wearied by intense application, is refreshed and strengthened by the quiet enlivening green of the emerald. In Pliny's time, the best came from Scythia. Those met with in modern times do not often exceed the size of a walnut. Some of a much larger size, and perfect, have been found, but they are extremely rare. Nero used one as an eye-glass in surveying the combats of the gladiators. Hitherto it has always been found crystallised. Specific gravity from 2·6 to 2·77. — (*Plin. Hist. Nat.* lib. xxxvii. cap. 5.; *Thomson's Chemistry.*)

"For the last two centuries and more, the only country known to yield emeralds is Peru, where they occur in Santa Fé, and in the valley of Tunca. Several large stones have appeared in Europe: about 2 years ago I cut one, exceeding 2 ounces in weight, for the Emperor of Morocco, but it was full of imperfections. The largest specimen known is an hexagonal crystal, nearly 6 inches long, and above 2 in diameter. This gem, however small, is so rarely seen perfect, that 'an emerald without a flaw' has passed into a proverb. A fine stone of 4 carats may be valued at 40*l.* or 50*l.*, or even more if very pure. Inferior stones of 1 or 2 carats are sold at from 40*s.* to 70*s.* per carat; and if smaller and defective, at 10*s.* or 15*s.* per carat. Fine emeralds are rare, and in such demand, that a particular suit has been known to have passed into the possession of a series of purchasers, and to have made the tour of Europe in the course of half a century."—*Mawe on Diamonds*, 2d ed. p. 104.)

EMERY (Fr. *Emeril, Emeri*; Ger. *Smirgel*; It. *Smerglio, Smeregio*; Sp. *Esmeril*; Rus. *Nashdak*; Lat. *Smiris*), a mineral brought to Britain from the Isle of Naxos, where it exists in large quantities. It occurs also in Germany, Italy, and Spain. It is always in shapeless masses, and mixed with other minerals. Colour intermediate between greyish black and bluish grey. Specific gravity about 4. Lustre glistening and adamantine. Emery is extensively used in the polishing of hard bodies. Its fine powder is obtained by trituration. — (*Thomson's Chemistry.*)

ENGROSSING, is "the buying up of corn and other dead victuals, with intent to sell them again."— (*Blackstone*, book iv. cap. 42.) We have shown, in another article, how absurd it is to suppose that this practice should have any injurious influence — (*antè*, p. 399.). But, for a long time, most scarcities that occurred were either entirely ascribed to the influence of engrossers and forestallers — (see FORESTALLING) — or, at least, were supposed to be materially aggravated by their proceedings. In consequence, however, of the prevalence of more just and enlarged views upon such subjects, the statutes that had been made for the suppression and punishment of engrossing, forestalling, &c. were repealed in 1772. But notwithstanding this repeal, engrossing continues to be an indictable offence, punishable at common law by fine and imprisonment; though it is not at all likely, were an attempt made, that any jury would now be found ignorant or prejudiced enough to convict any one on such a charge.

ENTRY, BILL OF. See IMPORTATION.

ERMINE (Ger. *Hermelin*, Fr. *Hermine, Ermine*; Rus. *Gornostai*), a species of weasel (*Mustela candida* Lin.), abundant in all cold countries, particularly Russia, Norway, Lapland, &c., and producing a most valuable species of fur. In summer, the ermine is of a brown colour, and is called the *stoat*. It is in winter only that the fur has that beautiful snowy whiteness and consistence so much admired. — (See FURS.)

ESPARTO, a species of rush, the *Stipa tenacissima* of botanists. It is found in the southern provinces of Spain; and is particularly abundant on all the sterile, uncultivated, and mountainous districts of Valencia. — Beckmann (*Hist. of Invent.* vol. ii. p. 288.

Eng. ed.) supposes, apparently with good reason, that the *stipa tenacissima* is the plant described by Pliny under the name of *Sparta*, who ascribes its application to useful purposes to the Carthaginians. — (*Hist. Nat.* lib. xix. c. 2.) It is still used for the same purposes as in antiquity, being manufactured into cordage, shoes, matting, baskets, nets, mattresses, sacks, &c. Cables made of esparto are said to be excellent; being light, they float on the surface of the water, and are not, therefore, so liable as hempen cables to be cut or injured by a foul bottom. They are exclusively made use of in the Spanish navy. Esparto is largely consumed in the manufacture of *alpergates*. These are light shoes worn by the Valencian peasantry, having platted soles made either of esparto or hemp, but principally of the former. They are extremely cheap and commodious in hot climates; and besides being in extensive demand at home, used to be exported in immense quantities to both Indies: but since the emancipation of Spanish America, this trade has greatly fallen off. The Spanish peasantry have attained to wonderful dexterity in the manufacture of esparto. "After having soaked the rush in water, the women and children, without either wheel or spindle, contrive to twist two threads at the same time. This they do by rubbing them between the palms of their hands, in the same manner as a shoemaker forms a thread upon his knees, with this difference, that one motion gives the twist to each thread, and, at the same time, unites them. To keep the threads asunder, the thumb of the right hand is interposed between them; and when that is wanted for other purposes, the left thumb supplies its place. Two threads being thus twisted into one of the bigness of a large crow-quill, 46 yards are sold for little more than ½*d.*, the materials being worth about ¼th part of the price." — (*Townsend's Travels in Spain*, vol. iii. p. 177., see also p. 129.; *Fischer's Picture of Valencia*, Eng. ed. p. 92. and p. 57, &c.)

ESTRICH or ESTRIDGE (Fr. *Duvet d'autruche*; It. *Penna matta di strozzo*; Sp. *Plumazo de avestrux*; Lat. *Struthionum plumæ molliores*), is the fine soft down which lies immediately under the feathers of the ostrich. The finest is used as a substitute for beaver in the manufacture of hats, and the coarser or stronger sort is employed in the fabrication of a stuff which resembles fine woollen cloth. Estridge is brought from the Levant, Italy, and other parts of the Mediterranean.

EUPHORBIUM (Ger. *Euphorbiengummi*; Lat. *Euphorbium*; Fr. *Euphorbe*; Arab. *Akal-nafzah*), the produce of a perennial plant, a native of Africa, and of many parts of India, &c. It is a concrete gum resin; is inodorous; when first chewed has little taste, but it soon gives a very acrid burning impression to the tongue, palate, and throat, which is very permanent, and almost insupportable. It is imported in serons, containing from 100 to 150 lbs. It is in small, hollow, forked pieces, often mixed with seeds and other impurities. — (*Thomson's Dispensatory.*)

EXCHANGE. In commerce, this term is generally used to designate that species of mercantile transactions, by which the debts of individuals residing at a distance from their creditors are cancelled without the transmission of money.

Among cities or countries having any considerable intercourse together, the debts mutually due by each other approach, for the most part, near to an equality. There are at all times, for example, a considerable number of persons in London indebted to Hamburg; but, speaking generally, there are about an equal number of persons in London to whom Hamburg is indebted. And hence, when A. of London has a payment to make to B. of Hamburg, he does not remit an equivalent sum of money to the latter; but he goes into the market and buys a *bill* upon Hamburg, that is, he buys an order from C. of London addressed to his debtor D. of Hamburg, requesting him to pay the amount to A. or his order. A., having indorsed this bill or order, sends it to B., who receives payment from his neighbour D. The convenience of all parties is consulted by a transaction of this sort. The debts due by A. to B., and by D. to C., are extinguished without the intervention of any money. A. of London pays C. of ditto, and D. of Hamburg pays B. of ditto. The debtor in one place is substituted for the debtor in another; and a postage or two, and the stamp for the bill, form the whole expenses. All risk of loss is obviated.

A bill of exchange may, therefore, be defined to be an order addressed to some person residing at a distance, directing him to pay a certain specified sum to the person in whose favour the bill is drawn, or his order. In mercantile phraseology, the person who draws a bill is termed the *drawer*; the person in whose favour it is drawn, the *remitter*; the person on whom it is drawn, the *drawee*; and after he has accepted, the *acceptor*. Those persons into whose hands the bill may have passed previously to its being paid, are, from their writing their names on the back, termed *indorsers*; and the person in whose possession the bill is at any given period, is termed the *holder* or *possessor*.

The negotiation of *inland* bills of exchange, or of those drawn in one part of Great Britain and Ireland on another, is entirely in the hands of bankers, and is conducted in the manner already explained. — (See *antè*, p. 66.) Bills drawn by the merchants

of one country upon another are termed *foreign* bills of exchange, and it is to their negotiation that the following remarks principally apply.

I. *Par of Exchange.* — The *par* of the currency of any two countries means, among merchants, the equivalency of a certain amount of the currency of the one in the currency of the other, *supposing the currencies of both to be of the precise weight and purity fixed by their respective mints.* Thus, according to the mint regulations of Great Britain and France, 1*l.* sterling is equal to 25 fr. 20 cent., which is said to be the par between London and Paris. And the exchange between the two countries is said to be at par when bills are negotiated on this footing; that is, for example, when a bill for 100*l.* drawn in London is worth 2,520 fr. in Paris, and conversely. When 1*l.* in London buys a bill on Paris for more than 25 fr. 20 cent., the exchange is said to be in favour of London and against Paris; and when, on the other hand, 1*l.* in London will not buy a bill on Paris for 25 fr. 20 cent., the exchange is against London and in favour of Paris.*

II. *Circumstances which determine the Course of Exchange.* — The exchange is affected, or made to diverge from par, by two classes of circumstances: *first*, by any discrepancy between the actual weight or fineness of the coins, or of the bullion for which the substitutes used in their place will exchange, and their weight or fineness as fixed by the mint regulations; and, *secondly*, by any sudden increase or diminution of the bills drawn in one country upon another.

1. It is but seldom that the coins of any country correspond exactly with their mint standard; and when they diverge from it, an allowance corresponding to the difference between the actual value of the coins and their mint value must be made in determining the *real* par. Thus, if, while the coins of Great Britain corresponded with the mint standard in weight and purity, those of France were either 10 per cent. worse or debased below the standard of her mint, the exchange, it is obvious, would be at *real* par when it was *nominally* 10 per cent. against Paris, or when a bill payable in London for 100*l.* was worth in Paris 2,772 fr. instead of 2,520 fr. In estimating the real course of exchange between any 2 or more places, it is always necessary to attend carefully to this circumstance; that is, to examine whether their currencies be all of the standard weight and purity, and if not, how much they differ from it. When the coins circulating in a country are either so worn or rubbed as to have sunk considerably below their mint standard, or when paper money is depreciated from excess or want of credit, the exchange is at real par only when it is against such country to the extent to which its coins are worn or its paper depreciated. When this circumstance is taken into account, it will be found that the exchange during the latter years of the war, though apparently very much against this country, was really in our favour. The depression was nominal only; being occasioned by the great depreciation of the paper currency in which bills were paid.

2. Variations in the actual course of exchange, or in the price of bills, arising from circumstances affecting the currency of either of two countries trading together, are *nominal* only: such as are *real* grow out of circumstances affecting their trade.

When two countries trade together, and each buys of the other commodities of precisely the same value, their debts and credits will be equal, and, of course, the *real* exchange will be at par. The *bills* drawn by the one will be exactly equivalent to those drawn by the other, and their respective claims will be adjusted without requiring the transfer of bullion or any other valuable produce. But it very rarely happens that the debts reciprocally due by any two countries are equal. There is almost always a balance owing on the one side or the other; and this balance must affect the exchange. If the debts due by London to Paris exceeded those due by Paris to London, the competition in the London market for bills on Paris would, because of the comparatively great amount of payments our merchants had to make in Paris, be greater than the compe-

* The statements in the text explain what is usually meant by the *par* of exchange; but its exact determination, or the ascertaining of the precise equivalency of a certain amount of the currency of one country in the currency of another, is exceedingly difficult. If the standard of one be gold and that of another silver, the par must necessarily vary with every variation in the relative values of these metals. This, however, is not all: even where two countries use the same metal for a standard, its value may be greater in one than in the other, and in estimating the par of exchange between them this difference must be taken into account. In illustration of this we may take the case of France and Mexico: they both use silver for a standard; but silver being largely produced in Mexico, is always cheaper there than in France, and is extensively imported into the latter; and taking the cost of this importation at 2 or 3 per cent., it is plain that the exchange would be really at par when it appeared to be 2 or 3 per cent. against Mexico. But the value of the precious metals, even in contiguous countries, is always exposed to fluctuations from the over issue or withdrawal of paper, from circumstances affecting the balance of payments, &c., as shown in the text. It is obvious, therefore, that it is all but impossible to say, by merely looking at the mint regulations of any two or more countries, and the prices of bullion in each, what is the par of exchange between them. And, luckily, this is not necessary. The importation and exportation of bullion is the real test of the exchange. If bullion be stationary, neither flowing into nor out of a country, its exchanges may be truly said to be at par; and, on the other hand, if there be an efflux of bullion from a country, it is a proof that the exchange is against it, and conversely if there be an influx of bullion into a country.

tition in Paris for bills on London; and, consequently, the real exchange would be in favour of Paris and against London.

The cost of conveying bullion from one country to another forms the limit within which the rise and fall of the *real* exchange between them must be confined. If 1 per cent. sufficed to cover the expense and risk attending the transmission of money from London to Paris, it would be indifferent to a London merchant whether he paid 1 per cent. premium for a bill of exchange on Paris, or remitted money direct to that city. If the premium were less than 1 per cent., it would clearly be his interest to make his payments by bills in preference to remittances: and that it could not exceed 1 per cent. is obvious; for every one would prefer remitting money, to buying a bill at a greater premium than sufficed to cover the expense of a money remittance. If, owing to the breaking out of hostilities between the two countries, or to any other cause, the cost of remitting money from London to Paris were increased, the fluctuations of the *real* exchange between them *might* also be increased. For the limits within which such fluctuations *may* range, correspond in all cases with the cost of making remittances in cash.

Fluctuations in the *nominal* exchange, that is, in the value of the currencies of countries trading together, have no effect on foreign trade. When the currency is depreciated, the premium which the exporter of commodities derives from the sale of the bill drawn on his correspondent abroad, is only equivalent to the increase in the price of the goods exported, occasioned by this depreciation. But when the premium on a foreign bill is a consequence, not of a fall in the value of money, but of a deficiency in the supply of bills, there is no rise of prices; and in these circumstances the unfavourable exchange operates as a stimulus to exportation. As soon as the *real* exchange diverges from *par*, the mere inspection of a price current is no longer sufficient to regulate the operations of the merchant. If it be unfavourable, the premium which the exporter will receive on the sale of his bill must be included in the estimate of the profit he is likely to derive from the transaction. The greater that premium, the less will be the difference of prices necessary to induce him to export. And hence an unfavourable *real* exchange has an effect exactly the same with what would be produced by granting a bounty on exportation equal to the premium on foreign bills.

But for the same reason that an unfavourable *real* exchange increases exportation, it proportionally diminishes importation. When the exchange is really unfavourable, the price of commodities imported from abroad must be so much lower than their price at home, as not merely to afford, exclusive of expenses, the ordinary profit of stock on their sale, but also to compensate for the premium which the importer must pay for a foreign bill, if he remit one to his correspondent, or for the discount, added to the invoice price, if his correspondent draw upon him. A less quantity of foreign goods will, therefore, suit our market when the *real* exchange is unfavourable; and fewer payments having to be made abroad, the competition for foreign bills will be diminished, and the *real* exchange rendered proportionally favourable. In the same way, it is easy to see that a favourable *real* exchange must operate as a *duty* on exportation, and as a *bounty* on importation.

It is thus that fluctuations in the *real* exchange have a necessary tendency to correct themselves. They can never, for any considerable period, *exceed* the expense of transmitting bullion from the debtor to the creditor country. But the exchange cannot continue either permanently favourable or unfavourable to this extent. When favourable, it corrects itself by restricting exportation and facilitating importation; and when unfavourable, it produces the same effect by giving an unusual stimulus to exportation, and by throwing obstacles in the way of importation. The true PAR forms the centre of these oscillations; and although the thousand circumstances which are daily and hourly affecting the state of debt and credit, prevent the ordinary course of exchange from being almost ever precisely at *par*, its fluctuations, whether on the one side or the other, are confined within certain limits, and have a constant tendency to disappear.

This natural tendency which the exchange has to correct itself, is powerfully assisted by the operations of the bill-merchants.

England, for example, might owe a large excess of debt to Amsterdam; yet, as the aggregate amount of the debts *due* by a commercial country is generally balanced by the amount of those which it has to receive, the deficiency of bills on Amsterdam in London would most probably be compensated by a proportional redundancy of those on some other place. Now, it is the business of the merchants who deal in bills, in the same way as of those who deal in bullion or any other commodity, to buy them where they are cheapest, and to sell them where they are dearest. They would, therefore, buy up the bills drawn by other countries on Amsterdam, and dispose of them in London; and by so doing, would prevent any great fall in the price of bills on Amsterdam in those countries in which the supply exceeded the demand, and any great rise in Great Britain and those countries in which the supply happened to be deficient. In the trade between Italy and this country, the bills drawn on Great Britain amount almost inva-

riably to a greater sum than those drawn on Italy. The bill-merchants, however, by buying up the excess of the Italian bills on London, and selling them in Holland, and other countries indebted to England, prevent the *real* exchange from ever becoming very much depressed.

III. *Negotiation of Bills of Exchange.* — Bills of exchange are either made payable at *sight*, at a certain specified time *after sight* or *after date*, or at *usance*, which is the usual term allowed by the custom or law of the place where the bill is payable. Generally, however, a few days are allowed for payment beyond the term when the bill becomes due, which are denominated *days of grace*, and which vary in different countries. In Great Britain and Ireland, *three* days' grace are allowed for all bills except those payable at sight, which must be paid as soon as presented. The following is a statement of the usance and days of grace for bills drawn upon some of the principal commercial cities: —

[*m|d. m|s. d|d. d|s. d|a.* respectively denote *months after date, months after sight, days after date, days after sight, days after acceptance.*]

London on	Usance.	Days of Grace.		Usance.	Days of Grace.	London on	Usance.	Days of Grace.

In the dating of bills, the new style is used in every country in Europe, with the exception of Russia.

In London, bills of exchange are bought and sold by brokers, who go round to the principal merchants and discover whether they are buyers or sellers of bills. A few of the brokers of most influence, after ascertaining the state of the relative supply and demand for bills, suggest a price at which the greater part of the transactions of the day are settled, with such deviations as particular bills, from their being in very high or low credit, may be subject to. The price fixed by the brokers is that which is published in Wettenhall's List; but the first houses generally negotiate their bills on $\frac{1}{2}$, 1, $1\frac{1}{2}$, and 2 *per cent.* better terms than those quoted. In London and other great commercial cities, a class of middlemen speculate largely on the rise and fall of the exchange; buying bills when they expect a rise, and selling them when a fall is anticipated.

It is usual, in drawing foreign bills of exchange, to draw them in sets, or duplicates, lest the first should be lost or miscarry. When bills are drawn in sets, each must contain a condition that it shall be payable only while the others remain unpaid: thus, the first is payable only, "second and third unpaid;" the second, "first and third being unpaid;" and the third, "first and second unpaid."

All bills of exchange must be drawn upon stamps as under: —

Inland Bills and Notes. — Not exceeding Two Months after Date, or Sixty Days after Sight.

* In France, no days of grace are allowed on bills payable *à vue.*

† In Austria, bills payable at sight, or on demand, or at less than 7 days after sight or date, are not allowed any days of grace.

No one acquainted with the fundamental rules of arithmetic can have any difficulty whatever in estimating how much a sum of money in one country is worth in another, according to the state of the exchange at the time. The common arithmetical books abound in examples of such computations. But in conducting the business of exchange, a direct remittance is not always preferred. When a merchant in London, for example, means to discharge a debt due by him in Paris, it is his business to ascertain not only the state of the direct exchange between London and Paris, and, consequently, the sum which he must pay in London for a bill on Paris equivalent to his debt, but also the state of the exchange between London and Hamburg, Hamburg and Paris, &c.; for it frequently happens that it may be more advantageous for him to buy a bill on Hamburg, Amsterdam, or Lisbon, and to direct his agent to invest the proceeds in a bill on Paris, rather than remit directly to the latter. This is termed the ARBITRATION of exchange. An example or two will suffice to show the principle on which it is conducted.

Thus, if the exchange between London and Amsterdam be 35*s.* Flemish (old coinage) per pound sterling, and between Paris and Amsterdam 1*s.* 6*d.* Flemish per franc, then, in order to ascertain whether a direct or indirect remittance to Paris would be most advantageous, we must calculate what would be the value of the franc in English money if the remittance were made through Holland; for if it be less than that resulting from the direct exchange, it will obviously be the preferable mode of remitting. This is determined by stating, as 35*s.* Flem. (the Amsterdam currency in a pound sterling) : 1*s.* 6*d.* Flem (Amsterdam currency in a franc) : : 1*l.* : 10*d.* the proportional or *arbitrated* value of the franc. — Hence, if the English money, or bill of exchange, to pay a debt in Paris, were remitted by Amsterdam, it would require 10*d.* to discharge a debt of a franc, or 1*l.* to discharge a debt of 24 francs: and therefore, if the exchange between London and Paris were at 24, it would be indifferent to the English merchant whether he remitted directly to Paris, or indirectly *viâ* Amsterdam; but if the exchange between London and Paris were *above* 24, then a direct remittance would be preferable; while, if, on the other hand, the direct exchange were less than 24, the indirect remittance ought as plainly to be preferred.

"Suppose," to borrow an example from Kelly (*Universal Cambist*, vol. ii. p. 137.) "the exchange of London and Lisbon to be at 68*d.* per milree, and that of Lisbon on Madrid 500 rees per dollar, the arbitrated price between London and Madrid is 34*d.* sterling per dollar; for, as 1,000 rees : 68*d.* : : 500 rees : 34*d.* But if the direct exchange of London on Madrid be 35*d.* sterling per dollar, then London, by remitting directly to Madrid, must pay 35*d.* for every dollar; whereas, by remitting through Lisbon, he will pay only 34*d.*: it is therefore the interest of London to remit indirectly to Madrid through Lisbon. On the other hand, if London draws directly on Madrid, he will receive 35*d.* sterling per dollar; whereas, by drawing indirectly through Lisbon, he would receive only 34*d.*; it is therefore the interest of London to draw directly on Madrid. Hence the following rules: —

"1. Where the certain price is given, draw through the place which produces the lowest arbitrated price, and remit through that which produces the highest.

"2. Where the uncertain price is given, draw through that place which produces the highest arbitrated price, and remit through that which produces the lowest."

In compound arbitration, or when more than 3 places are concerned, then, in order to find how much a remittance passing through them all will amount to in the last place, or, which is the same thing, to find the arbitrated price between the first and the last, we have only to repeat the different statements in the same manner as in the foregoing examples.

Thus, if the exchange between London and Amsterdam be 35*s.* Flem. for 1*l.* sterling; between Amsterdam and Lisbon 42*d.* Flem. for 1 old crusade; and between Lisbon and Paris 480 rees for 3 francs: what is the arbitrated price between London and Paris?

In the first place, as 35*s.* Flem. : 1*l.* : : 42*d.* Flem. : 2*s.* sterling = 1 old crusade.

Second, as 1 old crusade, or 400 rees : 2*s.* sterling : : 480 rees : 2*s.* 4·8*d.* sterling = 3 francs.

Third, as 2*s.* 4·8*d.* sterling : 3 francs : : 1*l.* sterling : 25 francs, the arbitrated price of the pound sterling between London and Paris.

This operation may be abridged as follows: —

		1*l.* sterling.
1*l.* sterling	=	35*s.* Flemish.
3½ shillings Flem.	=	1 old crusade.
1 old crusade	=	400 rees.
480 rees	=	3 francs.

Hence $\frac{35 \times 400 \times 3}{480 \times 3\frac{1}{2}} = \frac{4,200}{168} = 25$ francs.

This abridged operation evidently consists in arranging the terms so that those which would form the divisors in continued statements in the Rule of Three are multiplied together for a common divisor, and the other terms for a common dividend. The ordinary arithmetical books abound with examples of such operations.

The following account of the manner in which a very large transaction was actually conducted by indirect remittances, will sufficiently illustrate the principles we have been endeavouring to explain.

In 1804, Spain was bound to pay to France a large subsidy; and, in order to do this, three distinct methods presented themselves: —

1. To send dollars to Paris by land.
2. To remit bills of exchange directly to Paris.
3. To authorise Paris to draw directly on Spain.

The first of these methods was tried, but it was found too slow and expensive; and the second and third plans were considered likely to turn the exchange against Spain. The following method by the indirect, or circular exchange, was, therefore, adopted.

A merchant, or *banquier*, at Paris, was appointed to manage the operation, which he thus conducted: — He chose London, Amsterdam, Hamburg, Cadiz, Madrid, and Paris, as the principal hinges on which the operation was to turn; and he engaged correspondents in each of these cities to support the circulation. Madrid and Cadiz were the places in Spain from whence remittances were to be made; and dollars were, of course, to be sent to where they bore the highest price, for which bills were to be procured on Paris, or on any other places that might be deemed more advantageous.

The principle being thus established, it only remained to regulate the extent of the operation, so as not to issue too much paper on Spain, and to give the circulation as much support as possible from real business. With this view, London was chosen as a place to which the operation might be chiefly directed, as the price of dollars was then high in England; a circumstance which rendered the proportional exchange advantageous to Spain.

The business was commenced at Paris, where the negotiation of drafts issued on Hamburg and Amsterdam served to answer the immediate demands of the state; and orders were transmitted to these places to draw for the reimbursements on London, Madrid, or Cadiz, according as the course of exchange was most favourable. The proceedings were all conducted with judgment, and attended with complete

success. At the commencement of the operation, the course of exchange of Cadiz on London was 36*d.*; but by the plan adopted, Spain got 39¼*d.*, or above 8 *per cent.* by the remittance of dollars to London, and considerable advantages were also gained by the circulation of bills through the several places on the Continent. — (*Kelly's Cambist*, vol. ii. p. 168.; *Dubost's Elements of Commerce*, 2d ed. p. 228.)

Table specifying the Value of the Monies of Account of the principal Places with which this Country has Exchange Transactions, taking Silver at 5*s.* an oz., and specifying also the *Par* of Exchange with such Places on this Hypothesis. — (Abstracted from *Tate's Modern Cambist*, to which the reader is referred for farther explanations).

					Par of Exchange.	
Petersburg	100 copecks	= 1 rouble	= 3*s.* 1½*d.* giving		6 roub. 40 cop.	= 1*l.*
Berlin	30 sil. groschen	= 1 Pruss. doll.	= 2*s.* 10⅔*d.* —		6 doll. 27 *s. g.*	= 1*l.*
Copenhagen	96 skillings	= 1 Rig. doll.	= 2*s.* 2¼*d.* —		9 doll. 10 *sk.*	= 1*l.*
Hamburg	16 schillings	= 1 mark	= 1*s.* 5½*d.* —		13 mks. 10½ *sch.*	= 1*l.*
Amsterdam	100 centimes	= 1 florin	= 1*s.* 8*d.* —		11 fl. 97 cents	= 1*l.*
Antwerp	100 centimes	= 1 florin	= 1*s.* 8*d.* —		11 fl. 97 cents	= 1*l.*
Paris	100 centimes	= 1 franc	= 9½*d.* —		25 fr. 57 cents	= 1*l.*
Frankfort	24½ guld. or flor.	= 1 mark	= 1*s.* 7⅝*d.* —		12 3/40 guldens	= 1*l.*
Vienna	60 kreusers	= 1 florin	= 2*s.* 0 4/10*d.* —		9 fl. 50 kr.	= 1*l.*
Venice	100 centisimi	= 1 lira Austriaca	= 8·13*d.* —		29 li. 52 cent.	= 1*l.*
Genoa	100 centisimi	= 1 lira Nuova	= 9½*d.* —		25 li. 57 cent.	= 1*l.*
Leghorn	100 centisimi	= 1 lira Toscana	= 7·82*d.* —		30 li. 69 cent.	= 1*l.*
Madrid	8 reals	= 1 dollar of Plate	= 3*s.* 1⅝*d.* —		6 doll. 2⅝ reals	= 1*l.*
Lisbon	1000 reis	= 1 milreis	= 4*s.* 8*d.* —		4 mil. 285 reis	= 1*l.*
New York	100 cents	= 1 dollar	= 4*s.* 2*d.* —		4 doll. 80 cents	= 1*l.*
Rio Janeiro	1000 reis	= 1 milreis	= 2*s.* 7*d.* —		7 mil. 777 reis	= 1*l.*
Havannah	100 cents	= 1 dollar	= 4*s.* 6 13/222*d* —		4 doll. 44 cents	= 1*l.*

It is easy from this table to calculate the value of any of the above coins, taking silver at 5*s.* 2*d.*, 5*s.* 6*d.* an oz., or any other price, and thence to deduce the par of exchange at such rates. The values of the coins in the Table of Coins (*anté*, p. 310.) are estimated on the hypothesis that silver is worth 5*s.* 2*d.* an oz.

Law of Bills of Exchange.

The chief legal privileges appertaining to bills are, first, that though only a simple contract, yet they are always presumed to have been originally given for a good and valuable consideration; and, secondly, they are assignable to a third person not named in the bill or party to the contract, so as to vest in the assignee a right of action, in his own name; which right of action, no release by the drawer to the acceptor, nor set-off or cross demand due from the former to the latter, can affect.

All persons, whether merchants or not, being legally qualified to contract, may be parties to a bill. But no action can be supported against a person incapable of binding himself, on a bill drawn, indorsed, or accepted by such incapacitated person; at the same time the bill is good against all other competent parties thereto.

Bills may be drawn, accepted, or indorsed by the party's agent or attorney verbally authorised for the purpose. When a person has such authority, he must either write the name of his principal, or state in writing that he draws, &c. as agent, thus: "per procuration, for A. B."

Where one of several partners accepts a bill drawn on the firm, for himself and partners, or in his own name only, such acceptance binds the partnership if it concern the trade. But the acceptance of one of several partners on behalf of himself and partners, will not bind the others, if it concern the acceptor only in a separate and distinct interest; and the holder of the bill, at the time he becomes so, was aware of that circumstance. If, however, he be a *bonâ fide* holder for a sufficient consideration, and had no such knowlege at the time he first became possessed of the bill, no subsequently acquired knowledge of the misconduct of the partner in giving such security will prevent him from recovering on such bills against all the partners.

Although no precise form of words is required to constitute a bill of exchange or promissory note, yet it is necessary that it should be *payable at all events*, and not depend on any contingency: and that it be made for the payment of money only, and not for payment of money and performance of some other act, as the delivery of a horse, or the like.

If, however, the event on which the payment is to depend must inevitably happen, it is of no importance how long the payment may be in suspense; so a bill is negotiable and valid if drawn payable 6 weeks after the death of the drawer's father, or payable to an infant when he shall become of age.

Any material alteration of a bill after it has been drawn, accepted, or indorsed, such as the date, sum, or time of payment, will invalidate it: but the mere correction of a mistake, as by inserting the words "or order," will have no such effect.

The negotiability of a bill depends on the insertion of sufficient operative words of transfer; such as by making it payable to A. or order, or to A. or bearer, or to bearer generally.

Although a bill is presumed to have been originally drawn upon a good and valuable consideration, yet in certain cases a want of sufficient consideration may be insisted on in defence to an action on a bill. Certain considerations have been made illegal by statute; as for signing a bankrupt's certificate, for money won at gaming, or for money lent on a usurious contract. But with respect to gaming, it is held, that a bill founded on a gambling transaction is good in the hands of a *bonâ fide* holder; and by 58 Geo. 3. c. 93. a bill or note in the hands of an innocent holder, although originally founded on a usurious contract, is not invalid.

In general, if a bill is fair and legal in its origin, a subsequent illegal contract or consideration on the indorsement thereof will not invalidate it in the hands of a *bonâ fide* holder.

A bill cannot be given in evidence in a court of justice, unless it be duly stamped, not only with a stamp of the proper value, but also of the proper denomination.

Acceptance of a Bill. — An acceptance is an engagement to pay a bill according to the tenor of the acceptance, which may be either *absolute* or *qualified*. An *absolute* acceptance is an engagement to pay a bill according to its request, which is done by the drawee writing "Accepted" on the bill, and subscribing his name, or writing "Accepted" only; or merely subscribing his name at the bottom or across the bill. A *qualified* acceptance is when a bill is accepted conditionally; as when goods conveyed to the drawee are sold, or when a navy bill is paid, or other future event which does not bind the acceptor till the contingency has happened.

An acceptance may be also partial; as to pay 100*l.* instead of 150*l.*, or to pay at a different time or place from that required by the bill. But in all cases of a conditional or partial acceptance, the holder should, if he mean to resort to the other parties to the bill in default of payment, give notice to them of such partial or conditional acceptance.

In all cases of presenting a bill for acceptance, it is necessary to present the bill at the house where the drawee lives, or where it is made payable. By 1 & 2 Geo. 4. c. 78., all bills accepted payable at a banker's or other place are to be deemed a general acceptance; but if they are accepted payable at a banker's "only, and not otherwise or elsewhere," it is a qualified acceptance, and the acceptor is not liable to pay the bill,

except in default of payment when such payment shall have been first demanded at the banker's. The drawee is entitled to keep the bill 24 hours when presented for acceptance. The acceptance of an inland bill must be *in writing on the face of the bill*, or, if there be more parts than one, on one of such parts; nothing short of this constitutes a valid acceptance.

If a bill is made payable a certain time *after sight*, it must, in order to fix the time when it is to be paid, be presented for acceptance, and the date of the acceptance should appear thus: "Accepted, October 23rd, 1843.

Due diligence is the only thing to be considered in presenting any description of bill for acceptance; and such diligence is a question depending on the situation of the parties, the distance at which they live, and the facility of communication between them.

When the drawee refuses to accept, any third party, after protesting, may accept for the honour of the bill generally, or for the drawee, or for the indorser; in which case the acceptance is called an acceptance *supra protest*.

The drawers and indorsers are discharged from liability, unless due notice of non-acceptance when presented for acceptance, or non-payment at the time the bill becomes due, is given. These notices must be given with all due diligence to all the parties to whom the holder means to resort for payment. Generally, in both foreign and inland bills, notice is given next day to the immediate indorser, and such indorser is allowed a day, when he should give fresh notice to the parties who are liable to him.

Notice may be sent by the post, however near the residence of the parties may be to each other; and though the letter containing such notice should miscarry, yet it will be sufficient; but the letter, containing the notice, should be delivered at the General Post-Office, or at a receiving-house appointed by that office, not to the bellman in the street. In all cases of notice, notice to one of several parties is held to be notice to all; and if one of several drawers be also the acceptor, it is not necessary to give notice to the other drawers.

Upon the non-acceptance or non-payment of a bill, the holder, or a public notary for him, should protest it; that is, draw up a notice of the refusal to accept or pay the bill, and the declaration of the holder against sustaining loss thereby. Inland bills need not be protested; in practice they are usually only noted for non-acceptance; but this, without the protest, is wholly futile, and adds nothing whatever to the evidence of the holder, while it entails a useless expense on those liable to pay.

Indorsement of Bills.—An indorsement is the act by which the holder of a negotiable instrument transfers his right to another person, termed the indorsee. It is usually made on the back of a bill, and must be in writing; but the law has not prescribed any set form of words as necessary to the ceremony, and in general the mere signature of the indorser is sufficient.

All bills payable to order or to bearer for 1*l.* and upwards are negotiable by indorsement; and the transfer of them for a good consideration, before they are payable, gives a right of action against all the precedent parties on the bill, if the bills in themselves are valid; but a transfer after they are due will only place the holder in the situation of the person from whom he takes them.

Bills may be transferred either by delivery only, or by indorsement and delivery: bills payable to order are transferred by the latter mode only; but bills payable to bearer may be transferred by either mode. On a transfer by delivery, the person making it ceases to be a party to the bill; but on a transfer by indorsement, he is to all intents and purposes chargeable as a new drawer.

A bill originally transferable may be restrained by restrictive words; for the payee or indorsee, having the absolute property in the bill, may, by express words, restrict its currency, by indorsing it "Payable to A. B. only," or "to A. B. for his use," or any other words clearly demonstrating his intention to make a restrictive and limited indorsement. Such special indorsement precludes the person in whose favour it is made from making a transfer, so as to give a right of action against the special indorser, or any of the precedent parties to the bill.

In taking bills to account or discount, it is important well to examine all special indorsements. Lord Tenterden decided that a person who discounts a bill indorsed "Pay to A. B. or order *for my use*," discounts it subject to the risk of having to pay the money to the special indorser, who so limited the application *for my use*; thus a party may be liable to pay the amount of the bill twice over, unless he previously ascertains that the payment has been made conformably to the import of the indorsement.

After the payment of part, a bill may be indorsed over for the residue.

Presentment for Payment.—The holder of a bill must be careful to present it for payment at the time when due, or the drawer and indorsers will be exonerated from their liability; even the bankruptcy, insolvency, or death of the acceptor, will not excuse a neglect to make presentment to the assignees or executor; nor will the insufficiency of a bill in any respect constitute an excuse for non-presentment: the presentment should be made at a reasonable time of the day when the bill is due; and if by the known custom of any trade or place bills are payable only within particular hours, a presentment must be within those hours. If a bill has a qualified acceptance, the presentment should be at the place mentioned in such qualified acceptance, or all the parties will be discharged from their obligations.

If a bill fall due on Sunday, Good Friday, Christmas Day, or any public fast or thanksgiving day, the presentment must be on the day preceding these holidays. By 7 & 8 Geo. 4. c. 15., if a bill or note be payable on the day preceding these holidays, notice of the dishonour may be given the day following the holiday; and if Christmas Day fall on Monday, notice may be given on Tuesday.

Bills, however, payable at usance, or at a certain time after date or sight, or after demand, ought not to be presented for payment precisely at the expiration of the time mentioned in the bills, but at the expiration of what are termed *days of grace*. The days of grace allowed vary in different countries, and ought always to be computed according to the usage of the place where the bill is due.—(See *ante*, p. 557.) At Hamburg, and in France, the day on which the bill falls due makes one of the days of grace; but no where else.

On bills payable on demand, or when no time of payment is expressed, no days of grace are allowed; but they are payable instantly on presentment. On bank post bills no days of grace are claimed; but on a bill payable at sight the usual days of grace are allowed from the sight or demand.

Payment of a bill should be made only to the holder; and it may be refused unless the bill be produced and delivered up. On payment, a receipt should be written on the back; and when a part is paid, the same should be acknowledged upon the bill, or the party paying may be liable to pay the amount a second time to a *bonâ fide* indorser.

Promissory Notes and Checks.—The chief distinction between promissory notes and bills of exchange is, that the former are a direct engagement by the drawer to pay them according to their tenor, without the intervention of a third party as a drawee or acceptor. Promissory notes may be drawn payable on demand to a person named therein, or to order, or to bearer generally. They are assignable and indorsable; and in all respects so nearly assimilated to bills by 3 & 4 Ann. c. 9., that the laws which have been stated as bearing upon the latter, may be generally understood as applicable to the former. In *Edis* v. *Bury*, it has been decided, in case an instrument is drawn so equivocally as to render it uncertain whether it be a bill of exchange or promissory note, the holder may treat it as either against the drawer.

Promissory notes, bills, drafts, or undertakings in writing, being made negotiable or transferable, for a less sum than 20*s*., are void, and persons uttering such are subject to a penalty not exceeding 20*l*., recoverable before a justice of peace.

The issue of any promissory note payable to bearer on demand for a less sum than 5*l*. by the Bank of England, or any licensed English banker, is prohibited; and by 9 Geo. 4. c. 65. it is provided, that no corporation or person shall utter or negotiate, in England, any such note which has been made or issued

in Scotland, Ireland, or elsewhere, under a penalty not exceeding 20*l.* nor less than 5*l.* But this does not extend to any draft or order on bankers for the use of the drawer.

Promissory notes for any sum exceeding 100*l.* may be drawn payable to bearer on demand or otherwise; but notes from 2*l.* to 100*l.* inclusive are not to be drawn payable to bearer on demand, except bankers' issuable notes, which require a different stamp.

A *check* or *draft* is as negotiable as a bill of exchange, and vests in the assignee the same right of action against the assignor. As to the presentation of checks, &c., see CHECK.

Any person making, accepting, or paying any bill, draft, order, or promissory note, not duly stamped, is liable to a penalty of 50*l.*; for post-dating them, 100*l.*; and for not truly specifying the place where unstamped drafts are issued, 100*l.*: and any person knowingly receiving such unstamped draft, 20*l.*; and the banker knowingly paying it, 100*l.*; besides not being allowed such sum in account.

Before concluding this article on mercantile paper, it may not be improper to introduce one or two cautions with regard to acceptances, and accommodation paper, and proceedings in case of the loss of bills.

First, A man should not put his name as acceptor to a bill of exchange without well considering whether he has the means of paying the same when due, as otherwise he may be liable not only to the costs of the action against himself, but also to the costs of the action, against the other parties to the bill: the shrewd tradesman is generally anxious to get the acceptance of his debtor at a short date, well knowing that it not only fixes the amount of the debt, but it is more speedily recoverable by legal procedure than a book debt.

Secondly, Traders who wish to support their respectability, and desire to succeed in business, should be cautious in resorting to the destructive system of cross-accommodation acceptances: it seldom ends well, and usually excites suspicion as to the integrity of the parties; it being an expedient often adopted by swindlers to defraud the public. Independent of the expense in stamps and discounts, and frequently in noting, interest, and law expenses, the danger attending such accommodation is sufficient to deter from the practice. Suppose, for instance, A. and B. mutually accommodate each other to the amount of 1,000*l.*, the acceptances being in the hands of third persons: both A. and B. are liable to such third persons to the extent of 2,000*l.* each; and should A. by any unforeseen occurrence be suddenly rendered unable to meet his acceptances, the holders of the whole, as well the acceptances of A. as the acceptances of B., will resort to B. for payment; and it may so happen, that although B. could have provided for his own share of the accommodation paper, he may be unable to provide for the whole, and may thus become insolvent.

Thirdly, In case of the loss of a bill, the 9 & 10 Will. 3. c. 17. provides, that if any inland bill be lost or missing within the time limited for its payment, the drawer shall, on sufficient security given to indemnify him if such bill be found again, give another bill of the same tenor with the first.

Lastly, it is of great importance to bankers and others taking bills and notes, that they should have some knowledge of the parties from whom they receive them; otherwise, if the instrument turn out to have been lost or fraudulently obtained, they may, without equivalent, be deprived of their security, on an action by the owner to recover possession. Lord Tenterden decided, "if a person take a bill, note, or any other kind of security, under circumstances which ought to excite suspicion in the mind of any reasonable man acquainted with the ordinary affairs of life, and which ought to put him on his guard to make the necessary inquiries, and he do not, then he loses the right of maintaining possession of the instrument against the rightful owner."—(*Guildhall*, Oct. 25. 1826.)

EXCHEQUER BILLS. See FUNDS.

EXPECTATION, of life. See INSURANCE.

EXPORTATION, in commerce, the act of sending or carrying commodities from one country to another. —(See IMPORTATION and EXPORTATION.)

EXCISE, the name given to the duties or taxes laid on certain articles produced and consumed at home; but, exclusive of these, the duties on licences, auctions, and post-horses, are also placed under the management of the excise, and are consequently included in the excise duties.

Excise duties were introduced into England by the Long Parliament in 1643; being then laid on the makers and venders of ale, beer, cider, and perry. The royalists soon after followed the example of the republicans; both sides declaring that the excise should be continued no longer than the termination of the war. But it was found too productive a source of revenue to be again relinquished; and when the nation had been accustomed to it for a few years, the parliament declared, in 1649, that the "impost of excise was the most easy and indifferent levy that could be laid upon the people." It was placed on a new footing at the Restoration: and, notwithstanding Mr. Justice Blackstone says that "from its first original to the present time its very name has been odious to the people of England"—(*Com.* book i. c. 3.),—it has continued progressively to gain ground; and is at this moment imposed on various important articles, and furnishes a large share of the public revenue of the kingdom.

The prejudice to which Blackstone alludes did not, perhaps, originate so much in any dislike to the duties themselves, as in circumstances connected with their imposition. Down to a comparatively recent period, the acts by which they were imposed were, for the most part, singularly obscure and contradictory, so that it was hardly possible for any trader, how desirous soever to comply with their provisions, to avoid getting into scrapes. The duties being frequently, also, carried to an oppressive extent, smuggling was practised; and when a party was prosecuted, either for any intentional or unintentional infraction of the law, or for attempting to defraud the revenue, the case was tried by 2 commissioners of excise or 2 justices of the peace, without the intervention of a jury. No wonder, therefore, that the excise should have been unpopular. But of late years the laws and regulations connected with the assessment of the duties have been much simplified. It is indeed true, that very material improvements might still be made, and should be made, in this respect. The rules laid down by the commissioners for the assessing of the duties should be as brief and clear as possible, and should interfere as little as possible with the details and processes of

spect the same, &c. And upon an officer making oath that he has cause to suspect that goods forfeited under the excise acts are deposited in any private house or place, 2 commissioners of excise, or 1 justice of the peace, may grant a warrant to the officer to enter such house or place (if in the night, in the presence of a constable) to search for and seize such forfeited goods.

Specimen Books may be left by the officers on the premises of persons subject to the excise laws; and any one who shall remove or deface such books shall be liable to a penalty of 200*l*.

Removing Goods to avoid Duty.—Goods fraudulently removed or secreted, in order to avoid the duty, to be forfeited; and every person assisting in such removal shall forfeit and lose treble the value of such goods, or 100*l*., at the discretion of the commissioners.

Obstructing Officers. — All persons who shall oppose, molest, &c. any officer of excise in the execution of his duty, shall respectively, for every such offence, forfeit 200*l*.

Officers violently resisted in making any seizure may oppose force to force; and in the event of their wounding, maiming, or killing any person, when so opposed, they shall be admitted to bail, and may plead the general issue.

Justices, mayors, bailiffs, constables, &c. are required to assist excise officers; and any constable or peace officer who, on notice and request, declines going with an excise officer, is to forfeit 20*l*. for every such offence.

Claimants of Goods seized. — No claim shall be entered for goods seized, except in the real names of the proprietors of such goods. Claimants are bound with 2 sureties in a penalty of 100*l*. to pay the expenses of claim; and in default thereof, the goods are to be condemned.

Proceedings in Courts of Law. — All penalties under the excise laws may be sued for and recovered in the Courts of Exchequer at Westminster, Edinburgh, or Dublin respectively, according as the offence may have taken place in England, Scotland, or Ireland; provided that the proceedings in the courts commence within 3 years after the commission of the offe

Informations for the recovery of penalties against the excise laws in London may be heard and adjudged by any 3 or more of the commissioners of excise; and in other places such informations may be exhibited before 1 or more justices of the peace, and may be heard and adjudged by any 2 or more such justices.

Mitigation of Penalties. — Justices are authorised, if they [illegible]ere is a special provision to the [illegible]alty incurred for any offence

but it is lawful for the commissioners of excise, when they s[illegible] cause, further to mitigate, or entirely remit, such penalty.

Distribution of Penalties. — All penalties and forfeitures incurred under the excise acts are to be distributed, half to his majesty, and half to the officer or person who shall discover, inform, or sue for the penalty. On proof being made of any officer acting collusively in making a seizure, the commissioners may direct his share to be forfeited.

Oaths and Affirmations. — Persons wilfully taking or making any false oath or affirmation as to any matter connected with the excise laws, shall, upon being convicted of such offence, suffer the pains and penalties incident to wilful and corrupt perjury; and those procuring or suborning such persons to swear or affirm falsely shall, upon conviction, be liable to the pains and penalties incident to subornation of perjury.

Actions against Excise Officers. — No writ, summons, or process shall be sued out or served upon, nor shall any action be brought, raised, or prosecuted against, any officer of excise, for any thing done under any of the excise laws, until after the expiration of 1 calendar month next after notice in writing has been delivered to such officer, specifying the cause of such action, and the name and place of abode of the person in whose name it is to be brought. No action shall lie against any excise officer for any thing done under the excise laws, unless it be brought within 3 months after the cause of action shall have arisen. If judgment be given against the plaintiff, and in favour of the defendant, the latter shall, in every such action, have treble costs awarded to him.

Forging Certificates, &c. — By the 41 Geo. 3. c. 91. it is enacted, that if any one shall forge, counterfeit, or knowingly give any forged certificate required to be granted by any officer of excise, he shall be guilty of felony, and being convicted, shall be transported for 7 years.

All individuals carrying on any business subjected to the control of the excise, must take out licences renewable annually on the 5th of July. — (See *Licences.*)

All such individuals are also obliged to make entries of every building, place, vessel, or utensil, as the case may be, in the name of the real owner, with the officer of excise in whose survey such building, place, &c. shall be situated. Individuals found employed in unentered excise manufactories are [illegible]ally liable in a penalty of 30*l*. for the first offence; and in the event of any such offender refusing or neglecting to pay such [illegible] to the [illegible]lendar months, to be kept to hard labour, and not to be liberated until the fine of 50*l*. has been paid, or the term of 3 months has expired; and if found guilty of a second offence, the fine is to be 60*l*.; and in the event of its not being paid, the imprisonment is to be for 6 months. — (7 & 8 Geo. 4. c. 53. s. 35.)

Permits are usually necessary for the removal of exciseable commodities. — (See *Permits.*)

EXPORTS, the articles exported, or sent beyond seas. — (See IMPORTS AND EXPORTS.)

F.

FACTOR, an agent employed by some one individual or individuals, to transact business on his or their account. He is not generally resident in the same place as his principal, but, usually, in a foreign country. He is authorised, either by letter of attorney or otherwise, to receive, buy, and sell goods and merchandise; and, generally, to transact all sorts of business on account of his employers, under such limitations and conditions as the latter may choose to impose. A very large proportion of the foreign trade of this and most other countries is now carried on by means of factors or agents.

Factors and brokers are, in some respects, nearly identical, but in others they are radically different. "A factor," said Mr. Justice Holroyd, "differs materially from a broker. The former is a person to whom goods are sent or consigned; and he has not only the possession, but, in consequence of its being usual to advance money upon them, has also a special property in them, and a general lien upon them. When, therefore, he sells in his own name, it is within the scope of his authority; and it may be right, therefore, that the principal should be bound by the consequences of such sale. But the case of a broker is different: he has not the possession of the goods, and so the vendor cannot be deceived by the circumstance; and, besides, the employing a person to sell goods as a broker does not authorise him to sell in his own name. If, therefore, he sells in his own name, he acts beyond the scope of his authority; and his principal is not bound."

A factor is usually paid by a per-centage or commission on the goods he sells or buys. If he act under what is called a *del credere* commission, that is, *if he guarantee the price of the goods sold on account of his principal*, he receives an additional per-centage to indemnify him for this additional responsibility. In cases of this sort the factor stands in the vendee's place, and must answer to the principal for the value of the goods sold. But where the factor undertakes no responsibility, and intimates that he acts only on account of another, it is clearly established that he is not liable in the event of the vendee's failing.

The sound maxim, that the principal is responsible for the acts of his agent, prev[illegible] universally in courts of law and equity. In order to bind the principal, it is necessary only that third parties should deal *bonâ fide* with the agent, and that the conduct of the latter should *be conformable to the common usage and mode of dealing.* Thus, a factor may sell goods upon credit, that being in the ordinary course of conducting mercantile

affairs: but a stock broker, though acting *boná fide*, and with a view to the benefit of his principal, cannot sell stock upon credit, *unless he have special instructions to that effect;* that being contrary to the usual course of business.

A sale by a factor creates a contract between the owner and buyer; and this rule holds even in cases where the factor acts upon a *del credere* commission. Hence, if a factor sell goods, and the owner *give notice to the buyer to pay the price to him*, and not to the factor, the buyer will not be justified in afterwards paying the factor, and the owner may bring his action against the buyer for the price, unless the factor has a lien thereon. But if no such notice be given, a payment to the individual selling is quite sufficient.

If a factor buy goods on account of his principal, where he is accustomed so to do, the contract of the factor binds the principal to a performance of the bargain; and the principal is the person to be sued for non-performance. But it is ruled, that if a factor enter into a charterparty of affreightment with the master of a ship, the contract obliges *him* only, unless he lade the vessel with his principal's goods, in which case the principal and lading become liable, and not the factor. Where a factor, who is authorised to sell goods in his own name, makes the buyer debtor to himself; then, though he be not answerable to the principal for the debt, if the money be not paid, yet he has a right to receive it, if it be paid, and his receipt is a sufficient discharge; the factor may, in such a case, enforce the payment by action, and the buyer cannot defend himself by alleging that the principal was indebted to him in more than the amount.

"Where a factor," said Lord Mansfield, "dealing for a principal, but concealing that principal, delivers goods in his own name, the person contracting with him has a right to consider him, to all intents and purposes, as the principal; and though the real principal may appear, and bring an action on that contract against the purchaser of the goods, yet that purchaser may set off any claim he may have against the factor, in answer to the demand of the principal."

Merchants employing the same factor run the joint risk of his actions, although they are strangers to each other: thus, if different merchants remit to a factor different bales of goods, and the factor sell them as a single lot to an individual who is to pay one moiety of the price down and the other at 6 months' end; if the buyer fail before the second payment, each merchant must bear a proportional share of the loss, and be content to accept his dividend of the money advanced. — (*Beawes, Lex Merc.*)

A factor employed, without his knowledge, in negotiating an illegal or fraudulent transaction, has an action against his principal. On this ground it was decided, that a merchant who had consigned counterfeit jewels to his factor, representing them to be genuine, should make full compensation to the factor for the injury done to him by being concerned in such a transaction, as well as to the persons to whom the jewels had been sold.

The office of a factor or agent being one of very great trust and responsibility, those who undertake it are bound, both legally and morally, to conduct themselves with the utmost fidelity and circumspection. A factor should take the greatest care of his principal's goods in his hands: he should be punctual in advising him as to his transactions on his behalf, in sales, purchases, freights, and, more particularly, bills of exchange: he should deviate as seldom as possible from the terms, and never from the *spirit and tenor*, of the orders he receives as to the sale of commodities: in the execution of a commission for purchasing goods, he should endeavour to conform as closely as practicable to his instructions as to the quality or kind of goods: if he give more for them than he is authorised, they may be thrown on his hands; but he is bound to buy them for as much less as he possibly can. After the goods are bought, he must dispose of them according to order. If he send them to a different place from that to which he was directed, they will be at his risk, unless the principal, on getting advice of the transaction, consent to acknowledge it.*

* "Whoever," says Dr. Paley, "undertakes another man's business, makes it his own; that is, promises to employ upon it the same care, attention, and diligence, that he would do if it were actually his own; for he knows that the business was committed to him with that expectation. And he promises nothing more than this. Therefore, an agent is not obliged to wait, inquire, solicit, ride about the country, toil, or study, whilst there remains a possibility of benefiting his employer. If he exert as much activity, and use such caution, as the value of the business in his judgment deserves; that is, as he would have thought sufficient if the same interest of his own had been at stake; he has discharged his duty, although it should afterwards turn out, that by more activity and longer perseverance, he might have concluded the business with greater advantage."—(*Moral and Pol. Phil.* c. 12.)

There seems to be a good deal of laxity in this statement. It is necessary to distinguish between those who, in executing a commission, render their services for the particular occasion only, without hire, and those who undertake it *in the course of business*, making a regular charge for their trouble. If the former bestow on it that ordinary degree of care and attention which the *generality of mankind* bestow on similar affairs of their own, it is all, perhaps, that can be expected: but the latter will be justly censurable, if they do not execute their engagements on account of others with that care and diligence which a "*provident and attentive father of a family*" uses in his own private concerns. It is their duty to exert themselves proportionally to the exigency of the affair in hand; and neither to *do* any thing, how minute soever, by which their employers may sustain damage, nor omit any thing, however inconsiderable, which the nature of the act requires. Perhaps the best general rule on the subject is, to suppose a factor

A factor who sells a commodity under the price he is ordered, may be obliged to make good the difference, unless the *commodity be of a perishable nature and not in a condition longer to be kept.* And if he purchase goods for another at a fixed rate, and, their price having afterwards risen, he fraudulently takes them to himself, and sends them somewhere else, in order to secure an advantage, he will be found, by the custom of merchants, liable in damages to his principal.

If a factor, in conformity with a merchant's orders, buy with his money, or on his credit, a commodity he is directed to purchase, and, without giving advice of the transaction, sells it again at a profit, appropriating that profit to himself, the merchant may recover it from him, and have him amerced for fraud.

If a factor buy, conformably to his instructions, goods of which he is *robbed*, or which suffer some unavoidable injury, he is discharged, and the loss falls on the principal. But if the goods be *stolen* from the factor, he will not be so easily discharged; for the fact of their having been abstracted by *stealth*, and not by *violence*, raises a strong presumption that he had not taken that reasonable care of them which was incumbent upon him. If, however, he can prove that the goods were lodged in a place of security, and that he had not been guilty of positive negligence, nor exercised less care towards them than towards his own property, he will not be held responsible even for a theft committed by his servants. — (*Jones on Bailments*, 2d ed. p. 76.; *Chitty on Commercial Law*, vol. iii. p. 368.)

If a factor, having money in his hands belonging to his principal, neglect to insure a ship and goods, according to order, he must, in the event of the ship miscarrying, make good the damage; and if he make any composition with the insurers after insurance, without orders to that effect, he is answerable for the whole insurance. A principal at the end of a very long letter, directed his agent thus: "Observe, the premium on this value is also to be insured." But the agent, not noticing this sentence, neglected to insure the premium; and being sued, was held liable for the omission.

If goods are remitted to a factor, and he make a false entry of them at the Custom-house, or land them without entry, and they are, in consequence, seized or forfeited, he is bound to make good the damage to his principal; but if the factor make his entry according to invoice or letters of advice, and these proving erroneous, the goods are seized, he is discharged.

It is now a settled point, that a factor has a lien on goods consigned to him, not only for incidental charges, but as an item of mutual account for the balance due to him so long as he remains in possession. If he be surety in a bond for his principal, he has a lien on the goods sold by him on account of such principal, to the amount of the sum he is bound for.

It being the general rule of law "that property does not change while *in transitu*," or in the hands of a carrier, a consignment made *before* the bankruptcy of a consignor, but not arriving till *after*, remains the property of the consignor, except, indeed, where the *delivery* is made *by the order* and upon the account of the consignee, and is a complete *alienation from* the consignor. In the case, therefore, of a consignment to a factor, the property remains the consignor's, and passes into the hands of *his* assignees. When a factor has a lien on goods, he has a right to the price, though received after the bankruptcy.

Where general or unlimited orders are given to a factor, he is left to buy and sell on the best conditions he can. And if detriment arise to a principal from the proceedings of a factor acting under such authority, he has no redress, unless he can show that he acted fraudulently or with *gross negligence.*

A factor or broker acting against the interest of his principal cannot even receive his commission. If he pay money on account of his principal, without being authorised, he cannot recover it back.

An agent cannot delegate his rights to another so as to bind the principal, unless expressly authorised to nominate a sub-agent.

(For further information as to the general powers and liabilities of factors and agents, see *Beawes, Lex Mercatoria*, art. *Factors, Supercargoes, &c.*; *Chitty's Commercial Law*, vol. iii. c. 3.; *Woolrych on Commercial Law*, pp. 317—329, &c. See also the article BROKERS.)

Under the law with respect to the transactions of factors or agents on third parties that prevailed down to the act 6 Geo. 4. c. 94., it was held, that a factor, as such, had no authority to *pledge*, but only to *sell* the goods of his principal; and it was repeatedly decided that a principal might recover back goods on which a *bonâ fide* advance of

or agent bound to exert that degree of care and vigilance that may *be reasonably expected of him by others.* At all events, it is clear he is not to be regulated by his own notions of the "value of the business." A man may neglect business of his own, or not think it worth attending to; but he is not, therefore, to be excused for neglecting any similar business he has undertaken to transact for others.—(There are some very good observations on this subject in *Sir William Jones's Essay on Bailments*, 2d ed. p. 53. and *passim*.)

money had been made by a third party, without his being bound to repay such advance; and notwithstanding this third party was wholly ignorant that the individual pledging the goods held them as a mere factor or agent. It used also to be held, that *bonâ fide* purchasers of goods from factors or agents not vested with the power of sale, might be made liable to pay the price of the goods a second time to the real owner.

The extreme hardship and injurious influence of such regulations is obvious. It is the business of a principal to satisfy himself as to the conduct and character of the factor or agent he employs; and if he make a false estimate of them, it is more equitable, surely, that he should be the sufferer, than those who have no means of knowing any thing of the matter. The injustice of the law in question, and the injury it did to the commerce of the country, had frequently excited attention; and was very ably set forth by the late Lord Liverpool, in his speech in the House of Lords, on moving the second reading of the bill referred to.

"Those of their Lordships who were acquainted with commercial transactions, would know that money was frequently advanced on goods, without its being possible for the person advancing the money to have any further acquaintance with the transactions, than that the factor was in actual possession of the goods. It then became a question, putting fraud out of view, if the factor became a bankrupt, or in any other way failed to execute his engagements, whether the loss should fall on the principal who had consigned these goods, or on the *pledgee* who had advanced money on them. It had been of late ruled, that if the factor were intrusted only to dispose of the property, the loss must fall on the pledgee. He meant to contend, that this was contrary to equity, and contrary to analogy; that it was disapproved of by high authority, and was contrary to the law in every country of the world, except this, and the United States of America, which had drawn their law from this country. It was contrary to equity, he thought, that the pledgee, who had advanced his money without any fraud, but on the *bonâ fide* possession of the goods, should suffer. He had placed no confidence, but the principal who had appointed the factor had placed confidence. He could limit him in his operations as he pleased — he could give him any kind of instructions — he might qualify his power — he was bound to take precautions before placing confidence; and he was in all respects more liable to suffer from his faults than the pledgee. The latter knew nothing of the power of the factor, he saw only the goods, and advanced his money on what was a sufficient security for repayment. On every principle of natural equity, therefore, the loss ought to fall, not on the *pledgee*, but on the principal. He knew that this view was connected with one very important question — that of possession and title; but it was not possible for transactions to go on, unless the possession was admitted as the title to the goods. If this were an indifferent question, or a question involving only a few cases, he would not have called on their Lordships to legislate on this subject; but all the commercial interests of the country were connected with it. And he might say he believed that two thirds of the whole commerce of the country was carried on by consigning goods to a factor, and leaving it to his discretion to dispose of them to the greatest advantage, sending them to market when he pleased, and raising money on them when he could not send them to market. Bills of exchange, Exchequer bills, and money bills of every description, were subject to this rule. If a person consigned Exchequer bills to a second person, and he parted with them, the third party who obtained them was held to have a right to them. Commercial proceedings were of as much importance as money proceedings, and he could not see why they should not receive the same security. It might be asked, perhaps, when this was felt to be so great an evil, why it was not altered before; but it seemed to be one of those things which had grown up gradually, and which did much mischief before they became extensively known. The first decision, he believed, which established the law as it now stood, was delivered in 1742; and he knew that Lord Chief Justice Gibbs had said, he could not explain the origin of that decision. He supposed it might have been dictated by some fraud. That decision, the Lord Chief Justice maintained, was at variance with the best interests of commerce, and had grown out of circumstances he could not explain. From the time of the first decision, the decisions had not been numerous, till of late years. He did not doubt but the judges had decided according to the law as it was established by these precedents; but in doing that, they had expressed their regret that these precedents had been established. [Here his Lordship read an extract from opinions delivered by the late Lord Chief Justice Ellenborough, and a late judge, Mr. Le Blanc, expressing their regret, in deciding cases according to these precedents, that they had been established.] He inferred from these opinions, that these judges, though they had felt themselves obliged to decide in this way, supposed that the law was contrary to the general analogy of our laws, and to the principles of justice. He then came to the last consideration, the law of this country being in this respect different from the law of all other countries, except the law of the United States of America. In all other countries, the law was recognised to be what he wished to establish it by the bill before their Lordships. When there was no evidence of fraud, it was held, that the man advancing money on goods held by a factor should not suffer for his faults, but that the person who confided in the factor must be the sufferer. This was also the law in Scotland. He had understood, too, that the evils of the law were felt in America, and that means had been taken for bringing it before the congress, with a view to assimilate the law of America to the law of other countries. If the question were examined by the principles of equity, by analogy with other cases, by the authority of those who decided in our courts, or by the practice of other countries, it would be found that the reasons were strong in favour of the bill. It was of great importance in commercial transactions, that our law should be like the laws of other countries. It was not the same with the laws relative to real property — to our local law, if he might so call it; but when the bill was founded on equity and analogy, he thought it was an additional reason in its favour, that it assimilated our commercial law to the commercial law of other countries. He did not know if he had made himself understood, or if he had sufficiently explained the object of the bill; but the measure was founded in justice, and he hoped to have their Lordships' consent to it." The noble Earl concluded by moving the second reading of the bill.

Nothing can be clearer or more satisfactory than the principle laid down by Lord Liverpool, in the above extract from his speech. But the act 6 Geo. 4. c. 94., which his Lordship introduced, did not fully carry out his views; for while it confirms *bonâ fide* sales, made in the ordinary course of business, in cases in which the purchaser had notice that the seller was merely an agent, it does not confirm *bonâ fide* advances made on goods, or on documents of title to goods, under the same circumstances. To obviate this discrepancy, to get rid of the litigation to which certain ambiguities in the 6 Geo. 4. c. 94. had given rise, and to facilitate commerce, the following statute, 5 & 6 Victoria, c. 39., was passed in 1842.

Bonâ fide Advances to Persons intrusted with the Possession of Goods or Documents of Title, though known to be Agents, protected. — From and after the passing of this act, any agent intrusted with the

possession of goods, or of the documents of title to goods, shall be deemed and taken to be owner of such goods and documents, so far as to give validity to any contract or agreement by way of pledge, lien, or security *bonâ fide* made by any person with such agent, as well for any original loan, advance, or payment made upon the security of such goods or documents, as also for any further or continuing advance in respect thereof; and such contract or agreement shall be binding upon and good against the owner of such goods, and all other persons interested therein, notwithstanding the person claiming such pledge or lien may have had notice that the person with whom such contract or agreement is made is only an agent. — § 1.

Bonâ fide Deposits in exchange protected. — Where any such contract or agreement for pledge, lien, or security shall be made in consideration of the delivery or transfer to such agent of any other goods or merchandise, or document of title, or negotiable security, upon which the person so delivering up the same had at the time a valid and available lien and security for or in respect of a previous advance by virtue of some contract or agreement made with such agent, such contract and agreement, if *bonâ fide* on the part of the person with whom the same may be made, shall be deemed to be a contract made in consideration of an advance within the true intent and meaning of this act, and shall be as valid and effectual, to all intents and purposes, and to the same extent, as if the consideration for the same had been a *bonâ fide* present advance of money: provided always, that the lien acquired under such last-mentioned contract or agreement upon the goods or documents deposited in exchange shall not exceed the value at the time of the goods and merchandise which, or the documents of title to which, or the negotiable security which shall be delivered up and exchanged. — § 2.

But the Statute to be construed to protect only Transactions bonâ fide. — This act, and every matter and thing herein contained, shall be deemed and construed to give validity to such contracts and agreements only, and to protect only such loans, advances, and exchanges, as shall be made *bonâ fide*, and without notice that the agent making such contracts or agreements as aforesaid has not authority to make the same, or is acting *malâ fide* in respect thereof against the owner of such goods and merchandise; and nothing herein contained shall be construed to extend to or protect any lien or pledge for or in respect of any antecedent debt, owing from any agent to any person with or to whom such lien or pledge shall be given, nor to authorise any agent intrusted as aforesaid in deviating from any express orders or authority received from the owner; but that, for the purpose and to the intent of protecting all such *bonâ fide* loans, advances, and exchanges as aforesaid (though made with notice of such agent not being the owner, but without any notice of the agent's acting without authority), and to no further or other intent or purpose, such contract or agreement as aforesaid shall be binding on the owner and all other persons interested in such goods. — § 3.

Meaning of the Term "Document of Title," &c. — Any bill of lading, India warrant, dock warrant, warehouse keeper's certificate, warrant, or order for the delivery of goods, or any other document used in the ordinary course of business as proof of the possession or control of goods, or authorising or purporting to authorise, either by indorsement or by delivery, the possessor of such document to transfer or receive goods thereby represented, shall be deemed and taken to be a document of title within the meaning of this act; and any agent intrusted as aforesaid, and possessed of any such document of title, whether derived immediately from the owner of such goods, or obtained by reason of such agent's having been intrusted with the possession of the goods, or of any other document of title thereto, shall be deemed and taken to have been intrusted with the possession of the goods represented by such document of title as aforesaid, and all contracts pledging or giving a lien upon such document of title as aforesaid shall be deemed and taken to be respectively pledges of and liens upon the goods to which the same relates; and such agent shall be deemed to be possessed of such goods or documents, whether the same shall be in his actual custody, or shall be held by any other person subject to his control or on his behalf; and where any loan or advance shall be *bonâ fide* made to any agent intrusted with and in possession of any such goods or documents of title as aforesaid, on the faith of any contract or agreement in writing to consign, deposit, transfer, or deliver such goods or documents of title as aforesaid, and such goods or documents of title shall actually be received by the person making such loan or advance, without notice that such agent was not authorised to make such pledge or security, every such loan or advance shall be deemed and taken to be a loan or advance on the security of such goods or documents of title within the meaning of this act, though such goods or documents of title shall not actually be received by the person making such loan or advance till the period subsequent thereto; and any contract or agreement, whether made direct with such agent as aforesaid, or with any clerk or other person on his behalf, shall be deemed a contract or agreement with such agent; and any payment made, whether by money or bills of exchange, or other negotiable security, shall be deemed and taken to be an advance within the meaning of this act; and an agent in possession as aforesaid of such goods or documents shall be taken, for the purposes of this act, to have been intrusted therewith by the owner thereof, unless the contrary can be shown in evidence. — § 4.

Agent's civil Responsibility not to be diminished. — Nothing herein contained shall lessen, vary, alter, or affect the civil responsibility of an agent for any breach of duty or contract, or non-fulfilment of his orders or authority in respect of any such contract, agreement, lien, or pledge as aforesaid. — § 5.

Agent making Consignments contrary to Instruction of Principal, guilty of Misdemeanor. — If any agent intrusted as aforesaid shall, contrary to or without the authority of his principal in that behalf and for his own benefit and in violation of good faith, make any consignment, deposit, transfer, or delivery of any goods or documents of title so intrusted to him as aforesaid, as and by way of a pledge, lien, or security; or shall, contrary to or without such authority, for his own benefit and in violation of good faith, accept any advance on the faith of any contract or agreement to consign, deposit, transfer, or deliver such goods or documents of title as aforesaid; every such agent shall be deemed guilty of a misdemeanor, and being convicted thereof, shall be sentenced to transportation for any term not exceeding 14 years nor less than 7 years, or to suffer such other punishment by fine or imprisonment, or by both, as the court shall award; and every clerk or other person who shall knowingly and wilfully act and assist in making any such consignment, deposit, transfer, or delivery, or in accepting or procuring such advance as aforesaid, shall be deemed guilty of a misdemeanor, and being convicted thereof, shall be liable, at the discretion of the court, to any of the punishments which the court shall award, as hereinbefore last mentioned: provided nevertheless, that no such agent shall be liable to any prosecution for consigning, depositing, transferring, or delivering any such goods or documents of title, in case the same shall not be made a security for or subject to the payment of any greater sum of money than the amount which at the time of such consignment, deposit, transfer, or delivery was justly due and owing to such agent from his principal, together with the amount of any bills of exchange drawn by or on account of such principal, and accepted by such agent: provided also, that the conviction of any such agent shall not be received in evidence in any action at law or suit in equity against him, and no agent intrusted as aforesaid shall be liable to be convicted by any evidence in respect of any act done by him, if he shall, at any time previously to his being indicted for such offence, have disclosed such act, on oath, in consequence of any compulsory process of any court of law or equity in any action, suit, or proceeding which shall have been *bonâ fide* instituted by any party aggrieved, or if he shall have disclosed the same in any examination or deposition before any commissioner of bankrupt. — § 6.

Right of Owner to redeem, &c. — Nothing herein contained shall prevent such owner as aforesaid from having the right to redeem such goods or documents of title pledged as aforesaid, at any time before such goods shall have been sold, upon repayment of the amount of the lien thereon, or restoration of the securities in respect of which such lien may exist, and upon payment or satisfaction to such agent, if by him required, of any sum of money for or in respect of which such agent would by law be entitled to

retain the same goods or documents, or any of them, by way of lien as against such owner, or to prevent the said owner from recovering of and from such person with whom any such goods or documents may have been pledged, or who shall have any such lien thereon as aforesaid, any balance or sum of money remaining in his hands as the produce of the sale of such goods, after deducting the amount of the lien of such person under such contract or agreement: provided always, that in case of the bankruptcy of any such agent, the owner of the goods which shall have been so redeemed by such owner shall, in respect of the sum paid by him on account of such agent for such redemption, be held to have paid such sum for the use of such agent before his bankruptcy, or in case the goods shall not be so redeemed, the owner shall be deemed a creditor of such agent for the value of the goods so pledged at the time of the pledge, and shall, if he shall think fit, be entitled in either of such cases to prove for or set off the sum so paid, or the value of such goods, as the case may be. — § 7.

Clause 8. refers to the interpretation of the act.

FACTORAGE, OR COMMISSION, the allowance given to factors by the merchants and manufacturers, &c. who employ them: it is a percentage on the goods they purchase or sell on account of their principals; and varies in different countries, and as it refers to different articles. It is customary for factors, as observed in the previous article, to insure the debts due to those for whom they sell for an additional, or *del credere*, commission, generally averaging from 1½ to 2 per cent. Factorage or commission is also frequently charged at a certain rate per cask, or other package, measure, or weight, especially when the factor is only employed to receive or deliver: this commission is usually fixed by special agreement between the merchant and factor.

FACTORY, in commerce, a place where merchants and factors reside, to negotiate business for themselves and their correspondents on commission. We have factories in China, Turkey, Russia, &c.

FAIRS AND MARKETS. These institutions are very closely allied. A fair, as the term is now generally understood, is only a greater species of market recurring at more distant intervals. Both are appropriated to the sale of one or more species of goods, the hiring of servants, or labourers, &c. : but fairs are, in most cases, attended by a greater concourse of people, for whose amusement various exhibitions are got up.

1. *Origin of Fairs.* — Institutions of this sort are peculiarly serviceable in the earlier stages of society, and in rude and inland countries. The number of shops, and the commodities in them, are then either comparatively limited, or they are but little frequented by dealers ; so that it is for the advantage of all, that fairs should be established, and merchants induced to attend them. For this purpose various privileges have been annexed to fairs, and numerous facilities afforded to the disposal of property in them. To give them a greater degree of solemnity, they were originally, both in the ancient and modern world, associated with religious festivals. In most places, indeed, they are still held on the same day with the wake or feast of the saint to whom the church is dedicated ; and till the practice was prohibited, it was customary, in England, to hold them in churchyards ! — (*Jacob's Law Dict.* art. *Fair.*) But since the growth of towns, and the opportunities afforded for the disposal and purchase of all sorts of produce at the weekly or monthly markets held in them, the utility of fairs, in this country at least, has very much diminished ; they have, also, lost much of their ancient splendour ; and, though some of them are still well attended, and of real use, a good number might be advantageously suppressed.

But it is far otherwise in inland countries, where the facilities for carrying on commercial transactions are comparatively circumscribed. There it is of the utmost importance, that certain convenient places and specified periods should be appointed for the bringing together of commodities and dealers. This is not only the readiest and best means of promoting commerce, but also of softening national antipathies, and diffusing a knowledge of the products, arts, and customs of other countries.

2. *Establishment of English Fairs.* — No fair can be holden without grant from the Crown, or a prescription which supposes such grant. And before a patent is granted, it is usual to have a writ of *ad quod damnum* executed and returned, that it may not be issued to the prejudice of a similar establishment already existing. The grant usually contains a clause that it shall not be to the hurt of another fair or market ; but this clause, if omitted, will be implied in law : for if the franchise occasion damage either to the king or a subject, in this or any other respect, it will be revoked ; and a person, whose ancient title is prejudiced, is entitled to have a *scire facias* in the king's name to repeal the letters patent. If his Majesty grant power to hold a fair or market in a particular place, the lieges can resort to no other, even though it be inconvenient. But if no place be appointed, the grantees may keep the fair or market where they please, or rather where they can most conveniently.

3. *Times of holding Fairs and Markets.* — These are either determined by the letters patent appointing the fair or market, or by usage. The statute 2 Edw. 3. c. 15. enacts, that the duration of the fair shall be declared at its commencement, and that it shall not be continued beyond the specified time. By statute 5 Edw. 3. c. 5. any merchant selling goods after the stipulated time is to forfeit double the value of the goods sold.

4. *Effects of Sales in Fairs and Markets.* — A *bonâ fide* sale made in a fair or open market, in general, transfers the complete property of the thing sold to the vendee ; so that, however vicious or illegal the title of the vendor may be, the vendee's is good against every one except the king. But the sale, in order to come within this rule, must take place *on the market day, and at the place assigned for the market.* The city of London is said to be a market overt every day of the week except Sunday ; every shop being a market overt for such things as the shopkeeper professes to deal in. The property of goods may, however, be changed, and effectually transferred to the buyer, by a *bonâ fide* sale in a shop out of London, whether the shopkeeper be the vendor or vendee, if the goods are of the kind in which he trades. A wharf in London is not within the custom, and is not a market overt for articles brought there. But a sale in a market will not be binding, if it be such as carries with it a presumption of fraud : as, for example, if it take place in a back room, or secret place ; if the sale be covinous, and intended to defraud the real owner ; or if the buyer know that the vendor is not the real owner of the goods, &c. It is very difficult to transfer the property of horses, even when they are sold in an open market, without the consent of the real owner. — (See HORSES.)

5. *Court of Pié Poudre.* — To every fair or market there is incident, even without any express words in the grant, a court of *pié poudre*, in allusion to the dusty feet of the suitors. The steward or mayor may preside. It has cognizance of all questions as to contracts made in the market, respecting goods *bought and delivered there*, &c. Formerly *pié poudre* courts were held at every considerable fair ; but they are now entirely laid aside.

6. *Clerk of the Market.* — Owners and governors of fairs are to take care that every thing be sold according to just weights and measures. And for that and other purposes they may appoint a clerk of the fair or market, who is to mark and allow all such weights, &c.; charging 1*d.* for sealing and marking a bushel, ½*d.* for marking a half bushel or peck, and ¼*d.* for marking a gallon, pottle, quart, pint, &c., under penalty of 5*l.* — (22 *Cha.* 2. c. 8.)

7. *Tolls.* — Being a matter of private benefit to the owners of fairs or markets, and not incident to them, tolls are not exigible unless specially granted in the patent: but the king may by a new grant authorise a reasonable toll to be taken. If the toll granted be excessive, the patent will be void. It is a general rule, unless changed by a contrary custom obtaining time out of mind, that no toll be paid for any thing brought to a fair or market, before the same is sold, and that it shall then be *paid by the buyer.*

The owner of a house next to a fair or market is not allowed to open his shop during such fair or market without paying *stallage* (toll for having a stall); on the ground that if he take the benefit of the market, he ought to pay the duties thereon. This regulation has been a good deal complained of.

The owners of fairs and markets are required by statute (2 & 3 Ph. and M. c. 7.) to appoint a person in a special open place to take the toll. The most important part of this person's duty has reference to his entering the horses sold with three distinguishing marks, and the names, &c. of those who buy and sell them. — (See Horses.)

An action lies against any one who refuses to pay the customary toll.

(For further information as to British fairs and markets, see *Chitty on Commercial Law*, vol. ii. c. 9.)

The 3 Geo. 4. c. 55. enacts, that at all fairs held within 10 miles of Temple Bar, business and amusements of all kinds shall cease at 11 o'clock in the evening, and not re-commence before 6 o'clock in the morning, under a penalty of 40*s.* to be paid by any master, mistress, or other person, having the care or management of any house, shop, room, booth, standing, tent, caravan or wagon, where any breach of this enactment shall have been committed. Power is also given by the same act to any 2 justices of the peace, within their respective jurisdictions, to put a stop to any fair which is held without charter, prescription, or lawful authority.

8. *Principal British Fairs.* — Among these may be specified Stourbridge, in Worcestershire. Bristol has two considerable fairs, one in March and one in September. Exeter December fair, for cattle, horses, and most sorts of commodities. Weyhill fair, in Hampshire (October 10.), has, probably, the greatest display of sheep of any fair in the kingdom. Bartholomew fair, in London, used to be of considerable importance, but latterly it was appropriated only to shows of wild beasts, and such like exhibitions, and has, within these few years, been very properly suppressed. St. Faith's near Norwich (October 17.), is the principal English fair for Scotch cattle. They are sold to the graziers and feeders of Norfolk, Suffolk, Essex, &c., by whom they are fattened for the London markets, where they are met with in great abundance. But besides those sold at St. Faith's, large numbers of Scotch cattle are disposed of at Market Harborough, Carlisle, Ormskirk, and other places. Ipswich has two considerable fairs: one in August, for lambs; and one in September, for butter and cheese: it is reckoned that above 100,000 lambs are annually sold at the former. Woodborough-hill, in Dorset, for west country manufactures, as kerseys, druggets, &c. Woodstock October fair, for cheese. Northampton and Nottingham have each several large fairs, for horses, cattle, cheese, &c. The August fair of Horncastle, in Lincolnshire, is the largest horse fair in the kingdom, many thousand horses being exhibited for sale during its continuance: it is resorted to by crowds of dealers from all parts of Great Britain, by several from the Continent, and sometimes even from North America. Howden, in Yorkshire, has, also, a very large horse fair, particularly for Yorkshire hunters. Devizes, in Wiltshire, has several large fairs for sheep and cattle. There is usually a large display of cheese at the Gloucester April fair. A guild, or jubilee, commencing the last week of August, is held every twentieth year at Preston, in Lancashire; the last was held in 1842, and was well attended. The October fair of Market Harborough, Leicestershire, lasts 9 days, and a great deal of business is usually done in cattle, cheese, &c. Woodbridge Lady-day fair is celebrated for the show of Suffolk horses. Falkirk fair, or tryst, is one of the most important in Scotland, for the sale of cattle and sheep. The October fair of Ballinasloe, in the county Galway, is famous for the display of cattle and sheep; by far the largest proportion of these animals raised for sale in Connaught being disposed of at it. The sheep are generally from 3 to 4, the heifers from 3 to 4, and the bullocks from 4 to 5 years of age. They are mostly lean; and are kept for a year in Leinster before they are fit for the Dublin or Liverpool markets.

We subjoin an

Account of the Number of Sheep and Cattle exhibited at the October Fairs of Ballinasloe, from 1790 to 1842, both inclusive.

Years.	Sheep, total sold and unsold.	Horned Cattle, total sold and unsold.	Years.	Sheep, total sold and unsold.	Horned Cattle, total sold and unsold.	Years.	Sheep, total sold and unsold.	Horned Cattle, total sold and unsold.

9. *Principal French Fairs.* — Among these may be specified the fairs of St. Germain's, Lyons, Rheims, Chartres, Rouen, Bordeaux, Troyes, and Bayonne; but they are much fallen off.

The most important of the modern French fairs is that of Beaucaire, on the right bank of the Rhone opposite to Tarrascon, 14 miles E. Nismes. It is very favourably situated for an entrepôt, being, exclusive of the command of internal navigation afforded by the Rhone, connected by canals with the sea and the *Canal du Midi*. The fair, which commences on the 22d and finishes on the 28th of July, was formerly the greatest in Europe, and, though a good deal fallen off, it is still attended by a vast concourse of people, not from France only, but also from Switzerland, Germany, Italy, Spain, and the Levant. Almost every sort of article, whether of convenience or luxury, may then be met with in the town. It is said that the number of visitors still amounts to from 70,000 to 80,000, and the amount of business done to 150,000,000 fr.; but we incline to think that these estimates, especially the first, is very greatly exaggerated, and that it would be nearer the mark were it reduced a half. All bills due at this fair are presented on the 27th, and protested on the 28th. A tribunal instituted for the purpose takes cognizance of and immediately settles all disputes growing out of transactions that take place at the fair. A military force attends to preserve order, and the prefect of the department, who is always present, entertains the principal merchants and strangers. — (See *Geographical Dictionary*, art. *Beaucaire*, and the authorities there referred to.)

10. *German Fairs.*— The principal German, or rather European, fairs, are those of Frankfort on the Maine, Frankfort on the Oder, and Leipsic. The concourse of merchants, and the business done at these fairs, are generally very great. They are copiously supplied with the cotton stuffs, twist, cloths, and hardware of England; the silks and jewellery of France; the printed cottons of Switzerland and Austria; the raw, manufactured, and literary products of Germany; the furs of the North; Turkey carpets; Cachemere shawls, &c.; and there, also, are to be found merchants of all countries, those of Ispahan negotiating with those of Montreal for the purchase of furs; and Georgians and Servians supplying themselves with the cottons of Manchester and the jewellery of Paris. There, in fact, are met the representatives, as it were, of every people in the world, labouring, though without intending it, to promote each other's interest, and to extend and strengthen those ties that bind together the great family of the human race.

The fairs at Frankfort on the Maine should begin, the first on Easter Tuesday, and the second on the Monday nearest to the 8th of September. Their duration is limited to 3 weeks; but they usually begin from 8 to 15 days before their legal commencement. Accounts are kept in rixdollars: 1 rixdollar of account = 1½ florin, or 4½ copsticks, or 22½ batzen. The rixdollar = 3*s.* 1·8*d.*; so that the par of exchange is 141 batzen per 1*l.* sterling. 100 lbs. common Frankfort weight = 103 lbs. avoirdupois. The foot = 11·27 English inches.

The fairs at Frankfort on the Oder are 3 in number: viz. *Reminiscere*, in February or March; *St. Margaret*, in July; and *St. Martin*, in November. They ought, strictly speaking, to terminate in 8 days, but they usually extend to 15. The Prussian government gives every facility to those who attend these fairs. Accounts are kept in Prussian money, that is, in rixdollars of 2*s.* 11¼*d.* 100 lbs. Prussian = 103 lbs. avoirdupois. The foot = 12·356 English inches.

The fairs of Leipsic are still more celebrated than those of either Frankfort. They are held thrice a year, — on the 1st of January, at Easter, and at Michaelmas. The first is the least important. The Easter and Michaelmas fairs are famous, particularly the former, for the vast number of new publications usually offered for sale. They are

attended by all the principal booksellers of Germany, and by many from the adjoining countries, who adjust their accounts, learn the state of the trade in all parts of the world, and endeavour to form new connections. Most German publishers have agents in Leipsic; which is to the literature of Germany, what London is to that of Great Britain. As many as 4,500 new publications have been in a single Leipsic catalogue! They are also great markets for Saxon woollens and other goods, British calicos, French silks, and, in fact, for most descriptions of produce. The fairs ought to close in 8 days, but they usually continue for about 3 weeks. No days of grace are allowed. The holder of a bill must demand payment on the day it becomes due; and, if not paid, he must have it protested on that very day, and returned by the first opportunity. If he neglect any of these regulations, he loses all right of recourse upon the drawer and indorsers. Money of account at Leipsic same as at Frankfort on the Maine. 100 lbs. Leipsic = 103 lbs. avoirdupois. The foot = 11·11 English inches. — (*Kelly's Cambist; Manuel de Nelkenbrecher; Bowring's Report on the Prussian Commercial Union*, pp. 255—269, &c.

Dr. Bright gives, in his *Travels in Hungary* (pp. 201—223.), an interesting account of the fairs held at Debretzin and Pesth. The latter has become the grand centre of Hungarian commerce; most part of which is conducted at its fairs.

11. *Italian Fairs.* — Of these, the most celebrated is that of Sinigaglia, a small but handsome town of the Papal dominions, on the Misa, near its confluence with the Adriatic. The fair commences on the 20th of July, and should terminate on the last day of that month, but it usually continues 8 or 10 days longer. The duties on goods brought to the fair are extremely moderate, and every thing is done to promote the convenience of those frequenting it. All sorts of cotton, woollen, and silk goods, colonial produce, iron and steel, hardware, jewellery, brandy and liqueurs, timber, drugs, spices, &c. are brought here by the English, French, Austrians, Swiss, &c. These are exchanged for the various raw and manufactured products of Italy and the Levant; consisting, among others, of raw, thrown, and wrought silks; oil, fruits, cheese, alum, soda, sumach, sulphur, &c. The value of the imports for the fair of 1841 was estimated at about 1,700,000*l.* Accounts are kept in scudi of 20 soldi; the scudo = 4*s.* 4*d.* very nearly. 100 lbs. Sinigaglia = 73¾ avoirdupois. The ell or braccio measures 25·33 English inches. — (*Manuel de Nelkenbrecher; Macgregor's Tariffs, Italy*, p. 121.)

12. *Russian Fairs.*—These are numerous, and many of them are well attended. The most important is held at Nijnii-Novgorod, at the confluence of the Oka with the Wolga, lat. 56° 19′ 40″ N. lon. 44° 28′ 30″ E. Previously to 1817 this fair was held in a less convenient situation, at Makarieff, lower down the Wolga. But the buildings for the accommodation of the merchants at the latter having been accidentally burnt down in 1816, government took advantage of the circumstance to remove the fair to Nijnii. It is principally carried on within the new bazaars constructed for that purpose on the left bank of the Oka. These, which are divided into parallel rows or streets, are constructed of stone walls roofed with iron, having covered galleries in front supported by iron pillars. They are built on piles, and, to guard against inundations, the ground on which they stand has been raised about 20 feet. Being enclosed on 3 sides by canals, and on the 4th by a navigable inlet of the Oka, there is every facility for the delivery and shipment of goods. The establishment is of great extent, comprising 2,524 booths, and is admitted on all hands to be at once the largest and most perfect of its kind that is anywhere to be met with. But, in addition to the above, no fewer than 2,506 shops and booths, belonging to private parties, and constructed of wood, were occupied during the fair of 1841. The fair begins on the 1st of July and continues for a month or 6 weeks

The value of the different Russian products offered for sale and sold in 1841 is stated to have been as follows:—

	Offered for Sale.	
	Silver roubles.	*Silver roubles.*
Cottons	7,536,665	5,947,865
Woollen stuffs	3,448,295	2,620,175
Linens	3,126,736	2,375,736
Silks	3,220,489	2,239,989
Skins	1,996,273	1,498,[illegible]
Hides, raw and tanned	1,045,583	876,083
Metals and works in metal	7,560,330	6,450,330
Porcelain, earthenware, &c.	398,860	336,860
Dried fish, caviar, fish oil, &c.	513,778	473,278
Corn and flour	2,850,750	1,645,750
Wine, mead, &c.	866,786	781,386
Refined sugar, wax, paper, bristles, &c.	4,730,148	4,516,748
	37,132,693	29,762,473 *

The value of the merchandise offered for sale and sold at this fair in the undermentioned years, is stated, in the official returns, to have been as follows: —

* One silver rouble is equal to 3½ paper roubles, and is worth about 3*s.* 2*d.*

Years.	Merchandise offered for Sale.	Merchandise sold.
	Paper roubles.	*Paper roubles.*
1837	146,638,181	125,567,881
1838	156,199,500	129,231,500
1839	161,645,674	137,700,774
1840	165,427,384	135,901,454
1841	176,773,141	145,964,826

Tea, brought from Kiachta, is an important article at the Novgorod fairs. Previously to 1840 the quantity of tea sold at any single fair did not exceed 38,000 chests; but in 1840 and 1841 the quantities, exclusive of about 5,500 chests of coarse or Tartar tea, exceeded 50,000 chests each year, its value in 1841 having been estimated at 7,107,500 silver roubles. The total value of the various articles of Asiatic (including Chinese) produce exposed for sale at Novgorod in 1841 amounted to 9,146,719 silver roubles, being more than double the value of the products of Western Europe exposed in the same year. Of the latter, indigo, wine, and cottons were the principal articles.—(*Journal des Manufactures, Petersburg*, 1842.) The stationary population of the town, which may amount to about 25,000, is, during the fair, said to amount to from 130,000 to 160,000, including Chinese, Persians, Armenians, Tartars, Bokharians, &c. Theatrical exhibitions, shows of wild beasts, and other Bartholomew fair exhibitions, add to the attractions of the scene.

Another celebrated Russian fair is held, in the month of December, at Kiachta, in Mongolia, on the Chinese frontier, lat. 50° 21′ 5″ N., lon. 106° 28′ 15″ E. The town is small, the population not exceeding 4,000 or 5,000; but by far the largest part of the commerce between the Russian and Chinese empires is transacted at its fair, and it is also the centre of the political intercourse between them. The commodities brought by the Russians consist principally of Russian and German broad cloths, furs, sheep and lamb skins, leather, coarse linens, worsted stuffs, cattle, &c., with, for the most part, bullion. These they exchange with the Chinese for tea, raw and manufactured silk, nankeens, porcelain, sugar candy, rhubarb, tobacco, musk, &c., the value of the articles other than tea being, however, quite inconsiderable. The quantity of tea purchased at the Kiachta fairs by the Russians, which has latterly increased very considerably, amounted, in 1841, according to the official returns, to 242,608 poods, or 8,733,888 lbs., valued at 7,313,325 silver roubles. It consists principally of the fine and costly species of tea called pekoe; and in the above year, its estimated cost price, taking the rouble at 3*s.* 2*d.*, must have been as high as 2*s.* 7¾*d.* per lb. But, exclusive of this, the Russians buy large quantities of a coarser species of tea, called break or Tartar tea, which, though not thought worth the trouble of putting into packages, is largely consumed by the nomadic Tartars and Siberians. According to the same accounts, the total value of the exports to China, which pass almost wholly through Kiachta, in 1841, amounted to 7,671,118 silver roubles, and that of the imports to 7,687,576 do. The Russian trade is in the hands of a comparatively small number of merchants, some of whom are very rich; that of the Chinese is much more diffused. Commodities may be conveyed from Kiachta to European Russia either by land or by water. In the former case, the journey takes a year; in the latter, it takes 3 years, or rather 3 very short summers; the rivers being for the most part of the year frozen over. —(*Schnitzler, Statistique Générale de l'Empire de la Russie*, p. 143.; *Official Statement of the Trade of the Russian Empire in* 1841, *&c.*)

13. *Eastern Fairs.*—The most important fair in the Eastern world is that held at Mecca, during the resort of pilgrims in the month of Dhalhajja. It used to be frequented by many thousands of individuals of all ranks and orders, brought together from the remotest corners of the Mohammedan world; and though the numbers attending it have declined of late years, the concourse is still very great. — (See CARAVAN.)

Hurdwar, in Hindostan, in lat. 29° 57′ N., lon. 78° 2′ E., 117 miles N. E. from Delhi, is famous from its being one of the principal places of Hindoo pilgrimage, and the greatest fair in India. The town, which is but inconsiderable, is situated on the Ganges, at the point where that sacred stream issues from the mountains. The pilgrimage and fair are held together at the vernal equinox; and Europeans, nowise addicted to exaggeration, who have been repeatedly present on these occasions, estimate that from 200,000 to 300,000 strangers are then assembled in the town and its vicinity. But every twelfth year is reckoned peculiarly holy; and then it is supposed that from 1,000,000 to 1,500,000, and even 2,000,000 pilgrims and dealers are congregated together from all parts of India and the countries to the north. In 1819, which happened to be a twelfth year, when the auspicious moment for bathing in the Ganges was announced to the impatient devotees, the rush was so tremendous that no fewer than 430 persons were either trampled to death under foot, or drowned in the river! The foreigners resorting to Hurdwar fair for commercial purposes only, consist principally of natives of Nepaul, the Punjab, and Peshwaur, with Afghans, Usbeck Tartars, &c. They import vast numbers of horses, cattle, and camels; Persian dried fruits, shawls, drugs, &c.: the returns are made in cotton piece goods, indigo, sugar, spices, and other tropical productions.

The merchants never mention the price of their goods, but conduct the bargain by touching the different joints of their fingers, to hinder the bystanders gaining any information. During the Mahratta sway, a kind of poll-tax and duties on cattle were levied; but all is now free, without impost or molestation of any sort. Owing, also, to the precautions adopted by the British government, the most perfect order is preserved; much to the surprise and satisfaction of the natives; for, antecedent to our occupation of the country, the fairs usually ended in disorder and bloodshed.—(*Private information*, and the excellent account of *Hurdwar* in *Hamilton's Gazetteer*.

The fairs of Portobello, Vera Cruz, and Acapulco, once so famous, are now totally deserted; that of the Havannah is also much fallen off.

FATHOM, a measure of length, 6 feet, chiefly used for measuring the length of cordage, and the depth of water and mines.

FEATHERS, BED-FEATHERS (Fr. *Plumes, Plumes à lit*; Ger. *Federn, Bettfedern*; Du. *Bedveern, Pluimen*; It. *Piume*; Sp. *Plumas*), make a considerable article of commerce; particularly those of the ostrich, heron, swan, peacock, goose, and other poultry; for plumes, ornaments of the head, filling of beds, quilts, &c. The coarsest part of the ostrich plumage is generally denominated *hair*, to which it bears a resemblance, and is used in the manufacture of hats. Many parts of Great Britain supply feathers for beds, and an inferior sort is brought from Ireland. Eider down is imported from the north of Europe; the ducks that supply it being inhabitants of Greenland, Iceland, and Norway. The eider duck breeds in the islands on the west of Scotland, but not in sufficient numbers to form a profitable branch of trade to the inhabitants. Hudson's Bay furnishes very fine feathers. The down of the swan is brought from Dantzic, as well as large quantities of superior feathers.

The bed-feathers imported in 1842 produced 776*l.* of duty; the duty on ostrich feathers during the same year being 83*l.* 9*s.* 9*d.*

FIDDLES, or VIOLINS (Ger. *Violinen, Geigen*; Du. *Vioolen*; Fr. *Violons*; It. *Violini*; Sp. *Violines*; Rus. *Skripizii*), musical instruments, too well known to need any particular description. The finest-toned violins are those made in Italy; they are usually called Cremonas, from the name of the town where they were formerly manufactured in the highest perfection: 50 or 60 guineas have not unfrequently been given for a Cremona violin.

FIGS (Ger. *Feigen*; Du. *Vygen*; Fr. *Figues*; It. *Fichi*; Sp. *Higos*; Lat. *Fici, Caricæ*; Arab. *Teen*), the fruit of the fig tree (*Ficus carica*), a native of Asia, but early introduced into Europe. It flourishes in Turkey, Greece, France, Spain, Italy, and Northern Africa, and even sometimes ripens its fruit in the open air in this country. Figs, when ripe, are, for the most part, dried in ovens to preserve them; and then packed very closely in the small chests and baskets in which we import them. The best come from Turkey; those of Kalamata, in the Morea, are said to be the most luscious.—(*Thomson's Dispensatory.*)

Dried figs form a very considerable article of commerce in Provence, Italy, and Spain; besides affording, as in the East, a principal article of sustenance for the population. In Spain, figs are chiefly exported from Andalusia and Valencia; but they are more or less abundant in every province. In the northern parts of France there are many fig gardens, particularly at Argenteuil.

Account of the Quantities of Figs entered for Consumption, and of the Produce of the Duties thereon, in 1840, 1841, and 1842

Quantities.			Duties.		
1840.	1841.	1842.	1840.	1841.	1842.
Cwt. Qrs. Lbs.	*Cwt. Qrs. Lbs.*	*Cwt. Qrs. Lbs.*	£ *s. d.*	£ *s. d.*	£ *s. d.*
29,951 0 15	29,077 3 14	22,938 0 3	20,798 6 2	22,918 2 3	18,064 2 4

Of 30,063 cwts. of figs, imported in 1840, 17,863 cwts. were brought from Turkey, 4,351 do. from Portugal, 3,885 do. from Spain, 2,200 do. from Italy, and 1,035 from the Morea. The duty on figs was reduced in 1842 from 21*s.* 6*d.* to 15*s.* a cwt.—(*Decennial Returns by Board of Trade*; *Parl. Paper* No. 45. Sess. 1843.)

No abatement of duty is made on account of any damage received by figs.

FILE, FILES (Da. *File*; Du. *Vylen*; Fr. *Limes*; Ger. *Feilen*; It. *Lime*), an instrument of iron or forged steel, cut in little furrows, used to polish or smooth metals, timber, and other hard bodies.

FIR. See PINE.

FIRE-ARMS. Under this designation is comprised all sorts of guns, fowling-pieces, blunderbusses, pistols, &c. The manufacture of these weapons is of considerable importance; employing at all times, but especially during war, a large number of persons.

In consequence of the frequent occurrence of accidents from the bursting of insufficient barrels, the legislature has most properly interfered, not to regulate their manufacture, but to prevent all persons from using or selling barrels that have not been regularly *proved* in a public proof-house. The first act for this purpose was passed in 1813; but it was soon after superseded by a fuller and more complete one, the 55 Geo. 3. c. 59. This statute imposes a fine of 20*l.* on any person *using*, in any of the progressive stages

of its manufacture, any barrel not duly proved; on any person *delivering* the same, except through a proof-house; and on any person *receiving*, for the purpose of making guns, &c., any barrels which have not passed through a proof-house. These penalties to be levied on conviction before 2 justices: with like penalties, to be similarly levied, on persons counterfeiting the *proof-marks*.

FIRE-WORKS. By 9 & 10 Will. 3., all sorts of fire-works are declared to be a common nuisance: and the *making, causing to be made, giving, selling*, or *offering* for sale, any squibs, rockets, serpents, or *other fireworks*, or any cases or implements for making the same, is made subject to a penalty of *5l.*, to be recovered on conviction before a justice of the peace. Casting or firing any such fire-works, or permitting the same to be cast or fired, *from* any house or place, and casting or firing the same *into* any house, shop, street, highway, or river, is subjected to a penalty of 20*s.*, to be recovered in like manner; and if not immediately paid, the party to be imprisoned and kept to hard labour for any time not exceeding a month. But the statute provides, that it shall be lawful for the master, lieutenant, or commissioners of his Majesty's ordnance, or those authorised by them, to give orders for making any fire-works, to be used according to such orders.

FIRKIN, a measure of capacity, equal to 9 ale gallons, or 7½ Imperial gallons, or 2,538 cubic inches. —(See WEIGHTS AND MEASURES.)

FIRLOT, a dry measure used in Scotland. The Linlithgow wheat firlot is to the Imperial bushel as ·998 to 1; and the Linlithgow barley firlot is to the Imperial bushel as 1·456 is to 1. —(See WEIGHTS AND MEASURES.)

FISH (Ger. *Fische*; Du. *Visschen*; Da. and Sw. *Fisk*; Fr. *Poissons*; It. *Pesci*; Sp. *Pescados*; Port. *Peixes*; Rus. *Rüb*; Pol. *Rybi*; Lat. *Pisces*), a term used in natural history to denote every variety of animal inhabiting seas, rivers, lakes, ponds, &c. that cannot exist for any considerable time out of the water. But in a commercial point of view, those fishes only are referred to, that are caught by man, and used either as food or for some other useful purpose. Of these, herring, salmon, cod, pilchard, mackarel, turbot, lobster, oyster, whale, &c. are among the most important. —(See the different articles under these titles.)

The supply of fish in the seas round Britain is most abunaant, or rather quite inexhaustible. "The coasts of Great Britain," says Sir John Boroughs, "doe yield such a continued sea harvest of gain and benefit to all those that with diligence doe labour in the same, that no time or season of the yeare passeth away without some apparent meanes of profitable employment, especially to such as apply themselves to fishing; which, from the beginning of the year unto the latter end, continueth upon some part or other upon our coastes; and these in such infinite shoales and multitudes of fishes are offered to the takers, as may justly move admiration, not only to strangers, but to those that daily are employed amongst them."—"That this harvest," says Mr. Barrow, "ripe for gathering at all seasons of the year — without the labour of tillage, without expense of seed or manure, without the payment of rent or taxes — is inexhaustible, the extraordinary fecundity of the most valuable kinds of fish would alone afford abundant proof. To enumerate the thousands, and even millions of eggs, which are impregnated in the herring, the cod, the ling, and indeed in almost the whole of the esculent fish, would give but an inadequate idea of the prodigious multitudes in which they flock to our shores; the shoals themselves must be seen, in order to convey to the mind any just notion of their aggregate mass."—(For an account of the shoals of herrings, see HERRING.)

But, notwithstanding these statements, there has been, for these some years past, a growing complaint of a scarcity of such fish as breed in the channel; and it is affirmed, in the report of the Commons' committee of 1833, on the Channel fisheries, that the fact of such scarcity existing has been completely established. The committee ascribe it to various causes, but principally to the destruction of the spawn or brood of fish, by fishing with trawl or drag nets with small meshes, near the shore, during the breeding season; a practice prohibited by several statutes, which seem, however, to have fallen into disuse. The committee represent the fishermen as being generally in a very depressed state, and that the business is, for the most part, very unprofitable. We believe that this is the fact; but we do not know any period when the same might not have been said with quite as much truth as at present. Smith has remarked, that from the age of Theocritus downwards, fishermen have been proverbially poor—(*Wealth of Nations*, p. 45.); and a library might be filled with the acts, reports, plans, tracts, &c. that have been printed in this country during the last 2 centuries, containing regulations, schemes, suggestions, &c. for the improvement of fisheries and fishermen. But it is not too much to say, that not one of these well-meant endeavours, notwithstanding the enormous expense incurred in carrying some of them into effect, has been productive of any material advantage! and we see no reason to think that the suggestions of the late committee, supposing they were to be acted upon, would have any better success.

The injury done to the breeding grounds might, perhaps, be obviated; but besides this, the committee laid much stress on the encroachments of the French and other

foreign fishermen, and on the licence given to import foreign-caught turbot, &c. duty free! We confess, it appears to us quite visionary to suppose that these circumstances could have much influence. Our fishermen, living upon the very shores of the bays to which the French are said to resort, have advantages on their side sufficient, surely, to insure them a superiority, without the forcible expulsion, supposing that could be accomplished, of their foreign competitors. A man who does not succeed in a business carried on at his own door so well as one who resides 100 miles off, must look for the cause in his want of skill or industry; and should seek rather to improve himself than to discard his rival. The proposition for excluding turbot, &c. of foreign catch, is one that ought not to be listened to for a single moment. Such exclusion could not be of the slightest advantage to the British fishermen, unless it occasioned a rise in the price of the fish; and we need not say, that if the legislature interfere at all in the matter, it should have for its object the lowering, not the raising of prices. We are glad, however, to have to state that a convention for fixing the limits of the oyster and other fisheries on the coasts of the U. Kingdom and of France, was signed at Paris on the 2d of August, 1839.

All that it is possible to do for the fishery, by relieving it from tithes and other burdens, and facilitating the disposal of the fish in the markets of this and other countries, should be done; but, except in so far as its interests may be promoted in this way, and, perhaps, by some new regulations for preserving the brood, we do not see what more is to be done by legislative interference. It will be seen, in our articles on the herring and whale fisheries, that the bounty system was attended with vast expense, without leading to any useful result.

Except in London and a few sea-port towns, the consumption of fish in England is not great. The price in the metropolis, though it has been a good deal reduced of late years, is still very high. This has been pretty generally believed to be in no small degree owing to the salesmen of Billingsgate market being able, in a great measure, to regulate both the supply of the article and its price. The committee of 1833, however, declare, that though they minutely examined the subject, it did not appear that any improper monopoly or injurious regulations subsisted either in the mode of supplying the market, or in the sale of the fish. Had any such existed, the establishment of Hungerford market would have tended materially to counteract their influence.

Sir John Barrow, in a valuable article on the fisheries, in the *Encyclopedia Britannica*, has estimated the value of the entire annual produce of the foreign and domestic fisheries of Great Britain at 8,300,000*l*. But it is admitted by every one who knows any thing of the subject, that this estimate is very greatly exaggerated. We doubt much, whether the entire value of the fisheries can be reckoned so high as 4,500,000*l*.

Regulations as to Importation. — Fish of foreign taking, except anchovies, eels, turbots, and lobsters, may not be imported into the U. Kingdom in fishing vessels, or in any other vessels not regularly cleared out from some foreign port. — (5 & 6 *Vict.* c. 47. § 4.)

FLAX (Ger. *Flachs*; Du. *Vlasch*; Fr. *Lin*; It. and Sp. *Lino*; Rus. *Len*, *Lon*; Pol. *Len*; Lat. *Linum*), an important plant (*Linum usitatissimum*) that has been cultivated from the earliest ages in Great Britain and many other countries; its fibres being manufactured into thread, and its seed crushed for oil. Generally, however, we have been in the habit of importing a large proportion of our supplies. The premiums given by the legislature to force the cultivation of flax have had very little effect; the fact being, as Mr. Loudon has stated, that its culture is found to be, on the whole, less profitable than that of corn. When allowed to ripen its seed, it is one of the most severe crops.

Russia supplies by far the largest portion of the flax imported into this country, the principal sorts being Petersburg, Narva, Riga, Revel, Pernau, Liebau, Memel, and Oberland. Petersburg and Narva flax are nearly of the same quality, the latter being but little inferior to the former. Both sorts come to us in bundles of 12, 9, and 6 heads. The Riga flax seems to deserve the preference of any imported from the Baltic. It is the growth of the provinces of Marienburg, Druania, Thiesenhausen, and Lithuania.

The best Marienburg is called simply Marienburg (M), or Marienburg clean; the second quality, cut (GM); and the third, *visten dreyband* (RD): of the three other provinces, the first quality bears the name of *rakitzer*; — as *Druania rakitzer* (DR), *Thiesenhausen rakitzer* (TR), and *Lithuania rakitzer* (LR). The cut flax of these three provinces is the second quality: and to the third quality belong the *badstub* and *badstub cut* (B and BG); the *paternoster* (PN); and *hafs three band* (HB). *Badstub* and *paternoster* are the refuse of the *rakitzer* flax, and the *three band* again the refuse of the former sorts, and consequently very ordinary. The Revel and Pernau consists of Marienburg, *cut*, *visten*, *hafs three band*, and *three band*. The Liebau and Memel growths are distinguished by the denomination of *four* and *three band*. These two sorts, as well as the Oberland flax, come from Königsberg, Elbing, &c., and are little esteemed in the British markets.

Flanders or Dutch flax is well dressed, and of the finest quality.

Flax is extensively cultivated in Egypt. Of late years, some of the Italian ports, which used to be supplied from Russia, have been fully supplied on low terms from Alexandria.

The *Phormium tenax*, or New Zealand flax, has been said to exceed every other species in strength of fibre and whiteness; qualities which (if it really possess them in the degree stated) must make it peculiarly well fitted for being made into canvas and cordage. In point of fact, however, there is a great diversity of opinion as to its real merits, and it fetches at present but a low price. In 1831 and 1832 the imports of New Zealand flax amounted respectively to 15,325 and 15,867 cwts.; but they fell off in 1835 to 7,812 cwts., and since then none has been imported. It is alleged that this is a consequence of the imperfect preparation of the flax, which has hitherto been entirely intrusted to the native women. But without presuming to say whether the defects with which it is charged be inherent in the flax itself, or depend on its preparation, it is abundantly certain that, unless it be furnished of a superior quality, it will not suit our markets.

When flax is brought to the principal Russian ports whence it is shipped, it is classified according to its qualities, and made up in bundles by sworn inspectors (*brackers*) appointed by government for the assortment of that and all other merchandise. These functionaries are said to perform their task with laudable impartiality and exactness. A ticket is attached to every bundle of assorted flax, containing the names of the inspector and owner, the sort of flax, and the period when it was selected or inspected. — (See HEMP.) Good flax should be of a fine bright colour, well separated from the tow, codilla, or coarser portion of the plant; and of a long, fine, and strong fibre. In purchasing flax, it is usual to employ agents wholly devoted to this peculiar business.

Account of the Quantities of Flax and Tow imported into the United Kingdom during the 7 Years from 1835 to 1841 inclusive, distinguishing the Countries whence they were imported, and the Quantities brought from each.

The duty on flax is only 1*d.* a cwt.

Flax, the produce or manufacture of Europe, not to be imported for home consumption, except in British ships, or in ships of the country of which it is the produce, or of the country from which it is imported, on pain of forfeiture of the goods and 100*l.* by the master of the ship.—(3 & 4 *Will.* 4. c. 54.)

We subjoin an account of the charges on the importation of the different sorts of flax from Petersburg and Riga.

Charges at Petersburg on 12 Head Flax, per ton.

Circa, 16 bobbins = 63 poods = 1 ton.

	Pap. rou. cop.
Duty, 540 cop. per bercovitz	34 2
Quarantine duty, 1 per cent.	0 34
Additional duty, 10 per cent.	3 40
	R. 37 76
Custom-house charges, 4 per cent.	1 51
Receiving and weighing, 40 cop. per bobbin	6 40
Bracking, 1 roub. per bercovitz	6 30
Binding, 75 cop. per ditto	4 72
Lighterage and attendance to Cronstadt, 8 roub. per 60 poods	8 40
Mats	8 0
Brokerage, 60 cop. per ton	0 60
Fixed charges	*R.* 73 69

Brokerage, ½ per cent.
Commission and extra charges, 3 per cent.
Stamps, ½ per cent.
Brokerage on bills, ½ per cent. } ½ per cent.
are charges varying according to the price paid.

Riga flax is bought at so much the shippound. 6 shippound = 1 ton.

The charges of importation are the same, or nearly so, as on Petersburg flax.

Charges here, per ton, taking the price at 45*l.*

	£ s. d.
Insurance, 12*s.* 6*d.* per cent. and policy, during the summer, for best risks	0 6 9
Sound dues	0 5 6
Freight, say 5*l.* 6*d.* per ton in full	2 12 6
Customs	0 1 8
Landing charges	1 11 0
Discount, 3½ per cent. (being sold at 9 months' credit)	1 13 9
Brokerage, ½ per cent.	0 4 6
	£5 15 8
Loss by tare, 2 per cent.	0 18 0
	£6 13 8

9 Head Flax.

26 bobbins = 63 poods = 1 ton. *Rou. cop.*

Fixed charges at Petersburg amount to — 80 36

The other charges same as on 12 head; the charges of import may be called the same as on 12 head also, the difference being only on the value; which makes the insurance, discount, and brokerage, of less amount. The increase of fixed charges at Petersburg is owing to the larger number of bobbins to the ton.

6 Head Flax.

47 bobbins = 63 poods = 1 ton. *Rou. cop.*

Fixed charges, per ton — 91 52

Other charges, *vide suprà.*

FLAX-SEED, or LINSEED (Fr. *Lin, Graine de Lin*; Ger. *Leinsaat*; Du. *Lynzaad*; It. *Linseme*; Sp. *Linaza*; Port. *Linhaca*; Pol. *Siemie, Iniane*; Rus. *Semja lenjanoe*; Lat. *Lini semen*), the seed of flax. It contains a great deal of oil, which it yields by expression; and is cultivated either that it may be used in sowing, or sent to the crushing mills to be converted into oil.

As the quality of the crop depends much on the seed employed, a good deal of care is requisite in selecting the best. Generally speaking, it should be chosen of a bright, brownish colour, oily to the feel, heavy, and quite fresh. Dutch seed is in the highest estimation for sowing; it not only ripens sooner than any other that is imported, but produces larger crops, and of the quality that best suits our principal manufactures. American seed produces fine flax, but the produce is not so large as from Dutch seed. British flax seed is sometimes used instead of Dutch; but the risk of the crop misgiving is so much greater, "that those only who are ignorant of the consequences, or who are compelled from necessity, are chargeable with this act of ill-judged parsimony."—(*Loudon's Ency. of Agriculture.*) Crushing seed is principally imported from Russia, but considerable quantities are also brought from India, Italy, and Egypt.

Account of the Quantities of Flaxseed or Linseed imported into the United Kingdom during the 7 Years from 1835 to 1841 inclusive, distinguishing the Countries whence they were imported, and the Quantities brought from each.

The duty is 1*d.* a quarter; and the price, in January, 1843, varied from 43*s.* to 50*s.* a quarter.

FLOTSAM, JETSAM, AND LAGAN. In order to constitute a legal wreck, the goods must come to land. If they continue at sea, the law distinguishes them by the foregoing uncouth and barbarous appellations: *flotsam* is when the goods continue swimming on the surface of the waves; *jetsam* is when they are sunk under the surface of the water; and *lagan* is when they are sunk, but tied to a cork or buoy to be found again.—(*Blackstone*, book i. c. 8.) Foreign liquors, brought or coming into Great Britain or Ireland, as derelict, flotsam, &c., are to pay the same duties and receive the same drawbacks as similar liquors regularly imported.

FLOUR (Ger. *Feines mehl, Semmelmehl;* Du. *Bloem;* Fr. *Fleur de Farine*; It. *Fiore;* Sp. *Flor*), the meal of wheat corn, finely ground and sifted. There are three qualities of flour, denominated *firsts, seconds,* and *thirds,* of which the first is the purest.—(See CORN LAWS AND CORN TRADE.)

FOOT, a measure of length, consisting of 12 inches.—(See WEIGHTS AND MEASURES.)

FORESTALLING, the buying or contracting for any cattle, provision, or merchandise, on its way to the market, or dissuading persons from buying their goods there, or persuading them to raise the price, or spreading any false rumour with intent to enhance the value of any article. In the remoter periods of our history several statutes were passed, prohibiting forestalling under severe penalties; but as more enlarged views upon such subjects began to prevail, their impolicy became obvious, and they were consequently repealed in 1772. But forestalling is still punishable at common law by fine and imprisonment; though it be doubtful whether any jury would now convict an individual accused of such practices.—(*Wealth of Nations*, p. 237.)

FRANKINCENSE. See ROSIN.

FREIGHT, the sum paid by the merchant or other person hiring a ship, or part of a ship, for the use of such ship or part, during a specified voyage or for a specified time.

The freight is most commonly fixed by the charterparty—(see CHARTERPARTY)—or bill of lading—(see BILL OF LADING); but in the absence of any formal stipulations on the subject, it would be due according to the custom or usage of trade.

In the case of a charterparty, if the stipulated payment be a gross sum for an entire ship, or an entire part of a ship, for the whole voyage, the gross sum will be payable

although the merchant has not fully laden the ship. And if a certain sum be stipulated for every ton, or other portion of the ship's capacity, for the whole voyage, the payment must be according to the number of tons, &c. which the ship is proved capable of containing, without regard to the quantity actually put on board by the merchant. On the other hand, if the merchant have stipulated to pay a certain sum per cask or bale of goods, the payment must be, in the first place, according to the number of casks and bales shipped and delivered; and if he have further covenanted to furnish a complete lading, or a specific number of casks or bales, and failed to do so, he must make good the loss which the owners have sustained by his failure.

If an entire ship be hired, and the burden thereof be expressed in the charterparty, and the merchant bind himself to pay a certain sum for every ton, &c. of goods which he shall lade on board, but does not bind himself to furnish a complete lading, the owners can only demand payment for the quantity of goods actually shipped. But if the merchant agree to load a full and complete cargo, though the ship be described as of less burden than she really is, the merchant must load a full cargo, according to the *real burden* of the ship, and he will be liable for freight according to what ought to be loaded.

The delivery of goods at the place of destination is in general necessary to entitle the owner to freight; but with respect to living animals, whether men or cattle, which may frequently die during the voyage, without any fault or neglect of the persons belonging to the ship, it is ruled, that if there be no express agreement whether the freight is to be paid for the lading, or for the transporting them, freight shall be paid as well for the dead as for the living: if the agreement be to pay freight for the *lading*, then death certainly cannot deprive the owners of the freight; but if the agreement be to pay freight for *transporting* them, then no freight is due for those that die on the voyage, because as to them the contract is not performed. These distinctions have been made in the civil law, and have been adopted into the modern systems of maritime law.

Freight is most frequently contracted to be paid either by the whole voyage, or by the month, or other time. In the former case the owners take upon themselves the chance of the voyage being long or short: but in the latter the risk of the duration falls upon the merchant; and if no time be fixed for the commencement of the computation, it will begin from the day on which the ship breaks ground and commences her voyage, and will continue during the whole course of the voyage, and during all unavoidable delays *not occasioned by the act or neglect of the owners or master*, or by such circumstances as occasion a suspension of the contract for a particular period. Thus, the freight will be payable for the time consumed in necessary repairs during a voyage, provided it do not appear that the ship was insufficient at the outset, or that there was any improper delay in repairing her.

In the absence of an express contract to the contrary, the entire freight is not earned until the whole cargo be ready for delivery, or has been delivered to the consignee according to the contract for its conveyance.

If a consignee receive goods in pursuance of the usual bill of lading, by which it is expressed that he is to pay the freight, he, by such receipt, makes himself debtor for the freight, and may be sued for it. But a person who is only an agent for the consignor, and who is known to the master to be acting in that character, does not make himself personally answerable for the freight by receiving the goods, although he also enters them in his own name at the Custom-house.

In some cases freight is to be paid, or rather an equivalent recompence made to the owners, although the goods have not been delivered at the place of destination, and though the contract for conveyance be not strictly performed. Thus, if part of the cargo be thrown overboard for the necessary preservation of the ship and the remainder of the goods, and the ship afterwards reach the place of destination, the value of this part is to be answered to the merchant by way of general average, and the value of the freight thereof allowed to the owner. So, if the master be compelled by necessity to sell a part of the cargo for victuals or repairs, the owners must pay to the merchant the price which the goods would have fetched *at the place of destination*; and, therefore, are allowed to charge the merchant with the money that would have been due if they had been conveyed thither.

When goods are deteriorated during a voyage, the merchant is entitled to a compensation, provided the deterioration has proceeded from the fault or neglect of the master or mariners; and of course he is not answerable for the freight, unless he accept the goods, except by way of deduction from the amount of the compensation. On the other hand, if the deterioration has proceeded from a principle of decay naturally inherent in the commodity itself, whether active in every situation, or in the confinement and closeness of a ship, or from the perils of the sea, or the act of God, the merchant must bear the loss and pay the freight; for the master and owners are in no fault, nor does their contract contain any insurance or warranty against such an event. In our West India

trade, the freight of sugar and molasses is usually regulated by the weight of the casks at the port of delivery here, which, in fact, is in every instance less than the weight at the time of the shipment; and, therefore, the loss of freight occasioned by the leakage necessarily falls upon the owners of the ship by the nature of the contract.

Different opinions have been entertained by Valin, Pothier, and other great authorities as to maritime law, with respect to the expediency of allowing the merchant to abandon his goods for freight in the event of their being damaged. This question has not been judicially decided in this country. "The only point," says Lord Tenterden, "intended to be proposed by me as doubtful, is the right to abandon for freight alone at the port of destination: and in point of practice, I have been informed that this right is never claimed in this country."—(*Law of Shipping*, part iii. c. 7.)

Freight being the return made for the conveyance of goods or passengers to a particular destination, no claim arises for its payment in the event of a total loss; and it is laid down by Lord Mansfield, that "in case of a total loss with salvage, the merchant may either take the part saved, or abandon."—(*Abbott*, part iii. c. 7.) But after the merchant has made his election, he must abide by it.

It often happens that a ship is hired by a charterparty to sail from one port to another, and thence back to the first—as, for example, from London to Leghorn, and from Leghorn back to London—at a certain sum to be paid for every month or other period of the duration of the employment. Upon such a contract, *if the whole be one entire voyage*, and the ship sail in safety to Leghorn, and there deliver the goods of the merchant and take others on board to be brought to London, but happen to be lost in her return thither, nothing is due for freight, although the merchant has had the benefit of the voyage to Leghorn; but, *if the outward and homeward voyages be distinct*, freight will be due for the proportion of the time employed in the outward voyage. "If," said Lord Mansfield, in a case of this sort, "there be *one entire voyage out and in*, and the ship be cast away on the homeward voyage, no freight is due; no wages are due, because the whole profit is lost; and by express agreement the parties may make the outward and homeward voyage one. Nothing is more common than two voyages: *wherever there are two voyages, and one is performed*, and the ship is lost on the homeward voyage, freight is due for the first."—(*K. B. Trin. Term*, 16 *Geo.* 3.)

It frequently happens that the master or owner fails to complete his contract, either by not delivering the whole goods to the consignee or owner, or by delivering them at a place short of their original destination; in these cases, if the owner or consignee of the goods *derive any benefit from their conveyance*, he is liable to the payment of freight according to the proportion of the voyage performed, or *pro ratâ itineris peracti*: and though contracts of this nature be frequently entire and indivisible, and the master or owner of the ship cannot, from their nature, sue thereon, and recover a rateable freight, or *pro ratâ itineris*; yet he may do so upon a fresh *implied* contract, for as much as he deserves to have, unless there be an express clause in the original charterparty or contract to the contrary. A fresh implied contract is inferred from the owner's or consignee's acceptance of the goods. Many difficulties have, indeed, arisen in deciding as to what shall amount to an acceptance: it is not, however, necessary actually to receive the goods; acceptance may be made by the express or implied directions, and with the consent, of the owner or consignee of the goods, but not otherwise.

It sometimes happens that the owner of the ship, who is originally entitled to the freight, sells or otherwise disposes of his interest in the ship, where a chartered ship is sold *before* the voyage, the vendee, and not the vendor or party to whom he afterwards assigns the charterparty, is entitled to the freight. But where a ship has been sold *during* the voyage, the owner, with whom a covenant to pay freight has been made, is entitled to the freight, and not the vendee. A mortgagee who does not take possession, is not entitled to the freight.

The time and manner of paying freight are frequently regulated by express stipulations in a charterparty, or other written contract; and when that is the case, they must be respected: but if there be no express stipulation contrary to or inconsistent with the right of *lien*, the goods remain as a security till the freight is paid; for the master is not bound to deliver them, or any part of them, without payment of the freight and other charges in respect thereof. But the master cannot detain the cargo on board the vessel till these payments be made, as the merchant would, in that case, have no opportunity of examining the condition of the goods. In England, the practice is, when the master is doubtful of payment, to send such goods as are not required to be landed at any particular wharf, to a public wharf, ordering the wharfinger not to part with them till the freight and other charges are paid. No right of lien for freight can exist, unless the freight be earned; if the freighter or a stranger prevent the freight from becoming due, the ship owner or master's remedy is by action of damages.

(For further information and details with respect to this subject, see the art. CHARTER-

PARTY, in this Dictionary; *Abbot* (Lord Tenterden) *on the Law of Shipping*, part. iii. c. 7.; *Chitty's Commercial Law*, vol. iii. c. 9.; *Molloy de Jure Maritimo*, book ii. c. 4., *&c.*)

FRUIT (Ger. *Obst, Früchte;* Du. *Ooft;* Fr. *Fruit;* It. *Frutta, Frutte;* Sp. *Fruta;* Rus. *Owoschtsch;* Lat. *Fructum*). This appellation is bestowed by commercial men upon those species of fruit, such as oranges, lemons, almonds, raisins, currants, apples, &c., which constitute articles of importation from foreign countries.

FULLERS' EARTH (Ger. *Walkererde;* Du. *Volüarde;* Fr. *Terre à foulon;* It. *Terra da purgatori;* Sp. *Tierra de batan;* Rus. *Schiffernaia;* Lat. *Terra fullonum*), a species of clay, of a greenish white, greenish grey, olive and oil green, and sometimes spotted colour. It is usually opaque, very soft, and feels greasy. It is used by fullers to take grease out of cloth before they apply the soap. The best is found in Buckinghamshire and Surrey. When good, it has a greenish white, or greenish grey colour, falls into powder in water, appears to melt on the tongue like butter, communicates a milky hue to water, and deposits very little sand when mixed with boiling water. The remarkable detersive property on woollen cloth depends on the alumina, which should be at least one fifth of the whole, but not much more than one fourth, lest it become too tenacious. — (*Thomson's Chemistry; Jameson's Mineralogy.*) Malcolm, in his *Survey of Surrey*, published in 1809, says that he took considerable pains in endeavouring to ascertain the consumption of fullers' earth, and that he found it to be about 6,300 tons a year for the entire kingdom, of which about 4,000 tons were furnished by Surrey.

FUNDS (PUBLIC), the name given to the public funded debt due by government.

The practice of borrowing money in order to defray a part of the war expenditure began, in this country, in the reign of William III. In the infancy of the practice, it was customary to borrow upon the security of some tax, or portion of a tax, set apart as a fund for discharging the principal and interest of the sum borrowed. This discharge was, however, very rarely effected. The public exigencies still continuing, the loans were, in most cases, either continued, or the taxes were again mortgaged for fresh ones. At length the practice of borrowing for a fixed period, or, as it is commonly termed, upon *terminable* annuities, was almost entirely abandoned, and most loans were made upon *interminable* annuities, or until such time as it might be convenient for government to pay off the principal.

In the beginning of the funding system, the term fund meant the taxes or funds appropriated to the discharge of the principal and interest of loans; those who held government securities, and sold them to others, selling, of course, a corresponding claim upon some fund. But after the debt began to grow large, and the practice of borrowing upon interminable annuities had been introduced, the meaning attached to the term fund was gradually changed; and instead of signifying the security upon which loans were advanced, it has, for a long time, signified the principal of the loans themselves.

Owing partly, perhaps, to the scarcity of disposable capital at the time, but far more to the supposed insecurity of the Revolutionary establishment, the rate of interest paid by government in the early part of the funding system was, comparatively, high. But as the country became richer, and the confidence of the public in the stability of government was increased, ministers were enabled to take measures for reducing the interest, first in 1716, and again in 1749.

During the reigns of William III. and Anne, the interest stipulated for loans was very various. But in the reign of George II. a different practice was adopted. Instead of varying the interest upon the loan according to the state of the money market at the time, the rate of interest was generally fixed at *three* or *three and a half* per cent.; the necessary variation being made in the principal funded. Thus, suppose government were anxious to borrow, that they preferred borrowing in a 3 per cent. stock, and that they could not negotiate a loan for less than 4½ per cent.; they effected their object by giving the lender, in return for every 100*l.* advanced, 150*l.* 3 per cent. stock; that is, they bound the country to pay him or his assignees 4*l.* 10*s.* a year in all time to come, or, otherwise, to extinguish the debt by a payment of 150*l.* In consequence of the prevalence of this practice, the principal of the debt now existing amounts to nearly *two fifths* more than the sum actually advanced by the lenders.

Some advantages are, however, derivable, or supposed to be derivable, from this system. It renders the management of the debt, and its transfer, more simple and commodious than it would have been, had it consisted of a great number of funds bearing different rates of interest: and it is contended, that the greater field for speculation afforded to the dealers in stocks bearing a low rate of interest, has enabled government to borrow, by funding additional capitals, for a considerably less payment on account of interest than would have been necessary had no such increase of capital been made.

Were this a proper place for entering upon such discussions, it would be easy to show that the advantages now referred to are really of very trifling importance; and that the method of funding by an increase of capital has been a most improvident one, and most injurious to the public interest. But it would be quite foreign from the objects of this

Account of the State of the Public Funded and Unfunded Debt of Great Britain and Ireland, and the Charge thereon, on the 5th of January, 1843. — (*Finance Accounts for* 1842, p. 107, &c.)

Total annual charge of funded and unfunded debt, exclusive of 55,360*l.* 3*s.* 8½*d.*, the annual charge on capitals and long annuities, standing in the names of the commissioners, on account of stock unclaimed 10 years or upwards, and of unclaimed dividends; and also on account of donations and bequests	27,395,800 5 0½	1,213,908 14 6½	29,018,985 9 10½

The act 10 Geo. 4. (abolishing the sinking funds) enacts, that the sum thenceforth annually applicable to the reduction of the national debt shall consist of the actual surplus revenue beyond the expenditure. In 1835, this surplus amounted to 1,620,940*l.* 4*s.* 11½*d.*

work to enter into any examination of such questions: our readers will, however, find them fully investigated in an article in the 93d No. of the *Edinburgh Review*. Here we have merely to consider funded property, or government securities, as transferable or marketable commodities. The following is an account of the progress of the National Debt of Great Britain, from the Revolution to the present time: —

Account of the Principal and Annual Charge of the Public Debt since the Revolution.*

	Principal, Funded and Unfunded.	Interest and Management.
Debt at the Revolution, in 1689	£ 664,263	£ 39,855
Excess of debt contracted during the reign of William III. above debt paid off	15,730,439	1,271,087
Debt at the accession of Queen Anne, in 1702	16,394,702	1,310,942
Debt contracted during Queen Anne's reign	37,750,661	2,040,116
Debt at the accession of George I., in 1714	54,145,363	3,351,058
Debt paid off during the reign of George I., above debt contracted	2,053,125	1,133,207
Debt at the accession of George II., in 1727	52,092,238	2,217,851
Debt contracted from the accession of George II. till the peace of Paris in 1763, three years after the accession of George III.	86,773,192	2,634,500
Debt in 1763	138,865,430	4,852,051
Paid during peace, from 1763 to 1775	10,281,795	380,480
Debt at the commencement of the American war, in 1775	128,583,635	4,471,571
Debt contracted during the American war	121,267,995	4,980,.01
Debt at the conclusion of the American war, in 1784	249,851,628	9,451,772
Paid during peace, from 1784 to 1793	10,501,380	243,277
Debt at the commencement of the French war, in 1793	239,350,148	9,208,495
Debt contracted during the French war	601,500,343	23,929,096
Total funded and unfunded debt on the 1st of February, 1817, when the English and Irish exchequers were consolidated	840,850,491	32,038,191
Debt cancelled from the 1st of February, 1817, to 5th of January, 1843	49,594,351	3,019,206
Debt, and charge thereon, 5th of January, 1843	791,256,140	29,018,985

* This account has been made up partly from the table in Dr. Hamilton's work on the National Debt (3d ed. p. 100.); partly from the *Pari. Paper* No. 165. Sess. 1834; and partly from the *Annual Finance Book*, for the year ending 5th January, 1843, page 107, &c.

The above statement shows that a reduction of 49,594,351*l.* was effected in the principal of the national debt, and of 3,019,206*l.* in the annual charge on account thereof, between February, 1817, and January, 1843. The debt, at the last-mentioned period, includes the stock created by the funding of the loan of 15,000,000*l.* in 1835, for behoof of the slave proprietors. The diminution has been brought about partly by the application of surplus revenue to buy up stock, but more by the reduction of the interest on the 4 and 5 per cent. stocks existing in 1817, and by that paid on the unfunded debt. The total annual saving by the reduction of interest on the funded debt between 1822, when the first, and 1834, when the last reduction was made (that of the 4 per cent. annuities, mentioned in former impressions of this work), has been 2,355,846*l.*; and, considerable as this is, it would have been more than three times as great, but for the pernicious practice, previously pointed out, of funding large nominal capitals.

We subjoin a brief notice of the different funds or stocks constituting the public debt, as it stood on the 5th of January, 1843.

I. Funds bearing Interest at Three per Cent.

1. *South Sea Debt and Annuities.* — This portion of the debt, amounting, on the 5th of January 1843, to 10,144,584*l.*, is all that now remains of the capital of the once famous, or rather infamous, South Sea Company. The Company has, for a considerable time past, ceased to have any thing to do with trade: so that the functions of the directors are wholly restricted to the transfer of the Company's stock, and the payment of the dividends on it; both of which operations are performed at the South Sea House, and not at the Bank. The dividends on the old South Sea annuities are payable on the 5th of April and 10th of October; the dividends on the rest of the Company's stock are payable on the 5th of January and 5th of July.

2. *Debt due to the Bank of England.* — This consists of the sum of 11,015,100*l.* lent by the Bank to the public at 3 per cent.; dividends payable on the 5th of April and 10th of October. This must not be confounded with the Bank capital of 10,914,750*l.*, on which the stockholders divide. The dividend on the latter has been 7 per cent. since 1839. — (See *antè*, p. 78. and p. 87.)

3. *Bank Annuities created in 1726.* — The civil list settled upon George I was 700,000*l.* a year; but having fallen into arrear, this stock, consisting of 825,990*l.*, was created for the purpose of cancelling Exchequer bills that had been issued to defray the arrear. "The capital is irredeemable; and being small, in comparison with the other public funds, and a stock in which little is done on speculation, the price is generally at

least 1 per cent. lower than the 3 per cent. consols."—(*Cohen's* edit. of *Fairman on the Funds*, p. 40.)

4. *Three per Cent. Consols, or Consolidated Annuities.* — This stock forms by much the largest portion of the public debt. It had its origin in 1751, when an act was passed, consolidating (hence the name) several separate stocks bearing an interest of 3 per cent. into one general stock. At the period when the consolidation took place, the principal of the funds blended together amounted to 9,137,821*l.*; but, by the funding of additional loans, and parts of loans, in this stock, it amounted, on the 5th of January, 1843, to the immense sum of 368,975,292*l.*!

The consolidated annuities are distinguished from the 3 per cent. reduced annuities, by the circumstance of the interest upon them never having been varied, and by the dividends becoming due at different periods. This stock is, from its magnitude, and the proportionally great number of its holders, the soonest affected by all those circumstances which tend to elevate or depress the price of funded property; and, on this account, it is the stock which speculators and jobbers most commonly select for their operations. Dividends payable on the 5th of January and 5th of July.

5. *Three per Cent. Reduced Annuities.* — This fund was established in 1757. It consisted, as the name implies, of several funds which had previously been borrowed at a higher rate of interest; but, by an act passed in 1749, it was declared that such holders of the funds in question as did not choose to accept in future of a reduced interest of 3 per cent. should be paid off, — an alternative which comparatively few embraced. The debts that were thus reduced and consolidated, amounted, at the establishment of the fund, to 17,571,574*l.* By the addition of new loans, they now amount to 125,726,567*l.* Dividends payable on the 5th of April and 10th of October.

II. Funds bearing more than Three per Cent. Interest.

1. *Annuities at 3½ per Cent.*, 1818. — This stock was formed in 1818, partly by a subscription of 3 per cent. consolidated and 3 per cent. reduced annuities, and partly by a subscription of Exchequer bills. It was made redeemable at par any time after the 5th of April, 1829, upon 6 months' notice being given. Dividends payable on the 5th of April and 10th of October. The capital of this stock amounts to 9,653,179*l.*

2. *Reduced 3½ per Cent. Annuities.* — This stock was created in 1824, by the transfer of a stock bearing interest at 4 per cent. (Old 4 per cents.). It is redeemable at pleasure. Dividends payable 5th of April and 10th of October. Amount, on the 5th of January, 1843, 66,609,642*l.*

3. *New 3½ per Cent. Annuities.* — This stock was formed by the act 11 Geo. 3. c. 13., out of the stock known by the name of "New 4 per cents.," amounting on the 5th of January, 1830, to 144,331,212*l.* The holders of this 4 per cent. stock had their option either to subscribe it into the new 3½ per cent. annuities, or into a new 5 per cent. stock, at the rate of 100*l.* 4 per cents. for 70*l.* 5 per cents. Dissentients to be paid off. Only 467,713*l.* new 5 per cent. stock was created under this arrangement. The sum required to pay dissentients was 2,610,000*l.* The new 3½ per cent. stock thus created, amounted on the 5th of January, 1843, to 144,632,521*l.* Dividends payable 5th of January and 5th of July.

4. *New 5 per Cent.* — Amount, 5th of January, 1843, 430,076*l.* — (See previous Article.)

III. Annuities.

1. *Long Annuities.* — These annuities were created at different periods, but they all expire together in 1860. They were chiefly granted by way of premiums or douceurs to the subscribers to loans. — Payable on the 5th of April and 10th of October.

2. *Annuities per 4 Geo. 4. c. 22.* — This annuity is payable to the Bank of England, and is commonly known by the name of the "Dead Weight" annuity. (See *antè*, p. 86.) It expires in 1867. It is equivalent to a *perpetual* annuity of 470,319*l.* 10*s.*

3. *Annuities per 48 Geo. 3., 10 Geo. 4. c. 24., and 3 & 4 Will. 4. c. 14.* — These acts authorised the commissioners for the reduction of the national debt to grant annuities for terms of years, and life annuities; accepting in payment either money or stock, according to rates specified in Tables to be approved by the Lords of the Treasury. No annuities are granted on the life of any *nominee* under 15 years of age, nor in any case not approved by the commissioners. Annuities for terms of years not granted for any period less than *ten* years. These annuities are transferable, but not in parts or shares. Those for terms of years, payable 5th of January and 5th of July; and those for lives, 5th of April and 10th of October.

The terminable and life annuities granted under the above acts, amounted, on the 5th of January, 1836, to 4,188,809*l.*, being equal, according to the calculations of Mr. Finlaison, to a corresponding *perpetual* annuity of 1,970,019*l.*—(*Parl. Paper* No. 457. Sess. 1836.)

Irish Debt.—It seems unnecessary to enter into any details with respect to the public debt of Ireland. The various descriptions of stock of which it consists, and their amount, are specified above. The dividends on the Irish debt are paid at the Bank of Ireland; and, in order to accommodate the public, stock may be transferred, at the pleasure of the holders, from Ireland to Great Britain, and from the latter to the former.

Exchequer Bills are bills of credit issued by authority of parliament. They are for various sums, and bear interest (generally from 1½*d.* to 2½*d.* per diem, per 100*l.*) according to the usual rate at the time. The advances of the Bank to Government are made upon Exchequer bills; and the daily transactions between the Bank and Government are principally carried on through their intervention. Notice of the time at which outstanding Exchequer bills are to be paid off is given by public advertisement. Bankers prefer vesting in Exchequer bills to any other species of stock, even though the interest be for the most part comparatively low; because the capital may be received at the Treasury at the rate originally paid for it, the holders being exempted from any risk of fluctuation. Exchequer bills were first issued in 1696, and have been annually issued ever since. The amount outstanding, and *unprovided for*, on the 5th of January, 1843, was 18,187,800*l.*

India Stock and India Bonds are always quoted in the lists of the prices of the public funds. The stock on which the East India Company divide is 6,000,000*l.*; the dividend on which has been, since 1793, 10½ per cent.; and is to remain at that rate during the continuance of the charter. India bonds are generally for 100*l.* each, and bear at present 2½ per cent. interest, payable 31st of March and 30th of September. In selling them, the interest due down to the day of sale is, with the premium, added to the amount of the bills; the total being the sum to be paid by the purchaser. The premium, which is, consequently, the only variable part of the price, is influenced by the circumstances which influence the price of stocks generally,—the number of bonds in circulation, &c.

The price of stocks is influenced by a variety of circumstances. Whatever tends to shake or to increase the public confidence in the stability of government, tends, at the same time, to lower or increase the price of stocks. They are also affected by the state of the revenue; and, more than all, by the facility of obtaining supplies of disposable capital, and the interest which may be realised upon loans to responsible persons. From 1730 till the rebellion of 1745, the 3 per cents. were never under 89, and were once, in June, 1737, as high as 107. During the rebellion they sunk to 76; but in 1749 rose again to 100. In the interval between the peace of Paris, in 1763, and the breaking out of the American war, they averaged from 80 to 90; but towards the close of the war they sunk to 54. In 1792, they were, at one time, as high as 96. In 1797, the prospects of the country, owing to the successes of the French, the mutiny in the fleet, and other adverse circumstances, were by no means favourable; and, in consequence, the price of 3 per cents. sunk, on the 20th of September, on the intelligence transpiring of an attempt to negotiate with the French republic having failed, to 47⅜, being the lowest price to which they have ever fallen.

Average Prices of 3 per Cent. Consols, in each Year since 1820.

Years.	Prices of Consols. £	s.	d.	Years.	Prices of Consols. £	s.	d.	Years.	Prices of Consols. £	s.	d.

Agreements for the sale of stock are generally made at the Stock Exchange, which is frequented by a set of middlemen called *jobbers*, whose business is to accommodate the buyers and sellers of stock with the exact sums they want. A jobber is generally possessed of considerable property in the funds; and he declares a price at which he will either sell or buy. Thus, he declares he is ready to buy 3 per cent. consols at 85⅛, or

to sell at 85⅛; so that, in this way, a person willing to buy or sell any sum, however small, has never any difficulty in finding an individual with whom to deal. The jobber's profit is generally ⅛ per cent., for which he transacts both a sale and a purchase. He frequently confines himself entirely to this sort of business, and engages in no other description of stock speculation.

We borrow the following details from Dr. Hamilton's valuable work on the National Debt: —

"A bargain for the sale of stock, being agreed on, is carried into execution at the Transfer Office, at the Bank, or the South Sea House. For this purpose the seller makes out a note in writing, which contains the name and designation of the seller and purchaser, and the sum and description of the stock to be transferred. He delivers this to the proper clerk*; and then fills up a receipt, a printed form of which, with blanks, is obtained at the office. The clerk in the mean time examines the seller's accounts, and if he find him possessed of the stock proposed to be sold, he makes out the transfer. This is signed in the books by the seller, who delivers the receipt to the clerk; and upon the purchaser's signing his acceptance in the book, the clerk signs the receipt as witness. It is then delivered to the purchaser upon payment of the money, and thus the business is completed.

"This business is generally transacted by brokers, who derive their authority from their employers by powers of attorney. Forms of these are obtained at the respective offices. Some authorise the broker to sell, others to accept a purchase, and others to receive the dividends. Some comprehend all these objects, and the two last are generally united. Powers of attorney authorising to sell must be deposited in the proper office for examination one day before selling; a stockholder acting personally, after granting a letter of attorney, revokes it by implication.

"The person in whose name the stock is invested when the books are shut, previous to the payment of the dividends, receives the dividend for the half year preceding; and, therefore, a purchaser during the currency of the half year has the benefit of the interest on stock he buys, from the last term of payment to the day of transfer. The price of stock, therefore, rises gradually, *cæteris paribus*, from term to term; and when the dividend is paid, it undergoes a fall equal thereto. Thus, the 3 per cent. consols should be higher than the 3 per cent. reduced by ¼ per cent. from the 6th of April to the 5th of July, and from the 10th of October to the 5th of January; and should be as much lower from the 5th of January to the 5th of March, and from the 5th of July to the 10th of October; and this is nearly the case. Accidental circumstances may occasion a slight deviation.

"The dividends on the different stocks being payable at different terms, it is in the power of the stockholders to invest their property in such a manner as to draw their income quarterly.

"The business of speculating in the stocks is founded on the variation of the price of stock, which it probably tends in some measure to support. It consists in buying or selling stock according to the views entertained, by those who engage in this business, of the probability of the value rising or falling.

"This business is partly conducted by persons who have property in the funds. But a practice also prevails among those who have no such property, of contracting for the sale of stock on a future day at a price agreed on. For example, A. may agree to sell B. 10,000*l.* of 3 per cent. stock, to be transferred in 20 days, for 6,000*l.* A. has, in fact, no such stock; but if the price on the day appointed for the transfer be only 58, he may purchase as much as will enable him to fulfil his bargain for 5,800*l.*, and thus gain 200*l.* by the transaction; on the other hand, if the price of that stock should rise to 62, he will lose 200*l.* The business is generally settled without any actual purchase of stock, or transfer; A. paying to B. or receiving from him the difference between the price of stock on the day of settlement, and the price agreed on.

"This practice, which amounts to nothing else than a wager concerning the price of stock, is not sanctioned by law; yet it is carried on to a great extent: and as neither party can be compelled by law to implement these bargains, their sense of honour, and the disgrace attending a breach of contract, are the principles by which the business is supported. In the language of the Stock Exchange, the buyer is called a *Bull*, and the seller a *Bear*, and the person who refuses to pay his loss is called a *Lame Duck*; and the names of these defaulters are exhibited in the Stock Exchange, where they dare not appear afterwards.

"These bargains are usually made for certain days fixed by a committee of the Stock Exchange, called *settling days*, of which there are about 8 in the year; viz. one in each of the months of January, February, April, May, July, August, October, November; and they are always on Tuesday, Wednesday, Thursday, or Friday, being the days on which the commissioners for the reduction of the national debt make purchases. The settling days in January and July are always the first days of the opening of the Bank books for public transfer; and these days are notified at the Bank when the consols are shut to prepare for the dividend. The price at which stock is sold to be transferred on the next settling day, is called the price *on account*. Sometimes, instead of closing the account on the settling day, the stock is carried on to a future day, on such terms as the party agree on. This is called a *continuation*.

"All the business, however, which is done in the stocks *for time*, is not of a gambling nature. In a place of so extensive commerce as London, opulent merchants, who possess property in the funds, and are unwilling to part with it, have frequently occasion to raise money for a short time. Their resource in this case is to sell for money, and buy for account; and although the money raised in this manner costs more than the legal interest, it affords an important accommodation, and it may be rendered strictly legal and recoverable."—(Third ed. pp. 314—317.)

It would be foreign to the object of this work to enter upon any explanation of the comparative advantages and disadvantages of the funding system. Perhaps, on the whole, the latter preponderate; though it is not to be denied that the former are very considerable. The purchase of funded property affords a ready method of investment; and as neither the Bank of England, nor any of the London private banks, allows interest upon deposits, it is plain that, had it not been for the facilities given by the funds, individuals unable to employ their savings in some branch of business, would, down to a late period, have derived no immediate advantage from them, unless they resorted to the hazardous expedient of lending upon private credit. But since the establishment of joint stock banks in the metropolis, which allow interest on deposits, the advantage of the funds as a means of commodious investment is not quite so obvious, though, probably, it is little less real; for, it may be doubted whether the banks in question, or even the Scotch banks, which have been long in the habit of allowing interest on deposits, could do so, or whether, in fact, they could be conducted at all, without the aid of the funds.

The subjoined account of the number of dividend warrants issued in the quarters

* The letters of the alphabet are placed round the room, and the seller must apply to the clerk who has his station under the initial of his name. In all the offices, there are supervising clerks who join in witnessing the transfer.

ending with the 10th of October and 5th of January, 1842, is a very important document. The large number (85,991) of holders of sums not producing above *5l.* of quarterly dividend, is principally to be ascribed to the circumstances already mentioned as peculiar to the banking system of the metropolis; and there can be little doubt that their number would be materially diminished, did the Bank of England and the private banks allow a reasonable rate of interest on deposits. It is evident from this account, that the number of persons having a direct interest in the funds is much greater than it represents. The dividends upon the funded property belonging to the Equitable and other insurance companies, the different banking companies, &c. are paid upon single warrants, as if they were due to so many private individuals; whereas they are, really, paid to these individuals only because they act as factors or trustees for a vast number more. It is consequently quite absurd to pretend, as is sometimes done, that any interference with funded property would affect only some 285,000 individuals out of a population of 26,000,000. Any attack upon the dividends would really be destructive, not merely of the interests of those to whom dividend warrants are issued, but of *all* who depend upon them: it would destroy our whole system of insurance and banking, and overspread the country with bankruptcy and ruin. Not only, therefore, is every proposal for an invasion of the property of the fundholders bottomed on injustice and robbery, but it would, were it acted upon, be little less ruinous to the community than to the peculiar class intended to be plundered.

Account of the Number of Persons who were entitled to Dividends on the Portions of the Public Debt held by them which became due at the Quarters ended the 10th of October 1841, and 5th January 1842, arranged in classes according to the Amount of Dividend paid to each.

* Dividends payable 10th of October. † Dividends payable 5th of January.

The following Table has been calculated, in order to show in which of the public funds money may be invested, so as to yield the greatest interest. It gives the prices, differing by 1 per cent. from 50 to 93 for 3 per cents., &c., at which they all must be, to yield the *same* interest; *so* that, supposing the 3 per cents. to be at 80, a sum invested in them, or in the 3½ per cents., will yield the same interest, provided the latter be at 93¼: if the 3½ per cents. be *below* this sum, it will of course be more advantageous, in so far at least as interest is concerned, to invest in them than in the 3 per cents.; while, if they be *above* 93¼, it will be less advantageous.

To get the *true value* of the different funds at any particular period, in order to compare them accurately together, it is necessary to deduct from each the amount of interest accruing upon it from the payment of the last dividend.—(For further details, see *ante*, p. 82. and p. 188.)

Table showing the Prices the different Funds must be at to produce an equal Interest; and also the annual Interest produced by 100*l.* sterling invested at any of those Prices.

Foreign Funds. — Exclusive of the funded and unfunded debt due by the British government, more than 19-20ths of which is held by British subjects, our countrymen are also large creditors of foreign states. With the exception of Spain, the interest on the debts of most European states is paid with great regularity; and their funds form what may, on the whole, be reckoned, at least so long as peace is preserved, a pretty secure investment. Our countrymen are, also, large creditors of the new South American States, and of the U. States of North America. Owing, however, to the anarchy in which the former have been almost constantly involved, and the consequent want of power, and probably also of inclination, on the part of their rulers, to make any adequate provision for the payment of their debts, a large arrear of interest has, in most instances, been allowed to accumulate, with but little prospect of its being speedily reduced.

The public debt of the U. States, which amounted, at the close of the last war with this country, to 158,713,049 dollars, was entirely paid off in 1835. This proceeding, so honourable to the U. States, naturally tended to raise the character of American securities in the English market, and facilitated the contracting of loans by the different state governments. These have been contracted principally for the construction of canals, railways, and other local improvements, the erection of public buildings, the establishment of banks, insurance offices, and other institutions. Subjoined is a

Statement of the Debts of the several indebted States and Cities of the Union in 1842.

		Total of State and City debts			248,841,540

Some of the funds so borrowed have been profitably laid out; but a large proportion has, we believe, been expended on projects, some of which will, probably, be a total loss, while others will yield little or no revenue for years to come. But their injudicious outlay does not certainly afford so much as the shadow of an excuse for the conduct of Pennsylvania, Michigan, Mississippi, Louisiana, and other states, who have proceeded to repudiate their debts. Nothing, in fact, was ever heard of in the public conduct of nations more entirely profligate and audaciously villanous than this repudiation. Necessity may compel a state, as well as an individual, to become bankrupt; but the repudiating American states have no such excuse. Pennsylvania, indeed, is not only one of the wealthiest and most flourishing communities in America, but in the world; and, down to this disgraceful occurrence, the inhabitants were supposed to be eminently moral and high principled. The other repudiating states are universally, also, in the most prosperous circumstances; they are all but entirely free from the burden of taxes; and the smallest sacrifice on their part, such as the imposition of a small internal duty on spirits, tobacco, or some such article, consumed within their limits, would enable them to face all their engagements. The truth is, that their dishonesty is glaring and barefaced, admitting neither of palliation nor excuse. The pretences they have put forward in its extenuation serve only to set it in a still more striking point of view. What is it to the capitalists who made them loans, whether they expended them judiciously or employed honest agents? That was their own private affair; and to decline paying their just debts on such flimsy grounds is the climax of knavery. We regret to have to state, that our countrymen are large creditors of the states who have repudiated their debts, holding no less than 20,026,458 doll. (about 4,000,000*l.*) of Pennsylvanian stock. — (*Downe's American Almanac* for 1843, p. 272.) We would fain hope that the experience they have now had of American honour will make them more cautious how they trust to it on future occasions.

At the same time, it would be unjust not to state that New York and several of the leading states of the Union have treated the doctrine of repudiation with contempt, and have honourably distinguished themselves by their adherence to their engagements; and, seeing the disgrace that will be brought upon the Union by the proceedings of the repudiating states, the central government may, it is to be hoped, endeavour to bring them to a sense of their duty.

If any thing other than the consciousness, which they cannot but feel, of their dishonesty and bad faith, were necessary to make the repudiating states retrace their steps, it would be found in the disgust which their conduct has everywhere generated, the disgrace it has entailed on the American character, and the pain it has inflicted on the friends and well-wishers of American institutions. We have never, indeed, been of opinion that the latter had any very well-founded claim to the unqualified commendations that have been so frequently bestowed on them; though we did not certainly anticipate that under their influence any considerable portion of the population would have thus early become so lost to all sense of moral obligation, and such adepts in the art of swindling, as the repudiation of their debts and their banking schemes show them to be.

Our readers, we are sure, will be glad to have the opportunity of perusing the following petition to Congress in reference to this subject. The Americans cannot surely continue deaf to such an appeal. Its forcible statements derive additional weight from their coming from so distinguished a friend to liberal institutions.

The Humble Petition of the Rev. Sydney Smith to the House of Congress at Washington.

"I petition your honourable house to institute some measures for the restoration of American credit, and for the repayment of debts incurred and repudiated by several of the states. Your petitioner lent to the State of Pennsylvania a sum of money, for the purpose of some public improvement. The amount, though small, is to him important, and is a saving from a life income, made with difficulty and privation. If their refusal to pay (from which a very large number of English families are suffering) had been the result of war, produced by the unjust aggression of powerful enemies; if it had arisen from civil discord; if it had proceeded from an improvident application of means in the first years of self-government; if it were the act of a poor state struggling against the barrenness of nature, — every friend of America would have been contented to wait for better times; but the fraud is committed in profound peace, by Pennsylvania, the richest state in the Union, after the wise investment of the borrowed money in roads and canals, of which the repudiators are every day reaping the advantage. It is an act of bad faith which (all its circumstances considered) has no parallel, and no excuse.

"Nor is it only the loss of property which your petitioner laments: he laments still more that immense power which the bad faith of America has given to aristocratical opinions, and to the enemies of free institutions in the Old World. It is in vain any longer to appeal to history, and to point out the wrongs which the many have received from the few. The Americans, who boast to have improved the institutions of the Old World, have at least equalled its crimes. A great nation, after trampling under foot all earthly tyranny, has been guilty of a fraud as enormous as ever disgraced the worst king of the most degraded nation of Europe.

"It is most painful to your petitioner to see that American citizens excite, wherever they may go, the recollection that they belong to a dishonest people, who pride themselves on having tricked and pillaged Europe; and this mark is fixed, by their faithless legislators, on some of the best and most honourable men in the world, whom every Englishman has been eager to see, and proud to receive.

"It is a subject of serious concern to your petitioner that you are losing all that power which the friends of freedom rejoiced that you possessed, looking upon you as the ark of human happiness, and the most splendid picture of justice and of wisdom that the world had yet seen. Little did the friends of America expect it, and sad is the spectacle, to see you rejected by every state in Europe, as a nation with whom no contract can be made, because none will be kept; unstable in the very foundations of social life, deficient in the elements of good faith, men who prefer any load of infamy, however great, to any pressure of taxation, however light.

"Nor is it only this gigantic bankruptcy for so many degrees of longitude and latitude which your petitioner deplores, but he is alarmed also by that total want of shame with which these things have been done, the callous immorality with which Europe has been plundered, that deadness of the moral sense which seems to preclude all return to honesty, to perpetuate this new infamy, and to threaten its extension over every state of the Union.

"To any man of real philanthropy, who receives pleasure from the improvements of the world, the repudiation of the public debts of America, and the shameless manner in which it has been talked of and done, is the most melancholy event which has happened during the existence of the present generation. Your petitioner sincerely prays that the great and good men still existing among you may, by teaching to the U. States the deep disgrace they have incurred in the Old World, restore them to moral health, to that high position they have lost, and which, for the happiness of mankind, it is so important they should ever maintain; for the U. States are now working out the greatest of all political problems, and upon that confederacy the eyes of thinking men are intensely fixed, to see how far the mass of mankind can be trusted with the management of their own affairs, and the establishment of their own happiness."

FURS, in commerce, the skins of different animals, covered, for the most part, with thick fine hair, the inner side being converted by a peculiar process into a sort of leather. Furs, previously to their undergoing this process, are denominated *peltry*.

Beaver fur, from its extensive use in the hat manufacture, is a very important commercial article. That made use of in this country is almost entirely brought from North America. It is gradually becoming scarcer and dearer, being now obtainable only in considerable quantities from the most northerly and inaccessible districts. The fur of the middle-aged or young animal, called cub beaver, is most esteemed. It is the finest, most glossy, and takes the best dye. Fitch, or the fur of the fitchet or polecat, is principally imported from Germany; it is soft and warm, but the unpleasant smell which adheres to it depresses its value. Martin and mink (a diminutive species of otter) are principally imported from the U. States and Canada. The fur of the musquash or musk rat (a diminutive species of beaver) is imported in vast quantities from our possessions in North America; which also supply us with considerable quantities of otter skins. Nutria skins are principally brought from Buenos Ayres. The more valuable furs, as ermine, sable, &c., come principally from Russia.

FUR TRADE. We are indebted for the following details with respect to the fur trade to one of the most extensive and intelligent fur merchants of London.

"Though practically engaged in the fur trade, I fear I shall be able to say little with regard to it not already known to you; but were I to write on the subject, I should divide the trade into 2, or rather 3 classes.

"1. The 1st class would comprise articles of necessity; among which I should principally number an immense variety of lamb skins, varying so widely from each other in size, quality, colour, and value, that, to most persons, they would appear as the produce of so many different species of animals. These lamb skins are produced in all parts of the globe, and are every where consumed; but they form, in particular, an essential part of the dress of thousands among the lower classes in Russia, Poland, East Prussia, Hungary, Bohemia, and Saxony. In Russia and other cold climates, the skins of various other animals may be considered as articles of actual necessity.

"2. The 2d class would in a measure form part of the first, as it also comprises furs which through habit and fashion have now become articles of necessity. I should here enumerate all those different skins commonly called *hatting furs*. Few who are not acquainted with this branch of the fur trade can form an idea of its extent. It spreads, of course, over all parts of the globe where hats are worn, and requires very superior judgment and considerable capital to conduct it successfully. The furs now used for hat making are beaver, musquash, otter, nutria, hare, and rabbit; but each of these may be subdivided into 20 different sorts or classes.

"Neutria, or nutria, is comparatively a new article. It began first to be imported in large quantities about 1810, from the Spanish possessions in South America. — (See NUTRIA.) The skin is used for different purposes, being either dressed as a peltry, or cut (shorn) as a hatting fur; and if well manufactured and prepared, it bears some resemblance to beaver fur, and is used for similar purposes.

"3. Under the 3d and last class I should bring all those furs which, though continually sold, and used in immense quantities, must still be considered mere articles of fashion, as their value varies according to the whims and fancies of different nations. There are, however, exceptions among these; and many furs may be considered as standard articles, since they are always used, though their price is much influenced by changes of fashion.

"This class comprises an endless variety of furs, as under it may be brought the skins of most animals in existence; almost all of them appearing occasionally in the trade.

"Furs being entirely the produce of nature, which can neither be cultivated nor increased, their value is not influenced by fashion alone, but depends materially on the larger or smaller supplies received. The weather has great influence on the quality and quantity of furs imported from all quarters of the globe; and this circumstance renders the fur trade more difficult, perhaps, and precarious than any other. The quality, and consequently the price, of many furs will differ every year. It would be completely impossible to state the value of the different articles of furs, the trade being the most fluctuating imaginable. I have often seen the same article rise and fall 100, 200, and 300 per cent. in the course of a twelvemonth; nay, in several instances, in the space of 1 month only.

"Among the furs which always rank very high (though, like all the rest, they change in value) may be specified the Siberian sable, and the black and silver fox. These articles are at all times comparatively very scarce, and command high prices.

"The chief supplies of peltries are received from Russia (particularly the Asiatic part of that empire), and from North America. But many other countries produce very beautiful and useful furs; and though we are most indebted to Asia and America, Europe furnishes a very considerable quantity. Africa and Australia are of little importance to the fur trade, as, from their situation, they furnish but few articles, and consume still less. From the former we draw leopard and tiger skins (the most beautiful of that species), while the *only* production of the latter is the kangaroo; this, however, is never used as a fur being chiefly consumed by leather dressers and tanners for the sake of its pelt.

"Besides numerous private traders, there are several fur companies of very old standing, who in various countries do a great amount of business. Among these, the Hudson's Bay Company (in London) deserves to be mentioned first, not only from the extent of their business, but because it is one of the oldest chartered companies in England.

"The American Fur Company (in New York) stands next. They chiefly trade to London, whither they send the produce of the U. States and other parts of North America.

"The 3d company is the Russo-American (in Moscow). They trade to the Russian possessions on the western coast of North America, whence they draw their supplies, which are chiefly consumed in Russia, and sent to China.

"The 4th and last company of any consequence is the Danish Greenland Company (in Copenhagen). They do but a very limited business; exposing their goods for sale once a year in Copenhagen.

"The principal consumption of the furs which I should bring under the head of the 3d class, is in China, Turkey, and Russia, and among the more civilised countries of Europe, particularly in England. Germany consumes a considerable quantity. The consumption of America is comparatively little. In Africa, none but the Egyptians wear fur. In Australia, none is consumed.

"Hatting furs are used throughout Europe (with the exception of Turkey and Greece), and in America; but by far the principal trade in these articles is carried on in London and New York.

"Most of the companies sell their goods by public sale, and the principal fur fairs are held at Kiachta (on the borders of China); Nijni Novgorod, between Moscow and Casan, in Russia; and twice a year at Leipsic. — (See FAIRS.)

"It is a remarkable feature of the fur trade, that almost every country or town which produces and exports furs, imports and consumes the fur of some other place, frequently the most distant. It is but seldom that an article is consumed in the country where it is produced, though that country may consume furs to a very great extent."

The following details with respect to the North American fur trade may not be uninteresting: —

This trade was first practised by the French settlers at Quebec and Montreal; and consisted then, as now, in bartering fire-arms, ammunition, cloth, spirits, and other articles in demand among the Indians, for beaver and other skins. In 1670, Charles II. established the Hudson's Bay Company, to which he assigned the exclusive privilege of trading with the Indians in and about the vast inlet known by the name of Hudson's Bay. The company founded establishments at Forts Churchill and Albany, Nelson River, and other places on the west coast of the bay. But the trade they carried on, though said to be a profitable one, was of very limited extent; and their conduct on various occasions shows how thoroughly they were "possessed with that spirit of jealousy which prevails in some degree in all knots and societies of men endued with peculiar privileges." — (*European Settlements*, vol. ii. p. 268.) Mr. Burke has, in the same place, expressed his astonishment that the trade has not been thrown open. But as the company's charter was never confirmed by any act of parliament, all British subjects are lawfully entitled to trade with those regions; though, from the difficulties attached to the trade, the protection required in carrying it on, and the undisguised hostility which private traders have experienced from the agents of the company, the

latter have been allowed to monopolise it with but little opposition. In 1783–4, the principal traders engaged in the fur trade of Canada formed themselves into an association known by the name of the North-West Company, having their chief establishment at Montreal. This new company prosecuted the trade with great enterprise and very considerable success. The course of their proceedings in their adventurous undertakings has been minutely described by Mr. Mackenzie, one of the agents of the company, in his *Voyage from Montreal, through the Continent of America.* This gentleman informs us, that some of those engaged in this trade are employed at the astonishing distance of upwards of 4,000 miles north-west of Montreal! A very numerous caravan, if we may so call it, sets out every year for *Le Grande Portage*, on Lake Superior, where they meet those who have wintered in the remoter establishments, from whom they receive the furs collected in the course of the season, and whom they, at the same time, furnish with fresh supplies of the various articles required in the trade. Fort Chepeywan, on the Lake of the Hills, in lon. 110° 26′ W., used to be one of the most distant stations of the servants of the North-West Company; but many of the Indians who traded with the fort came from districts contiguous to, and sometimes even beyond, the Rocky Mountains.

The competition and success of the North-West Company seem to have roused the dormant energies of the Hudson's Bay Company. The conflicting interests and pretensions of the two associations were naturally productive of much jealousy and ill-will. Under the auspices of the late Earl of Selkirk, who was for a considerable period at the head of the Hudson's Bay Company, a colony was projected and founded on the Red River, which runs into Lake Winnipec. The North-West Company regarded this establishment as an encroachment upon their peculiar rights; and the animosities thence arising led to the most violent proceedings on the part of the servants of both companies. At length, however, the more moderate individuals of each party began to perceive that their interests were not materially different; and the rival companies, wearied and impoverished by their dissensions, ultimately united under the name of the *Hudson's Bay Fur Company*, which at present engrosses most of the fur trade of British America. The most important part of the trade is still carried on from Montreal in the way described by Mr. Mackenzie.

The *North American Fur Company*, the leading directors of which reside in the city of New York, have long enjoyed the principal part of the Indian trade of the great lakes and the Upper Mississippi. But, with the exception of the musk rat, most of the fur-clad animals are exterminated in the vicinity of the lakes. The skins of racoons are of little value; and the beaver is now scarce on this side the Rocky Mountains. The further north the furs are taken, the better is their quality.

Account of the Quantities of the Principal Furs imported in 1841, specifying the Countries whence they were brought and the Quantity furnished by each Country.

Countries.	Bear.	Beaver.	Fitch.	Marten.	Mink.	Musquash.	Nutria.	Otter.

The furs from our North American colonies are mostly all imported by the Hudson's Bay Company, by whom they are sold at public sales.

China is one of the best markets for furs. The Russo-American Fur Company are in the habit of carrying a considerable quantity of the furs taken by them in Kamtchatska and Russian America to Kiachta, where they are exchanged for tea and other Chinese product. We subjoin

An Official Account of the Furs disposed of by the Russian Fur Company at Kiachta, in 1839, 1840, and 1841. — (*Supplement du Journal de l'Interieur* for 1842, p. 157.)

FUSTIAN (Ger. *Barchent*; Du. *Fustein*; Fr. *Futaine*; It. *Fustagno, Frustagno*; Sp. *Fustan*; Rus. *Bumasea*; Pol. *Barchan*), a kind of cotton stuff, wealed or ribbed on one side.

FUSTIC (Ger. *Gelbholz, Fustick*; Du. *Geelhout*; Fr. *Bois jaune de Brésil*; It. *Legno giallo de Brasilio*; Sp. *Palo del Brasilamarillo*), the wood of a species of mulberry (*Morus tinctoria*), growing in most parts of South America, in the United States, and the West India islands. It is a large and handsome tree; and the timber, though, like most other dye woods, brittle, or at least easily splintered, is hard and strong. It is very extensively used as an ingredient in the dyeing of yellow, and is largely imported for that purpose. Of 9,047 tons of fustic imported into Great Britain in 1840, 2,183 tons were brought from the British West Indies, 1,201 ditto from Cuba and the foreign West Indies, 397 ditto from the United States, 546 ditto from Mexico, 4,349 ditto from Colombia, and 192 ditto from Brazil. Fustic from Cuba fetches full 30 per cent. more in the London market than that of Jamaica or Colombia. At present, the price of the former varies from 7*l.* to 9*l.* a ton, while the latter varies from 6*l.* to 7*l.* a ton. The consumption amounted at an average of the 3 years ending with 1842, to 7,560 tons a year. The duty on fustic from a foreign country is 2*s.* a ton, and from a British plantation, 1*s.* per ditto.

Zante, or *young* fustic, is really a species of sumach (*Rhus cotinus* Lin.), and is quite distinct from the *morus tinctoria*, or *old* fustic; the latter being a large American tree, while the former is a small European shrub. It grows in Italy and the south of France, but is principally exported from the Ionian Islands and Patras in the Morea. It imparts a beautiful bright yellow dye to cottons, &c., which, when proper mordants are used, is very permanent. It is conveniently stowed amongst a cargo of dry goods, as it may be cut into pieces of any length without injury. Only a small quantity of this species of sumach is imported; the imports in 1840 being 82 tons. Its price fluctuates considerably.

G.

GALACZ OR GALATZ, a town of Moldavia, on the left bank of the Danube, between the confluence of the Sereth and Pruth with that river, lat. 45° 25′ N., long. 28° E. It is ill built and dirty: population supposed to amount to 12,000. The trade of the town is chiefly carried on by Greek merchants; but, within the last few years, various English and other foreigners have formed establishments in it. Though at a considerable distance inland, Galacz is in the best position for becoming the port of the Danube. At present, however, it is little more than the port of Moldavia, Ibraila, or Brahilow, about 12 miles farther inland, being the port of Wallachia. The commercial importance of these ports, and indeed of the Danube, dates only from the treaty of Adrianople in 1829. Previously to that epoch the trade of the principalities laboured under the most oppressive restrictions, and was principally carried on by land. But all articles of native produce may now be freely exported either by sea or land, on paying moderate duties; and the duties on imports are also, for the most part, comparatively moderate. The probability indeed seems to be that Galacz, "the Alexandria," as it has been called, "of the Scythian Nile," will at no very distant period become a first-rate emporium. The rescuing of Moldavia and Wallachia from Turkish misgovernment has, of itself, been of signal advantage; and the political jealousies that so long obstructed the navigation of the Danube have been, for the present at least, in a considerable degree mitigated. The establishment of a regular intercourse by means of steam packets between Vienna and Galacz, and thence, by the Black Sea, with Constantinople and Trebizond, has already done a great deal, and will every day do more, to introduce a spirit of improvement into the vast and fertile, but long neglected, countries traversed by the Danube in the lower part of its course. The capacities of this great river as a commercial highway are certainly unequalled by those of any other European stream; and their full development would be of immeasurable advantage, not merely to the countries on its banks, but to all commercial nations.

Exports and Imports. — Moldavia and Wallachia are very productive provinces, being fruitful both of corn and cattle. The exports of the former are very extensive, having amounted, in 1840, to 230,568 quarters of wheat from Galacz, and 151,200 ditto from Brahilow, exclusive of large quantities of Indian corn. The quality of the wheat, which is partly hard and partly soft, was, a few years ago, very inferior, being generally damp, and having an earthy smell from its being kept in pits dug in the ground. Latterly, however, it has been much improved; and the finer samples now fetch, in Marseilles, Genoa, and Leghorn, within from 4 to 5 per cent. of the price of Odessa wheat. But it would appear to be altogether unsuitable for our markets; so much so, that, notwithstanding the high prices in England in 1840 and 1841, the im-

ports of wheat from the Danube in these years were quite inconsiderable. Both provinces fatten large herds of cattle, particularly Moldavia, which annually sends great numbers to the Austrian states. Tallow may be had in large quantities, its annual produce in Wallachia only being estimated at about 3,000,000 okes, or 8,500,000 lbs. Until within these two or three years the tallow shipped at Galacz was burdened with a heavy export duty, which checked its sale, and consequently, also, its growth. Happily, however, that duty is now reduced to 3 per cent., and the exportation is rapidly increasing. The quality of the Danubian tallow is excellent. Among the other articles of export are wool, timber, hides, and skins, lard, butter, bristles, bones, jerked beef, linseed, barilla, yellow-berries, coarse cheese, &c. Timber of the finest quality may be had in any quantity; but as it can only be advantageously exported in large ships, which cannot when laden make their way over the bar, the trade in it has hitherto been confined within comparatively narrow limits. One, however, would be disposed to think that this difficulty might be obviated by sending down the timber in rafts and loading outside the bar.

Notwithstanding the recent period at which the navigation of the Danube has been opened, and the barbarous state of the countries in the lower parts of its course, the value of the exports from Galacz and Brahilow probably at this moment (1843) exceed 1,000,000*l.* a year, of which from 600,000*l.* to 650,000*l.* may be from the former. But, considerable as this is, it is nothing to what it certainly would be were civilisation to make any considerable progress in the countries traversed by the Danube after it leaves the Austrian dominions, and still more were the river to become, as it naturally is, the principal channel for the conveyance of products to and from Hungary and Transylvania.

The great articles of import are manufactured cotton goods and cotton twist, principally from England, the demand for which is rapidly increasing; with sugar, coffee, and other colonial products; olives and olive oil, iron and steel, hardware, &c.

Entrance to Galacz. — Of the three principal mouths of the river, the Soulineh (middle) mouth, in lat. 45° 10′ 30″ N., long. 29° 41′ 20″ E., is the only one accessible by vessels of considerable burden. The depth of water on the bar, at its entrance, ¼ mile from shore, varies from 10 to 13 and 14 feet, according to the season of the year, and the direction of the wind. From the bar to Galacz and Brahilow, there is nowhere less than 18 feet water, and in many places from 60 to 70 feet. Vessels of 300 tons lie close to the quays at Galacz. The shores at the mouth of the river being low, and bordered with reeds and shoals, vessels intending to enter the river generally make the small rocky islet of Phidonisi, or Serpent's Isle*, in lat. 45° 15′ 15″ N., long. 30° 10′ 30″ E., whence the Soulineh mouth bears W. by S., distant 23 miles. According to Mr. Cunningham, the first objects seen, on nearing the shore, are the masts of vessels in the river and the houses in the town of Soulineh, which, however, are very low. Hagemeister says that there is a wooden tower on the south shore at the entrance to the river; but, though the contrary has been often affirmed, and its position given in Arrowsmith's map, there is certainly no lighthouse. When a ship approaches the entrance, a boat from the Russian captain of the port goes off, and by waving a red flag indicates the course to be kept. Lighters are generally stationed without the bar, into which large ships discharge a part of their cargoes; and pilots may generally be obtained from them or other vessels. As the current is sometimes very strong, and difficult to stem, the establishment of steam tugs at the mouth of the river would obviate the principal difficulties incident to its navigation. An E. S. E. wind carries a vessel from Soulineh to Galacz through all the different reaches of the river; but otherwise the navigation is difficult, and tracking is in parts necessary.

Frost usually sets in on the Danube in the month of December, and continues till the month of March; in 1833, however, there was no frost. Freights in the ports of the Danube are always from 20 to 25 per cent. higher than in Odessa; premiums of insurance, on the contrary, are not higher than at the latter, except on such vessels as, on account of their size, are obliged to discharge outside the bar.

Money, Weights, and Measures.—These are mostly the same as at Constantinople, which see. Accounts are kept in piastres and paras. 1 piastre = 40 paras.

Galacz. — Ducat blanc = pia. 44. Silver ruble = 15 pia. Spanish dollar = 19 pia. 32 paras. Turkish yermelik, old coinage = 19 pia. 32 paras; Turkish yermelik, new coinage, = 17 pia. 15 paras. Austrian swanziker = 3 pia. 5 paras. It is to be observed that when exchanges are so high that it is requisite to remit in specie, any of these coins may go to a premium, according as it suits better than others for the remittance; and just now, owing to the want of bills to remit to Austria, the ducat blanc = 44 pia. 20 paras.

Ibraila has two rates of currency; the one for charges, which is the same as in Galacz, and the other for the purchase of merchandise, as follows: — Ducat blanc = 32 pia.; Spanish dollar = 18½ pia.; Turkish yermelik, old coinage, = 14½ pia.; Turkish yermelik, new coinage, = 12 pia. 28 paras; swanziker = 2 pia. 12 paras. *Note.*—The same as in Galacz, any of these coins may go to a premium.

Galacz and Ibraila. — All duties are paid in both places, in the course of the Treasury, as follows: — Ducat blanc = 31½ pia.; silver ruble = 10½ pia.; Spanish dollar = 14 pia.; Turkish yermelik, old, = 14 pia.; swanziker = 2½ pia.

The ducat blanc weighs 1 Turkish drachm.

		Pias.	Paras.	
Vienna		9	16	per florin.
Trieste		9	13	florin.
Marseilles	3 = plate	3	26	franc.
Genoa		3	26	franc.
Leghorn		3	4	lira.
London		90	20	£ sterl.
Odessa	10 d/st.	490 per 100 roubles.		
Constantinople		119	100 of Galacz.	

Weights.—Galacz and Ibraila. 400 drams = 1 oke. 44 okes = 1 cantar.

Measures.—Galacz and Ibraila. 20 banniza = 1 kilo. kilo of Galacz = 2 kilo of Ibraila.

Correspondence of Weights and Measures of Galacz with those of Foreign Places.

39½ okes	=	1 cwt. English.
78 —	=	100 kilogrammes.
44 —	=	100 fund of Vienna.
12½ —	=	1 pud of Russia.
100 kilo of Galacz	=	50 Imperial quarters.
100 —	=	43.9 hectolitres.
100 —	=	525 stajo of Venice.
100 —	=	600 sacks of Leghorn.
100 —	=	208 chetwerts of Odessa.
160 okes linseed	=	1 Imperial quarter
55 —	=	1 hectolitre.
115 —	=	1 chetwert.
1 kilo of Brahilow	=	2½ Imperial quarters.

Note.—These measures generally measure out somewhat less.

* This island was famous in antiquity for its temple in honour of Achilles, to whom it was sacred. It was called *Leuce*, or the White Island, from the myriads of sea-fowl by which it was usually covered. There seems to be no good foundation for the modern notion of its being infested with serpents. It is singular, however, seeing that it is now annually passed by numbers of European ships, that it should not have been visited by any traveller. It may be expected to contain some remains of antiquity. — (See *Clarke's Travels in Russia, Turkey, &c.* 8vo. edit. vol. ii. p. 394—401.)

Charges on Shipping, &c. in Galacz and Ibrailа.

Port Charges.— In Galacz anchorage is 30 pia., and a guardian for 5 days' observation 5 pia. per day. In Ibrailа anchorage is 17½ pia., and guardian for 5 days' observation 5 pia. per day.

Quarantine.— Vessels generally remain in quarantine during their stay, as little or no advantage is gained by taking pratique.

Vessels wishing to take pratique may obtain it in 14 to 21 days, according to the state of health in Turkey, by taking a Health Office guard on board; or the captain alone may take pratique, the same as any passenger, by going into the Lazaret. During the last year, as the health was good in Constantinople and along the Danube, the quarantine was only seven days.

When the grain is shipped direct from the warehouse of the seller, without being transported to the warehouse of the buyer, then the charges will be less by the cartage and porterage passed for that purpose.

When the season is advanced and the streets in bad order, the charges of embarking will be something more.

Duties.— An *ad valorem* duty of 3 per cent. is levied on all articles, except provisions, imported into, or exported from, the principalities of Moldavia and Wallachia. Government reserves to itself the power of prohibiting the exportation of any article, but it has to give a month's previous notice of any such prohibition.

Galacz is a free port; that is, a port at which all commodities may be landed, warehoused, re-exported, and consumed in the town, free of duty. Quarantine regulations are strictly enforced, unless performed previously to entering the river.

Ismail and Reni, ports of the Russian province of Bessarabia, are situated on the Danube, and are both, but especially Ismail, a good deal nearer its mouth than Galacz; but they are much less considerable in point of commercial importance. Having little importation, their trade is confined almost entirely to the exportation of corn, and even in this respect they are very inferior to Galacz and Brahilow. They are subject to the Russian duties and regulations.

We have gleaned these particulars from a variety of works, but principally from the valuable *Report* by Mr. Cunningham, now vice-consul at Brahilow, printed at Galacz in 1841; the work of Hagemeister, *On the Commerce of the Black Sea*, Eng. Trans. pp. 85—95, &c.; *Purday's Sailing Directions for the Black Sea*, p. 193, &c.

Account of Vessels departing loaded from Brahilow in 1842, with a Specification of their Cargoes.

In 1842, only 309 vessels left Galacz with cargoes; of these, 6 were English, principally loaded with tallow and bones.

Mouths of the Danube. — There is a great discrepancy in the statements of ancient authors as to the number of channels by which the Danube poured its waters into the Euxine. — (*Cellarii Notitia Orbis Antiqui*, lib. ii. cap. 8.) A similar discrepancy exists at this moment; some authorities affirming that it has 4, others 5, and others 6 or 7 mouths. But, as stated above, there are only 3 of any considerable magnitude, viz. the Kilia mouth on the north, and successively the Soulineh mouth, and the Edrillis mouth. But, besides these, there are other channels of inferior importance, of which two, at least, are still more to the south than the Edrillis mouth. In antiquity, the most southerly channel was the deepest, and best suited for the purposes of navigation, and was thence called *Sacrum*. — (See *Cellarius ut suprà.*) It is not, however, to be wondered at, that, in the course of so many ages, very great changes should have taken place in the channels of the river. It seems probable that the *Ostium Sacrum*, or southern channel of the ancients, may have run between *Carsum*, now Hirchova, and the lake *Halmyris*, now Rassein, which communicates with the Euxine at Kara Kerman, formerly *Istropolis*, and at a point still more to the south. At any rate, there certainly was a channel in the route now pointed out — (*D'Anville Abrégé de la Géographie Ancienne*, tom. i. p. 307.); and as it is a good deal more to the south than the Edrillis mouth, with which the *Ostium Sacrum* has been commonly identified, it would seem to have the best claim to the distinction of being synonymous with the latter. This channel is, in fact, still partially open, and it is stated that the Austrian government has seriously entertained a project for making it navigable. There can be no doubt, that if this could be effected, it would be of much importance to the trade with Hungary and the countries on the upper part of the river, by materially shortening the river navigation, and facilitating the transit of ships and goods to and from the Black Sea; but the marshy nature of the ground is said to oppose formidable obstacles to the construction of a canal.

Navigation of the Danube. — Steam navigation was first established on the Danube in 1830, since which the undertaking has gone on prospering, so much so, that the communication between Vienna and Constantinople is now maintained by a line of 7 steam vessels. The Austrian steam company, which was the first in the field, have extended their scheme by starting vessels between Vienna and Linz, and a Bavarian company commenced in 1838 running a vessel between Ratisbon and Linz. It is probable that in a year or two steamers may ply from Ulm downwards.

At present steam boats ply on the Danube as long as the river remains free from ice (usually from February or March to November), from Ratisbon to Linz, once a week; Linz to Vienna, 10 hours, once a week; Vienna to Presburg and Pesth, twice; Pesth to Drencova, once a week; Gladova to Galacz. once a week; Galacz to Constantinople, once a fortnight.

The voyage from Vienna to Constantinople, including stoppages, is seldom performed in less than 14 days, and sometimes occupies 17; in returning against the stream it takes at least a month, including 10 days quarantine at Orsova. The fare, first place, is 134 fl., about 13*l.*; second place, 94 fl.

The navigation of the Danube by steamers is unfortunately interrupted for about 50 miles, between Drencova and Gladova, by rocks and rapids, the lowest and most considerable of which is a sort of cataract, called the "Irongate," about 3 miles below the Hungarian frontier. It is worthy of remark that the most illustrious of the Roman emperors, Trajan, alive to all the advantages to be derived from the easy navigation of the Danube, had with equal industry and sagacity formed a road, or towing path, along the river's edge, for facilitating the operation of towing, of which the remains are still extant, with an inscription commemorative of the completion of the works. It has been proposed to overcome the difficulties in the way of the navigation by renovating the old Roman road, and deepening the channel contiguous to it. But it rarely happens that attempts to improve the navigation in the bed of a river, under any thing like similar circumstances, are even tolerably successful. The better way undoubtedly would be, were it practicable, to construct a lateral canal, or rather a canal from the mouth of the Bereska to Palanka, which would not only avoid the rapids, but also shorten the navigation by getting rid of the bend of the river by Orsova. But the difficulties in the way of such an undertaking, from the nature of the ground, are said to be insuperable; and it is, therefore, probable that the distance of 50 miles along the rapids will continue, if not always, at least for some considerable time, *a portage*. The inconvenience, however, of this break in the navigation has been diminished, as far as possible, by the construction of an admirable carriage road (recently finished), at great expense, by the Hungarian diet, from Moldova to Orsova. In the extent of excavations in the rock, and terraces of masonry, upon which it is carried, it is not inferior as a specimen of engineering to the finest roads over the Alps. Several steamers have been transported down these rapids at the season of floods, small barges pass them at all times, and little boats, laden with wax and wool, are towed up by men and oxen. The passengers and goods conveyed by the steamers are transferred from Moldova in row-boats, to Gladova, below the Irongate, where they embark on another steamer. — (*Geog. Dict.* art. *Danube.*)

A *railroad* is nearly completed from Brunn, the capital of Moravia, to Vienna; another railroad diverges, from the Danube at Linz, north to Budweis in Bohemia, where it reaches the banks of the Muldau, and through it communicates with the Elbe.

Junction of the Danube and the Rhine. — The long projected canal to unite the Danube and Rhine, the favourite scheme of Charlemagne, is being carried into execution by the King of Bavaria, and is now (1843) nearly finished. It extends from Bamberg, by Erlangen and Nuremberg, to Neumark, joining the Danube at Kellheim, a few miles above Ratisbon. The distance between the Maine near Bamberg, and the Danube, is about 112 miles; but the actual extent of canal is less, the communication being in part effected by the Regnitz, a tributary of the Maine, and the Altmuhl, a tributary of the Danube. When this is accomplished, an internal communication by water will be established throughout all the vast country, stretching from the shores of the Netherlands to the Black Sea; so that produce shipped at Rotterdam or at Galacz may be conveyed from the one to the other in the same vessel.

GALANGAL (Ger. *Galgant*; Du. and Fr. *Galanga*; Rus. *Kalgan*; Lat. *Galanga*; Arab. *Kusttulk*; Chin. *Laundon*), the root of the *galanga*, brought from China and the East Indies in pieces about an inch long, and hardly ¼ an inch thick. A larger root of the same kind (*Greater Galangal*), an inch or more in thickness, is to be rejected. It has an aromatic smell, not very grateful; and an unpleasant, bitterish, extremely hot, biting taste. It should be chosen full and plump, of a bright colour, very firm and sound: 12 cwt. are allowed to a ton.—(*Lewis's Mat. Med.*; *Milburn's Orient. Com.*)

GALBANUM (Fr. *Galbanum*; Ger. *Mutterharz*; It. *Galbano*; Lat. *Galbanum*; Arab. *Barzud*), a species of gum resin obtained from a perennial plant (*Galbanum officinale*) growing in Africa, near the Cape of Good Hope, and in Syria and Persia. It is brought to this country from the Levant in cases or chests containing from 100 to 300 lbs. each. The best is in ductile masses, composed of distinct whitish tears agglutinated together by a pale brown or yellowish substance. It is generally much mixed with stalks, seeds, and other impurities. The separate tears are considered as the best. When the colour is dark brown or blackish, it is to be rejected. It has a strong peculiar odour, and a bitterish, warm, acrid taste. — (*Thomson's Dispensatory.*)

GALLON, a measure of capacity, both for dry and liquid articles, containing 4 quarts. By 5 Geo. 4. c. 74., "the Imperial gallon shall be the standard measure of capacity, and shall contain 10 lbs. avoirdupois weight of distilled water, weighed in air at the temperature of 62° of Fahrenheit's thermometer, the barometer being at 30 inches, or 277·274 cubic inches; and all other measures of capacity to be used, as well for wine, beer, ale, spirits, and all sorts of liquids, as for dry goods, not measured by heaped measure, shall be derived, computed, and ascertained from such gallon; and all measures shall be taken in parts, or multiples, or certain proportions, of the said Imperial standard gallon." The old English gallon, wine measure, contained 231 cubic inches; and the old English gallon, ale measure, contained 282 cubic inches. Hence the Imperial gallon is about $\frac{1}{5}$ larger than the old wine gallon, and about $\frac{1}{60}$ less than the old ale gallon. By the 6 Geo. 4. c. 58. § 6. it is enacted, that from and after the 6th of January, 1826, whenever any gallon measure is mentioned in any act of parliament relative to the excise, it shall be taken and deemed to be a gallon Imperial standard measure. — (See WEIGHTS AND MEASURES.)

GALLS, OR GALL-NUTS (Fr. *Galles, Noix de Galle*; Ger. *Gallapfel, Gallus*; It. *Galle, Galluze*; Lat. *Galæ*; Arab. *Afis*; Hind. *Mujoophal*; Pers. *Mazu*), are excrescences produced by the attacks of a small insect, which deposits its eggs in the tender shoots of a species of oak (*Quercus infectoria* Lin.), abundant in Asia Minor, Syria, Persia, &c. Galls are inodorous, and have a nauseously bitter and astringent taste. They are nearly spherical, and vary in magnitude from the size of a pea to that of a hazel nut. When good, they are of a black or deep olive colour; their surface is tubercular, and almost prickly; they are heavy, brittle, and break with a flinty fracture. They are known in commerce by the names of *white*, *green*, and *blue*. The white galls are those which have not been gathered till after the insect has eaten its way out of the nidus and made its escape. They are not so heavy as the others, are of a lighter colour, and do not fetch so high a price. The green and blue galls are gathered before the insect has escaped; they are heavier and darker than the former, and are said to afford about one third more of colouring matter.

Galls are of great importance in the arts, being very extensively used in dyeing, and in the manufacture of ink, of which they form one of the principal ingredients. They are the most powerful of all the vegetable astringents; and are frequently used with great effect in medicine.

The ancients reckoned the gall-nuts of Syria superior to every other, and they still retain their pre-eminence. They are principally exported from Aleppo, Tripoli, Smyrna, and Said; those brought from the first come chiefly from Mosul, on the western bank of the Tigris, about ten days' journey from Aleppo. The real Mosul galls are unquestionably the best of any; but all that are gathered in the surrounding country are sold under this name. Those from Caramania are of a very inferior quality. The galls met with in India are carried thither from Persia by Arabian merchants.

It is not unusual to dye the whitish gall-nuts blue, in order to increase their value. The fraud is, however, detected by the deeper blue tinge that is thus imparted to them; and by their being perforated and lighter than the genuine blue galls.

The price of galls in bond varies in the London market from 50*s.* to 64*s.* a cwt. The duty is 1*s.* a cwt. — (*Rees's Cyclopædia*; *Bancroft on Colours*; *Ainslie's Mat. Indica*, &c.)

GALVESTON, the principal sea-port of the newly formed republic of Texas, at the N. E. end of the long, low, narrow island of the same name, on the north shore of the Gulph of Mexico, and on the channel forming the entrance to the bay of Galveston, an extensive inlet of the sea between the N. side of the island and the mainland, lat. 29° 16′ 37″ N., long. 94° 49′ 41″ W. Having only recently attained to any distinction, Galveston is yet of no great magnitude, its population not perhaps exceeding 6,000 or 7,000; but it is daily increasing; and if population and cultivation should increase in the interior, it will most probably become one of the principal *entrepôts* in this part of the world.

The bar outside Galveston harbour and bay, between the N.E. end of the island and Point Bolivar on the mainland, has not more than 13½ feet water at the highest springs, and but 10 feet at ebb: hence the smaller class of vessels, or those under 200 or 250 tons, are most suitable for the trade of the port, as well as for that of almost all the other ports on the N. and E. sides of the gulph, the deficiency of water being all but universal. Though the land be low, the houses of Galveston may be seen from the masthead at a distance of several miles. Vessels drawing 8 feet water and upwards should, however, not approach the bar nearer than 6 fathoms, without heaving to and making the signal for a pilot, which is promptly attended to. Vessels drawing less than 8 feet water may approach the bar till the water shoals to 4 fathoms before heaving to. Vessels making the port in the night should invariably anchor in 5 or 6 fathoms; and the holding ground being excellent, those who are well found in anchors and cables have nothing to fear. Pilot boats are now constantly on the look-out; and ships should on no account attempt crossing the bar till they have got a pilot on board. In the harbour there is from 18 to 30 feet water. The bay, which stretches about 35 miles from N. to S., and from 12 to 18 miles from E. to W., has not generally more than 9 feet water, and is intersected by a bar, on which there is only from 5 to 6 feet water. — (*Kennedy's Texas*, i. 29.) Several very considerable rivers have their embouchure in the bay, so that the town has a considerable command of internal navigation.

It is no part of our business to give any account of the circumstances which led to the independence of Texas; but we may shortly state that it had its origin in the attempts of the Mexican government to impose taxes on the settlers. In fact, no direct taxes at present exist in the country; so that all, or mostly all, the public revenue is derived from customs duties, of which the port of Galveston pays above two-thirds.

The great articles of export from Galveston, and, indeed, from Texas, are cotton, provisions, cattle and other stock, hides and skins, furs, bullion from Mexico, &c. The articles of importation consist principally of cotton and other manufactured goods hardware, agricultural implements and machinery,

powder and shot, salt, coal, &c. The following details give a view of the trade and of the regulations under which it is conducted.

Monies, Weights, and Measures, same as those of the U. States; for which see NEW YORK.

Charges on Shipping in the Ports of Texas.

Tonnage Duty. — All sailing vessels entering any port of the republic from any foreign port or place, are chargeable with a tonnage duty of 60 cents per ton, and steam-boats with 30 cents, according to registered tonnage.

Entrance. — Any ship or vessel of less than 100 tons burden pays 1½ dollars; of 100 and upwards, 2½ dollars.

Clearance. For every clearance of vessels of the above-mentioned burden, the same fees respectively: —

	$ cts.
Port entry	2 0
Permit to land goods	0 30
Bond taken officially	0 40
Permit to load goods for exportation, that may be entitled to debenture or official certificate	0 40
Bill of health	0 20
For every document (registers excepted) required by any merchant, owner, or master of any ship or vessel not before enumerated	0 20

Rates of Pilotage at Galveston. — On all vessels drawing less than 8 feet water, 2 dollars 50 cents per foot. On all vessels drawing 8 feet and over, 3 dollars per foot.

Any pilot that may be detained waiting on any vessel bound for sea, or any vessel that may be prevented from entering the port by contrary winds or otherwise, shall be entitled to receive 3 dollars per day for each day he may be detained after the first 24 hours.

Any pilot taking charge of a vessel in distress from loss of anchors, spars, or rudder, shall receive such extra compensation as in the opinion of the collector of customs the circumstances of the case may require; the same to be awarded by the collectors after hearing the parties.

Any pilot speaking a vessel outside the bar, inward bound, or any vessel inside the bar, outward bound, and offering his services, shall be entitled to full pilotage whether those services be accepted or not.

Any pilot speaking a vessel, inward bound, inside the bar, shall, if his services be accepted, be entitled to half pilotage; but, if his services be not accepted, he shall not be entitled to any pilotage.

Any vessel, after waiting outside the bar for four hours with a signal for a pilot flying, may enter port free of all pilotage charges.

Any pilot boarding a vessel 15 miles from shore, shall be entitled to 25 per cent. more than the regular rates for off-shore pilotage.

*** Consignees are, in all cases, liable for the pilotage of vessels consigned to them, and no vessel is permitted to go to sea, until all pilotage has been paid.

Pilotage Regulations at Galveston. — The collector of customs at Galveston is authorised to appoint as many pilots as may be necessary for the shipping, with power of suspension and dismissal, requiring bond with good security, in the sum of 10,000 dollars, for the faithful performance of duties; without which appointment it is not lawful for any person to exercise the calling of pilot.

Each branch pilot may appoint two deputies, for whose acts he is responsible; these appointments are subject to the approval of the collector.

Any pilot or deputy taking charge of a vessel, while in a state of inebriety, forfeits his appointment. Any pilot wilfully or negligently losing any vessel, is to be dismissed, and is, with his sureties, liable to the party injured for all damages sustained by reason of his misconduct.

Any branch or deputy pilot, who fails to board with promptitude a vessel in need of his services, is, for the first offence, subject to the penalty of suspension for three months, and for the second, to forfeiture of his appointment; and any pilot, who for any cause whatever forfeits his branch, or appointment, is ever afterwards held incapable of filling any office of the kind.

Flag of Texas. — The national flag consists of a blue perpendicular stripe, of the width of one third of the whole length of the flag, with a white star of five points in the centre, and two horizontal stripes of equal width, of two-thirds the length of the flag; the upper, white; the lower, red.

Regulations for the Coasting Trade, and for the Protection of Texan Shipping. — No merchant vessel is permitted to assume the Texan flag, unless owned by a citizen or citizens of the republic; nor can such vessel be commanded after assuming it, save by a citizen of the republic; and every vessel or boat above 8 tons burden, before sailing under the national flag, must be enrolled at the Custom-house of some port of the country, and must take out a register, or coasting licence, according to the rules and regulations, and under the responsibilities and restrictions observed and demanded in the U. States of America, so far as they may be compatible with the statutes of Texas.

The enrolment and the register or licence of every merchant vessel, sailing under the Texan flag, is to specify her name, class, description, admeasurement, and burden, and to declare whether she be of domestic or foreign construction; and if the former, when and in what part of the republic she was built.

All vessels of domestic build, and sailing under the national flag, are free from every kind of tonnage duty, and are subject to no other exaction than is specified in the tariff of fees established by law.

Vessels built in a foreign country, on becoming the property of a citizen or citizens of the republic, may be enrolled under the Texan flag, and employed either in the foreign or coasting trade; but if engaged in the latter, under a coasting licence, she shall pay, on the expiration of the term of her licence, an annual tonnage duty of 37½ cents for each ton of her burden, for which the vessel and her securities are bound in the bond of her licence; and in case that her licence be returned within the year of its term, the said tonnage duty is to be exacted in proportion only to the time which has intervened between the date of the licence and its relinquishment. If the licence be returned in consequence of wreck, the duty is to be paid in proportion to the time that has elapsed between the loss of the vessel and the date of the licence. Any foreign vessel so adopting the flag of the republic is required to pay for enrolment and register, or licence, and for all coasting entrances and clearances, while under coasting licence, fees double in amount of those paid by vessels of domestic build.

Foreign vessels, without changing owner, master, or flag, by giving a bond conditioned and secured according to the mode of licensing coasting vessels in the U. States, and depositing the register with the collector of a port of the republic, may obtain from said collector a licence to carry on the coasting trade, and no other, for the term of six months; which licence may be relinquished for the aforesaid register within or at the end of the specified term; or may be renewed. On granting or renewing such licence, the collector exacts a half-yearly tonnage-duty of 62½ cents for each ton of the vessel's burden, no part of which duty is to be refunded, even should the licence be relinquished within the term. All such vessels, while under licence, pay for licence and for all coasting entrances and clearances, fees double in amount of those levied on licensed coasters of domestic construction.

Any foreign vessel, without changing her owner, master, flag, or register, may receive at any port of the republic, a cargo either of domestic or foreign produce, and land the same at another port of the republic; each foreign vessel making sail voyage coastwise, has to pay at the port of her entrance coastwise, a

tonnage duty of 15 cents for each ton of her burden; and while engaged in such voyage, with cargo so received, she is subject to the payment of fees, for entrance and clearance, double in amount to those paid for entrance and clearance from and to a foreign port.

No vessel bearing the flag of the republic, and sailing under a register, whether she be of domestic or foreign build, is subject to the payment of tonnage duty, nor to higher fees for entrance from and clearance to a foreign port, than those specified in the tariff of fees established by law. Any Texan vessel of domestic construction, making a coasting voyage under register, pays for entrance and clearance coastwise, the same fees as if sailing to or arriving from a foreign port. Vessels of foreign build, sailing under the flag of the republic, and making a coasting voyage, under register, pay double that amount of fees for such entrance and clearance.

Every vessel or boat of more than 4 tons burden, in sailing from one port of the republic to another, without cargo, and with or without a coasting licence, is to report, and clear verbally; if laden with cargo of domestic produce for home consumption, the nature of such cargo is to be briefly stated in writing; if laden with foreign merchandise, or with cotton, or other articles of domestic produce for exportation out of the republic, the contents of the cargo are to be specified in a manifest, a duplicate of which is to be left at the custom-house where she clears.

Warehousing. — A law passed 5th February, 1840, enjoins the secretary of the Treasury to provide good and sufficient warehouses in the ports of the republic, for the stowage of goods, wares, and merchandise, without payment upon the first entry thereof, or for exportation, in conformity with the revenue laws. Merchants are allowed to warehouse in their own stores under Custom-house lock and key.

All warehoused goods are to be duly cleared either for exportation, or for home consumption, within one year from the date of entry, unless the secretary of the Treasury, for good and sufficient reasons, should extend the time, which he is empowered to do, for a further term of three months. If any such goods be not so cleared, it is lawful for the secretary of the Treasury to order the collector of customs, where such failure may take place, to advertise and sell, at public auction, all such goods, by giving fifteen days' public notice, the produce of sale being applied to the payment of the duties, warehouse rent, and other charges, and the residue, if any, to the owners or proprietors of the goods, if discoverable, and if not, to be paid to his credit into the treasury.

The secretary of the Treasury is empowered to remit or return the duties payable or paid on goods entered to be warehoused, and lost or destroyed, either on shipboard or in the landing or shipping of the same, or in the receiving into or delivery from the warehouse.

Officers of the customs guilty of causing any embezzlement, waste, spoil, or destruction, in goods legally warehoused, are subject upon conviction to any punishment the proper tribunal may inflict, one year being the shortest term of imprisonment for any goods so embezzled, wasted, spoiled, or destroyed; the importer is not liable to duty, and in cases where importers prosecute officers of customs to conviction, the damage sustained by them is to be made good by the secretary of the Treasury.

When it is intended that warehoused goods shall be reshipped for exportation beyond seas, bond is required, with security quadruple the amount of the duties, that such goods shall be duly shipped and exported, and that they shall be landed at the place for which they are entered outwards, or otherwise accounted for to the satisfaction of the collector of customs. Warehoused goods are not to be exported in any craft of less than 45 tons burden.

Collectors of customs are empowered to appoint appraisers to appraise and estimate damage sustained by warehoused goods, and on estimates being forwarded to the secretary of the Treasury, he is authorised to refund to the importers or proprietor of such goods the excess of duties paid, that is, the difference between their value, in a sound and proper state, and in their injured condition. If the duties have not been paid, the collector is empowered to assess according to present value.

The unpacking, assortment, and repackage of damaged merchandise are allowed, and collectors of customs are authorised to accept, the abandonment for the duties, of any quantity of tobacco, coffee, pepper, and pimento; and also, of any whole package of other merchandise.

Drawbacks. — Drawback is allowed and paid on all goods, wares, or merchandise, whereupon duties have been paid, and which are exported to any place beyond seas, from the port or place of original importation, but no privilege of drawback is extended to goods, wares, or merchandise exported or transported to the territory of any state or power immediately adjoining the republic of Texas. To obtain the benefit of drawback, goods must be exported within twelve months from the date of their entry, in the district into which they were imported or introduced.

Farming utensils, implements of husbandry, furniture which has been used and in use, to the amount of 500 dollars. And also the tools, or implements of trade, of persons arriving in the republic, their wearing apparel, and other personal baggage in use, — free.

By a treaty with France, the following articles, the production and manufacture of France, imported direct in French or Texian vessels, are subject to a reduction as follows: —

Brandy	- -	One fifth.
Wines	- -	Two fifths.
Silks	- -	Ten per cent. ad valorem.

Note. — According to a proclamation issued by President Houston, dated 21st December, 1841, the proclamation issued 11th February, 1840, by President Lamar, was revoked, and French wines, &c. made to pay duty as specified in the foregoing tariff.

An additional duty of 5 per cent. on all goods imported on foreign bottoms, excepting Great Britain, France, and the Netherlands, those powers having treaties with Texas. In consequence of the lapse of the treaty between Texas and the U. States, vessels of the latter country are at present subjected to this duty.

All articles not enumerated, pay 15 per cent.

(We are principally indebted for the foregoing statements, the most valuable hitherto published with regard to Texas, to the report made by the British Consul at Galveston, to the Foreign Office, on the 1st of June, 1843.)

Tariff of the Republic of Texas, now in operation, and which took effect from and after the 1st Day of February, 1842.

Articles.	Specific.	Ad valorem.
Arms, fire, of every description -	-	15 ℘ ct.
Allspice - - - - -	5 cts. lb.	
Butter - - - - -	6	
Beef, per barrel - - - -	3 dollars	
Bacon - - - - -	2 cts. lb.	
Beans, per bushel - - -	50 cts.	
Boots and shoes - - -	-	25
Bonnets, ladies' - - -	-	10
Bagging and bale rope - -	-	15
Books and stationery - -	-	
Bibles, testaments, and primary school books - - - - -	Free.	
Coffee - - - - -	2 cts. lb.	
Corn and corn meal, bushel of 50 lbs.	20 cts.	
Candles, sperm, lb. - - -	10	
tallow, lb. - - - -	4	
Cheese - - - - -	3	
Chocolate - - - - -	3	
Candies - - - - -	3	
Cigars, Spanish, per 1,000 -	5 dollars	
American - -	3	
Clothing, ready made - -	-	30
Conserves, and sweetmeats of all kinds	-	30
Crockery ware - - - -	-	30
Cabinet ware of all kinds -	-	30
Chairs of all kinds - - -	-	30
Cutlery of all kinds - - -	-	25
Carriages for pleasure - -	-	30
Flour, per barrel - - -	1 dollar	
Fruits, dry and green - -	-	30
Grains not enumerated, per bushel of 60 lbs. - - - - -	20 cts.	
Hats of all kinds - - - -	-	25
Hardware and cutlery - -	-	25
Harness of all kinds - -	-	35
Lard, per lb. - - - -	3 cts.

Liquors: —		
Brandy, 1st and 2d proof, per gall. -	50 cts.	
Do. 3d and 4th - - -	62½	
Do. over 4th - - -	75	
Gin and rum same as brandy.		
All other liquors, including cordials of all kinds, pay same as brandy.		
Whiskey, 1st and 2d proof, per gall.	25 cts.	
Do. 3d do. -	37½	
Do. 4th do. -	50	
Do. over 4th do. -	75	
Wines: —		
Claret in cases - - -	-	10
do casks, per gallon - -	10 cts.	
Burgundy, Hermitage, Chambertin, and all other varieties of Burgundy - - - -	-	15
French wines (white) - -	-	10
Champagne, per basket - -	2 dol. 50 cts.	
Oporto, or Port, per gallon -	37½ cts.	
Madeira and sherry, per gallon	75	
Teneriffe and Spanish (white and red), per gallon - - -	25	
German and Rhenish - -	50	
Cider and malt liquor - -	-	10

Probable Progress of Texas. — Our anticipations of the future progress of this newly formed state are not so sanguine as those that seem to be generally entertained. The

country, no doubt, is, speaking generally, highly productive, well watered, and well situated for commerce; but the climate, especially in the lower and more fertile districts, is too hot and relaxing, and the land too fruitful, to permit or require its cultivation being vigorously prosecuted by free labourers. Had the importation of slaves into Texas been permitted, its progress might, and most probably would, have been as rapid as that of the southern states of the American Union. But their importation, except from the U. States, is prohibited; and if the supply from this quarter should fail, and the prohibition of their importation from other quarters be really enforced, its progress will, we apprehend, be comparatively slow. It is a contradiction and an absurdity to suppose that free settlers in such a country should exhibit any considerable portion of the energy and industry they would exhibit if they had to cultivate a less fertile soil, or were placed under a severer climate. Mexico and the U. States may both be referred to in illustration of this principle: industry is, in the former, at the lowest possible ebb (see *Geog. Dict.*, art. *Mexico*), though it is needless to add, that the incentives to labour are there quite as great as in Texas. And does any one suppose that the cultivation of cotton and sugar would be carried to near its present extent in the Southern U. States, but for their all but unlimited command of slave labour? We, therefore, are well convinced that the future progress of Texas will depend principally on the fact, whether she can or cannot derive ample supplies of slave labour. If she can (whether with or without the sanction of the law is in this respect of no importance), the fair presumption is, that she will make a rapid progress; whereas, if she cannot, her progress will, most probably, be comparatively slow; and we should anticipate that, under such circumstances, her inhabitants will gradually fall into the same state of semi-barbarous indolence into which the Mexicans have already sunk.

In exchange for the cotton and other products sent to Great Britain, the Texans import British manufactured goods, not only for their own consumption, but partly, also, for the supply of the N. States of Mexico. Indeed, Santa Fé has been, since 1825, the great emporium of N. or New Mexico, and in it the traders of that country meet those of the U. States; the former purchasing the manufactures brought by the latter with peltry and bullion, so that a good deal of specie reaches the U. States by this route. The annual amount of the trade at Santa Fé was estimated, in 1834, at 2,000,000 dollars; and in 1841 Iken estimated it at 3,000,000 dollars. Most of the articles for this trade are purchased in Philadelphia, whence they are transported overland to Pittsburg, where they are shipped for St. Louis, being thence conveyed in wagons to Santa Fé, which they reach after a journey of at least 4,000 miles. From St. Louis to Santa Fé, about 1,200 m., the road is extremely bad, running through a country so infested by hostile Indians, that the U. States government is obliged usually to send an escort of cavalry with the larger caravans; indeed, 200 dragoons were sent in 1839 for the protection of one body of traders! — (*Kennedy*, ii. 417.) But Santa Fé is only 600 m. from the Texan coast; so that it may not unreasonably, perhaps, be anticipated, that eventually Galveston and the other Texan ports will be the principal routes by which European goods will reach N. Mexico. It may, also, be pretty confidently anticipated, that Texas will become the seat of an extensive smuggling trade into the southern and western states of the American Union. Seeing the high duties imposed by the American tariff on so many important articles, and the facilities which the country affords for smuggling into the Union, it is all but certain that it will be extensively carried on.

GAMBOGE (Fr. *Gomme gutte*; Ger. *Gummigutt*; It. *Gomma gutta*; Lat. *Gummi guttæ*, *Cambogia*; Arab. *Ossararewund*; Siamese and Cambojan, *Rong*), a concrete vegetable juice, or gum resin, the produce of the *Garcinia Cambogia*, a forest tree of the genus which affords the mangostein, the most exquisite fruit of the East. The districts which yield gamboge lie on the east side of the Gulph of Siam, between the latitudes of 10° and 12° north, comprising a portion of Siam and the kingdom of Camboja, whence its English name. It is obtained by making incisions in the bark of the tree, from which it exudes, and is collected in vessels placed to receive it. In these it assumes a firm consistence; and being formed into orbicular masses, or more frequently cylindrical rolls, it is at once fit for the market. It is of a bright yellow colour, opaque, brittle, breaks vitreous, has no smell, and very little taste. Specific gravity 1·22. When taken internally, it operates as a most violent cathartic. It forms a beautiful yellow pigment, for which purpose it is principally used. The Dutch began to import it about the middle of the seventeenth century. The greater part of the gamboge of commerce first finds its way to Bangkok, the Siamese capital, or to Saigon, the capital of lower Cochin China; from these it is carried by junks to Singapore, whence it is shipped for Europe. Its price at Singapore varies, according to quality, from 30 to 80 dollars per picul. Dark coloured pieces should be rejected. — (*Crawford's Embassy to Siam*, p. 425.; *Thomson's Chemistry.*)

GARNET, GARNETS (Fr. *Grenats*; Ger. *Granaten, Granatstein*; It. *Granati*; Lat. *Granati*; Rus. *Granatnoi kamen*; Sp. *Granadas*). There are two species of garnet, the precious and the common. The colour of the first is red; and hence the name of the mineral, from its supposed resemblance to the flower of the pomegranate; passes from Columbine red, to cherry and brown red; commonly crystallised. External lustre glistening, internal shining, vitreous; transparent, sometimes only translucent; specific gravity 4·08 to 4·35. The colour of the common garnet is of various shades of brown and green. Different colours often appear in the same mass: translucent; black varieties nearly opaque: specific gravity from 3·66 to 3·75. — (*Thomson's Chemistry.*) The finest varieties come from India, and some good specimens have been received from Greenland. When large and free from flaws, garnets are worth from 2*l.* to 5*l.* or 6*l.*, and even more; but stones of this value are of rare occurrence, and always in demand. — (*Mawe on Diamonds, &c.* 2d ed. p. 113.)

GAS COMPANIES, the term usually applied to designate the companies or associations established in most large towns for lighting the streets and houses with gas.

Every one must have remarked that most species of coal, when ignited, give out large quantities of gas, which burns with much brilliancy, yielding a great quantity of light as well as of heat. Dr. Clayton seems to have been the first who attempted, about 1736, to apply this gas to the purposes of artificial illumination; but his experiments were upon a very limited scale, and no further attention was paid to the subject till more than half a century afterwards. At length, however, Mr. Murdoch, of Soho, instituted a series of judicious experiments on the extrication of gas from coal; and, by his ingenuity and sagacity, succeeded in establishing one of the most capital improvements ever made in the arts. Mr. Murdoch found that the gas might be collected in reservoirs, purified, conveyed by pipes to a great distance from the furnace where it was generated; and that it affords, by its slow combustion, when allowed to escape through small orifices, a beautiful and steady light. This great discovery, which places Mr. Murdoch in the first rank among the benefactors of mankind, was first brought into practice at Redruth, in Cornwall. In 1802, it was applied to light Mr. Murdoch's manufactory at Soho; in 1805, it was adopted by Messrs. Philips and Lee, of Manchester, in the lighting of their great cotton mill; and is now employed in the lighting of the streets, theatres, and other public buildings, factories, &c. of *all* the considerable towns of the empire; and also in most considerable towns of the Continent and America.

Gas light is indebted, for its rapid diffusion, not more to its peculiar softness, clearness, and unvarying intensity, than to its comparative cheapness. According to Dr. Thomson (*Encyc. Brit.* art. *Gas Lights*), if we value the quantity of light given by 1 lb. of tallow in candles at 1*s.*, an equal quantity of light from coal gas will not cost more than 2½*d.*, being less than a *fourth part* of the cost of the former.

Oil and other substances have been used in furnishing gas for the purpose of illumination, but none of them has answered so well as coal. Most of the oil gas establishments have been abandoned.

The construction of gas works on a large scale, and the carrying of pipes through the streets and into houses, &c., is very expensive, and requires a large outlay of capital. Hence most of the gas lights in the different towns are supplied by joint stock companies. Many of them have turned out to be very profitable concerns.

The subjoined Table contains a statement of the most important particulars connected with the principal gas companies; viz. the number of shares in each, the nominal amount of each share, the sums actually paid up, the market price of shares, the dividend payable on them, &c. — (From the *Trade List* for the 27th of June, 1843.)

GENEVA (Du. *Genever;* Fr. *Genièvre;* Ger. *Gaud, Genever;* It. *Acqua di Ginepro;* Lat. *Juniperi aqua;* Sp. *Agua de Enebro*), a spirit obtained by distillation from grain, rectified with the addition of juniper berries. The latter give to the spirit that peculiar flavour by which it is distinguished, and are also said to render it diuretic. Geneva is a corruption of *genièvre*, the French term for the juniper berry.

By far the best Geneva is made in Holland, where its manufacture is carried on to a very great extent. The distilleries of Schiedam have long been famous, and are at present in a very prosperous condition. Schiedam geneva is made solely of spirit obtained from rye and barley, flavoured with juniper berries. It becomes milder, and acquires, as it gets old, an oily flavour disliked by the Hollanders; hence nearly the whole of the "Schiedam" is exported, principally to the East Indies. There are no fewer than 300 distilleries in Schiedam, 100 in other parts of Holland, and not more than 40 in Belgium. The entire annual produce of the distillery in Holland is estimated at 2,000,000 ankers, or 20,500,000 wine gallons, of which about two thirds are exported. — (*Cloet, Description Géographique des Pays Bas*, p. 32.)

In nothing, perhaps, has the destructive effect of heavy taxation been so strongly exhibited, as in the trade of geneva. It appears from the *Parl. Paper* No. 248. Sess. 1826, that during the 10 years ending with 1786, when the duty on geneva was about 10*s.* the wine gallon, the average annual consumption in Great Britain amounted to about 80,362 gallons. But in 1786, Mr. Pitt reduced the duties to 5*s.* a gallon; and the effect of this wise and politic measure was such, that in the next decennial period the average imports for home consumption amounted to 444,891 gallons! From 1796 to 1806, the duties fluctuated from 7*s.* 6*d.* to 14*s.*; but as the taste for geneva had been formed, and as the duties on other spirits had been increased in about the same proportion, the consumption went on increasing, having been, at an average of the 10 years, as high as 724,351 gallons a year. This was the maximum of consumption. Mr. Vansittart soon after began his inauspicious career, and immediately raised the duty from 14*s.* to 20*s* 8*d.* the consequence of this increase being, that in the 10 years ending with 1816, the average consumption amounted to only 272,898 gallons. Since then the duties have continued stationary, being at this moment 22*s.* 10*d.* the Imperial gallon, on an article which may be bought in bond for 2*s.* 3*d.* or 2*s.* 6*d.*! The duties on rum and British spirits having been materially reduced during the last 10 years, the consumption of geneva has gone on progressively diminishing, till it now amounts, as appears from the subjoined official

statement, to no more than 13,323 gallons; being only *one fifty-fourth* part of what it amounted to during the 10 years ending with 1806!

In Ireland the effects of this *felo de se* system have been more injurious than appears from this Table. During the 4 years ending with 1803, the books of the Irish Custom-house show that there were, at an average, 82,828 gallons of geneva entered for home consumption, producing at the then duty of 7*s.* 3½*d.*, 39,923*l.* a year; whereas, notwithstanding the vast increase of population, the consumption of geneva in Ireland, in 1842, was only 1,246 gallons, and the revenue only 1,406*l.*

To make any lengthened commentary on such statements would be useless. Our policy, if we may apply this term to so revolting a display of short-sighted rapacity, has had no other effect than to lessen the public revenue and enjoyments of the people, to injure our trade with Holland, and to foster and promote the ruinous and destructive practice of smuggling. The exorbitant duties on geneva, brandy, and tobacco have led to the formation of the coast guard and the preventive water guard, costing together about 400,000*l.* a year; and yet, notwithstanding this outlay, and notwithstanding the innumerable penalties and punishments to which he is exposed, the trade of the smuggler is not put down, but is, on the contrary, in a peculiarly flourishing condition; and so it will continue, in despite of every thing that can be done for its suppression, till these duties be adequately reduced.

We believe our gin manufacturers have nothing to apprehend from a reduction of the duties on geneva to 10*s.* a gallon. The lower classes, who are the great consumers, prefer English gin to every other stimulant. Nothing would have so much influence in improving the quality of the latter as the admission of geneva at a moderate duty. It would also have the beneficial effect of putting an end to the manufacture of the spurious compounds sold under its name.

The regulations as to the importation, &c. of geneva are similar to those affecting BRANDY; which see.

An Account of the Number of Gallons (Imperial Measure) of Geneva entered for Home Consumption in Great Britain and Ireland, the Rates of Duty on the same, and the entire Nett Produce of the Duty, each Year since 1814.

GENOA, a maritime city of Italy, once the capital of the famous republic of that name, now of a province of the kingdom of Sardinia, at the bottom of the extensive gulph to which it gives its name; the light-house being in lat. 44° 24′ 40″ N., lon. 8° 52′ 55″ E. Population, in 1838, 115,257. Genoa is one of the finest cities of Europe. In general, the streets are inconveniently narrow; but some of the principal ones are moderately wide, and consist almost entirely of public buildings, and private palaces erected during the period of her prosperity. Being built on a rising ground, in the form of an amphitheatre, the appearance of the town from the sea is most magnificent, and justifies the epithet given to her of "*la superba.*"

Port. — The harbour is semicircular, the diameter being about 1,000 fathoms. It is artificial, being formed by two gigantic moles having opposite directions. That on the east side, called the old mole (*molo vecchio*), projects from the centre of the city W. by S. It is about 260 fathoms in length, and has a battery near its middle. The new mole (*molo nuovo*), on the opposite side of the port, adjoins the southern extremity of the suburb of St. Pietro d'Arena, projecting about 210 fathoms from shore in an E. S. E. direction. The mole heads bear from each other N. E. by E. and S. W. by W., the distance between them, forming the entrance to the harbour, being about 350 fathoms. The light-house is without the port, on the west side, near the extremity of a point of land, and contiguous to the bottom of the new mole. It is a lofty square tower; and as it stands on a high rock, and is painted white, it is visible in clear weather at a great distance. There is also a harbour light at the extremity of the new mole. There is no difficulty in entering the harbour; the ground is clean, and there is plenty of water, particularly on the side next the new mole; care, however, must be taken, in coming from the west, to give the light-house point a good offing. Moderate sized merchantmen commonly anchor inside the old mole contiguous to the *porto franco*, or bonded warehouses, having a hawser made fast to the mole, and an anchor ahead. Men of war and the largest class of merchantmen may anchor inside the new mole, but they must not come too near the shore. Ships sometimes anchor without the harbour in from 10 to 25 fathoms, the light-house bearing N. ½ W.; distant 2 or 3 miles. The S. W. winds occasion a heavy swell, but the bottom is clay and holds well. Within the town are two rather shallow basins designed for gallies and small trading vessels. There is also an arsenal.

Money. — Accounts were formerly kept at Genoa in lire of 20 soldi, each soldo containing 12 denari; and money was divided into *banco* and *fuori di banco*. But since the 1st of January, 1827, the ancient method of reckoning has ceased, and accounts are now kept in lire Italiane, divided into cents. The weight and fineness of the new coins are precisely the same as those of France: so that the par of ex-

change = 25·20 lire per 1*l.*, if estimated in silver at 5*s.* 2*d.* an oz., and 25·54, if estimated in silver at 5*s.* an oz. 6 old lire di banco are equal to 5 new lire very nearly.—(*Manuel de Nelkenbrecher.*) Sales of merchandise continue, however, to be, to some extent, made in the old currency. The prices given in a subsequent part of this article are in it.

The Bank of Genoa, or of St. George, was one of the most ancient and celebrated banks of circulation and deposit in Europe. Until 1746, when the bank was pillaged by the Austrians, it was customary to make all bills of exchange drawn upon Genoa payable in *banco*; but since then they have generally been made payable in money *fuori di banco*. In 1800, when the French were besieged in Genoa by the Austrians they took the treasure of the bank to pay their troops. The establishment has never recovered from this blow; some warehouses, and a part of the town's revenue, were assigned to it, but they yield a very poor dividend. It is no longer used as a place of deposit for money.

Weights and Measures.—The pound is of two sorts; the *peso sottile* = 4,891½ English grains, and the *peso grosso*. The latter is 10 per cent. heavier than the former: hence the cantaro of 100 lbs. peso sottile = 69·89 lbs. avoirdupos; and the cantaro of 100 lbs. peso grosso = 76·875 lbs. avoirdupois. The latter is used for weighing bulky commodities; the former is used in the weighing of gold and silver, and of all commodities of small bulk.

Corn is measured by the mina of 8 quarte or 96 gombette; 1 mina = 3¼ Winchester bushels nearly. Salt is sold by the mondino of 8 mine.

Of liquid measure, 100 pinte = 1 barilla.
2 barilla = 1 mezzarola = 39¼ English wine gallons. The barilla of oil = 17 English gallons.

Of long measures, the palmo = 9·725 English inches. The canna is of 3 sorts: the canna piccola, used by tradesmen and manufacturers, = 9 palme, or 87·5 English inches; the canna grossa, used by merchants, = 12 palmi = 116·7 English inches; and the canna used at the Custom-house = 10 palmi = 97·25 English inches. The braccio = 2⅔ palmi.

Trade, &c.—Genoa is the *entrepôt* of a large extent of country; and her commerce, though inferior to what it once was, is very considerable, and has latterly been increasing. She is a free port; that is, a port where goods may be warehoused and exported free of duty. The exports consist partly of the raw products of the adjacent country, such as olive oil (an article of great value and importance), rice, fruits, cheese, rags, steel, argol, &c.; partly of the products of her manufacturing industry, such as silks, damasks, and velvets (for the production of which she has been long famous), thrown silk, paper, soap, works in marble, alabaster, coral, &c.; the printed cottons of Switzerland, and the other products of that country and of the western parts of Lombardy, intended for the south of Europe and the Levant; and partly of the various foreign products brought by sea, and placed in *porto franco*. The imports principally consist of cotton and woollen stuffs; cotton wool, mostly from Egypt; corn from the Black Sea, Sicily, and Barbary; sugar, salted fish, spices, coffee, cochineal, indigo, hides, iron, and naval stores from the Baltic; hardware, and tin plates from England; wool, tobacco, lead (principally from Spain), wax, &c. Corn, barilla, Gallipoli oil, cotton, valonia, sponge, galls, and other products of the countries adjoining the Black Sea, Sicily, the Levant, &c. may in general be had here, though not in so great abundance as at Leghorn. The abolition of the various duties and Custom-house fees formerly charged on the transit of goods through Genoa and the Sardinian territories, has had a very beneficial influence on the trade of this port, particularly as regards the importation of raw cotton for Switzerland and Milan, as well as of the different descriptions of colonial produce

Statement of the Principal Articles of Raw Produce exported from Genoa, with their Prices there on the 3rd of January, 1843, in *Porto franco* (Bond), in Italian Money, Weights, and Measures, and free on Board in English Money, Weights, and Measures.—(From the *Circular of Grants, Balfour, and Co.*)

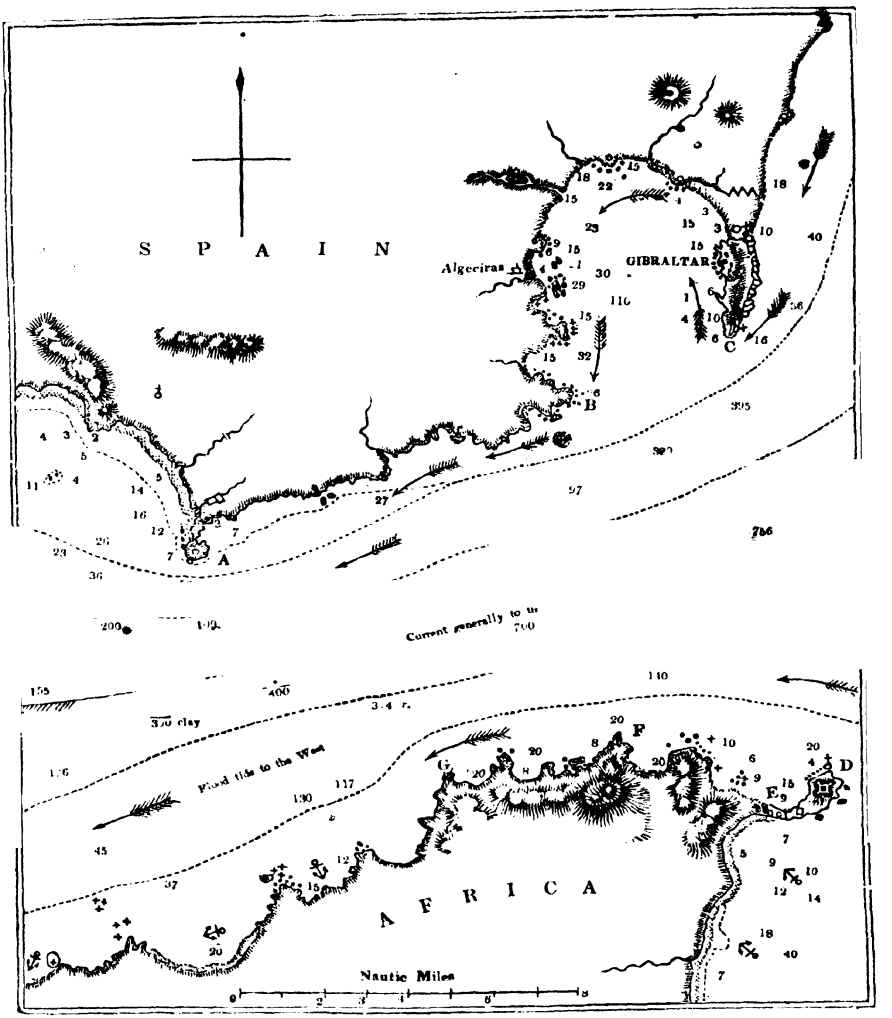
Tares.—Those of usage are,—on cotton, fish, tallow, valonea, and elephants' teeth, 4 per cent.; hemp, 1 per cent.; wood, 116 for 100 lbs.; almonds, wax, and galls, 104 for 100 lbs.; ginger, 112 for 100 lbs.; sugar in loaves, 2 per cent.; raw silk, 1 ounce per lb.; alum, argol, anchovies, barilla, brandy, flour, iron, lead, saltpetre, figs, hides, pepper, juniper berries, pumice stone, rags, raisins, rice, cream of tartar, essences, quicksilver, shumac, steel, and soap, have no tare; for all other articles sold by weight, 106 lbs. are given for every 100 lbs. These tares have been deducted from the proceeds of the imports as above stated.

The loss of weight on importations from the place of growth, partly arising from difference of tare, varies as follows:—

	Per cent.	
Sugar in chests from Rio de Janeiro, loses	1 to 3	taking 3½ arrobas as equal to 1 cwt. Eng.
bags, ditto	3 — 4	
chests from Pernambuco	4 — 6	
chests from Bahia	7 — 10	
boxes from Havannah and Cuba	4 — 6	taking 4½ ditto.
Muscovado in casks from Cuba and Porto Rico	12 — 15	

Importations from other quarters where the tares allowed are on a par with those of Genoa, generally render full weight; Havannah box sugars from the United States render 1 to 2 per cent. more than full weight.



GENTIAN (Ger. *Enzian*; Fr. *Gentiane*; It. *Genziana*; Sp. *Jenciana*; Rus. *Enzian*; Lat. *Gentiana*), the roots of two alpine plants, *Gentiana lutea* and *Gentiana purpurea*, found growing in Switzerland and Austria, the Apennines, the Pyrenees, and in North America. Those brought to this country come from Germany. They are in pieces of various lengths and thickness, twisted, wrinkled on the outside, and covered with a brownish grey cuticle. They have no particular odour; and the taste is intensely bitter, without being nauseous.—(*Thomson's Dispensatory.*)

GHEE. See BUTTER.

GIBRALTAR, a famous fortress near the southernmost extremity of Spain, and contiguous to the narrowest part of the strait, to which it gives its name, joining the Atlantic and Mediterranean, lat. 36° 6′ 30″ N., lon. 5° 21′ 12″ W. It is situated on the west side of a rocky mountain or promontory, the *Mons Calpe* of the ancients, projecting into the sea, in a southerly direction, about 3 miles, being from ¼ to ¾ of a mile in width. The southernmost extremity of the rock is called Europa Point. Its northern side, fronting the isthmus which connects it with Spain, is almost perpendicular, and wholly inaccessible; the east and south sides are so rugged and precipitous, as to render any attack upon them, even if they were not fortified, next to impossible; so that it is only on the west side, fronting the bay, where the rock declines to the sea and the town is built, that it can be attacked with the least chance of success. Here, however, the strength of the fortifications, and the magnitude of the batteries, are such, that the fortress seems to be impregnable, even though attacked by an enemy having the command of the sea. It was taken by the English in 1704, but the fortifications were then very inferior to what they are at present. Towards the end of the American war, it was attacked by a most formidable armament fitted out jointly by Spain and France; but the strength of the place, and the bravery of the garrison, defeated all the efforts of the combined powers. Population about 16,000, exclusive of the troops, which usually amount, in time of peace, to from 3,000 to 4,000.

The bay of Gibraltar is spacious; and, being protected from all the more dangerous winds, affords a convenient station for ships. Two moles have been constructed, at a vast expense, for the protection of the shipping. The old mole projects from the north end of the town, N.W. by N., 1,100 feet into the sea: the new mole is 1½ mile more to the south, extending outwards about 700 feet; it has an elbow formed by the shore, and in winter large vessels anchor inside; the farthest out in from 5 to 6 fathoms. The plan on the opposite page gives a better idea of the position of Gibraltar, as well as of the Straits, than could be derived from any description. It is taken from Captain Smyth's beautiful chart of the Mediterranean.

Trade, Political Importance, &c.—Gibraltar is of very considerable consequence as a commercial station. Being a free port, subject to no duties and few restrictions, she is a convenient *entrepôt* for the English and other foreign goods destined for the supply, principally through illegitimate channels, of the contiguous Spanish provinces. Its importance, in this respect, has increased very rapidly during the last 10 years; so much so, that while the declared value of the various articles of British produce and manufacture exported to Gibraltar in 1833 amounted to only 385,460*l.*, they amounted to 1,111,176*l.* in 1840, and to 1,053,367*l.* in 1841. Of the exports in 1840, cotton goods amounted to 635,821*l.*, linen ditto 217,001*l.*, woollen ditto 97,092*l.*, hardware and cutlery 24,311*l.*, iron and steel 25,699*l.*, with a great variety of inferior articles. We also send to Gibraltar considerable quantities of foreign and colonial merchandise, nine-tenths of which are destined for the supply of Spain.

References to Plan. — A, point and light-house of Tariffa, lat. 36° 0′ 30″ N., lon. 5° 35′ 15″ W. The light-house was erected in 1813, and the light revolves. B. Cabrita Point. C, Europa Point, the extremity of the rock of Gibraltar. D, town and fortress of Ceuta, on the African coast. E, Little Ceuta Bay. F, Point Leona. G, Point Cires. The soundings and the direction of the currents are marked in the chart. Variation in the Straits, 22° 31′.

Gibraltar is also of great importance to Great Britain in a military and naval point of view, being, in fact, the key of the Mediterranean, and affording a convenient and secure station for the outfit, refreshment, repair, and accommodation of our ships of war and merchantmen. The revenue collected in the town amounts to from 30,000*l.* to 40,000*l.*, which is about sufficient to defray the public civil expenditure of the place. The expense annually incurred in Great Britain on account of the garrison, in time of peace, amounts to about 200,000*l.* — a small sum compared with the important political and commercial advantages it is the means of securing.

Money. — The effective or hard dollar = 4*s.* 4*d.*; the current dollar being estimated at ⅘ hard dollars = 3*s.* 10½*d.* Reals and quartos of both hard and current dollars are the same, being, the former = 4½*d.*, and the latter = 1$\frac{1}{16}$*d.*

Accounts are kept in current dollars (pesos), divided into 8 reals of 16 quartos each; 12 reals currency make a cob or hard dollar, by which goods are bought and sold; and 5 of these reals are considered equal to 5 Spanish reals vellon.

Gibraltar draws on London in effective dollars of 12 reals, and London on Gibraltar in current dollars of 8 reals.

The exchange of Gibraltar on Cadiz, and other cities of Spain, is in hard dollars at a percentage, which varies considerably, and mostly in favour of Gibraltar.

Weights and Measures are those of England, excepting the arroba = 25 lbs. English; grain is sold by the fanega, 5 of which make 1 Winchester quarter; wine is sold by the gallon, 100 of which are equal to 109·1 English wine gallons.

GILD, or GUILD, a company of merchants or manufacturers, whence the halls of such companies are denominated Gild or Guild Halls.

GILL, a measure of capacity. See WEIGHTS and MEASURES.

GIN. English geneva, or gin, is made of spirit obtained from oats, barley, or malt, rectified, or redistilled, with the addition of juniper berries, oil of turpentine, &c. All spirits manufactured in England, and most of the Scotch and Irish spirits imported into England, are subjected to the process of rectification. English gin is said to be one of the most wholesome spirits. —(See SPIRITS.)

GINGER (Ger. *Ingwer*; Du. *Gember*; Fr. *Gingembre*; It. *Zenzero*; Sp. *Jenjibre, Agengibre*; Rus. *Inbir*; Lat. *Zingiber*; Pers. *Zungebeel*; Arab. *Zingebeel*), the roots of a plant (*Amomum Zingiber*), a native of the East Indies and China, but which was early carried to and succeeds very well in the West Indies. After the roots are dug, the best are selected, scraped, washed, and dried in the sun with great care. This is called *white ginger*; while the inferior roots, which are scalded in boiling water before being dried, are denominated *black ginger*. Preserved ginger is made by scalding the green roots, or the roots taken up when they are young and full of sap, till they are tender; then peeling them in cold water, and putting them into a thin syrup, from which they are shifted into the jars in which they come to us, and a rich syrup poured over them. Dried ginger has a pungent aromatic odour, and a hot, biting taste. It is imported in bags, each containing about a cwt. The white brings the highest price, being more pungent and better flavoured. The external characters of goodness in both sorts of dried ginger are, soundness, or the being free from worm holes, heaviness, and firmness; the pieces that are small, light, and soft, or very friable and fibrous, should be rejected. The best preserved ginger is nearly translucent; it should be chosen of a bright yellow colour; rejecting that which is dark-coloured, fibrous, or stringy. —(*Milburn's Orient. Commerce*; *Thomson's Dispensatory.*)

The consumption of ginger does not exceed 10,000 cwt. a year. This is principally to be ascribed to the oppressive duties with which it was burdened previously to 1842, these being no less than 2*l.* 13*s.* a cwt. on foreign ginger, and 11*s.* on that brought from a British possession; but in the above mentioned year the duties were reduced to 10*s.* and 5*s.* a cwt. Of 16,004 cwt. of ginger imported in 1840, 5,381 came from the British West Indies, 9,727 from the East India Company's possessions and Ceylon, and 896 from Western Africa.

GINSENG (Du. *Ginseng, Ginsem*; Fr. *Ginseng*; Ger. *Kraftwerzel, Ginseng*; It. *Ginseng*; Sp. *Jinseng*; Chin. *Yansam*; Tart. *Orhota*), the root of a small plant (*Panax quinquefolium* Lin.), growing in China, Tartary, and several parts of North America. The latter is what we generally see in England, and is an article of trade to China, which is its only market. Large quantities were formerly exported from this country; but it is now carried direct to China by the Americans. It is sometimes exported crude, and sometimes cured or clarified. Within these few years, it has been discovered in the Himalaya mountains, and small quantities have been thence sent to Canton; but the speculation has not succeeded. It is only about 40 years since it began to be sent from America to China. Previously to the present century, the Chinese drew their supplies from the wilds of Tartary, and the root brought an exorbitant price. Crude ginseng now sells in the Canton market at from 60 to 70 dollars per picul, and prepared at from 70 to 80 dollars. In 1841, there were sent from the United States to China, 640,967 lbs. of ginseng, valued at 437,245 dollars. —(*Papers laid before Congress*, July 21. 1842.)

GLASS (Ger. and Du. *Glas*; Fr. *Vitre, Verre*; It. *Vetro*; Sp. *Vidrio*; Rus. *Steklo*; Lat. *Vitrum*), a transparent, brittle, factitious body. It is formed by mixing together some sort of siliceous earth, as fine sand, or pounded flint, with an alkali, such as soda, potash, or pearlash, and subjecting them to a strong heat. By this means they are melted into a transparent, soft, tenacious mass, that may, when hot, be formed into thin plates, bent and shaped in every possible way. When cool, it becomes brittle, and is denominated glass. Litharge, minium, borax, the black oxide of manganese, &c. are sometimes used in the manufacture of glass, according to the purposes to which it is to be applied.

The kinds of glass, and their ingredients, are stated by Dr. Ure as follows: —

"There are 5 distinct kinds of glass at present manufactured: —1. Flint glass, or glass of lead; 2. Plate glass, or glass of pure soda; 3. Crown glass, the best window glass; 4. Broad glass, a coarse window glass; 5. Bottle, or coarse green glass.

"1. *Flint Glass*, so named because the siliceous ingredient was originally employed in the form of ground flints. It is now made of the following composition: —

Purified Lynn sand	-	-	100 parts
Litharge, or red lead	-	-	60 —
Purified pearlash	-	-	30 —

To correct the green colour derived from combustible matter, or oxide of iron, a little black oxide of manganese is added, and sometimes nitre and arsenic. The fusion is accomplished usually in about 30 hours.

"2. *Plate Glass*. — Good carbonate of soda, procured by decomposing common salt with pearlash, is employed as the flux. The proportion of the materials is —

Pure sand - -	45·0
Dry subcarbonate of soda	25·5
Pure quicklime -	4·0
Nitre -	1·5
Broken plate glass -	25·0 — 100·0.

About 70 parts of good plate glass may be run off from these materials.

"3. *Crown, or fine Window Glass*. — This is made of sand vitrified by the impure barilla manufactured by incineration of sea weed on the Scotch and Irish shores. The most approved composition is —

	By Measure.	By Weight.
Fine and purified -	- 5 -	200
Best kelp ground -	- 11 -	330

"4. *Broad Glass*. — This is made of a mixture of soap-boilers' waste, kelp, and sand. The first ingredient consists of lime used for rendering the alkali of the soap-boiler caustic, the insoluble matter of his kelp or barilla, and a quantity of

water, all in a pasty state. The proportions necessarily vary. 2 of the waste, 1 of kelp, and 1 of sand, form a pretty good broad glass. They are mixed together, dried, and fritted.

"5. *Bottle Glass* is the coarsest kind.' It is made of soapers' waste and river sand, in proportions which practice must determine according to the quantity of the waste; some soapboilers extracting more saline matter, and others less, from their kelps. Common sand and lime, with a little common clay and sea salt, form a cheap mixture for bottle glass."

1. *Historical Notices with respect to Glass.* — The manufacture of glass is one of the very highest beauty and utility. It is most probable that we are indebted for this wonderful art, as we are for the gift of letters, to the Phœnicians. According to Pliny (*Hist. Nat.* lib. xxxvi. c. 26.), glass had been made for many ages, of sand found near the mouth of the small river Belus in Phœnicia. "The report," says he, "is, that the crew of a merchant ship laden with nitre (fossil alkali) having used some pieces of it to support the kettles placed on the fires they had made on the sand, were surprised to see pieces formed of a translucent substance, or glass. This was a sufficient hint for the manufacture. Ingenuity (*astuta et ingeniosa solertia*) was immediately at work, to improve the process thus happily suggested. Hence the magnetical stone came to be added, from an idea that it contained not only iron, but glass. They also used clear pebbles, shells, and fossil sand. Indian glass is said to be formed of native crystal, and is on that account superior to every other.* Phœnician glass is prepared with light dry wood, to which copper and nitre are added, the last being principally brought from Ophir. It is occasionally tinged with different colours. Sometimes it is brought to the desired shape by being blown, sometimes by being ground on a lathe, and sometimes it is embossed like silver." Sidon, he adds, is famous for this manufacture. It was there that mirrors were first invented. In Pliny's time, glass was made in Italy, of fine sand on the shore between Cumæ and the Lucrine bay.

Glass was manufactured at Rome into various articles of convenience and ornament. Pliny mentions that Nero gave 6,000 sesterces (50,000*l.* according to the ordinary method of reckoning) for two glass cups, each having two handles! These, however, must have been of an immense size and of exquisite workmanship; for glass was then in common use for drinking vessels, and was used even in the form of bottles in which to keep wine. — (*Mart. Epig.* lib. ii. 22. 10., and lib. iv. 86.)

There is no authentic evidence of glass being used in windows previously to the third or fourth century; and then, and for long after, it was used only in churches and other public buildings. In this country, even so late as the latter part of the sixteenth century, glass was very rarely met with. In a survey of Alnwick Castle, made in 1573, it is stated — "And, because throwe extreme winds, the glasse of the windowes of this and other my lord's castles and houses here in the country dooth decay and waste, yt were good the whole leights of everie windowe, at the departure of his lordshippe from lyinge at any of his said castels, and houses, and dowring the time of his lordship's absence, or others lyinge in them, were taken doune and lade up in safety: And at sooche time as ather his lordshippe or anie other sholde lye at any of the said places, the same might then be set uppe of newe, with smale charges, whereas now the decaye thereof shall be verie costlie and chargeable to be repayred." — (*North. Housh. Book*, xvii.) Sir F. M. Eden thinks it probable that glass windows were not introduced into farmhouses in England much before the reign of James I. They are mentioned in a lease in 1615, in a parish in Suffolk. In Scotland, however, as late as 1661, the windows of ordinary country houses were not glazed, and only the upper parts of even those in the king's palaces had glass; the lower ones having two wooden shutters, to open at pleasure, and admit the fresh air. From a passage in Harrison's *Description of England*, it may be inferred that glass was introduced into country houses in the reign of Henry VIII. He says, — "Of old time," (meaning, probably, the beginning of the century,) "our countrie houses instead of glasse did use much lattise, and that made either of wicker or fine rifts of oke in checkerwise. I read also that some of the better sort, in and before the time of the Saxons, did make panels of horne instead of glasse, and fix them in wooden calmes (casements); but as horne in windowes is now (1584) quite laid downe in everie place, so our lattises are also growne into disuse, because glasse is come to be so plentiful, and within verie little so good, cheape, if not better than the other." Glass is now introduced into the windows of almost every cottage of Great Britain; and in this cold, damp climate, it ought rather to be considered as a necessary of life, than as the most elegant and useful of conveniences. What Dr. Johnson has said as to glass deserves to be quoted. — "By some fortuitous liquefaction was mankind taught to produce a body at once in a high degree solid and transparent, which might admit the light of the sun, and exclude the violence of the wind; which might extend the sight of the philosopher to new ranges of existence, and charm him at one time with the unbounded extent of the material creation, and at another with the

* If this be a correct description of the glass of India in the age of Pliny, it has since fallen off very much; Indian glass being now about the very worst that is made. At present, the Hindoos manufacture it of fragments of broken glass, quartz sand, and impure soda, — an article found native in many parts of India, particularly in the south. The furnaces are so bad that they cannot melt our common bottle glass. — (*Hamilton's Mysore*, vol. iii. p. 370.) The glass of China is much better than that of India, though still very inferior to that Europe.

endless subordination of animal life; and, what is yet of more importance, might supply the decays of nature, and succour old age with subsidiary sight. Thus was the first artificer in glass employed, though without his own knowledge or expectation. He was facilitating and prolonging the enjoyment of light, enlarging the avenues of science, and conferring the highest and most lasting pleasures; he was enabling the student to contemplate nature, and the beauty to behold herself." — (*Rambler*, No. 9.)

Venice, for a long time, excelled all Europe in the manufacture of glass, but was subsequently rivalled by France. The manufacture was early introduced into England; but it was not carried on to any extent previously to the sixteenth century. The first plates for looking-glasses and coach windows were made in 1673, at Lambeth, by Venetian artists under the protection of the Duke of Buckingham. The British Plate Company was incorporated in 1773, when it erected its extensive works at Ravenhead, near St. Helen's, in Lancashire. The manufacture was at first conducted by workmen from France, whence we had previously brought all our plate glass. But that which is now made at Ravenhead, at Liverpool, and London, is equal or superior to any imported from the Continent.

It is difficult to form any precise estimate of the value of the glass annually produced in Great Britain. We believe, however, that it cannot amount to less than 2,000,000*l.*; and that the workmen employed in the different departments of the manufacture exceed 40,000.

Duties on Glass. — Considering the vast importance of glass, and the various necessary, convenient, and ornamental purposes to which it is applied, it were much to be wished that it could be exempted from all taxation. But if the public exigencies make its taxation indispensable, the duties on it should, at all events, be kept within reasonable limits, and imposed in the way least likely to be injurious. We regret, however, to have to state that these apparently obvious considerations have been all but wholly lost sight of in the taxing of glass in this country; the duties on it having been carried to a most exorbitant extent, and imposed in the most oppressive manner. After successive augmentations, the duties were raised in 1813 to the amount of 98*s.* a cwt. on flint and plate glass! And the consequence was, that, despite the increase of wealth and population in the interim, the consumption of both these sorts of glass was less than it had been in 1794, when the duty was only 32*s.* 2½*d.* a cwt.! The progress of the manufacture and of the duties since 1813 is exhibited in the subjoined tables, the influence of the various modifications of the latter on production being too obvious to require being pointed out. Still, however, there can be no doubt that the duty is at this moment a great deal too high, and that it is in other respects most objectionable.

We do not know whether it be possible materially to vary the mode in which the duties are assessed, without opening a still wider door to fraud than that which now exists. But at present they not only augment the price of a most indispensable article by their entire amount, but they farther augment it, and that in no inconsiderable degree, by fettering the operations of the manufacturers, and preventing them from making experiments and improvements, and introducing new processes. In this respect the duties are especially injurious. Nor can any one acquainted with the facts entertain any doubt that the Commissioners of Excise Inquiry were fully justified in expressing their conviction that "*no tax can combine more objections, or be more at variance with all sound principles of taxation, than this duty on glass.*"

If it be impossible otherwise to get rid of these duties, we incline to think that they might be advantageously commuted for an increase of the duty on windows in houses of 10*l.* a year and upwards. The greater cheapness of glass would more than compensate to most householders for the increase of the window tax, at the same time that the glass manufacture would be vastly increased and improved.

But, whatever may be done with the rest, that portion of the duty which is assessed on common bottle glass should certainly be repealed. It is oppressive without being productive, and might be abandoned without any considerable sacrifice. The duty on this description of glass produced, at an average of the 3 years ending with 1842, 172,518*l.* a year of gross income; but of this no less than 100,317*l.* a year was drawn back on exportation, making the nett revenue only 72,201*l.* a year! — a miserable compensation for the injury done to the manufacture and the public, and for the fraud inseparable from such a duty.

The excise regulations as to the manufacture of glass were formerly dispersed over various statutes, and were at once numerous and complicated in the extreme. Latterly, however, they have been consolidated in the statute 1 & 2 Vict. c. 44.; but, notwithstanding the regulations have been a good deal simplified, this statute is of great length, comprising no fewer than 95 sections; so that, were its length not a sufficient obstacle, it would be quite useless giving any abstract of it in this place, as no one would think of engaging in the manufacture without having beside him a copy of the act.

I. A Return of the Rates of Duty on Glass in 1813, with the Quantities of each Kind of Glass retained for Home Use, and the aggregate Nett Revenue in each Year, from 1813 to 1842, both included, noting the Periods when any Alteration of the Duty took place, and the Amount of such Alterations.

				And further, on the above rates, 5*l.* per centum, from the 10th of May, 1840.						

GLOVES (Ger. *Handschuhe*; Fr. *Gants*; It. *Guanti*; Sp. *Guantes*; Rus. *Rukawizii, Pertschatki, Golizii*), well known articles of dress used for covering the hands, usually made of leather, but frequently also of cotton, wool, silk, &c. The leather used in the manufacture of gloves is not, properly speaking, tanned, but prepared by a peculiar process that renders it soft and pliable. Some sorts of leather gloves admit of being washed, and others not. Woodstock and Worcester, but particularly the former, are celebrated for the manufacture of leather gloves of a superior quality; in which a great number of women and girls, as well as men, are employed. The produce of the Worcester manufacture has been estimated at about 42,000 dozen pairs of oil leather, or beaver gloves; and 470,000 dozen pairs of kid and lamb-skin gloves; the value of the whole, when finished, being about 375,000*l.* Besides Worcester and Woodstock, London, Yeovil, Ludlow, and Leominster are the principal seats of the leather glove manufacture. Gloves are sometimes sewed by machinery; but this is done only to improve the work by rendering the stitches more correctly equidistant, as it is not cheaper than manual labour. Limerick used to be famous for the manufacture of a sort of ladies' gloves, called chicken gloves. Large quantities of cotton gloves are made at Nottingham and Leicester.

Influence of Repeal of Prohibition of Importation. — The importation of leather gloves and mitts was formerly prohibited, under the severest penalties. This prohibition had the effect, by preventing all competition and emulation with the foreigner, to check improvement, and to render British gloves at once inferior in quality and high in price. This system was, however, permitted to continue till 1825, when the prohibition was repealed, and gloves allowed to be imported on payment of duties, which, though high, are not prohibitory. This measure was vehemently opposed; and many predictions were made of the total ruin of the manufacture; but in this, as in most other instances, experience has shown that the trade had not been materially benefited by the prohibition. The wholesome competition to which the manufacturers now felt themselves, for the first time, exposed, made them exert all their energies; and it is admitted on all hands, that there has been a more rapid improvement in the manufacture during the last dozen years than in the previous half century. There has been, no doubt, a great deal of complaining of a decay of trade among the leather glove manufacturers; but we are assured that, if there be any real foundation for their complaints, it is ascribable far more to the growing use of home-made cotton gloves than to the importation of foreign leather gloves; and had it not been for the improved fabric, and greater cheapness of British leather gloves, that has grown out of the new system, it is abundantly certain that cotton gloves would have gained still more rapidly on them. In point of fact, however, it does not appear, taking the smuggling that formerly existed into account, that there has been any falling off in the leather glove trade. At all events, there has been no serious falling off in the number of skins brought from abroad to be used in the manufacture, and consequently in the number of pairs of gloves produced from such skins; and there is no reason for thinking that it is different with the other departments.

Leather gloves must be imported in packages, containing each 100 dozen pairs at least, and in vessels of 70 tons burden or upwards, on penalty of forfeiture. — (7 *Geo.* 4. c. 48. § 7.)

Account of the Number of Pairs of Habit Gloves, Men's Gloves, and Women's Gloves and Mitts, imported into the United Kingdom, with the Amount of Duty paid thereon, in 1840, 1841, and 1842, and the Rates of Duty.

GOLD (Ger. *Gold*; Du. *Goud*; Da. and Sw. *Guld*; Fr. *Or*; It. and Sp. *Oro*; Port. *Oiro*, *Ouro*; Rus. *Soloto*; Pol. *Zloto*; Lat. *Aurum*; Arab. *Tibr* and *Zeheb*; Sans. *Swarna*; Malay, *Mās*), the most precious of all the metals, seems to have been known from the earliest antiquity. It is of an orange red, or reddish yellow colour, and has no perceptible taste or smell. Its lustre is considerable, yielding only to that of platinum, steel, silver, and mercury. It is rather softer than silver. Its specific gravity is 19·3. No other substance is equal to it in ductility and malleability. It may be beaten out into leaves so thin, that one grain of gold will cover $56\frac{3}{4}$ square inches. These leaves are only $\frac{1}{282003}$ of an inch thick. But the gold leaf with which silver wire is covered has only $\frac{1}{12}$ of that thickness. An ounce of gold upon silver is capable of being extended more than 1,300 miles in length. Its tenacity is considerable, though in this respect it yields to iron, copper, platinum, and silver. From the experiments of Seckingen, it appears that a gold wire 0·078 inch in diameter, is capable of supporting a weight of 150·07 lbs. avoirdupois without breaking. It melts at 32° of Wedgwood's pyrometer. When melted, it assumes a bright bluish green colour. It expands in the act of fusion, and consequently contracts while becoming solid more than most metals; a circumstance which renders it less proper for casting in moulds. — (*Thomson's Chemistry.*)

For the quantities of gold produced, and the places where it is produced, see PRECIOUS METALS.

GOMUTI, OR EJOO, a species of palm (*Borassus Gomutus*), growing in the Indian islands. A valuable product is obtained from this palm, resembling *black horse hair*; it is found between the trunk and the branches, at the insertion of the latter, in a matted form, interspersed with long, hard, woody twigs of the same colour. When freed from the latter, it is manufactured by the natives into cordage. Its fibres are stronger and more durable, but less pliant, than those of the cocoa nut, or coir — (see COIR); and is, therefore, fitter for cables and standing rigging, but less fit for running rigging. The native shipping of the Eastern islands of all kinds are chiefly equipped with cordage of the gomuti; and the largest European shipping in the Indies use cables of it. It undergoes no preparation but that of spinning and twisting; no material similar to our tar or pitch, indispensable to the preservation of hempen cordage, being necessary with a substance that, in a remarkable degree, possesses the quality of resisting alternations of heat and moisture. The gomuti of Amboyna, and the other Spice islands, is the best. That of Java has a coarse ligneous fibre. Gomuti is generally sold in twisted shreds or yarns, often as low as 1 dollar a picul, and seldom more than 2. Were European ingenuity applied to the improvement of this material, there seems little doubt that it might be rendered more extensively useful. — (*Crawfurd's East. Archip.* vol. iii. p. 425.)

GOOD HOPE, CAPE OF. See CAPE TOWN.

GOTTENBURG, OR, more properly, GOTHABORG, on the south-west coast of Sweden, at the head of a fiord near the Cattegat, which receives the river Götha, lat. 57° 42′ 4″ N., lon. 11° 57′ 45″ E. Population 29,000, and increasing. Vessels do not come close to the city, but lie in the river or harbour at a short distance from the shore, goods being conveyed from and to them by lighters that navigate the canals

by which the lower part of the town is intersected. The depth of water in the port is 17 feet, and there is no tide, bar, or shallow. A vessel entering the Götha must take a pilot on board, whose duty it is to meet her ½ league west of Wingo beacon. After Stockholm, Gottenburg has the most extensive commerce of any town in Sweden. Iron and steel, the former excellent, but the latter inferior to that made in England, form the principal articles of export. They are brought from the rich mines of Wermeland, distant about 200 miles; being conveyed partly by the lake Wener, partly by the Tröllhætta canal — (see CANALS), — and partly by the river Götha. The exports of iron, in 1839, amounted in all to 191,150 sklb., of which 134,630 were taken by the U. States, and 35,180 by England. The original cost of iron is supposed to be increased about 5 per cent. by the expense of its conveyance to Gottenburg; and the shipping charges, inclusive of the export duty, are about 10 per cent. additional. The next great article of export is timber, particularly deals, which are also furnished by Wermeland. Of these, the exports, in 1839, were 148,650 dozen, of which 64,870 dozen went to Great Britain, and the residue to France, Holland, &c. The other articles of export are, linen, sail-cloth, tar, copper, alum, glass, cobalt, manganese, linseed, oak bark, bones, juniper berries, cranberries, rock moss for dyeing, &c. Grain is sometimes imported and sometimes exported. The principal articles of import are sugar, coffee, tobacco, cotton yarn and twist, salt, indigo, and dye woods, South Sea oil, rice, herrings, wine, spices, &c. There belonged to the port in 1837, exclusive of river craft, 72 vessels of the aggregate burden of 6,354 Swedish lasts, or 15,250 English tons, which had increased in 1839 to 8,100 lasts, and in 1840 to about 9,600 ditto.; and ship building has since been going on briskly. The opening of the Götha canal by which Gottenburg communicates with a large portion of the interior of Sweden, has exercised a powerful and beneficial influence over her commerce. She carries on an extensive trade with England, and English is generally understood. Steamers run once a week between Gottenburg and Hull for 8 months of the year; but in winter the intercourse with England is kept up by the tedious route of Lubeck and Hamburg.

Herring Fishery. — Gottenburg used, at no distant period, to be one of the principal seats of the herring fishery; but at present this branch of industry is quite extinct, and it has always been very capricious. From 1556 to 1588, great quantities of herrings were taken; from 1588 to 1660, they left the coast; during the next 15 years they were again abundant: but from 1675 to 1747, they entirely disappeared. From 1747 to 1770, they were abundant, 186,614 barrels being taken in 1763, and 151,483 in 1768. From 1786 to 1799, the fishery was very good, from 110,000 to 190,000 barrels being annually exported. In 1804, the export was 79,512 barrels. In 1808 and 1809, fish were very scarce; and in 1812 they entirely disappeared, and have not hitherto returned: so that Gottenburg, instead of exporting, at present imports considerable supplies of herrings.

Both iron and timber pay duties on exportation, but they are not heavy.

Custom-house Regulations and Port Charges.—On arriving in port, no person is allowed to board or to leave a vessel till she be in custody of the officers; who, having inspected the manifest and papers, send them to the Custom-house. An officer is appointed to superintend the unloading and also the loading. The public charges of all sorts on a Swedish ship and on a foreign ship not privileged, each of 300 tons burden, unloading and loading mixed cargoes at Gottenburg, would be, on the former 2*l.* 5*s.* 7*d.*, on the latter 4*l.* 5*s.* 7*d.* On a privileged foreign ship the charges are the same as on a Swedish ship.

Warehousing System. — Goods may be bonded for any length of time, on paying ½ per cent. *ad valorem* for the first 2 years, and ¼ per cent. annually thereafter.

Commission, Credit, &c. — The usual rate of commission is 2 per cent. Goods are commonly sold on credit. Raw sugar at 9 months, with 3 months' interest to the seller. Other goods at 3, 4, and 6 months.

Banking, &c.—There are no public or private banking establishments at Gottenburg for the issue of notes; but the national bank has two offices here which advance limited sums of money, at 5 per cent. on the security of goods, and in discount of bills. Some of the English insurance companies have agents here, who do a good deal of business.

Sea Stores, Water, &c.—These may be had here of excellent quality and cheap. Beef 1½*d.* per lb., best rye bread 2½*d.* per lb., and butter 6*d.* per lb.

Money, Weights, Measures, &c., same as at Stockholm, which see.

In compiling this article, we have made use of consular returns, *Coxe's Travels in the North of Europe*, vol. iv. pp. 267—275.; and some valuable *private communications*.

GRACE, DAYS OF. See EXCHANGE.

GRAPES (Ger. *Trauben*; Fr. *Raisins*; It. *Grappoli, Grappi*; Sp. *Uhas, Racimos*; Lat. *Uvæ*), a well known fruit, produced from the vine. France, Spain, Portugal, and Italy, as well as some parts of Germany and Hungary, produce grapes which yield wines of various qualities and flavour, many of them excellent. We import green grapes from Lisbon, and other parts of Portugal, Malaga, &c.: they are brought packed in jars, and secured from damage by means of saw-dust, plentifully strewed between the layers of fruit. The grapes grown in Great Britain in the open air are much smaller, and by no means so luscious, as those of foreign countries; but those raised in hot-houses are quite equal, if not superior, to the latter. Grapes are imported not only in their natural state, but dried and preserved, in which latter state they are denominated RAISINS; which see.

GRINDSTONES, flat circular stones of different diameters and thickness, mounted on spindles or axles, and made to revolve with different degrees of velocity, employed to polish steel articles, to give an edge to cutting instruments, &c. Grindstones not in constant use are commonly turned by winch handles; but at Sheffield and other places, where polished articles and cutlery are extensively manufactured, large numbers of grindstones, being mounted in buildings appropriated to that purpose, called grind or blade mills, are turned by straps, acting on their axles, the moving power being either water or steam. The stone best suited to form grindstones is what is called a sharp-grit; it

being chosen finer or coarser grained according to the purposes for which they are destined. The principal grindstone quarry in England is at Gateshead Fell, in the county of Durham; where they are produced in vast numbers, not only for home use, but for exportation to all parts of the world. But those principally in use at Sheffield are mostly quarried at Wickersley, in Yorkshire.

They are classed in eight different sizes, called *foots*, according to their dimensions, as in the following table:—

Denominations.	Diameter.	Thickness.	No. in a Chaldron.	Denominations.	Diameter.	Thickness.	No. in a Chaldron.
	Inches.	*Inches.*			*Inches.*		
1 foot	10	2	36	5 foots	35		5
2 foots	14	2½	27	6 foots	42		3
3 foots	20	4	18	7 foots	50		1¼
4 foots	28	4	9	8 foots	56		

A grindstone foot is 8 inches: the size is found by adding the diameter and thickness together. Thus, a stone 56 inches diameter by 8 thick, making together 64 inches, is an 8-foot stone, of 8 inches each foot.

Besides the above sizes, grindstones are made, when ordered, of any intermediate dimensions: many are made much larger than any of the above sizes; some as large as 76 inches diameter, and 14 or 15 inches thick, which are a great weight, a cubic foot weighing 1 cwt. 1 qr. 14 lbs. — (*Rees's Cyclopædia; Bailey's Survey of Durham*, p. 43.)

Grinding is an unhealthy and dangerous employment. For some purposes, the stones are made to revolve with an extreme degree of velocity, which makes them occasionally fly in pieces. But the greatest annoyance to which the grinder is exposed is from his inhaling the minute particles of stone, and of iron and steel, that are always flying about, particularly in the process termed dry grinding. Contrivances have been suggested for obviating this serious inconvenience; but whether it be owing to their unsuitableness, or to the carelessness of the workmen, none of them has succeeded in practice. — (*Treatise on Iron and Steel, Lardner's Cyclopædia*, p. 293.)

GUAIACUM, or LIGNUM VITÆ (Fr. *Gayac, Bois saint*; Ger. *Pockholz*; It. *Guajaco*; Lat. *Guaiacum, Lignum vitæ*; Sp. *Guayaco*), the wood of a tree, a native of Jamaica, Hayti, and the warmer parts of America. It is a dark-looking evergreen, growing to from 40 to 50 feet in height, and from 14 to 18 inches in diameter. The bark is hard, smooth, and brittle; the wood is externally yellowish, and internally of a blackish brown colour. Lignum vitæ is the weightiest timber with which we are acquainted, its specific gravity being 1·333. It is exceedingly hard, and difficult to work. It can hardly be split, but breaks into pieces like a stone, or crystallised metal. It is full of a resinous juice (*guaiac*), which prevents oil or water from working into it, and renders it proof against decay. Its weight and hardness make it the very best timber for stampers and mallets; and it is admirably adapted for the sheaves or pulleys of blocks, and for friction rollers or castors. It is extensively used by turners.

The *guaiac*, or gum, spontaneously exudes from the tree, and concretes in very pure tears. It is imported in casks or mats; the former containing from 1 to 4 cwt., the latter generally less than 1 cwt. each. Its colour differs considerably, being partly brownish, partly reddish, and partly greenish; and it always becomes green when left exposed to the light in the open air. It has a certain degree of transparency, and breaks with a vitreous fracture. When pounded, it emits a pleasant balsamic smell, but has scarcely any taste, although when swallowed it excites a burning sensation in the throat. When heated, it melts, diffusing, at the same time, a pretty strong fragrant odour. Its specific gravity is 1·229. — (See *Veget. Sub., Lib. of Entert. Knowledge; Thomson's Chemistry, &c.*)

GUANO, or HUANO (the Peruvian term for manure), a substance used as a manure found on certain small islands off the coast of Peru and Bolivia, and on parts of the shore of the mainland. It is friable and easily reduced to powder; its colour varies from a dull red to a dirty white, and it has a strong smell, and a fat, unctuous feel. At an average it may weigh from 50 to 60 lbs. a bushel. Humboldt was either the first, or one of the first, by whom this important substance was brought to Europe; but it was described at a much earlier date by Ulloa (*Voyage au Perou*, i. 481.), and has been used as a manure by the Peruvians from the age of the Incas downwards. Very different opinions have been entertained as to its nature and origin. Many have supposed that it was a peculiar mineral or earth; but Ulloa is clearly of opinion that it consists of the excrements of the sea-birds which are found in prodigious swarms all along the Peruvian and Bolivian shores; and there can hardly be any longer a doubt that such is the case. The localities where the deposit is principally met with being within a rainless region, it is accumulated with a rapidity of which we have no idea. Guano is of very different qualities: some authorities give the preference to the whitish varieties, which are believed to be more recent, while others prefer the red. According to Klaproth, a quantity of guano represented by 100 contained, urate of ammonia 16 parts, phosphate of lime 10 do., oxalate of lime 12¾ do., silica 4 do., common salt ¼ do., sand 28 do., and water, organic and combustible matter, 28¾ do.; but its composition is found to differ very materially. The best is that which contains the greatest proportion of ammoniacal salts.

Guano has been only very recently introduced into England; and there is a good

deal of discrepancy in the statements that have been put forth as to its operation. There can, however, be no doubt that it is a most efficient manure, and that about 2 or 2½ cwt. per acre of average guano mixed with about two-thirds the usual quantity of farm-yard manure (which is required to keep the soil loose) will produce, when applied to land that is well drained, nearly double the ordinary quantity of potatoes. In turnip husbandry, splendid crops are produced by the agency of guano only; but in this case from 4 to 5 cwt. per acre should be applied. It has, also, a powerful influence in improving crops of corn and the pasture following such crops. The effect of guano is very materially increased by its being covered up to some considerable depth as soon as it is laid on the soil; and top-dressing is certainly the most wasteful way of applying the manure. —(*Private information.*) Under such circumstances it becomes of very considerable importance to learn the probable supply of this valuable deposit, and the price at which it may be imported and sold in Europe.

Unfortunately, however, our information on both these points is less complete than might be desired. Since it began to be largely exported to this and other foreign countries, an apprehension has, we understand, begun to gain ground in Peru, that the deposits would in no very long time be wholly exhausted; and as this would occasion the ruin of those estates along the coast of Peru, and the department of Arequipa, in which guano has long been extensively used as a manure, government has been called upon to avert this catastrophe by prohibiting its export. We are, however, well convinced that this apprehension is entirely groundless, and that the deposits are in fact all but inexhaustible. At present guano is principally obtained from some small islands opposite Pisco, in about lat. 13° 55′ S., and long. 76° 30′ W., and it is stated by Mr. B. H. Wilson, the well-informed English consul in Peru, that though it is supposed that about 300 tons a year have been carried for centuries from Chincha, one of the islands in question, to the opposite coast, it is estimated that there is still upon that island the enormous quantity of 17,000,000 tons, and that the supply in the various islands of the group now alluded to, may be safely estimated at above 40,000,000 tons! But, exclusive of these, there are other islands more to the south, whence guano is shipped for Arequipa, and which are still very far from being exhausted; and, as already stated, vast deposits have been found on the coast of the mainland, especially near La Mar or Cobija; so that, making every allowance for exaggeration, the supply of guano cannot, for all practical purposes, be regarded otherwise than as inexhaustible.

The islands where the guano is found being uninhabted except by those employed in its shipment, it would, but for the interference of government, cost nothing save the expense of putting it on board and the freight home. But the governments of Peru and Bolivia were either so little aware of the value of the article, and of their duty to their constituents, or so corrupt, that they sold in 1839 to private parties, (Messrs. Quiros, Allier, and Co. of Lima,) for a mere trifle (40,000 dollars), the sole right to ship guano for the term of nine years; so that these parties had it in their power to exact any price they pleased for the article! This contract was, however, too ruinous to be allowed to continue; and was cancelled by the Peruvian government on the 27th of November, 1841, on the ground of enormous public lesion, and of ignorance of the value of the privilege that had been conceded. We cannot positively say whether the shipment of guano be now free, or whether it be again subjected to some species of restraint. We believe, however, that Quiros, Allier, and Co., and certain other houses, obtained, though with considerable modifications, a renewal of the monopoly held by the former in the course of last year, but we have not learned the terms of the new contract, nor whether it be still in force. But, supposing its exportation were free, the expenses attending the shipment of a cargo of 500 tons guano from Chincha, or other Peruvian island, would be —

	$	c.		£	s.	d.
Carriage to the shoot of 500 tons, at 5 rs.	312	4	=	59	17	11
Payment to master of the shoot	20	0	=	3	17	5
Seven men in launch shipping 36 tons daily, at 14 rs. each for 14 days	171	4	=	32	16	8
Anchorage	10	0	=	1	18	4
Agency	50	0	=	9	11	8
Payments, &c. for peons or labourers	6	0	=	1	3	0
	570	0	=	109	5	0
3750 bags at 2 rs. required for one half the quantity of guano, at 15 bags per ton, the other half of the guano being shipped in bulk	937	0	=	179	11	10
	1507	0	=	288	16	10

or about 3 dolls. or 12*s.* per ton. And adding to this, 5*l.* per ton for freight, and 1*l.* per ton for insurance, expenses of receiving and sale in England, profit, &c., the entire cost would be 6*l.* 12*s.* a ton, or about 6*s.* 7*d.* a cwt.

Between the 1st of January, 1842, and the 20th of August that year, 11,297 tons of guano were shipped from Peru, and 887 tons from Bolivia, and with the exception of a single cargo of about 350 tons for France, and one of 200 tons for Genoa, the whole of this quantity was shipped for England! This shows the already great and growing importance of the trade. And the probability is, that, unless the Peruvian government lay a heavy export duty on the article, or give a monopoly of its supply to private parties,

the export will be very greatly increased. It may be questioned, however, seeing that the guano islands are uninhabited, and at a considerable distance from the shore, whether the Peruvian government would be entitled to adopt measures in reference to them so hostile to the interests of other nations as those now alluded to. All vessels loading Peruvian guano for exportation must take their final departure from the port of Callao; but it is difficult to perceive the use of this regulation, unless it be to increase the trouble and expense of the shippers. — (Besides Ulloa, *ubi suprà*, in the French trans., we have derived the foregoing particulars from various sources, but principally from consular Reports and the communications of private parties resident in Peru.)

GUAYAQUIL, a city and port of Colombia, on the western coast of South America, lat. 2° 11′ 21″ S., long. 79° 43′ W. Population, 20,000? The town is situated on the banks of the river of the same name, about 6 or 7 leagues from the Isla Verde, or 9 leagues from the Isla Puña, in the Gulph of Guayaquil, opposite to the mouth of the river. Ships bound for Guayaquil generally call at the Isla Puña, where expert pilots may be had, who carry them up to the town by night or by day, according to the state of the tides. The town is old; but as the houses are of wood, and it has frequently suffered from fires, much of it is comparatively modern, and has a good appearance. There is a dry dock on the south bank of the river, where several ships of a superior construction have been built.

The district in which Guayaquil is situated has, for a considerable period, formed a part of the republic of Ecuador or Æquator. Like the other S. American states, it has been subjected to perpetually recurring revolutions; but Guayaquil has notwithstanding continued to enjoy a considerable commerce. Its principal article of export is cocoa, of which large quantities are shipped; and next to it are timber, tobacco, ceibo wool used in stuffing mattresses, &c. The principal articles of import are British manufactured cottons and hardware, silks, wine, flour, &c.

Account of the Export of Cocoa from Guayaquil, during each of the Six Years ending with 1838, specifying the Countries to which it was exported, and the Quantities sent to each.

GUERNSEY. For the peculiar regulations to be observed in trading with Guernsey, Jersey, &c., see IMPORTATION AND EXPORTATION.

GUMS, RESINS, GUM-RESINS. In commerce, the term gum is not only applied to gums properly so called, but also to resins and gum-resins. But though these substances have many properties in common, they are yet sufficiently distinct.

I. *Gum* is a thick transparent fluid that issues spontaneously from certain species of plants, particularly such as produce stone fruit, as plum and cherry trees. It is very adhesive, and gradually hardens by exposure to the atmosphere. It is usually obtained in small pieces, like tears, moderately hard and somewhat brittle while cold; so that it can be reduced by pounding to a fine powder. When pure, it is colourless: but it has commonly a yellowish tinge; it is not destitute of lustre; it has no smell; its taste is insipid; its specific gravity varies from 1·3161 to 1·4317; it readily dissolves in water, but is insoluble in alcohol. Gum is extensively used in the arts, particularly in calico printing, to give consistence to the colours, and to hinder them from spreading. It is also used in painting, in the manufacture of ink, in medicine, &c.

The only important gums, in a commercial point of view, are *gum Arabic* and *gum Senegal*.

1. *Gum Arabic* (Fr. *Gomme Arabique*; It. *Gomma Arabica*; Ger. *Arabische gummi*; Arab. *Toth*), the produce of the *Acacia vera*, a tree growing in Arabia, and in many parts of Africa. The gum exudes naturally from the trunk and branches, and hardens by exposure to the air. "The more sickly the tree appears, the more gum it yields; and the hotter the weather, the more prolific it is. A wet winter and a cool or mild summer are unfavourable to gum." — (*Jackson's Morocco*, p. 84.) It is in irregularly shaped pieces, hard, brittle, and semi-transparent. When pure it is almost colourless, or of a pale yellowish hue; being insipid, inodorous, and dissolving completely in the mouth. Specific gravity 1·31 to 1·43. It is often mixed with gum Senegal. East India gum Arabic is, though a useful, a spurious article, not being the produce of the *acacia vera*, but of other species of plants. The best gum is either imported direct from Alexandria, Smyrna, Tripoli, Mogadore, Tangiers, &c., or at second hand from them through Gibraltar, Malta, and the Italian ports. The price depends principally on its whiteness and solubility, increasing and diminishing, according as the article has more or less of these qualities. — (*Thomson's Dispensatory*, and *private information.*)

At an average of the 3 years ending with 1842, the gum Arabic entered for consumption amounted to 18,176 cwt. a year. Previously to 1832, the duty on gum Arabic from a British possession was 6*s.* a cwt., and from other parts 12*s.*, but the duty on it and all other gums was then fixed at 6*s.* a cwt. without regard to origin, and in 1842 it was farther reduced to 1*s.* a cwt. Of 25,289 cwt. of gum Arabic imported in 1839, Tripoli, Barbary, and Morocco furnished 4,587; Turkey, 413; Italy, 1,585; Cape of Good Hope, 2,713; the East Indies, 15,431, &c. The price of gum Arabic in bond in the London market was, in June 1843, fine yellow from 42*s.* to 60*s.* a cwt., and brown in drops from 16*s.* to 30*s.* per do.; best Turkey from 9*l.* to 10*l.* per do.

2. *Gum Senegal*, principally brought from the island of that name on the coast of Africa, is obtained from various trees, but chiefly from two: one called *Verek*, which yields a white gum; the other called *Nebud*, which yields a red gum; varieties of the *acacia gummifera*. Gum Arabic is very often mixed with gum Senegal. The latter is nearly as pure as the former, but it is usually in larger masses, of a darker colour, and more clammy and tenacious. It is the sort of gum principally employed by calico printers. — (*Thomson's Chemistry*, *Thomson's Dispensatory*, *Ainslie's Materia Indica*, &c.) The entries of gum Senegal for consumption amounted, at an average of the three years ending with 1842, to 17,715 cwts. a year. It was worth in June 1843, when garbled, from 87*s.* 6*d.* to 95*s.* a cwt. The trade in gum Senegal is principally in the hands of the French.

II. *Resins*, for the most part, exude spontaneously from trees, though they are often obtained by artificial wounds, and are not uncommonly, at first, combined with volatile oil, from which they are separated by distillation. They are solid substances, naturally brittle; have a certain degree of transparency, and a colour most commonly inclining to yellow. Their taste is more or less acrid, and not unlike that of volatile oils; but they have no smell, unless they happen to contain some foreign body. They are all heavier than water, their specific gravity varying from 1·0182 to 1·1862. They differ from gums in being insoluble in water, whether cold or hot; while they are, with a few exceptions, soluble in alcohol, especially when assisted by heat. When heated, they melt; and if the heat be increased, they take fire, burning with a strong yellow flame, and emitting a vast quantity of smoke. Common *rosin* furnishes a very perfect example of a resin, and it is from this substance that the whole genus have derived their name. Rosin is, indeed, frequently denominated resin. The principal resins are *Animi*, *Elemi*, *Copal*, *Lac*, *Labdanum*, *Mastic*, *Rosin*, *Sandarach*, *Tacamahac*, &c.; which see, under their respective names. — (*Thomson's Chemistry.*)

III. *Gum-resins*, a class of vegetable substances consisting of gum and resin. They differ from resins in this — that they never exude spontaneously from the plant, being obtained either by bruising the parts containing them, and expressing the juice, which is always in a state of emulsion, generally white, but sometimes of a different colour, or by making incisions in the plant, from which the juice flows. The juice, being exposed to the action of the sun, is condensed and inspissated, till it forms the gum-resin of commerce. Gum-resins are usually opaque, or, at least, their transparency is inferior to that of resins. They are always solid, and most commonly brittle, and have, sometimes, a fatty appearance. When heated, they do not melt as resins do, neither are they so combustible. Heat, however, commonly softens them, and causes them to swell. They burn with a flame. They have almost always a strong smell, which, in several instances, is alliaceous. Their taste, also, is often acrid, and always much stronger than that of resins. They are usually heavier than resins. They are partially soluble in water, but the solution is always opaque, and usually milky. Alcohol partially dissolves them, the solution being transparent.

The most common gum-resins are *Aloes*, *Ammonia*, *Euphorbium*, *Galbanum*, *Gamboge*, *Myrrh*, *Olibanum*, *Sagapenum*, *Scammony*, &c.; which see, under their respective names. — (*Loudon's Ency. of Agriculture*; *Thomson's Chemistry.*)

GUNPOWDER (Ger. *Pulver, Schiesspulver;* Du. *Buskruid;* Da. *Krudt, Pulver;* Sw. *Krut;* Fr. *Poudre;* It. *Polvere;* Sp. and Port. *Polvora;* Rus. *Poroch;* Pol. *Proch;* Lat. *Pulvis pyrius*). This well known inflammable powder is composed of nitre, sulphur, and charcoal, reduced to powder, and mixed intimately with each other. The proportion of the ingredients varies very considerably; but good gunpowder may be composed of the following proportions; viz. 76 parts of nitre, 15 of charcoal, and 9 of sulphur. These ingredients are first reduced to a fine powder separately, then mixed intimately, and formed into a thick paste with water. After this has dried a little, it is placed upon a kind of sieve full of holes, through which it is forced. By this process it is divided into grains, the size of which depends upon the size of the holes through which they have been squeezed. The powder, when dry, is put into barrels, which are made to turn round on their axis. By this motion the grains of gunpowder rub against each other, their asperities are worn off, and their surfaces are made smooth. The powder is then said to be glazed. — (*Thomson's Chemistry.*)

Dr. Thomson, whose learning is equal to his science, has the following remarks with respect to the introduction of gunpowder into warlike operations: — "The discoverer of this compound, and the person who first thought of applying it to the purposes of war, are unknown. It is certain, however, that it was used in the fourteenth century. From certain archives quoted by Wiegleb, it appears that cannons were employed in Germany before the year 1372. No traces of it can be found in any European author previously to the thirteenth century; but it seems to have been known to the Chinese long before that period. There is reason to believe that cannons were used in the battle of Cressy, which was fought in 1346. They seem even to have been used three years earlier, at the siege of Algesiras; but before this time they must have been known in Germany, as there is a piece of ordnance at Amberg, on which is inscribed the year 1303. Roger Bacon, who died in 1292, knew the properties of gunpowder; but it does not follow that he was acquainted with its application to fire-arms."— (*Thomson's Chemistry.*) For further particulars as to the introduction of cannon, see that article.

The manufacture and sale of gunpowder is regulated by several statutes. By the 12 Geo. 3. c. 61. it is enacted, that no person shall use mills or other engines for making gunpowder, or manufacturing the same in any way, except in mills and other places which were *actually in existence* at the time of passing the act, or which, if erected afterwards, have been sanctioned by a licence, under pain of forfeiting the gunpowder, and 2*s.* a pound. It is further enacted, that no mill worked by a pestle, and usually termed a pestle mill, shall be used in making gunpowder, under the above-mentioned penalty; and that no more than 40 lbs. of gunpowder, or materials to be made into gunpowder, shall be made at any one time under a single pair of mill-stones, on pain of forfeiting all above 40 lbs., and 2*s.* for every pound; nor shall more than 40 cwt. be dried in any one stove or place at any one time, under forfeiture of all above that quantity, and 2*s.* for every pound thereof. The powder mills erected at Battle, Crowhurst, Saddlescombe, and Brede, in Sussex, previously to 1772, are exempted from the above regulations so far as relates to the making of fine fowling powder.

No dealer is to keep more than 200 lbs. of powder, nor any person not a dealer more than 50 lbs., in the cities of London or Westminster, or within 3 miles thereof, or within any other city, borough, or market town, or 1 mile thereof, or within 2 miles of the king's palaces or magazines, or ½ a mile of any parish church, on pain of forfeiture, and 2*s.* per lb.; except in licensed mills, or to the amount of 300 lbs. for the use of collieries, within 200 yards of them.

Not more than 25 barrels are to be carried by any land carriage, nor more than 200 barrels by water, unless going by sea or coastwise, each barrel not to contain more than 100 lbs.

All vessels, except his Majesty's, coming into the Thames, are to put on shore, at or below Blackwall, all the gunpowder they have on board exceeding 25 lbs. Vessels outward bound are not to receive on board more than 25 lbs. of gunpowder previously to their arrival at Blackwall. The Trinity House have authority to appoint searchers to inspect ships, and search for gunpowder. All the gunpowder found above 25 lbs., and the barrels containing it, and 2*s.* for every lb. above that quantity, are forfeited. Any person obstructing an officer searching for concealed gunpowder is liable to a penalty of 10*l.* The places of deposit for gunpowder are regulated by the 54 Geo. 3. c. 159.

The exportation of gunpowder may be prohibited by order in council. Its importation is prohibited on pain of forfeiture, except by licence from his Majesty; such licence to be granted for furnishing his Majesty's stores only. — (6 *Geo.* 4. c. 107.)

The act 1 Will. 4. c. 44. prohibits the manufacture and keeping of gunpowder in Ireland by any person who has not obtained a licence from the Lord Lieutenant; such licences may be suspended on notice from the chief secretary, and any one selling gunpowder during the suspension of such licence shall forfeit 500*l.* Gunpowder makers under this act are to return monthly accounts of their stock, &c. to the chief secretary. This act, which contains a variety of restrictive clauses, was limited to one year's duration, but has been prolonged.

GUNNY (Hind. *Tāt;* Ben. *Gūni*), a strong coarse sackcloth manufactured in Bengal for making into bags, sacks, and packing generally, answering at once the two purposes for which canvas and *bast* are used in Europe. The material from which this article is manufactured is the fibre of two plants of the genus Corchorus; viz. *Corchorus olitorius*, and *Corchorus capsularis* (Bengali, *pat*); both, but particularly the first, extensively cultivated throughout Lower Bengal. Besides a large domestic consumption of gunny, the whole rice, paddy, wheat, pulses, sugar, and saltpetre of the country, as well as the pepper, coffee, and other foreign produce exported from Calcutta, are packed in bags or sacks made of this article. There is also a considerable exportation of manufactured bags, each commonly capable of containing two maunds, or about 160 lbs. weight, to Prince of Wales Island, Malacca, Singapore, Java, and Bombay. In 1841-42 there were exported from Calcutta 5,330,899 gunny bags, of the value of 499,426 rup.

(49,942*l.*), and 95,412 pieces of gunny cloth, worth 4,83,321 rup. (43,332*l.*). — (*Wallich; Roxburgh; Review of the External Commerce of Bengal for* 1841-42.)

GYPSUM, OR SULPHATE OF LIME, is found in various parts of the Continent, in Derbyshire and Nottinghamshire, and in Nova Scotia, whence it is largely exported. When reduced to a powder, and formed into a paste with water, it is termed *plaster of Paris*, and is much used for forming casts, &c. It is also used for laying floors, and has been advantageously employed as a manure.

H.

HACKNEY COACHES are coaches stationed in the streets or other public places, and bound to carry such persons as require their services, for certain rates of hire according to the distances travelled. They have generally been licensed by authority, and subjected to certain regulations, intended to prevent strangers and others using them from fraud and imposition. It may be doubted, however, whether these regulations have had any good effect; and whether the public would not be as well accommodated, at least in all large towns, by throwing the business open, and trusting to competition to rectify abuses. As respects London, nothing can be said in favour of its hackney coach establishment. Speaking generally, the coaches are the dirtiest, most disagreeable vehicles that can well be imagined, and the horses and drivers are but little superior; forming a striking contrast to the elegance and commodiousness of the private carriages, the excellence of the horses, and the neatness of the servants.

Hackney coaches were first established in London in 1625; but they were not then stationed in the streets, but at the principal inns. In the reign of Charles II. their number was considerable. Commissioners for licensing and superintending hackney coaches were established by the act 9 Ann. c. 23.; and successive acts have been passed, specifying the number of coaches that might be licensed, the duties payable to government, and the conditions under which licences were to be granted. There are immense numbers of hackney coaches, chariots, and cabriolets annually licensed in the metropolis.

Hackney Coach Regulations, Fares, &c. — The regulations as to hackney coaches in the city of London are governed by the acts 6 & 7 Vict. c. 86. and the 1 & 2 Will. 4. c. 22. The first of these acts provides for the appointment of a registrar of metropolitan public carriages, who is to grant licences, costing 5*s.* each, to the drivers and conductors of stage, hackney, and other carriages, and to watermen. The persons so licensed receive metal tickets or badges, which they are to wear conspicuously on their breast, and persons acting as drivers, conductors, watermen, &c., without such licences and tickets, are to be fined 5*l.*; and proprietors who suffer drivers, conductors, &c. to act for them shall forfeit 10*l.* for every such offence. — §§ 8, 9, 10, &c.

In 1842 there were licensed under this act, in the metropolitan district, 4,546 hackney drivers; 1,412 stage drivers; 1,543 conductors; and 287 watermen.

The other act, 1 & 2 Will. 4. c. 22., regulates the licensing of carriages, the amount of fares, &c. We notice a few of the more important clauses.

Definition. — A hackney coach is any carriage with 2 or more wheels, standing or plying for hire in any public street or road. — § 4.

Licensing, Plates, &c. — A licence to keep a hackney coach costs 5*l.*, and a weekly sum of 10*s.* has to be paid per advance on every licence. A plate specifying the number of the licence is to be placed inside the coach; and 2 other plates, on which are painted the names of the proprietor, or of one of the proprietors of the coach, are to be placed externally, one on each side. Penalty on proprietor for letting or employing a hackney coach without having properly numbered plates properly fixed upon such coach, 10*l.*; ditto on driver, if proprietor, 10*l.*; if not, 5*l.* — §§ 22, 23.

Obligation to ply. — Carriages standing on the streets with plates, to be deemed hackney coaches; and, unless actually hired, shall be compellable, under a penalty of 40*s.*, to go with any person offering to hire the same. — § 35.

Distance. — Drivers of hackney coaches compellable, under a penalty of 40*s.*, to go any distance not exceeding 5 miles from the General Post Office, or from the place where they shall have been hired. — § 34.

Number of Passengers. — To prevent disputes, the number of persons to be carried by hackney coaches is to be painted in some conspicuous place outside; and they are compellable, under a penalty of 40*s.*, to carry this number if required. — § 46.

Rates and Fares. — These may be charged, at the option of the proprietor or driver, either by time or distance; that is, by the hour or mile, but not by the day. The terms are, when charged by *distance*,

For every hackney coach, drawn by 2 horses, for any distance within and not exceeding 1 mile, 1*s.*; and for every distance exceeding 1 mile after the rate of 6*d.* for every ½ mile, and for any fractional part of ½ a mile over and above any number of ½ miles completed.

Fares when taken by *time* are — For any time within and not exceeding 30 minutes, 1*s.*; above 30 minutes and not exceeding 45 do., 1*s.* 6*d.*; above 45 minutes and not exceeding 1 hour, 2*s.*; and for any further time exceeding 1 hour, then after the rate and proportion of 6*d.* for every 15 minutes; and 6*d.* for any fractional part of the period of 15 minutes.

Cabriolets, or carriages with one horse, are entitled to *two thirds*, and no more, of the rates and charges above mentioned. — s. 38. and schedules.

Back Fare. — The driver of a hackney coach discharged beyond the limits of the metropolis, that is, beyond 3 miles from the General Post Office, after 8 o'clock in the evening, or before 5 o'clock in the morning, shall be entitled to full fare from the place of such discharge to the nearest part of said limits, or to the stand where the coach shall have been hired beyond the limits, at the option of the hirer. Coaches discharged during the day beyond the limits, are entitled to a back fare at the rate of 6*d.* a mile; but such back fare is not payable for any distance less than 4 miles. — § 39.

Coaches waiting are entitled to a reasonable deposit, to be accounted for in the fare. Penalty on drivers refusing to wait, or to account for deposit, 40*s.* — § 47.

Refusal to pay Fare, or defacing or injuring any hackney coach, may be punished, unless reasonable satisfaction be made for the same, by imprisonment for 1 calendar month. — § 41.

Drivers exacting more than legal Fare liable to a penalty of 40*s*. — § 42.
Agreement to pay more than legal Fare, not binding; sum paid beyond such legal fare may be recovered back, and driver be liable in a penalty of 40*s*. — § 43
Drivers demanding more than Sum agreed upon, though distance be exceeded, or it be less than the legal fare, forfeit 40*s*. for each offence. — § § 44, 45.
Drivers to hold Check Strings, under a penalty of 20*s*. — § 48.
Property left in Hackney Coaches to be carried to Stamp Office, under a penalty of 20*l*. If not claimed within a year, to be given up to driver; or if not applied for, to be sold. — § 49.
Court of Aldermen authorised to make orders for regulating hackney coaches in city. — § 54.
Offences may be tried either by a justice appointed for that purpose by the secretary of state, or by any 2 of his Majesty's justices. — § 55.

HAIR, HUMAN (Ger. *Haare, Menschen-haar;* Du. *Hair;* Fr. *Cheveux;* It. *Capelli umani;* Sp. *Cabellos;* Lat. *Capilli*). "Human hair makes a very considerable article in commerce, especially since the mode of perruques has obtained. Hair of the growth of the northern countries, as England, &c., is valued much beyond that of the more southern ones, as Italy, Spain, the southern parts of France, &c. Good hair is well fed, and neither too coarse nor too slender; the bigness rendering it less susceptible of the artificial curl, and disposing it rather to frizzle; and the smallness making its curl of too short duration. Its length should be about 25 inches; the more it falls short of this, the less value it bears." — (*Ency. Brit.*)

HAIR OF BEASTS (Ger. *Haare, Huhaare;* Du. *Hair;* Fr. *Poil;* It. and Sp. *Pelo;* Lat. *Pelles*). The hair of horses is extensively used in the manufacture of chairs, sofas, saddles, &c.; while the hair or wool of beavers, hares, rabbits, &c. is much employed in the manufacture of hats, &c.

HAIR-POWDER (Ger. *Puder;* Fr. *Poudre à poudrer;* It. *Polvere di cipri;* Sp. *Polvos de peluca*) is used as an ornament for the hair, and generally made from starch pulverised, and sometimes perfumed. A tax of 1*l*. 3*s*. 6*d*. a year is laid upon all persons who wear hair-powder. Different statutes prohibit the mixing of hair-powder with starch or alabaster And hair-powder makers are prohibited having alabaster in their custody.

HALIFAX, the capital of Nova Scotia, on the south-east coast of that province, lat. 44° 36′ N., lon. 63° 28′ W. It is situated on a peninsula on the west side of Chebucto Bay, and has one of the finest harbours in America. Population, exclusive of the military, about 19,000. The town is irregularly built, and most of the houses are of wood. The government-house is one of the most splendid edifices in North America. Halifax was founded in 1749.

Port. — The best mark in sailing for Halifax is Sambro light-house, on a small island off the cape of the same name, on the west side of the entrance to the harbour, in lat. 44° 30′, lon. 63° 32′. The light, which is fixed, is 210 feet above the level of the sea; and a detachment of artillery, with two 24-pounders, is upon duty at the light-house, firing at regular intervals during the continuance of the dense fogs with which this part of the coast is very much infested. — (*Coulter, Tables des Principales Positions Geographiques*, p. 78.) The course into the harbour for large ships, after passing Sambro light, is between the main land on the west, and Macnab's Island on the east. On a spit projecting from the latter a light-house has recently been constructed; and when this is seen, ships may run in without fear. The harbour is defended by several pretty strong forts. Ships usually anchor abreast of the town, where the harbour is rather more than a mile in width. After gradually narrowing to about ¼ of that width, it suddenly expands into a noble sheet of water, called Bedford Basin, completely land-locked, with deep water throughout, and capable of accommodating the whole navy of Great Britain. The harbour is accessible at all times, and is rarely impeded by ice. There is an extensive royal dockyard at Halifax; which during war is an important naval station, being particularly well calculated for the shelter, repair, and outfit of the fleets cruising on the American coast and in the West Indies. Mr. M'Gregor has severely, and, we believe, justly censured the project for the removal of the dockyard from Halifax to Bermuda.

Trade, &c. of Halifax and Nova Scotia. — Halifax is the seat of a considerable fishery; but the British colonists seem to be, for what reason it is not easy to say, less enterprising and successful fishers than the New Englanders. The principal trade of the town and province is with the West Indies, Great Britain, and the United States. To the former they export dried and pickled fish, lumber, coals, grindstones, cattle, flour, butter, cheese, oats, potatoes, &c. They export the same articles to the southern ports of the United States, and gypsum to the eastern ports of New England. To Great Britain they send timber, deals; whale, cod, and seal oil; furs, &c. The principal exports of timber are from Pictou on the St. Lawrence. The imports consist principally of colonial produce from the West Indies; all sorts of manufactured goods from Great Britain; and of flour, lumber, &c. from the United States, principally for exportation to the West Indies.

In 1826 a company was formed for making a canal across the country from Halifax to the basin of Minas, which unites with the bottom of the Bay of Fundy. The navigation is formed, for the most part, by Shubenacadie lake and river. The legislature gave 15,000*l*. to this undertaking. The excavated part of the canal is 60 feet wide at top, 36 feet at bottom, and admits vessels drawing 8 feet water. It seems very questionable whether this canal will be profitable to the shareholders; but it is of very considerable service to the trade of Halifax.

There are two private banking companies at Halifax. Accounts are kept in pounds, shillings, and pence, the same as in England, and the weights and measures are also the same.

About 100 large square-rigged vessels, and about the same number of large schooners, with several smaller craft, belong to Halifax.

The splendid steam ships Hibernia, Caledonia, Britannia, and Acadia, of 1,200 tons each, conveying the mails to British North America, ply between this port and Boston in the U. States and Liverpool. They sail from the latter twice a month during the summer months, but only once a month in winter. The fare to Halifax or Boston from Liverpool, including provisions and steward's fee (but excluding wines and liquors), is 39 guineas. On arriving at Halifax, passengers are conveyed by coaches across the Peninsula to Pictou, whence they are carried by steamers to Quebec and Montreal. A steam intercourse is also kept up in summer with Boston.

In 1838 there were exported from Nova Scotia, and principally from Halifax —

HAMS. See BACON and HAMS.

HAMBURG, a free Hanseatic city, on the north bank of the river Elbe, about 70 miles from its mouth, lat. 53° 32′ 51″ N., lon. 9° 58′ 37″ E. Population, including the suburbs of St. George and St. Pauli, but excluding the territory attached to the city, 137,000. Hamburg is the greatest commercial city of Germany, and, perhaps, of the Continent. She owes this distinction principally to her situation. The Elbe, which may be navigated by lighters as far as Melnik, in Bohemia, renders her the *entrepôt* of a vast extent of country. Advantage, too, has been taken of natural facilities that extend still further her internal navigation; a water communication having been established, by means of the Spree and of artificial cuts and sluices, between the Elbe and the Oder, and between the latter and the Vistula; so that a considerable part of the produce of Silesia destined for foreign markets, and some even of that of Poland, is conveyed to Hamburg. —(See CANALS.) There is, also, a communication by means of the Steknitz canal, with the Trave, and, consequently, with Lubeck and the Baltic. She is, also, in the course of being connected by means of railways with Berlin, Hanover and Brunswick, Kiel, &c. Vessels drawing 14 feet water come up to the town at all times; and vessels drawing 18 feet may come safely up with the spring tides. The largest vessels sometimes load from and unload into lighters at Cuxhaven. The trade of Hamburg embraces every article that Germany either sells to or buys from foreigners. The exports principally consist of grain of all sorts, wool, clover seed, bark, spelter, butter, salted provisions, rags, wooden clocks and toys, linens, and all sorts of German manufactured goods, Rhenish wines, &c. Most sorts of Baltic articles, such as grain, flax, iron, pitch and tar, wax, &c., may generally be bought as cheap at Hamburg, allowing for difference of freight, as in the ports whence they were originally brought. The imports consist principally of sugar; coffee, which is the favourite article for speculative purchases; cotton wool, stuffs, and yarn; tobacco, hides, indigo, wine, brandy, rum, dyewoods, tea, pepper, &c. Being brought from many different places, there is a great variety of quality in the grain found at Hamburg; but a large proportion of the wheat is inferior. Some of the barley is very good, and fit for malting. The oats are feed of various qualities. It will be afterwards seen that the total annual value of the import and export trade of the port (including that of Altona, the merchants of which conduct their business on the Hamburg exchange,) may be estimated at about 20,000,000*l.* sterling a year, or upwards: and as the largest portion of this immense trade is in our hands, it will be necessary that we should be a little fuller than ordinary in our details as to this great emporium.

Hamburg was visited by a dreadful and most destructive fire in May, 1842. But, notwithstanding the heavy losses that were in consequence incurred, and the paralysis it occasioned in trade and industry, the shock was less severe than might have been anticipated. The system of mutual insurance having been generally adopted, the proprietors of houses and other property have been subjected to a tax, to defray the interest of a loan of 32 millions marks-banco raised to indemnify the sufferers, and to enable them to rebuild their houses. And we are glad to have to state that the work of reparation has been vigorously commenced, and that the probability is, that in a few years all traces of the recent calamity will have been obliterated. We have not, however, owing to the destruction of documents during the fire, been able to obtain any authentic accounts of the trade of Hamburg in 1842; and this is the less to be regretted, seeing that the fire, by interrupting for a while and otherwise deranging the ordinary channels of commercial intercourse, influenced the trade of that year too much to allow of its entering into any fair average statement of the trade of the port.

Table of the Principal Imports, Stocks, Exports, and Consumption, at the Port of Hamburg, from 1830 to 1839, both inclusive. — (Compiled by Messrs. Berinberg, Gosler & Co.)

Money is generally reckoned in Hamburg in marks, of 16s., each of 12 pfennings; and is of two sorts, *banco* and *current*. The former consists of the sums inscribed in the books of the Bank, opposite to the names of those who have deposited specie or bullion in the bank, or got it transferred to them at the rate of 27½ marks banco to the Cologne mark of fine silver. The value of the marks banco, taking silver at 5s. an oz., is consequently 1s. 5½d., which makes the par of exchange 13 marks 10½ schill. banco per *l.* sterling. Banco is worth about 2½ per cent. more than currency; the agio varying from 120 to 131 per cent. Speaking generally, the value of the current mark may be taken at 1s. 2½d. or 1s. 3d. sterling. The silver coins current in Hamburg are, specie dollars (of which 34 are equal to a mark Cologne, fine silver); Prussian current dollar (14 dollars to the mark fine); new 2s. 3d. pieces (18 to the mark fine); Danish groats current, and Hamburg current (34 to the mark, fine). The gold coins comprise ducats = 9s. 4d. sterling, Louis and Frederick d'ors. The agios of these different coins, with banco, constantly vary. Hamburg has for many years ceased to coin monies, with the exception of ducats and the smaller coins.

Measures and Weights. — A new regulation of these was effected by an act passed on the 16th January, 1843.

There are in Hamburg 3 different sorts of *pound weights*:

1. The bank or silver weight (formerly the Cologne weight).
2. The commercial weight.
3. The apothecary weight.

One pound bank, or silver weight, is = 2 marks; 1 mark (Cologne) is 233·85489 grains, or 486·9537 Dutch As. = 100 marks = 62·6554 English troy pounds.

The old relation between the commercial weight and bank weight, by which the commercial pound is equal to $33\frac{5}{32}$ oz. bank weight, has been confirmed by the late act.

1 centner = 112 pounds; 1 pound = 32 oz.; 1 oz. = 4 drachms; 1 drachm = 4 pfennings.

100 commercial lbs.	=	106·338 English lbs. avoirdupois.
100	—	48·4609 kilogrammes.
100	—	86·5355 lbs. Vienna.
100	—	96·9219 lbs. German customs union.

1 "schiffpfund," in commerce, = 2½ centners, or 20 "liespfund" of 14 lbs. each, or 280 lbs.

1 "schiffpfund" by land carriage has 20 "liespfund," each of 16 pfund; is, therefore, = 320 lbs.

A pipe of oil is 880 lbs.; 1 barrel of butter (small willow and hoops) is taken at 224 lbs., but with common hoops, at 280 lbs. nett.

Long Measure. — The Hamburg foot, divided into 12 inches, of 8 parts each, = 0·28657 metres, = 127·036 Parisian lines, = 11·249 Eng. inches. Hence

100 Hamburg feet	=	94·021 Eng. feet.
100	—	28·657 French metres.
100	—	91·307 Prussian or Rhenish feet.
100	—	90·664 Vienna feet.

The Hamburg ell (short ell) = 2 Hamburg feet. 0·57314 metres = 254,072 Paris lines. 100 Hamburg ells = 62·681 Eng. yards.

The Brabant ells (or long ell) most commonly used in Hamburg, in measurement of piece goods, = 27·585 Eng. inches.

Liquid Measure. — 1 fuder = 6 aums, 1 aum = 4 ankers or 5 eimers; 1 anker = 5 viertels; 1 viertel = 4 stübchens; 1 stübchen = 4 kannen; 1 kannen = 4 quartiers of Dessel; 1 eimer = 4 viertels; 1 hogshead = 1½ aums, or 6 ankers, or 30 viertels, each of 8 quartiers or bottles.

The stübchen contains 256 Hamburg cubic inches, = 3·62 litres.

100 Hamburg viertels	=	139·39 English imperial gallons.
100	—	724·18 French litres.
100	—	639·45 Prussian quarters.
100	—	511·88 Vienna mass.

The full beer barrel contains 48 stübchens, or 192 quartiers; the small barrel only 32 stübchens, or 128 quartiers.

The vinegar barrel contains 30 stübchens, or 120 quartiers.

The whale and fish oil barrel contains 32 stübchens, or 128 quartiers. 2 whale oil barrels = 1 quartel.

Grain Measure. One last = 60 fass; 1 fass = 2 himpten, 1 himpten = 4 spint. The wispel of wheat, rye, and peas is 20 fass; but of oats and barley, 30 fass. The achetlet of wheat, rye, and peas, is 2 fass; of barley and oats, 3 fass.

The fass contains 3872 Hamburg cubic inches, = 52·734 litres, and 46·8 Parisian cubic inches, and

100 Hamburg fass	=	18·135 Imperial quarters.
100	—	52·734 hectolitres.
100	—	95·947 Prussian scheffels.
100	—	85·765 Austrian metzen.

100 Hamburg lasts = 108·81 Imperial quarters.

The mode of measuring grain has hitherto been by the meters throwing it into the fass, and striking off the surplus with a wooden roller pressed lightly along the upper edge; but an alteration is expected on a new corn law, now projected, coming into operation: there will probably be a new fass measure of 4037 Hamburg cubic inches), equal to the Prussian scheffel.

In practice, 1 Hamburg last is taken at 11 imperial quarters, 21 hectolitres, 77 Prussian scheffels, 25 Danish barrels, and 16½ Russian chetwerts.

The coal barrel contains (when the 1853 Hamburg cubic inches of head or heaped measure is added) 16,438 cubic inches.

The Hamburg ship last, or last of commerce, really weighs 4000 pounds, or 3 tons (not 4000 pounds, as is generally stated).

Account of the Ships and Tonnage which arrived at and departed from Hamburg in 1840 and 1841, specifying the Countries to which the Ship belonged, and the Number belonging to each.

HAMBURG.

The total value of imports in the years 1839 to 1841, inclusive, is estimated as follows: —

	Banco.	£
1839 about	164,900,000	12,867,000
1840	177,000,000	13,575,000
1841	180,000,000	13,500,000

of which more than half was received from Great Britain.

The export of corn depends chiefly on the wants of England, which occasioned a very large export during 1839, 1840, and 1841, being in amount and value as follows: —

	Lasts.	Banco.	£
1839	43,191 ; estimated value	14,230,000, or	1,067,250
1840	44,288 —	13,344,000, or	1,000,800
1841	59,187 —	17,252,000, or	1,293,900

The prices of wheat during these years were —

	Highest price.	Lowest price.
1839	162 to 212 doll.	110 to 172 doll. currency. 35*s.* 6*d.* to 55*s.* 1*d.*
1840	135 to 188 doll.	88 to 130 doll. currency. 28*s.* 5*d.* to 41*s.* 7*d.*
1841	134 to 195 doll.	88 to 122 doll. currency. 28*s.* 5*d.* to 39*s.* 4*d.*

(See art. Corn Laws and Corn Trade.)

The export of wool (nearly the whole of which goes to Great Britain) was as follows: —

1839	55,642 bales, or about	18,531,000 lbs.
1840	54,975 —	18,142,000
1841	53,000 —	17,774,000

The once important trade in German linens to Spain and her former American possessions, has of late years greatly fallen off. This is a consequence of the competition of England, who, by means of her superior machinery, is able, not only to spin, but to produce cloth cheaper than any other country. On the other hand, however, the import of linen yarns from England is being progressively augmented.

The total value of the exports from Hamburg has been estimated as follows: —

	Banco.	£
1839	107,000,000 or	8,025,900
1840	105,500,000 or	7,912,500
1841	109,500,000 or	8,212,500

Navigation of the Elbe, Pilotage, &c. — The mouth of the Elbe is encumbered with sand banks. The channel leading to Cuxhaven is bounded on the north by the Vogel Sands and North Grounds, and on the south by the Schaarhorn Sands and Neuwerk Island. On the latter there are 2 light-houses and 2 beacons, and on the Schaarhorn is another beacon. The light-houses on Neuwerk Island are about 700 yards apart; the most southerly, which is also the most elevated, being in lat. 53° 54′ 57″ N., lon. 8° 29′ 40″ E. It is 188 feet high, being twice the height of the other. The channel is, in some places, hardly ¼ of a mile wide. The outer red buoy in the middle of the channel, at its mouth, bears from Heligoland S. E. by S., distant nearly 20 miles. But the best mark in entering the Elbe is the floating light, or signal ship, moored 2 miles N.W. by N. of the red buoy, in 11 fathoms at low water. This vessel never leaves her station, unless compelled by ice in the winter season. By night she exhibits a lantern light, 38 feet above deck, and in foggy weather rings a bell every quarter of an hour. A second signal ship is stationed 5½ miles S.E. by E. from the first, at the westernmost point of a sand bank dividing the fair way of the river. She is rigged like a galliot, to distinguish her by day from the first signal ship; and during night she exhibits *two* lights, one 18 feet above the other. The distance from the outer red buoy to Cuxhaven is about 16 miles; thence to Glückstadt the course is east, 28 miles; from the latter to Stade the course is south-easterly, 9 miles; and then easterly to Hamburg, 18 miles. The channel throughout is marked with black and white buoys, which are numbered and specified in the charts. The black ones are to be left, in passing up the river, on the starboard or right-hand side, and the white on the larboard side.

Every vessel coming from sea into the Elbe, and drawing 4 feet water, is directed to take a pilot on board, and must pay pilotage, though she do not take one. However well the signals, lights, beacons, and buoys, may be arranged, an experienced pilot is very necessary, in case of a fog in the night, or of a storm. To take in a pilot, a vessel must heave to by the pilot galliot, which lies, in good weather, near the red buoy, and in bad weather N.N.E. from Neuwerk, and is known by having at the flagstaff an admiral's flag, and a long streamer flying at the top. If the pilot boat have no pilot on board, or if the weather be so bad that the pilot cannot leave her, she lowers her flag, and then the vessel coming in must sail, with the signal for a pilot hoisted to Cuxhaven, and heave to there, where she is certain of getting one.

There are no docks or quays at Hamburg; and it is singular, considering the great trade of the port, that none have been constructed. Vessels moor in the river outside of piles driven into the ground a short distance from shore; and in this situation they are not exposed to any danger unless the piles give way, which rarely happens. There is a sort of inner harbour formed by an arm of the Elbe which runs into the city, where small craft lie and discharge their cargoes. Larger vessels load and unload from their moorings, by means of lighters. These carry the goods from and to the warehouses which front the various small arms and channels of the river, and the canals carried from it into different parts of the city. The charges on account of lighterage are extremely moderate.

Port Charges. — The charges of a public nature payable by vessels entering the port of Hamburg, unloading and loading, are pilotage and lastage. The separate items of which are given in the following Table.

Pilotage and Lastage. — The Hamburg pilots, generally speaking, take charge of vessels only from the *Red Buoy* to *Freyburgh* or *Glückstadt*, the pilotage for which is regulated by law of the 18th of February, 1750, as follows: —

	For each Foot Hamburg Measure which a Vessel draws.*			
	During the Six Summer Months, from 1st Mar. to 1st Sept.	During the remaining Six Winter Months		
	Marks Currency.		English Money.	
			s. d.	*s. d.*
Vessels coming northwards, and colliers	2 0	3 0	2 4	3 6
All vessels, smacks, and kayen drawing more than 4 feet water, and in ballast	2 0	3 0	2 4	3 6
Vessels laden with salt or corn, wheresoever they may come from	3 0	4 8	3 6	5 3
Vessels which, besides salt, corn, or ballast, have one third of the cargo consisting of piece goods	4 0	6 0	4 8	7 0
Vessels laden with herrings	2 0	3 0	2 4	3 6
All vessels laden with wine, oil, vinegar, train oil, iron, lead, packages, or bags, and all vessels coming from foreign parts, whether laden or not	4 0	6 0	4 8	7 0
All smacks going between Holland, Friesland, and Hamburg with piece goods	4 0	6 0	4 8	7 0

* Sixteen feet English are equal to 17 feet Hamburg.

Half Pilotage only. — *N.B.* In case the Hamburg pilots enter a vessel only within the first buoy beyond the Rosshacken, Strangly, or Cuxhaven, half the above mentioned pilotage is paid. Also half pilotage must be paid at all events, whether the vessel has taken a pilot from the pilot galliot or not.

Pilotage earned. — The above pilotage is earned if vessels are brought as far as *Freyburgh* or *Glückstadt*, and when from stress of wind or weather, which seldom happens, the Hamburg pilots take vessels to *Wittenberg* or *Neumühlen*, they are to pay, without distinction —

	Marcs currency.	d. stg.
To Wittenberg	1 0	14 0
Neumühlen	1 8	21 0

Pilotage all the way. — For pilotage the whole way from Cuxhaven to Hamburg there is no table of rates, for, generally speaking, the Hamburg pilots do not take vessels up beyond *Boesch*.

From Boesch to Hamburg. — Vessels are generally piloted from Boesch to Hamburg by Danish or Hanoverian pilots, to whom it is customary to pay 3 marcs.

Lastage and Custom-house Charges.—British and other foreign vessels pay the same as Hamburg vessels. For clearing in and clearing out, no separate charges are made; visiting the port is considered as *one* voyage, and the charges on vessels are paid as follows: —

For vessels arrived with cargoes from the undermentioned places; viz. —

Places.	For every Commercial Last of 6,000 lbs.	Sterling.
	Marcs.	£ *s. d.*
The East Indies	3 0	0 3 6
West Indies, North and South America	2 8	0 3 5
Portugal, Spain, and the Mediterranean	2 0	0 2 4
The rest of the European ports	1 8	0 1 9
Holland, East Friesland, the Weser, Eyder, and Jutland	0 12	0 0 10½
For vessels under 20 commercial lasts* without distinction	0 4	0 0 3½
Vessels arriving and departing in ballast, of upwards of 20 commercial lasts	0 8	0 0 7

*It is difficult to determine the exact ratio of a last to a ton; but it may be taken at about 3 or 2½ to 1. But in Hamburg all vessels are measured by the harbour-master; and it is upon his report that the lastage is calculated.

For all vessels laden with coals, wood, or turf, no lastage is paid, provided they do not take return cargoes.

Half Lastage. — Vessels arriving in ballast and departing with a cargo pay half the above lastage, according to their destination.

N.B. — Exclusive of the above dues, which are all remarkably moderate, vessels coming to the port of Hamburg are obliged to pay certain dues to Hanover, called Stade or Brunshausen dues. These are rated according to the number of the vessel's masts, and are over and above the Stade duties on the cargo. — (For the items, see Stade.)

Duties. — The import and export duty was formerly 1½ per cent. (courant for banco, or fl. on 125) on goods imported and exported by sea, and ¼ per cent. (courant for banco), for such as were received and transported by land or river conveyance; but for some years, these duties have been greatly reduced, and are now only ⅛ per cent. on imports, and ⅛ per cent. on exports. The greater part of the imports and exports are, how-

ever, entirely free even of those low duties, as is evident from the following statements: —

Goods entirely free of Duty on Import.

1. Linen, mixed linen and cotton, linen and woollen rags, used and new made linen cloths, yarn and manufactured girths of flax, hemp, and cotton, sheep and lambs' wool.
2. Wheat, rye, barley, buckwheat, malt, potatoes, and rapeseed.
3. Unmanufactured copper and brass, ship's copper, old ditto for smelting, certain copper and brass waste, copper and brass plates, rough spelter, tinned and untinned iron plates.
4. Bullion and coins, unworked gold and silver, waste derived from the precious metals.
5. Printed works, books, music, and maps.
6. Oilcakes, bark, bones.
7. Passenger luggage, accompanied by proprietor, and otherwise, as may be allowed by the collectors of customs under particular circumstances.

Articles of Export exempted from Duty.

1. Millet, peas, beans, lentils, tares, spelt, aniseed, caraway seed, flour, madder, seed oils, arsenic, smalts, calamine, gypsum, black lead, mineral earths, mortar, mill stones, red stone, potters' clay, terras stone, tripoli, tophus stone, fullers' earth, brimstone, spelter in blocks and plates, and coals.
2. Wood for building, staves, and fire-wood, coming down the Elbe, or received landwards, the last being exempted when it has come originally by sea.
3. Articles arriving by post waggons, coming to one party, not above the value of 50 ℔ cent. banco.

All articles defined as *transito goods* are likewise entirely free of duty if so declared at entry, whether imported on account of Hamburg citizens or of foreigners.

The privilege of *transito* generally extends to a period of 3 months from the time of entry; but an extension of 3 months may be obtained on petition, by paying ½ ℔ cent. courant for banco, on the value. Transit beyond a period of 6 months is not allowed.

The levy of duties in Hamburg is conducted in the simplest manner, and on the most liberal footing. No vexatious forms check the free intercourse or the free course of trade; the entry for duty is merely a declaration of the current value at the time; transito articles remaining in warehouse for exportation, require a mere declaration to that effect by a burgher or citizen.

In levying duties, no advantage is claimed by Hamburg for vessels bearing her own flag; goods by all vessels, from whatever quarter of the world, paying the same duties. Commercial treaties have been concluded by Hamburg alone, or in conjunction with the two other free Hanseatic cities, with Great Britain, France, the United States of America, Mexico, Venezuela, the Porte, Norway, and Sweden.

The low rates of duty in Hamburg is a proof of her anxious desire to encourage trade with all nations, and the more so when we consider the great expense she is put to in keeping up buoys along the Lower Elbe, and other necessary charges for the navigating the river; expenses which considerably exceed the total sum received for duties.

Stade Duties. — Besides the duties levied at Hamburg, all articles passing up the Elbe to Hamburg, whether for transit or not, pay duties to Hanover at Brunshausen, near Stade. These duties are rated according to a tariff, and are computed from the ship's manifest, bills of lading, and packets, which have all to be sent on shore for that purpose. On several articles, particularly those of British manufacture, these duties are very heavy, being frequently much larger than the Hamburg duties! They are particularly grievous, too, from heavy penalties being attached even to the slightest unintentional mistakes. It is really surprising, considering the source of this measure, that it has been allowed to exist so long. It ought, at all events, have been expected that British ships and goods would have been exempted from such a tax. With what force can we protest against the conduct of Prussia and other German states in throwing obstacles in the way of the free navigation of the Elbe, when we submit, without a murmur, to similar proceedings on the part of Hanover? — (For further particulars, see STADE.)

Custom House Regulations. — On passing Stade, the masters of vessels must send their papers, including the manifest, bills of lading, and cockets, on shore, that the amount of the Stade duties may be calculated. On the vessel's arrival at Hamburg the broker reports her to the Custom-house, and gives his guarantee for payment of the duties; he either delivers her papers, or undertakes to deliver them as soon as they can be got from Stade, and, upon a receipt being produced for the Stade duties by the Hanoverian authorities at Hamburg, the vessel is allowed to unload. On clearing, a manifest of the outward cargo, together with the consul's certificate of the regularity of the ship's papers, must be produced at the Custom-house by the *broker*, who obtains in return a clearance certificate, authorising the vessel to go to sea.

Quarantine. — Ships are visited at Cuhaven, a Hanoverian possession at the mouth of the Elbe. Suspected vessels are generally sent to a station on the Norwegian coast; but vessels which have undergone quarantine in an English port, or come from beyond the Cape of Good Hope or Cape Horn, or direct from the River Plate, are permitted to come directly to Hamburg.

Credit, Brokerage, &c. — Almost all goods are sold for ready money, with an allowance of 1 per cent. for discount. Sometimes, but not frequently, sales are made at 2 or 3 months' credit, and in such cases a higher price is obtained than for cash. Sometimes regards sold to the sugar baker at this credit.

Brokers are positively forbidden to act as merchants or factors. They are licensed by the Senate, and must conform to the established regulations.

Brokerage is paid wholly by the seller, and amounts to —

" Five stuivers per cent. on cotton, cotton twist, cocoa, cochineal, copper, hides, indigo, manufactured goods, nankeens, sugar, and teas.

" One per cent. on annotto, camphire, cinnamon, cardamoms*, cassia*, cloves*, drugs not denominated*, deer skins, dyewoods* ginger*, jalap*, mace*, nutmegs*, pepper, pimento, rotanbee, Peruvian bark, quercitron bark, rice*, saltpetre, sarsaparilla*, shellac*, tamarinds*, tobacco in leaves* and tobacco stems*, of the growth of the United States of America, whale oil*, vanellocs*.

" *N. B.* — Tobacco stems* of all other origin, segars, and other manufactured tobacco, pay 2 per cent.; all other leaf and roll tobacco* 1½ per cent.

" One and a half per cent. on wine, brandy, rum, and arrack, if sold in parcels amounting to 3,000 marcs banco and upwards.

" Two per cent on ditto, for sales of and under 3,000 marcs banco.

" In auction the selling broker is entitled to 1½ per cent. and the purchasing broker to 2 per cent., without regard to the amount."

All articles marked (*) pay the brokerage before mentioned, if the quantity sold amounts to 600 marcs banco, or higher; for smaller lots of less than 600 marcs banco, and down to 150 marcs banco, the brokerage is paid, with the addition of one half, and under 150 marcs banco, the double is allowed. All other merchandise pays 1½ per cent. at least for sales not exceeding 150 marcs banco.

It is, however, to be observed, that all augmentations, in proportion to the amount sold, are only to be understood for sale by private contract, and not for those by auction; and even not for such private sales, where a broker has made the purchase of a larger quantity of goods above the said amount of 600 marcs banco, and has afterwards divided it into smaller lots.

Conditions of Sale. Imports. — Coffee is sold per pound in schill. banco; discount, 1 per cent.; good weight is ½ per cent. Tare is as follows: viz. on casks, real weight; on bags of 150 lbs. or less, 2 lbs.; above 150 lbs. and not above 180 lbs., 3 lbs.; above 180 lbs. and not exceeding 300 lbs., 4 lbs. On Mocha bales of about 300 lbs., 14 lbs.; if 600 lbs., 20 lbs. On Bourbon single bales, 2 lbs.; on double, 4 lbs.

Cotton is sold per lb. in schill. banco; discount, 1 per cent.; good weight, 1 per cent.; tare on bales, West Indian and North American, 1 per cent.; on square bales, 6 per cent.; on Bombay and Surat bales, 8 per cent.; on Bourbon bales, and Manilla serons, 6 per cent.; on Egyptian and Guiana small serons, 10 per cent. For the regulation of the Stade duty, all packages should be called bags, and not bales, in the bill of lading.

East India piece goods are sold per piece, in marcs banco; discount, 1 per cent. For saving in the Stade duty, if more than 50 pieces are in a bale, the number of pieces should not be mentioned in the bill of lading, but only the number of bales.

Flour is sold per 100 lbs. in marcs currency, uncertain agio; discount 1 per cent.; good weight, 1 per cent.; tare, 20 lbs. per barrel.

Fustic is sold per 100 lbs. in marcs currency, agio 20 per cent.; discount, 1 per cent.; good weight, 1 per cent.; and frequently an allowance in weight is made, if the wood is not very solid.

Indigo is sold per lb. in schill. banco; discount, 1 per cent.; good weight, ½ per cent.; tare, if in single bales of 300 lbs., 5 lbs.; in double bales, 6 lbs.

Quercitron bark is sold per 100 lbs. in marcs currency; agio, 20 per cent.; discount, 2 per cent.; good weight, 1 per cent. To determine the tare, the American tare is reduced to Hamburg weight.

Rice is sold per 100 lbs. in marcs banco; discount, 1 per cent.; good weight, 1 per cent.; tare, real; and super-tare for tierces, 4 lbs.; for ½ tierces, 2 lbs.

Rum is sold per 50 quarts in rix doll. currency, agio uncertain.

Sugar, raw and clayed, is sold per lb. in banco groats, with a rebate of 8½ per cent.; discount, 1 per cent., and sometimes ½ per cent.; Brazil or Havannah chest, good weight, ½ per cent.; real tare; super-tare, 10 lbs. for Brazil, and 5 lbs. for Havannah sugar, per chest. Muscovados in casks, good weight, 1 per cent.; tare, if the casks weigh upwards of 1,000 lbs., 18 per cent.; if less, 20 per cent. Clayed sugars, good weight, 1 per cent.; tare, 16 per cent. East India sugars, in bags, good weight, ½ per cent.; tare for [redacted] 4 to 5 lbs.; for brown, 6 to 7 lbs.

Tea, per lb. in schill. currency, agio uncertain; discount, 1 per cent.; good weight, ½ per cent. Tare of lohea, in chests of 100 lbs., 70 lbs.; of 150 to 180 lbs., 15 lbs. All black tea, 28 lbs. tare; green, 24 lbs. For the regulation of the Stade duty, the net weight should likewise be mentioned in the bill of lading.

Tobacco. — Leaf tobacco is sold per lb. in schill. banco, agio uncertain; discount, 1½ per cent; good weight, 1 per cent.; tare per cask, 80 lbs. Brazil leaf in serons; tare, 5 per cent. In rolls; canister, in baskets of about 100 lbs.; good weight, 1 lb. per basket; tare, 14 lbs. if the basket is packed up in linen, and 12 lbs. if without linen. Porto Rico rolls, good weight, 1 per cent.; no tare, as the rolls are weighed by themselves. Brazil rolls, in serons of 400 to 600 lbs., are sold per lb., in schillings banco; good weight, ½ per cent.; tare, 8 lbs. per seron. Tobacco stems per 100 lbs., in marcs currency, agio uncertain; discount, 1½ per cent.; good weight, 1 per cent.; tare, if in casks, real weight; if packed up with cords, 2 to 4 per cent., according to the thickness of the rope. As there is a great difference in the Stade duty for the different sorts of tobacco, it is necessary that, on shipping leaf tobacco, there should be inserted in the bill of lading, *Leaf Tobacco*, omitting the weight. With tobacco in rolls, only the number of packages containing roll tobacco, and the nett weight, without mentioning the number of rolls, should appear in the bill of lading.

Glass (window) is sold per chest, in marcs currency, agio uncertain; other glass ware per piece, dozen, or hundred, in schillings or marcs currency, with uncertain agio; discount, 1 per cent.

Hares, wool is sold per 2 lbs., in marcs currency, agio uncertain; discount, 1 per cent.

Hare skins (German, grey) are sold per 100 pieces, in rixdollar. banco. Russian, grey, per 104 pieces, in rixdoll. banco. White, in marcs currency, agio uncertain; discount, 1 per cent.

Iron is sold per 100 lbs., in schill. currency, agio uncertain; discount 1 per cent.

Copper is sold per 100 lbs. in schill. banco; discount, 1 per ct.

The exchange business done at Hamburg is very great; for, besides the business of the place, most of the merchants in the inland towns have their bills negotiated there.

The usual charge for commission is, on sales 2 per cent. and

1 per cent. for *del credere*, if such guarantee be required; on purchases, 2 per cent. Under particular agreements, the rates sometimes vary considerably from the above.

Citizenship. — Foreigners cannot establish themselves as merchants, or carry on any business in their own names, at Hamburg, without becoming burghers; and to be manufacturers, they must also enter the guild or corporation peculiar to the trade they mean to follow. But, to become a burgher, one has only to comply with certain forms and pay certain fees, which do not, in all, exceed 10*l*. He then becomes, in the eye of the law, a Hamburg subject, and enjoys all the rights and privileges of a native.

Banking, Insurance, &c. — For an account of the Bank of Hamburg, see BANKS (FOREIGN). All sorts of insurances are effected at Hamburg. A municipal regulation compels the insurance of all houses within the city, the rate varying according to the number of fires, and the amount of loss. Marine insurance is principally effected by joint stock companies, of which there are several; their competition has reduced the premiums to the lowest level, and the business is not understood to be profitable. The high duties on policies of insurance in this country has led to the insuring of a good many English ships at Hamburg. Life insurance is not prosecuted in Germany to any considerable extent; but some of the English companies have agents here, who are said not to be very scrupulous.

Bankruptcy. — Considering the vast number of merchants and tradespeople at Hamburg, bankruptcy does not seem to be of frequent occurrence.

Much of the business transacted at Hamburg being on commission and for account of houses abroad, the failure of foreign merchants is a prevalent source of bankruptcy. Another source of bankruptcy is losses on goods imported or exported on speculation, and occasionally losses in the funds, in which a good deal of gambling goes on here. Expensive living is not nearly so prevalent a source of bankruptcy here as in London and other places.

The law of Hamburg makes 3 classes of bankrupts; — the unfortunate, the careless, and the fraudulent. The first class consists of those whose books show that misfortune alone has occasioned the bankruptcy; that the party has all along lived within his probable income, and can account to his assignees completely for all his losses. Whoever is adjudged by the court to belong to this class (which contains but few in number), is considered entirely free from his debts, and is not subject to be called upon hereafter. The second and most numerous class, contains those termed "careless" bankrupts. These are persons who have entered into speculations exceeding their means, who have gone on for a considerable time after they found their affairs in arrear, who have lived beyond their income, have not kept their books in good order, and so forth. They are liable to be confined in prison for a period of 3 or 6 months; and, provided they have not paid a dividend of 40 per cent., may be called upon for payment of their debt after 5 years from their discharge. If a claim be made by any creditor after this lapse of time, the bankrupt is obliged to pay whatever sum he is able for the benefit of his creditors. He must swear that he cannot pay any thing, or not above a certain sum, without depriving himself and his family of necessaries. Every 5 years the claim may be repeated. All careless bankrupts are disabled from holding offices of honour. The third class contains the "fraudulent" bankrupts, who are liable to be imprisoned, according to the extent of their frauds, for a limited period, or even for life, besides being rendered incapable of holding any office whatever. Should a bankrupt abscond, he is called upon by public advertisement to appear by a certain day, in default of which he is adjudged a fraudulent bankrupt, and his name is posted up on a black board on the Exchange.

General Remarks. — The trade of Hamburg is, in a great measure, passive; that is, it depends more on the varying wants and policy of others than on its own. There is nothing of such vital importance as the free navigation of the Elbe to the prosperity of Hamburg, and, indeed, of all the countries through which it flows. This, too, is a matter of paramount consequence as respects our interests; for the Elbe is the grand inlet by which British manufactures find their way into some of the richest and most extensive European countries. The principle that the navigation of the Elbe, the Rhine, the Weser, &c. should be quite free along their whole course, was distinctly laid down by the Congress of Vienna in 1815. But, no general tariff of duties being then established, this declaration has not had the practical effect that might have been expected. It is probable, however, that all impediments to the free navigation of the Elbe above Hamburg will be speedily removed. It is in an especial manner for the interest of Prussia, Saxony, Austria, and England, that these impediments should be abolished. So long, however, as the Stade duties are kept up, it would be folly to imagine that much attention should be paid to our remonstrances against other duties. If we cannot prevail on Hanover to emancipate our commerce from oppressive restrictions and burdens, we need hardly expect to succeed with any other power. Were the Stade duties and those in the upper parts of the Elbe wholly abolished, we have little doubt that the trade of Hamburg would be vastly increased; which, however advantageous to her, would be far more advantageous to the extensive countries of which she is the grand emporium.

In compiling this article we have made use of *Oddy's European Commerce*, pp. 412—439.; the *Dictionnaire de Commerce* (*Ency. Méthodique*), i. 44—53.; the *Circulars of Bercnberg, Gossler and Co., Anderson, Heber, and Co.*, and other eminent merchants; and of detailed statements transmitted to us from Hamburg, founded on the works of Dr. Soetber, and C. and F. Norback, &c. From the circumstance of no official returns being published or obtainable at Hamburg, the returns of imports given above must not be regarded as quite accurate, though the errors they involve cannot be material.

HANSEATIC LEAGUE, an association of the principal cities in the north of Germany, Prussia, &c., for the better carrying on of commerce, and for their mutual safety and defence. This confederacy, so celebrated in the early history of modern Europe, contributed in no ordinary degree to introduce the blessings of civilisation and good government into the North. The extension and protection of commerce was, however, its main object; and hence a short account of it may not be deemed misplaced in a work of this description.

Origin and Progress of the Hanseatic League. — Hamburg, founded by Charlemagne in the ninth, and Lubeck, founded about the middle of the twelfth century, were the earliest members of the League. The distance between them not being very considerable, and being alike interested in the repression of those disorders to which most parts of Europe, and particularly the coast of the Baltic, were a prey in the twelfth, thirteenth, and fourteenth centuries, they early formed an intimate political union, partly in the view of maintaining a safe intercourse by land with each other, and partly for the protection of navigation from the attacks of the pirates, with which every sea was at that time infested. There is no very distinct evidence as to the period when this alliance was consummated; some ascribe its origin to the year 1169, others to the year 1200, and others to the year 1241. But the most probable opinion seems to be, that it would grow up by slow degrees, and be perfected according as the advantage derivable from it became more obvious. Such was the origin of the Hanseatic League, so called from the old Teutonic word *hansa*, signifying an association or confederacy.

Adam of Bremen, who flourished in the eleventh century, is the earliest writer who has given any information with respect to the commerce of the countries lying round the Baltic. And from the errors into which he has fallen in describing the northern and eastern shores of that sea, it is evident they had been very little frequented and not at all known in his time. But from the beginning of the twelfth century, the progress of commerce and navigation in the North was exceedingly rapid. The countries which stretch along the bottom of the Baltic, from Holstein to Russia, and which had been occupied by barbarous tribes of Sclavonic origin, were then subjugated by the kings of Denmark, the dukes of Saxony, and other princes. The greater part of the inhabitants being exterminated, their place was filled by German colonists, who founded the towns of Stralsund, Rostock, Wismar, &c. Prussia and Poland were afterwards subjugated by the Christian princes and the Knights of the Teutonic Order. So that, in a comparatively short period, the foundations of civilisation and the arts were laid in countries whose barbarism had ever remained impervious to the Roman power.

The cities that were established along the coast of the Baltic, and even in the interior of the countries bordering upon it, eagerly joined the Hanseatic confederation. They were indebted to the merchants of Lubeck for supplies of the commodities produced in more civilised countries, and they looked up to them for protection against the barbarians by whom they were surrounded. The progress of the League was in consequence singularly rapid. Previously to the end of the thirteenth century, it embraced every considerable city in all those vast countries extending from Livonia to Holland, and was a match for the most powerful monarchs.

The Hanseatic confederacy was at its highest degree of power and splendour during the fourteenth and fifteenth centuries. It then comprised from 60 to 80 cities, which were distributed into 4 classes or circles. Lubeck was at the head of the first circle, and had under it Hamburg, Bremen, Rostock, Wismar, &c. Cologne was at the head of the second circle, with 29 towns under it. Brunswick was at the head of the third circle, consisting of 13 towns. Dantzic was at the head of the fourth circle, having under it 8 towns in its vicinity, besides several that were more remote. The supreme authority of the League was vested in the deputies of the different towns assembled in congress. In it they discussed all their measures; decided upon the sum that each city should contribute to the common fund; and upon the questions that arose between the confederacy and other powers, as well as those that frequently arose between the different members of the confederacy. The place for the meeting of congress was not fixed, but it was most frequently held at Lubeck, which was considered as the capital of the League, and there its archives were kept. Sometimes, however, congresses were held at Hamburg, Cologne, and other towns. They met once every 3 years, or oftener if occasion required. The letters of convocation specified the principal subjects which would most probably be brought under discussion. Any one might be chosen for a deputy; and the congress consisted not of merchants only, but also of clergymen, lawyers, artists, &c. When the deliberations were concluded, the decrees were formally communicated to the magistrates of the cities at the head of each circle, by whom they were subsequently communicated to those below them; and the most vigorous measures were adopted for carrying them into effect. One of the burgomasters of Lubeck presided at the meetings of congress; and during the recess the magistrates of that city had the sole, or at all events the principal, direction of the affairs of the League.

Besides the towns already mentioned, there were others that were denominated confederated cities, or allies. The latter neither contributed to the common fund of the League, nor sent deputies to congress,; even the members were not all on the same footing in respect to privileges: and the internal commotions by which it was frequently agitated, partly originating in this cause, and partly in the discordant interests and conflicting pretensions of the different cities, materially impaired the power of the confederacy. But in despite of these disadvantages, the League succeeded for a lengthened period, not only in controlling its own refractory members, but in making itself respected and dreaded by others. It produced able generals and admirals, skilful politicians, and some of the most enterprising, successful, and wealthy merchants of modern times.

As the power of the confederated cities was increased and consolidated, they became more ambitious. Instead of limiting their efforts to the mere advancement of commerce and their own protection, they endeavoured to acquire the monopoly of the trade of the North, and to exercise the same sort of dominion over the Baltic that the Venetians exercised over the Adriatic. For this purpose they succeeded in obtaining, partly in return for loans of money, and partly by force, various privileges and immunities from the northern sovereigns, which secured to them almost the whole foreign commerce of Scandinavia, Denmark, Prussia, Poland, Russia, &c. They exclusively carried on the herring fishery of the Sound, at the same time that they endeavoured to

obstruct and hinder the navigation of foreign vessels in the Baltic. It should, however, be observed, that the immunities they enjoyed were mostly indispensable to the security of their commerce, in consequence of the barbarism that then prevailed; and notwithstanding their attempts at monopoly, there cannot be the shadow of a doubt that the progress of civilisation in the North was prodigiously accelerated by the influence and ascendancy of the Hanseatic cities. They repressed piracy by sea and robbery by land, which must have broken out again had their power been overthrown before civilisation was fully established; they accustomed the inhabitants to the principles, and set before them the example, of good government and subordination; they introduced amongst them conveniences and enjoyments unknown by their ancestors, or despised by them, and inspired them with a taste for literature and science; they did for the people round the Baltic, what the Phœnicians had done in remoter ages for those round the Mediterranean, and deserve, equally with them, to be placed in the first rank amongst the benefactors of mankind.

"In order," as has been justly observed, "to accomplish their purpose of rendering the Baltic a large field for the prosecution of commercial and industrious pursuits, it was necessary to instruct men, still barbarous, in the rudiments of industry, and to familiarise them in the principles of civilisation. These great principles were laid by the confederation, and at the close of the fifteenth century the Baltic and the neighbouring seas had, by its means, become frequented routes of communication between the North and the South. The people of the former were enabled to follow the progress of the latter in knowledge and industry. The forests of Sweden, Poland, &c. gave place to corn, hemp, and flax; the mines were wrought, and in return the produce and manufactures of the south were imported. Towns and villages were erected in Scandinavia, where huts only were before seen: the skins of the bear and the wolf were exchanged for woollens, linens, and silks: learning was introduced; and printing was hardly invented before it was practised in Denmark, Sweden, &c."—(*Catteau, Tableau de la Mer Baltique*, tom. ii. p. 175.)

The kings of Denmark, Sweden, and Norway were frequently engaged in hostilities with the Hanse towns. They regarded, and, it must be admitted, not without pretty good reason, the privileges acquired by the League, in their kingdoms, as so many usurpations. But their efforts to abolish these privileges served, for more than 2 centuries, only to augment and extend them.

"On the part of the League there was union, subordination, and money; whereas the half-savage Scandinavian monarchies were full of divisions, factions, and troubles; revolution was immediately followed by revolution, and feudal anarchy was at its height. There was another circumstance, not less important, in favour of the Hanseatic cities. The popular governments established amongst them possessed the respect and confidence of the inhabitants, and were able to direct the public energies for the good of the state. The astonishing prosperity of the confederated cities was not wholly the effect of commerce. To the undisciplined armies of the princes of the North—armies composed of vassals without attachment to their lords—the cities opposed, besides the inferior nobles, whose services they liberally rewarded, citizens accustomed to danger, and resolved to defend their liberties and property. Their military operations were combined and directed by a council composed of men of tried talents and experience, devoted to their country, responsible to their fellow citizens, and enjoying their confidence. It was chiefly, however, on their marine forces that the cities depended. They employed their ships indifferently in war or commerce, so that their naval armaments were fitted out at comparatively small expense. Exclusive, too, of these favourable circumstances, the fortifications of the principal cities were looked upon as impregnable; and as their commerce supplied them abundantly with all sorts of provisions, it need not excite our astonishment that Lubeck alone was able to carry on wars with the surrounding monarchs, and to terminate them with honour and advantage; and still less that the League should long have enjoyed a decided preponderance in the North."—(*L'Art de vérifier les Dates*, 3me partie, tom. viii. p. 204.)

The extirpation of piracy was one of the objects which had originally led to the formation of the League, and which it never ceased to prosecute. Owing, however, to the barbarism then so universally prevalent, and the countenance openly given by many princes and nobles to those engaged in this infamous profession, it was not possible wholly to root it out. But the vigorous efforts of the League to abate the nuisance, though not entirely successful, served to render the navigation of the North Sea and the Baltic comparatively secure, and were of signal advantage to commerce. Nor was this the only mode in which the power of the confederacy was directly employed to promote the common interests of mankind. Their exertions to protect shipwrecked mariners from the atrocities to which they had been subject, and to procure the restitution of shipwrecked property to its legitimate owners, though, most probably, like their exertions to repress piracy, a consequence of selfish considerations, were in no ordinary

degree meritorious; and contributed not less to the advancement of civilisation than to the security of navigation.*

Factories belonging to the League. — In order to facilitate and extend their commercial transactions, the League established various factories in foreign countries; the principal of which were at Novogorod in Russia, London, Bruges in the Netherlands, and Bergen in Norway.

Novogorod, situated at the confluence of the Volkof with the Imler Lake, was, for a lengthened period, the most renowned emporium in the north-eastern parts of Europe. In the beginning of the eleventh century, the inhabitants obtained considerable privileges that laid the foundation of their liberty and prosperity. Their sovereigns were at first subordinate to the grand dukes or czars of Russia; but as the city and the contiguous territory increased in population and wealth, they gradually usurped an almost absolute independency. The power of these sovereigns over their subjects seems, at the same time, to have been exceedingly limited; and, in effect, Novogorod ought rather to be considered as a republic under the jurisdiction of an elective magistrate, than as a state subject to a regular line of hereditary monarchs, possessed of extensive prerogatives. During the 12th, 13th, and 14th centuries, Novogorod formed the grand *entrepôt* between the countries to the east of Poland and the Hanseatic cities. Its fairs were frequented by an immense concourse of people from all the surrounding countries, as well as by numbers of merchants from the Hanse towns, who engrossed the greater part of its foreign commerce, and who furnished its markets with the manufactures and products of distant countries. Novogorod is said to have contained, during its most flourishing period, towards the middle of the 15th century, upwards of 400,000 souls. This, however, is most probably an exaggeration. But its dominions were then very extensive; and its wealth and power seemed so great and well established, and the city itself so impregnable, as to give rise to a proverb, Who can resist the Gods and great Novogorod? *Quis contra Deos et magnam Novogordiam?* — (*Coxe's Travels in the North of Europe*, vol. ii. p. 80.)

But its power and prosperity were far from being so firmly established as its eulogists, and those who had only visited its fairs, appear to have supposed. In the latter part of the 15th century, Ivan Vassilievitch, czar of Russia, having secured his dominions against the inroads of the Tartars, and extended his empire by the conquest of some of the neighbouring principalities, asserted his right to the principality of Novogorod, and supported his pretensions by a formidable army. Had the inhabitants been animated by the spirit of unanimity and patriotism, they might have defied his efforts; but their dissensions facilitated their conquest, and rendered them an easy prey. Having entered the city at the head of his troops, Ivan received from the citizens the charter of their liberties, which they either wanted courage or inclination to defend, and carried off an enormous bell to Moscow, that has been long regarded with a sort of superstitious veneration as the palladium of the city. But notwithstanding the despotism to which Novogorod was subject, during the reigns of Ivan and his successors, it continued for a considerable period to be the largest as well as most commercial city in the Russian empire. The famous Richard Chancellour, who passed through Novogorod in 1554, in his way from the court of the czar, says, that "next unto Moscow, the city of Novogorod is reputed the chiefest of Russia; for although it be in majestie inferior to it, yet in greatness it goeth beyond it. It is the chiefest and greatest mart town of all Muscovy; and albeit the emperor's seat is not there, but at Moscow, yet the commodiousness of the river falling into the Gulf of Finland, whereby it is well frequented by merchants, makes it more famous than Moscow itself."

But the scourge of the destroyer soon after fell on this celebrated city. Ivan IV., having discovered, in 1570, a correspondence between some of the principal citizens and the King of Poland, relative to a surrender of the city into his hands, punished them in the most inhuman manner. The slaughter by which the bloodthirsty barbarian sought to satisfy his revenge was alike extensive and indiscriminating. The crime of a few citizens was made a pretext for the massacre of 25,000 or 30,000. Novogorod never recovered from this dreadful blow. It still, however, continued to be a place of considerable trade, until the foundation of Petersburg, which immmediately became the seat of that commerce that had formerly centred at Novogorod. The degradation of this ill-fated city is now complete. It is at present an inconsiderable place, with a population of about 7,000 or 8,000; and is remarkable only for its history and antiquities.

The merchants of the Hanse towns, or Hansards, as they were then commonly termed, were established in London at a very early period, and their factory here was

* A series of resolutions were unanimously agreed to by the merchants frequenting the port of Wisby, one of the principal emporiums of the League, in 1287, providing for the restoration of shipwrecked property to its original owners, and threatening to eject from the "*consodalitate mercatorum*," any city that did not act conformably to the regulations laid down.

of considerable magnitude and importance. They enjoyed various privileges and immunities; they were permitted to govern themselves by their own laws and regulations; the custody of one of the gates of the city (Bishopsgate) was committed to their care; and the duties on various sorts of imported commodities were considerably reduced in their favour. These privileges necessarily excited the ill-will and animosity of the English merchants. The Hansards were every now and then accused of acting with bad faith; of introducing commodities as their own that were really the produce of others, in order to enable them to evade the duties with which they ought to have been charged; of capriciously extending the list of towns belonging to the association; and obstructing the commerce of the English in the Baltic. Efforts were continually making to bring these disputes to a termination; but as they really grew out of the privileges granted to and claimed by the Hansards, this was found to be impossible. The latter were exposed to many indignities; and their factory, which was situated in Thames Street, was not unfrequently attacked. The League exerted themselves vigorously in defence of their privileges; and having declared war against England, they succeeded in excluding our vessels from the Baltic, and acted with such energy, that Edward IV. was glad to come to an accommodation with them, on terms which were any thing but honourable to the English. In the treaty for this purpose, negotiated in 1474, the privileges of the merchants of the Hanse towns were renewed, and the king assigned to them, in absolute property, a large space of ground, with the buildings upon it, in Thames Street, denominated the Steel Yard, whence the Hanse merchants have been commonly denominated the Association of the Steel Yard; the property of their establishments at Boston and Lynn was also secured to them; the king engaged to allow no stranger to participate in their privileges; one of the articles bore that the Hanse merchants should be no longer subject to the Judges of the English Admiralty Court, but that a particular tribunal should be formed for the easy and speedy settlement of all disputes that might arise between them and the English; and it was further agreed that the particular privileges awarded to the Hanse merchants should be published as often as the latter judged proper, in all the sea-port towns of England, and such Englishmen as infringed upon them should be punished. In return for these concessions, the English acquired the liberty of freely trading in the Baltic, and especially in the port of Dantzic and in Prussia. In 1498, all direct commerce with the Netherlands being suspended, the trade fell into the hands of the Hanse merchants, whose commerce was in consequence very greatly extended. But, according as the spirit of commercial enterprise awakened in the nation, and as the benefits resulting from the prosecution of foreign trade came to be better known, the privileges of the Hanse merchants became more and more obnoxious. They were in consequence considerably modified in the reigns of Henry VII. and Henry VIII., and were at length wholly abolished in 1597.—(*Anderson's Hist. Com.* Anno 1474, &c.)

The different individuals belonging to the factory in London, as well as those belonging to the other factories of the League, lived together at a common table, and were enjoined to observe the strictest celibacy. The direction of the factory in London was intrusted to an alderman, 2 assessors, and nine councillors. The latter were sent by the cities forming the different classes into which the League was divided. The business of these functionaries was to devise means for extending and securing the privileges and commerce of the association; to watch over the operations of the merchants; and to adjust any disputes that might arise amongst the members of the confederacy, or between them and the English. The League endeavoured at all times to promote, as much as possible, the employment of their own ships. In pursuance of this object, they went so far, in 1447, as to forbid the importation of English merchandise into the confederated cities, except by their own vessels. But a regulation of this sort could not be carried into full effect; and was enforced or modified according as circumstances were favourable or adverse to the pretensions of the League. Its very existence was, however, an insult to the English nation; and the irritation produced by the occasional attempts to act upon it, contributed materially to the subversion of the privileges the Hanseatic merchants had acquired amongst us.

By means of their factory at Bergen, and of the privileges which had been either granted to or usurped by them, the League enjoyed for a lengthened period the monopoly of the commerce of Norway.

But the principal factory of the League was at Bruges in the Netherlands. Bruges became, at a very early period, one of the first commercial cities of Europe, and the centre of the most extensive trade carried on to the north of Italy. The art of navigation in the thirteenth and fourteenth centuries was so imperfect, that a voyage from Italy to the Baltic and back again could not be performed in a single season; and hence, for the sake of their mutual convenience, the Italian and Hanseatic merchants determined on establishing a magazine or storehouse of their respective products in some intermediate situation. Bruges was fixed upon for this purpose; a distinction
